HARPER'S NEW MONTHLY MAGAZINE.

NO. CCXXIII.—DECEMBER, 1868.—VOL. XXXVIII.

A Pilgrimage upon the Rhine.

By JOHN D. SHERWOOD. Illustrated by CHARLES PARSONS.

I.

WHO'E'ER would sing the beauteous RHINE,
Its castled rocks and feudal towers,
And banks all crowned with royal wine,
Where reel the joyous, festal hours,—
Must wreath his pen with Bacchant grace—
Distill the sun into his song;
With purple joy its movements trace,
And, crowned with leaves, be gentle, strong;
Flow, like its stream, in varied rhyme,
And gild his verse with spoils of time.

O'er BINGEN's hills ripe grapes are hung,
Bathing their slopes in purpling mist;
While soft, green girdles, zoning, flung
'Round wall and tower, with amethyst,
Clasp tenderly each shelving ledge,
Hanging their jeweled clusters rare
O'er every rippling field and hedge;
And, crinkling through the loving air,
With wavy wealth of murmuring grace
Church, hamlet, flood and land enlace.

VOL. XXXVIII.—No. 223—1

Entered according to Act of Congress, in the year 1868, by Harper and Brothers, in the Clerk's Office of the District Court of the United States, for the Southern District of New York.

JOHANNISBERG shines far and wide
 Amid the verdant, flowing sea;
 Its white walls glancing o'er the tide
 Which rolls its long-ridged billows free
 To RUDESHEIM's rich slanting plain,
 Rocking with rubied, furrowed wave,
 Where leafy heavens shed golden rain,
 Swelling the floods that kiss and lave
 The feet of yonder castle hoar,
 Whose shadow darkens all the shore.

II.

Above the river's hurrying swirl,
 Cliff-anchored RHEINSTEIN lifts its walls;—
 Her kingly banners there unfurl,
 And turret unto turret calls;—
 A mimic show of feudal state,
 With donjon, barbican and keep,
 Where toy-like tower and modern gate
 Rise o'er the piled and well-made steep;
 Where warders show large storied wealth,
 And share the gains they take by stealth.

RHEINSTEIN 1869.

Close pressed by banks, now warmly green
 With foliage, hamlets nestle brown
 Upon the water's rim. Frequent lean,
 With tottering limbs and storm-swept crown,
 Old ruins, through whose creviced age
 Babble quaint tales and legends gray,
 Or shake their waning strength with rage
 At steam-steeds rushing fast away;
 Like bearded guests, strayed from the Past,
 And 'mid changed scenes bewildered cast.

III.

At BACHARACH the Pilgrims stray
 Through fields of ruins strown on high;
 Where swallows skim at close of day,
 Their spread wings lessening up the sky.
 Straight, slender columns drink the light,
 Spring in the air and fix their gaze—
 With well-cut coigns and shafts bedight—
 Bright relics of those earlier days
 When pious robbers, dying, gave
 Their thriftless wealth their souls to save.

Bacharach 168
C. J. G. J. G.

IV.

Two Castles—PFALZ and GUTENFELS—
 Watch o'er the foaming, brimming tide:—
 Two armed and sleepless sentinels,
 'Erst waiting for the chieftain's bride,
 Who,—floating down with silken sail,
 And music pulsing with the oar—
 Was seized and born, a captive pale,
 For weighty vengeance—where no door
 Admits or light or armed surprise,
 Or hope, or change, or blue-eyed skies.

PFALZ AND GUTENFELS—

V.

SCHÖNBERG

On SCHÖNBERG's shattered towers the sunset flings
 Its arrowy beauty, smiting with red fire
 Their mossed and mouldering strength, where sits and sings
 The cowled and monkish owl. Below the spire
 Of village church, touched by a parting ray,
 Looks downward on a gathering peasant throng
 Returning to their homes by varied way,
 Repeating high this joyous, choral Song
 Which Echo oft renews o'er listening vale and dell,
 Quick-throbbing on the air—as throbs an evening bell.

THE COW-HERDS' SONG.

One.

Sing not to us of blood-red wine,
 Nor Bacchus praise in drunken song;
 The oaken chaplets we entwine
 Are hers to whom they well belong:—

Chorus:

The honest Cow—the creamy Cow;—
 For her we raise our voices now,
 For her the milk-white flag we bear,
 For her we deck our flowing hair.

Two.

In maddening cups let others fling
 Their knotted strength and priceless health;
 To her cool, patient praise we sing
 Who to our hearths brings brimming wealth:—

Chorus:

The patient Cow—the bright-eyed Cow;
 Crown we her steady frontlet now;
 Send out our voices on the gale,
 And chant the virtues of the pail.

Three.

From blossomed meadows, starry fields,
 Bearing their secrets—see her come!
 And to our call those secrets yields;—
 We'll crown her at our grateful home.

Chorus:

The thoughtful Cow—the generous Cow,
 For her we bring the budding bough,
 Binding with joy her royal horn
 Who stintless gladdens night and morn.

VI.

A heap of ruins—vast and hoar!
 A harvest of the fruitful Past!
 Such are thy spoils, oh sweet ST. GOAR!
 So RHEINFELS on our path is cast,
 Within whose dungeon walls were wrought
 Such deeds as freeze our listening sense,—
 Crimes that appall historic thought—
 And well exact as recompense

This Nemesis, whose venging rod
 Has scourged to silence grand and lone,
 As witnesses to Man and God,
 These weeping Magdalens in stone!
 Who with mute lips and unshed tears
 Stand shamed, yet pardon ever plead
 From all the hastening, judging years
 Which for the Past now intercede.
 Below the waters seethe and rave;
 While nimble Echo oft repeats
 Each sound that wanders near her cave,
 And, like a pulse, vibrates and beats
 Against the rocks, which fain would keep
 The sounds which climb her wave-washed steep.

C. L. ST. GOAR.

VII.

O'er the river's level current STOLZENFELS leans wondrous, fair;
 Like a sunset cloud in summer, pillowed on dissolving air,
 With its burnished towers and balcon, and its bannered state and pride,
 With fantastic battlements, sun-illuminated, glorified.
 Sheathed in strong and stony armor far she looks with tranced gaze,
 On the plains embossed and pearly, piled with sheaves of corn and maize;
 Looking out upon the Summer with its tangled skein of streams,
 Braided through the mellow sunshine, braided in our summer dreams;
 Out upon the nut-brown hamlets, sandaling the rocks and hills,
 Where the murmuring voice of peasants all the rustling vineyards fills;

Out upon the shining river, hastening from its cradle cold,
 In the lap of Alpine winter where thick, icy sheets enfold;
 And the laugh of struggling waters freezes in their icy urns
 And the chamois 'mid the snow cliffs freely roams and safe returns;
 Looking out upon the meadows, set in frames of golden sedge,
 And the quaint and dim cathedrals, springing from its blue-rimmed edge;
 Gathering, as it proudly marches, on its grand triumphal way,
 States and Empires, fair and hoary, founded at the peep of day;
 Folding in its wide embraces—in its glittering, jeweled arms
 Lordly mansions, towns and cities, cottage meek and bosky farms;
 Till at last with hoarded treasures, full it leaps into the sea;
 Like our lives, whose amplest measures, onward flow to mystery.

VIII.

In surly grandeur through the smokeless air,
 Towering, like Titan Prussia's fort Briarean,
 Swings her hundred arms, with iron sinews knit;
 Itself with noisy uproar forcing strange silences
 Upon the subject COBLENCE which below
 Licks its mailed feet.

And yet upon thy summit grim, EHRENBREITSTEIN,
 A smile lies stranded, like the bloom of flowers
 Upon the wintry forehead of Mont Blanc.
 Visions of beauty, brodered with clustered hills
 And varied pomps of plains edged with golden grain,
 With towns and hamlets deftly wrought in cunning loom,
 Rise to the pleased sense, more ravishing than dreams.
 Into the grimy casemates, black and sulphureous,
 Peep the sunny eyes of gardens, as children
 Climb the knee and look into the furrowed face
 Of Crime.—From out the far horizon
 The Moselle leads its wavy line of villages
 Set in the emerald rim of vines, to meet the Rhine.

But hark! from off those vine-hung hills
 A Song the fragrant spaces fills,—
 Swelling and rising o'er the Rhine
 As rushes in the cup red wine:

SONG OF THE MOSELLE.

(1.)

Shout not to me, nor boastful tell,
 Oh ye! who far from the Moselle,
 In flat stale plains, forever dwell;
 And dusty grain,
 'Mid heat or rain
 Scant harvests glean
 Wheat, corn or bean.

EHRENBREITSTEIN.

(2.)

My heart-strings throb—my pulses swell
 O'er every sunny knoll and dell
 Of thine, oh blue-eyed, sweet Moselle,
 Whose purple dower,
 Each summer hour,
 Thy banks display
 To wondering day.

(3.)

At vespers mild the evening bell
 Breaks o'er each red-ripe hill and fell
 Of thine, oh dancing, gay Moselle;
 And village maid,
 In smiles arrayed,
 With sunny glance
 Wakes Song and Dance.

(4.)

Then gray, good men old legends tell
 Of what in elder days befell
 Upon the banks of our Moselle;
 When belted knight,
 In mailed might,
 For maidens fair
 All dangers dare.

(5.)

Thou blue-eyed, loved and dear Moselle,
 I would not my ripe birth-right sell—
 That birth-right loved so much and well—
 For all the wine,
 Thou robber Rhine,
 Hast from thy birth
 E'er shed on Earth.

IX.

Like Giants vast the mountains seven
 Stand sentinels
 'Round DRACHENFELS
 Whose splintered top, upholding heaven,
 By time and cannon gashed and riven,

Resting on velvet foliage green
 Forget his scars
 And cruel wars
 Sending his eye o'er woodland scene,
 Transfigured through the hazy sheen

Of cities kindled and aglow
 With work and light
 With force and might
 Through whose warm hearts thy currents go,
 Oh beauteous RHINE,—and e'er shall flow.

THE DRACHENFELS.

EXPLORATIONS IN LOWER CALIFORNIA.

[Third Paper.]

BY J. ROSS BROWNE.

HAILING THE SHIPS.

MAGDALENA BAY.

PROBABLY the first navigator who visited this magnificent bay was Fernando de Ulloa. After an exploration of the Gulf or Sea of Cortez, in 1539, he directed his course from Cape St. Lucas along the western shore of the Peninsula, touching at the Bay of Magdalena and the Islands of Marguerita and Cerros. In this voyage he reached the latitude of 30° north, and made several interesting discoveries. About three years later (1542) the same bay was visited by the famous old adventurer Juan Rodriguez Cabrillo, who, according to Vanegas, gave it the name of La Magdalena. The expedition of Sebastian Viscaino, in 1602, resulted in a more perfect knowledge of its shores and harbors. Although the narratives of these enthusiastic old navigators abound in exaggerated accounts of what they saw, there

is a remarkable concurrence of testimony in regard to the sterility of the coast. It is represented as barren and forbidding in the extreme. Torquemada, in his account of the voyage of Viscaino, says, "They could get no intelligence of any water except in a cavity among the rocks, and what they had there was excessively bad." The only place now known where fresh water exists among the rocks is on the inner side of Marguerita Island, about three miles back from the shore. This is exceedingly brackish, and can only be used for drinking purposes in cases of great extremity. It is probably the same spring referred to by Torquemada.

From the narrative of Viscaino's voyage it would appear that one of the vessels, the *Capitana*, "being alone on St. Magdalen's Day, the Father Commissary and Father Thomas said

mass ashore; and on account of this festival the bay was called La Magdalena." How it came to receive the same name from Cabrillo, sixty years before, the good Padre Vanegas does not tell us.

Looking at the vast extent of this bay, the salubrity of its climate, and the placidity of its waters, the question naturally arises, how came it to pass that the Jesuits did not establish missions on its shores? We undervalue their sagacity in assuming that they were ignorant of its resources. An expedition to explore it, as a place already discovered by sea, and less difficult to be visited by land, was fitted out at Loreto in 1719, under Father Clemente Guillen, accompanied by Estevan Rodriguez Lorenzo, with an escort consisting of a party of soldiers and three bodies of native Californians, armed after the fashion of the country.

"They traveled," says Vanegas, "twenty-five days amidst all the hardships and fatigues naturally to be expected in such a craggy and barren country; and the Indians every where taking the alarm at seeing so many strange people in their country, rendered it necessary to observe the greatest order and circumspection in the march. At last they came to Magdalena Bay, which lies in the district of the mission of San Luis Gonzaga, since founded. It was every where sheltered from the winds by lofty mountains, and about half a league in breadth, running up the country toward Cape St. Lucas. Near this arm they discovered a rancheria of Indians, with whom by means of little presents they entered into terms of peace and amity. On inquiry of the Indians after water they were informed, and their own searches confirmed their report, that the only fresh water thereabout was in a well dug in the sand, and which the Indians made use of. They added that a neighboring island called Santa Rosa, which they frequently visited, afforded a sufficiency of water; but they were without any means of crossing the channel to it; neither did they find in the bay those azure shells, or appearance of the pearl beds, with which this coast was said to abound. It being known that the bay had two entrances, the captain sent some of his men to reconnoitre that on the south side, and following the course of a brook, observe whether the other arm of the bay which forms the harbor called *del Marquez* afforded a watering-place. In this survey they observed at a distance the second mouth or arm; but found that the brook before its joining the sea ran through some ponds of brackish water, so that there was no possibility for ships to water here. This discovery induced them to attempt a survey of the whole tract; but in some parts the inaccessible rocks, and in others impassable marshes, obliged them to make a circuit to the rancheria called San Benito de Arny, four leagues from the sea, where the Indians gave them the same discouraging account of the want of water on the coast. Here all the people met, and Father Guillen used his utmost endeavors for inducing them to undertake a survey of the remaining part of the coast, or at least as far as possible from the south. But the captain and soldiers were not to be prevailed upon, and the Indians, after such discouraging circumstances, insisted on returning to Loreto."

Thus we see why no settlement of white people has ever been made upon the shores of this bay. The sterility of the soil and the scarcity of water have proved insuperable obstacles to colonization, even since the careful surveys of Du Petit Thouars and Sir Edward Belcher. From time to time, as commerce with the neighboring States of Sonora, Cinaloa, and Durango became profitable to foreign countries, this bay

acquired some importance as a rendezvous for smugglers, who kept their vessels at anchor there until opportunity offered to run them into the ports of Guaymas, Mazatlan, or San Blas. Large fortunes have been made in this way, and there are now on the Pacific coast prominent capitalists, much esteemed in the business community, who are known to have engaged in this illicit traffic.

The importance of the Mexican possessions on the Pacific as a field for commercial enterprises was thoroughly appreciated by the nations of Europe before the acquisition of Upper California by the United States. England, France, and Russia, during the early part of the present century, sent out various expeditions to explore the coast; and the reports of the discoveries made excited a strong spirit of emulation to acquire these valuable possessions. President Jackson proposed the purchase of Upper California in 1835, above the line of Monterey, although its vast mineral resources were then unknown.

A survey of Magdalena Bay was made in 1839 by the French Admiral Du Petit Thouars, in the frigate *La Venus*, but nothing resulted from this to induce settlement upon its shores. In general terms they are represented as sterile and destitute of water.

Sir Edward Belcher, during the same year, spent several months making an elaborate survey and chart of Magdalena Bay. He erected an observatory on shore, and had accurate soundings made of the entire bay, including its inlets and lagoons. Brackish water was found in some of these, but no land on any of the adjacent shores suitable for cultivation. Scarcity of wood and difficulty of procuring fresh water are represented to be the prominent characteristics of this region. Numerous other authorities might be cited to the same effect—thus showing a remarkable concurrence of testimony on the part of the most eminent navigators who have visited the coast during the past three centuries.

I am particular in referring to explorations made prior to any recent transactions connected with the cession of public lands on this bay, because the character of the country has been greatly misrepresented by persons assuming to be well acquainted with it. Before my departure from San Francisco I was informed that there was a town on the bay; that the lands were very productive; that in all respects it was a suitable place for the establishment of a colony. Not only is there no town accessible to navigation, but not even a cabin within seven miles of the beach. Abundant proof exists, confirmed by my own observation, that representations made as to the fertility of the soil or its adaptability to agricultural purposes have no foundation in fact.

My visit to this region was in the latter part of January—a favorable season for exploration. It was my original intention to make a land trip around the shores of the bay, but this I found

STAMPEDED BY A POLECAT.

utterly impracticable. The information which I had received at San Francisco led me to believe that the country was a verdant plain, abounding in fine pastures and running streams. I was grievously disappointed.

My guides had no knowledge of any fresh water except on the trail to Comondú, which makes a detour through the interior, at a considerable distance from the coast. This trail passes over a desert region, prolific only in cactus and thorny shrubs. Blind trails, made by wild animals, branch off from it in every direction; and it is exceedingly difficult even for an experienced guide to avoid losing the way, owing to the shifting sands and barren tracts of gravel and cobble-stones which at intervals obliterate all traces of the route. The whole face of the earth for a hundred miles or more, north and south, and eastward across the Peninsula, is a complication of rugged mountains of a sedimentary formation, and mesas cut into fearful arroyas and ravines by the floods of former times, and stretches of naked sand-desert. All the vegetation visible to the eye seems to conspire against the intrusion of man. Every shrub is armed with thorns; the cactus, in all its varieties, solitary and erect, or in twisted masses, or snake-like undulations, tortures the traveler with piercing needles and remorseless fangs. Burs with barbed thorns cover the ground; the very grass, wherever it grows, resents the touch with wasp-like stings that fester in the flesh; and poisonous weeds tempt the hungry animals with their verdure, producing

craziness and death. Add to this the innumerable varieties of virulent reptiles and insects that infest these desolate regions in summer; the rattlesnakes, vipers, scorpions, tarantulas, centipedes, and sand-flies; the rabid polecats that creep around the camp-fire at night, producing hydrophobia by their bite; the scorching heat of the sun, and the utter absence of water, and you have a combination of horrors that might well justify the belief of the old Spaniards that the country was accursed of God. Deserters from whale-ships, in attempting to make their way to Comondú, have, in several well-authenticated instances, perished from thirst. A species of cactus grows in these arid wastes which, it is said, contains juice enough to support life; but the weary and bewildered traveler is not always in a condition to seek this source of relief. Men who lose the trail are apt to become crazed with the horrors of a situation from which they can see no escape.

It was not my object to find a country more barren than that over which we had passed on the route from Todos Santos, but rather to discover whether any of the lands accessible to navigation afforded inducements for the establishment of a colony.

The last watering-place on the trail from the Rancho Colorado is situated in an arroya, about seven miles distant from the bay, and is called the Salado. As a specimen of the loose statements made by interested parties in regard to the resources of this country, we were told be-

fore leaving La Paz that we would find quite a settlement here, consisting of a good ranch with abundance of cattle, a store-house well supplied with all the necessities of life, and many other conveniences which would greatly facilitate us in our exploration. The truth is, we found nothing but a wretched little cabin built of mud and brush-wood, inhabited by a half-breed native and his family, who if they had been more destitute of the means of subsistence would have had nothing at all. This miserable *hacqual* was perched on the edge of the barren mesa overlooking the arroya, and presented a most unpromising appearance to a party who wished to procure supplies of any kind. The ranchero had a few cattle, but no fresh meat. We got some jerked beef, however, which, with a little cheese, was all the place afforded. They had neither flour nor panoche, and scarcely knew the luxuries of tea and coffee. A small supply of these rare commodities was very gratefully received by the good woman who did the honors of the place.

We camped under a cotton-wood tree on the opposite side of the arroya, and turned our animals loose to pick up what the country afforded. Mesquit and bunch-grass are tolerably abundant in the vicinity; but the water is brackish and unpleasant to the taste. By letting it stand all night in an *oja* or earthen jar we found it much improved. My impression is, that the water generally in the sandy regions of Lower California, though abounding in saline matter, is not unwholesome. At least it did not disagree with any of our party.

The pack animals were somewhat jaded after the journey of the last ten days, and needed rest and food. With the utmost care in packing, such was the roughness of the road, their backs were badly galled—a trouble, however, that did not give our *vaqueros* much concern. Packers are proverbially cruel in all Mexican countries, and ours were not an exception.

Accompanied by the principal members of the party, I rode down to the beach nearly op-

posite the northern end of the Island of Marguerita, on the morning after our arrival at the Salado. Soon after leaving the arroya we struck into a sand-desert, covered with a tangled growth of cactus, through which it is difficult to travel without being pierced with thorns. The hummocks of sand near the beach mark the proximity of the bay. Some miles before we reached these prominent beach-marks we descried the tapering spars of two whale-ships that lay at anchor about three miles from the shore. Sand-bars extend out for over a mile, and there is no good anchorage nearer.

We found nothing on the shore save an old leathern vat for straining oil, and the carcass of a whale, over which myriads of buzzards were hovering. The air was heavily laden with the stench. Two or three half-breeds, who contrive to live in some mysterious way, were lazily reclining under the bushes, as if time and business were matters of no concern to them.

There was no water to be had nearer than the Salado, except on board the whale-ships. We had failed to provide ourselves with a sufficient supply, thinking we would have no difficulty in procuring some here; but were chagrined to find that there was not a drop to be had without begging it from these poor fellows, who, however, generously shared with us the contents of their *botas* or leathern bottles.

The first sight of the bay was very impressive. Such a magnificent sheet of water is seldom to be seen. The distant shores were scarcely visible, looking almost like low clouds on the horizon. The waters of the bay were beautifully blue and clear, and nothing could exceed the purity and softness of the atmosphere.

Our men, some of whom were practiced in the business of shell-fishing, went to work on the beach, and very soon dug up a very fine feast of clams. Cart-loads of them can be had in a few hours. While some of the members of the party were amusing themselves in this way, others of us ascended one of the sand-hills and hoisted signals on some poles which we

RANCH OF THE SALADO.

THE DEAD WHALE.

found there. These we waved to and fro, hoping the people on the vessels would send their boats ashore for us. Finding they paid no attention to our signs, we got up our animals and all rode to the top of the hill, and then taking off our coats tied them to the poles over our handkerchiefs, and made such a display as we supposed would attract their attention. For three or four hours we waved our signals with indefatigable industry, but no boat appeared.

We were about to give up in despair when we discovered six boats under the lee of Marguerita Island, all in a row, with their sails set,

evidently towing in a whale. The wind blew fresh, and they stood in for the nearest ship, which they gained in about one hour after we first saw them. The two captains, as soon as they perceived us, came ashore in one of the boats, supposing us to be a party of native Californians who had promised them some beef cattle from the interior. They manifested great surprise and some trepidation when they landed on the beach and discovered that we were strangers, rather better dressed than the people of the country.

Rumors of a piratical party under the adven-

DIGGING OLAMS.

turer D'Artois had reached them from Cape St. Lucas, and they had a suspicion that a raid upon their ships was intended, though they could not conceive any rational ground for such conduct against the property of a nation friendly to the Liberal cause. Finding we were not the D'Artois party, they were equally disturbed by a suspicion that we had come over from La Paz with a commission from Governor Pedrin to levy a contribution upon them for fishing in the waters of the bay, it being understood that a privilege of that sort had been given to a prominent citizen of La Paz. Naturally enough they were greatly rejoiced when they found that we had no designs upon them further than to ask their assistance in making a reconnoissance of the Bay.

I had hoped to be able to purchase a whale-boat here and fit it out with a crew of natives; but such a thing was quite impracticable. One or two crazy little yawls, cast off by some whale-ship, comprised all we could get any tidings of, and they were said to be forty or fifty miles up the bay. At all events we could see nothing of them.

Captain Hathaway, who commanded one of the whaling vessels, had visited the Bay of Magdalena during twelve successive seasons, and was thoroughly acquainted with every lagoon and inlet, as well as with the shores all around as far as ship or boat navigation extended. From him I received a most discouraging account of the prospect. He said he had read newspaper accounts of the project of colonizing this country, and expressed great surprise that

people should be so deceived. He regretted that the whaling season up to this date had proved so unpropitious as to make it difficult for him to spare a boat or crew; but he would do all in his power to facilitate our exploration, which he thought would be a good thing for the public, as it would furnish reliable information respecting the resources of the country. It was too late that afternoon to make any definite arrangements for a boat and crew, so I made an appointment to meet Captains Hathaway and Davis at the beach next morning.

As it was highly important that Mr. Gabb should not be delayed in his inland reconnoissance beyond the time necessary to recruit the animals, I so arranged it that our party should divide at the Salado. Mr. Gabb, Dr. Löhr, Cornelius Ironmonger, the cook and snake-charmer, Jesus Carillo the guide, and Manuel the vaquero were to remain in camp until Monday—this being Saturday. They were provided with five saddle-mules, four pack-mules, and a horse. I was very sorry that I had been disappointed in procuring a larger number of animals; but the truth is, we had been deceived at every point. Mr. Gabb and his party, having taken a look at the Bay, remained in camp to complete their preparations for the inland journey, which I confess was sufficiently formidable to occasion me much solicitude. I had great confidence, however, in the energy and endurance of every member of the party.

One of the most important objects of the reconnoissance was to ascertain with as much particularity as possible the feasibility of establish-

DIGGING FOR WATER

EXPLORING MAGDALENA BAY.

ing a colony on the shores of Magdalena Bay. I therefore deemed it the best disposition of the limited means at my command to take charge of this duty myself, as it involved no special scientific knowledge.

On Sunday morning, January 28, Dr. Wiss and myself parted from our friends, and started for the beach according to appointment. We took nothing with us but our riding animals, our blankets, and Manuel, the Doctor's mozo. Captains Hathaway and Davis met us at the hour agreed upon. They had consulted together during our absence, and being very desirous of promoting our enterprise, it was agreed that Captain Davis should fit out a spare boat for us, and make the trip with us in person.

It was a pleasant surprise to find that my whaling experience in early life had formed a bond of sympathy between the good Captain and myself, which made him doubly a friend. He knew most of my old shipmates, and we enjoyed some pleasant hours talking over old times and mutual friends. I had every reason to believe that the information he gave me was reliable. He had during the past twelve years explored the shores of the Bay, and he represented them as being destitute of wood, except a stunted growth of mangrove, mesquit, gum-tree, and cactus, and presenting every where the same desolate appearance. There was nowhere, to his knowledge, a running stream on the main land, and only one sickly little spring on the Island of Marguerita, of which the water was too brackish to sustain life for any great

length of time. He had taken thirty barrels of it on board, and I could judge for myself. None of the crew could use it, except for washing, and it was not even good for that. I tasted this water and found it very bad. Almost anywhere along the beach brackish water could be had by digging six or eight feet in the sand. Cattle were supplied by making a kind of slope down to the well, which it was customary to protect by means of posts and brush-wood. During his numerous boat-cruises in search of whales, Captain Hathaway had touched upon nearly every part of the shore, up to the head of the great lagoon. Every acre of it was familiar to him. I could not hope in a month or six months to obtain such a thorough knowledge of it as he possessed, for he knew every spit and hummock, and necessity had compelled him to seek out the watering-places. The whole country, by his account, was utterly worthless for agricultural purposes. He did not know of a single patch of land that would support a colony of Americans. Chinamen might live on clams and oysters or other marine productions; but it was not a place for white men.

Near the head of the great lagoon there was a small patch of land which presented a better appearance than the generality of the shores, but it was occupied by some native rancheros. There was an extensive mesa, also, which might be made available for a colony of Chinese by means of wells and irrigation by hand-labor or wind-mills. At a few other points, where cactus and mesquit were abundant, and bunch-

grass grew among the sand-hills, there was tolerable grazing for cattle, and at one of these a Frenchman had carried on a ranch in former years for the purpose of supplying whale-ships with fresh beef. Poisonous weeds, insects, excessive heat, and lack of water killed more cattle than he could sell, and he finally abandoned the enterprise.

At 5 A.M. of the following morning Captain Davis, Dr. Wiss, and myself started in one of the whale-boats, according to agreement, to explore the Bay. We had a stout crew of Kanakas, with an American boat-steerer, all stalwart fellows and hardy seamen. The boat was well provided with water and provisions for a cruise of two or three days, and we had lances, harpoons, and a whaling-gun, in order that we should not miss a chance of killing a whale.

Our course at first was over to Marguerita Island, the shores of which we coasted for about fifteen miles. It is very rocky and abrupt, with a deep anchorage a stone's-throw from the land. A sloping mesa extends inland to the foot of the hills, cut up here and there with deep arroyas, of a sandy and gravelly formation, well covered with bunch-grass, cactus, and wild flowers.

At a point about eight miles from the heads we landed and took a ramble a short distance back toward the hills. The crew meantime went to fishing for oysters and lobsters, of which they took a sufficient quantity in less than an hour to afford us an abundant meal. The oysters are small, but of good flavor; the lobsters very large and fine. The men caught the latter by wading in among the rocks and pinning

them to the ground by means of forked sticks till they could get a secure hold upon their backs, when they tossed them out on the land. Great quantities of beautifully colored shells lie along the beach, sometimes in piles of several feet, drifted up by the surf. They are mostly dead, and much worn by attrition. Some curious coral formations, honey-combed and exquisitely colored, may also be found here. The variety of sea-weeds is wonderful. In many places the beach presents the appearance of a flower-garden.

Proceeding close along the shore, some two or three miles toward the heads, we came to a plateau or mesa, apparently formed by nature as a site for a town. I was charmed with the picturesque beauty of this spot. It is sheltered by the headlands and surrounding hills from the prevailing winds; the water by the shore is deep, calm, and clear; scarcely a breath of air ruffled the surface. In short, a more lovely spot it would be difficult to find any where. Like all the shores, however, the appearance from the water is deceptive. The verdure, which at a distance conveys the idea of green pastures and luxuriant gardens, proves upon a nearer approach to be nothing but chaparral and cactus.

We went ashore at this promising spot and spent several hours exploring the country. The soil is a decomposed granite, and would doubtless be productive if there was water for irrigation. Traces of a torrent from the adjacent mountains, cutting through an arroya, gave evidence that in by-gone years there was no de-

CATCHING LOBSTERS.

fiency of rain. Until within two weeks of our visit, however, it was said by the people near the bay that rain had not visited this region for fourteen years. Owing to the formation of the mountains, when it does come it sweeps every thing before it.

The extent of the mesa, or town-site as we called it, is about two miles in depth by three in width. Probably a better point could not be selected as a naval dépôt. The supply of wood, however, is small, consisting entirely of cactus and scraggy bushes. Water doubtless could be had by digging wells, but from the indications we judged it would require an excavation of fifty feet to reach it. I regretted that our time was so limited and our implements so inadequate as to preclude an absolute test. By digging in the bottom of an arroya with a spade we reached brackish water at the depth of a few feet. Three miles back in the cañon is situated the spring referred to by Torquemada, from which Captain Hathaway filled his casks. As already stated the water is too brackish for use, except in cases of great extremity. Flowing as it does out of the rocks, and having no immediate connection with the sea, this is somewhat singular. My impression is the island must contain, deep within the body of the mountains, rock-salt or other saline deposits. Nothing of the kind, however, has been found upon the surface.

I am inclined to the opinion that Marguerita contains copper ore, but whether in paying quantities or not can only be determined by practical working. Nothing like a regular ledge has yet been discovered. Pyrites of iron have also been found. An amusing instance of ignorance and credulity is related of one of the whaling captains who visited the bay about the time of the gold fever in Upper California. He was out one day exploring the interior of the island in search of water. Coming upon some croppings containing iron pyrites he supposed it to be gold, and in great excitement carried down a lot of it to his crew. "Boys," said he, "we have been whaling long enough. Here is gold for us all, and for the owners too. For my part, I am done with blubber-hunting. What do you say? Shall we ship a cargo of ore and go home rich, or spend the rest of our lives catching whales and trying out oil?" The crew to a man were clamorous for the gold. Overboard went the oil, and all hands went to work loading the vessel with the golden treasures of the island. About the time the ship was laden down to the water's edge a practical miner from La Paz, hearing of the excitement, came over, and dashed the hopes of the deluded fortune-hunters by pronouncing the ore utterly worthless. An assay was made which confirmed his judgment, and the unlucky party had to go to work again catching whales—wiser if not happier men. I had some thought of proposing a name for the town-site—"Grijalva"—in honor of the first Spanish navigator who visited the Peninsula. Should the requirements of com-

merce ever render this an important rendezvous for vessels, it will be a matter of interest to know where a dépôt can be advantageously located. That it can never be available for any thing more than a dépôt is sufficiently evident. The island neither produces nor affords facilities for the production of supplies. Fuel and provisions would have to be imported. The town-site is beautifully situated, but possesses no natural resources.

Leaving Marguerita Island, we hoisted our sail and started across for Man-of-War Bay, which we passed sufficiently near to get a good idea of its general aspect and character. Sir Edward Belcher and other competent authorities speak well of this locality as a rendezvous for vessels.

The beach is sloping and gravelly, with a hilly range behind, intervening between the port and the ocean. Whalers lie at anchor here for weeks at a time during the season; and it is considered an excellent place for vessels to touch at on their way up or down the coast, being convenient to the heads and well sheltered from the prevailing winds. Fresh water can be had by digging wells a short distance from the beach. A barrel placed in a hole soon fills, and the water is comparatively good.

As Captain Davis's time was limited, and I desired to see as much as possible during our cruise, I did not deem it advisable to make a landing here. Accordingly we steered across for the main land, well up toward the extremity of the great bay. Although we ran seven knots an hour, it took us till late in the afternoon to reach it, making about twenty-eight miles from the island. A heavy surf broke upon the beach, rendering it somewhat difficult to land. Our Kanaka crew, however, understood this sort of business, so that we disembarked without any great inconvenience. Getting into the boat again afterward was rather more hazardous, though it cost us nothing more than a ducking in the surf.

The coast upon which we landed is desolate beyond description; nothing in view but desert sand-hills, with patches of mangrove, mesquit, bunch-grass, and cactus. A magnificent evening sky constituted the sole charm of the scene. I climbed several of the highest points, and could see nothing on any side but a vast stretch of desert, the dreary monotony of which was scarcely relieved by occasional elevations of bare sand, swept into billowy hummocks, like an angry sand-ocean suddenly paralyzed. For a sweep of many miles the same fearful monotony prevails; no living thing disturbs the silence; the stillness of death reigns supreme.

Captain Davis, who had explored every nook and inlet of these waters, told us this was a fair average of the entire bay shore, the only exception being small patches of lagoon, where there is a growth of rushes and mangrove that look fertile by comparison.

In the sand-hills there are spots of green weeds, where it is said good water can be had

GATHERING OYSTERS FROM THE MANGROVES.

by digging wells to the depth of six or eight feet. We dug in some of the dry lagoons and got water at the depth of three feet; but the sand was black and foul, and the water was too brackish for use. Captain Davis pointed out a spot to us where he had procured drinkable water during one of his cruises.

It did not seem to me that the most important question was as to the supply of water for drinking purposes. Sufficient can be had at almost any point by the usual process of digging.

The great consideration, in my mind, was as to the value of the water for any purposes of colonization, on an extensive scale, when found. People, it is true, must have water to drink, but they require something else as well.

There is no back country here to make settlement by Americans or Europeans an object; no interior trade to be supplied, or to furnish traffic for a colony; no land suitable for cultivation or grazing; no wood of any value for lumber or fuel; no mineral deposits within a large circuit of country; no reasonable hope to be derived from recent or earlier explorations that any thing valuable remains to be discovered. It is a country almost entirely destitute of resources. Water is not the only desideratum.

Coasting along the shore for about twenty miles, we came to a low island covered with mangroves, between which and the main we found a channel. The most prominent object of curiosity observable on the island is that the shrubs, instead of fruit, bear oysters. One naturally smiles at the idea of oysters growing on bushes, but it is true nevertheless. Attaching themselves to the branches at high-tide, they form a kind of excrescence, and there remain till their necessities prompt them to emigrate. Boat-loads of a very excellent species can be gathered in a short time.

As it was getting late, and the country presented still an aspect of unbroken sterility, we hauled around a point of land and pulled up our boat in a little cove for the night. Fuel

was scarce, but we succeeded in getting enough of drift-wood on the beach to serve us as material for a good fire, which was very pleasant, as the night air was sharp, and not much protection was afforded by the sand-hills against the wind. Captain Davis, by means of the oars and sails, constructed a tolerably comfortable tent, in which we slept soundly till morning.

At an early hour we renewed our reconnoissance of the shore. It was all, or nearly all, the same desert and cactus as far as the eye could reach. There was not a single spot visible that gave the least promise of fertility.

Numerous "schools" of killers and porpoises sported around the boat. Our men kept a sharp look-out for cow whales, but none came in sight. There was a time, the Captain told us, when he could not have sailed a quarter the distance without encountering scores of them. Of late they were getting "scary," and it was something of an achievement to capture two or three in a month. The wind dying away soon after sunrise, our crew had to pull the rest of the way back to the vessel.

I did not deem it necessary, with my limited means of observation, to make a more detailed exploration of the bay. Government vessels had spent months here, with all the advantages of ample time and the best scientific aid, and it would have been presumption in me to suppose I could make a more thorough survey in a common whale-boat, and without assistance, even could I have devoted many more months to the duty.

All the testimony I could gather from early and recent authorities, from the whaling captains, and from the native Californians, satisfied me it would be time misspent; and the conclusion I came to was, that Magdalena Bay affords no suitable location for the nucleus of a colony of civilized people.

The fisheries do not now furnish any inducements for the investment of capital which did not exist with much greater force during the past fifteen years. If money could be made

there the enterprising speculators of San Francisco would not be long ignorant of the fact. Whales are becoming scarce, so much so, indeed, as to render their pursuit no longer profitable. When it was first discovered that the bay abounded in cow whales during the months of January and February vessels flocked in from San Francisco and the Sandwich Islands, and soon filled their casks with oil; but of late the fishery has presented but few attractions to whalers, and is now nearly abandoned. The two vessels commanded by Captains Hathaway and Davis had only taken two whales up to the date of our visit, though they had scoured the waters of the bay for two months.

It is a mere chance whether a sufficient quantity of oil can be obtained during the entire season to defray the expenses of detention. In short, it is generally after a season in the Arctic, and for want of a more convenient place of sojourn while awaiting the opening of the north seas, that whale-ships now resort to this locality.

These facts, however, do not materially affect any privileges contained in the Company's grant. The colonists are merely required to subject themselves to the provisions of law in relation to the fishing of whales and seals, in common with others who may engage in the business. It would be difficult and expensive to maintain exclusive privileges in an isolated region like this. Neither the government of Mexico nor the territorial government of Lower California has yet attempted it, though the bay has been frequented by American whalers for many years.

Of the varieties of fish that inhabit these waters detailed notes are given elsewhere. Rock, cod, sturgeon, mullet, bonitos, lobsters, and oysters are found in great abundance. To Chinese fishermen these would furnish an inexhaustible source of subsistence. The climate is too warm for the kind of fish most valuable to commerce, such as are found on the coast of Russian America and in northern latitudes. At

all events fishing enterprises have been attempted on this bay without success, but whether their failure is to be attributed to mismanagement or the warmth of the climate I am unable to say. So far there has been no restriction upon enterprises of this kind in any of the bays of Lower California.

I have arrived at these conclusions as to the unpromising character of this region with considerable reluctance. It would be more consistent with my wishes to give an encouraging account of the resources of the country. But of what avail would any misrepresentation be, excluding all considerations of propriety? Sooner or later the truth could not fail to be known, and I should regard it as a great wrong to the public to make any statements or draw any conclusions not warranted by the facts. Any expenditure of capital, which could not but result in loss, would occasion disappointment.

None can deny the salubrity of the climate, or the great extent of the bay; but these alone can not be regarded as reasonable grounds for making it a place of settlement for Americans or Europeans. As before stated, a limited colony of Chinese might live upon the fisheries, or cultivate small patches of the desert plains by means of hand-irrigation. There is nothing upon which any considerable population could subsist, except what they could gather out of the sea, or procure at great expense from more favored parts of the world. The plain near the head of the lagoon might be irrigated by wind-mills, and thus rendered to some extent productive. As a stopping-place for vessels bound up and down the coast, it is probably not so convenient as Cape St. Lucas. The anchorage is more secure, and that is the only advantage.

A large tract of the main is covered by the so-called Limantour grant, as may be seen by reference to Flouroy's map. Similar grants, at other points, appear on the same map. The probability is these grants have no existence in fact. It is said Limantour never complied with any of the colonization laws, and has no claim

OUR CAMP ON THE ISLAND.

A THORNY PATH.

upon the Mexican government for this pretended cession of territory. It will be remembered that this man, Limantour, some years since claimed nearly the whole city of San Francisco, and all the adjacent military resources. After years of litigation the courts decided the claim to be fraudulent, and supported by forged testimony. Doubtless Limantour imagined that he had a territorial acquisition here which would give him less trouble, inasmuch as there would probably be less contention about it.

On our return to the whale-ships we signified our desire to be put ashore. Captains Hathaway and Davis gave us a pressing invitation to stay; but they were boiling out oil, and neither the smoke nor the smell of the blubber had any fascinations for my friend, Dr. Wiss. It reminded me of my early sea-life, though I can not say the past or present experience was pleasant. The worthy captains accordingly put us ashore, with our rolls of blankets and extra clothing.

The Doctor's mozo, Manuel, was not expected till next day with the horses and pack-mule. We were two leagues from camp, without water, and with packs weighing forty pounds each. What were we to do? If we left the packs they might be stolen by some prowling vaquero; if we remained with them we would suffer from thirst, and after all have to go back on board the whale-ships—an alternative not to be for a moment entertained. So, after some consultation, we shouldered our packs and started on, in

the broiling afternoon sun, for our camp at the Salado. It was the hardest walk I ever undertook. The sand was deep, the cactus thorny, the load heavy, and the labor unprofitable in every point of view. However, we made camp in about three hours, where a prescription of native rum from the Doctor's saddle-bags revived us.

Professor Gabb and his party had taken their departure according to agreement. The camp looked lonely without them. I missed the familiar faces around the evening fire, but felt especially depressed at the absence of Ironmonger's extravagant snake-stories.

Our animals were much refreshed after their long rest. Next day, in good time, we started for the Rancho Colorado. Under the guidance of a Mexican from the Salado we cut off some bends by taking a new trail. The guide left us too soon, and it was a miracle we ever reached our destination. For nearly an hour we were lost in the dark on a rocky mesa, with deep arroyas, impenetrable jungles of cactus, and gaping fissures in the earth. One might as well be lost on the desert of Sahara as in this country. There is no cutting across to the recognized land-marks. Many a traveler has perished of thirst in plain sight of a familiar mountain. It is inconceivable the difficulty of getting through the complicated masses of thorny shrubs and cactus by which the whole face of the country is overlaid.

A Portuguese sailor, who had run away from

a whaling vessel, was picked up in a dying condition a few months ago, twelve miles from the Salado. The Mexicans, with unerring instinct, had followed his course over the mesa, and although he left no footprints on the hard, gravelly parts of the desert, they knew by breaks in the cactus when and in what direction he had passed. This was one of the suggestive incidents we had to reflect upon as we floundered about among the rocks and thorns. The barking of a dog at no great distance gave us a clue to the direction of the ranch, which we soon after reached amidst a general barking and howling of all the mongrel dogs possible to be found at a Mexican ranch.

Next day we made but nine miles to San Hilario, where we stopped to enjoy the hospitality of a famous old Portuguese sailor who lives here. This ranch contains about twenty acres of arable land, well watered by a spring. It is situated in a wild-looking arroyo, surrounded by broken mesas.

There is a gradual ascent all the way from Magdalena to the summit of the mesa, or series of mesas, the greatest altitude of which lies nearest to the Gulf shore. The pass over which

the trail goes is about eighteen hundred feet. Some of the peaks probably exceed two thousand. The formation is evidently of recent date, and shows no signs of valuable mineral deposits. Occasional indications of the presence of iron are seen. There is no back-bone or range of mountains of an older formation, corresponding with the Cacachilla and Triunfo range farther south, to show continuity. All the evidence presented in the sedimentary character of the mesa tends to strengthen the conclusion that the southern part of the Peninsula, lying within the angle formed by La Paz, Cape St. Lucas, and Todos Santos, was at no very remote geological period an island; so that the old Spaniards were not so far wrong as might be supposed. Their error was merely in the matter of date. The "Island of California" in all probability did exist since the formation of the Pacific coast, but whether a thousand or six thousand years before the days of Cortéz I leave to geologists to determine.

The summit, or dividing point, afforded a magnificent view of the bay and town of La Paz. On the Gulf side the descent is abrupt. Tier after tier of mesa seems to break short off

RANCHO COLORADO.

at the end, causing fearful gaps and chasms in the earth. Through one of these, after passing the Rancho de los Reyes, we traveled for a distance of ten miles.

The country lying between Magdalena Bay and La Paz is, in general terms, like all we had seen—composed of alternations of rocky mesas and sand-deserts. Water is found at four or five places on the route. No sign of cultivation is any where to be seen, except on a very small scale at the place called San Hilario. The shrubbery is of a heavier growth than on the Todos Santos trail; and altogether this route is much to be preferred, being less than half the distance, and in all respects more pleasant.

We reached La Paz in three days and a half traveling time. Native vaqueros have made it in twenty-four hours without a change of animals; but what they do in the way of hard riding is far above my ambition. Dr. Wiss, a gentleman weighing over two hundred pounds, thought it a very easy undertaking.

At La Paz I had the pleasure of meeting Mr. Jacob P. Leese and Mr. Jerome B. Stillson, the agents of the Lower California Company sent out to take legal possession of the grant. They had just arrived from Cape St. Lucas, at which point they had landed from the Panama steamer.

It must be apparent, upon a perusal of these sketches, that there are obstacles to the colonization of Lower California. The configuration of the country is such as to preclude the existence of any considerable quantity of arable land. It has been well described in Findlay's Coast Directory as consisting of

"Groups of bare rocks divided by ravines and hills, intersected with tracts of sandy soil nearly as unproductive as the rocks themselves. There are but very few streams, as must be evident from the fact of the mountainous ridge which occupies nearly the whole of the surface; but this again leads to the formation of torrents in the wet season, which wash away all portions of earth which might otherwise become fertile and productive. In some few places there are small valleys, not subject to these drawbacks, which exhibit great fertility. From these causes Lower California is one of the most barren and unattractive regions of the temperate zone. . . . There is seldom rain in summer north of Loreto. . . . The general aspect of the country is horrible. The imagination can not conceive any thing more naked, more desolate."

Professor Gabb's report demonstrates an important fact hitherto unknown, viz., that northwesterly from a line extending obliquely across the Peninsula from the port of La Paz to Todos Santos, for a distance of three hundred miles, the geological formation is recent. The whole country within these is a broken mesa, gradually rising from the Pacific in steppes or slopes till it attains its highest altitude, which generally lies within twenty miles of the Gulf shore. The elevation of the main ridge is sometimes so great as to lead to the error of confounding it with the Sierra Nevada range of mountains, of which it is supposed by many to be a continuation. That no precious metals exist in any great quantity within the limits of this sed-

imentary tract is more than probable. To the southward, in the Triunfo, San Antonio, and Cacachilla districts, there are valuable silver-bearing lodes, though as yet but few of them have paid the expenses of working. The "Sauce Mine," near Loreto, about which so much has been said of late, was visited not long since by Professor Ashburner, of the State Geological Survey, who reported unfavorably as to its value. The mine is now closed. Mr. Gabb was not permitted to see it; and the inference is, it will not now bear inspection better than it did when visited by Professor Ashburner.

Respecting the advantages of the Peninsula for railroad enterprises, it would be an exceedingly difficult and expensive country to grade, at any point between the Gulf and the Pacific south of Mulege. Between Mulege and Batteñas Bay a tunnel would be required through the principal ridge of mountains. Batteñas Bay is not a suitable place for a dépôt or terminus. The entrance is narrow and difficult for vessels of suitable capacity. The most feasible route discovered by Mr. Gabb, and that which in all respects presents the greatest advantages, is from a point nearly opposite the Guardian Angel Island to the Bay of San Bartolo, or some point lying between Elida Island, Cerros, and Point St. Eugenia. The country between the Gulf and the Pacific is comparatively low in this latitude—a series of mesas and arroyas extending nearly all the way across. Detailed observations on this route are given by Mr. Gabb in his official report.

The Southern Atlantic and Pacific railroad routes, surveyed by the United States, and projected by private companies, have been numerous. It is thought by many that Guaymas would be the best point for the terminus. Major Ferguson, in a valuable report, speaks favorably of Libertad. Allata, farther south, on the Mexican shore of the Gulf, presents advantages in being more accessible to vessels from the outside, by way of Cape St. Lucas.

The passage across the Gulf would involve the establishment of a steamship line capable of withstanding heavy gales, and the shipment and transportation of freight to a Peninsular dépôt on the eastern side; its transportation by railway across to the western dépôt, and reshipment to San Francisco. This would probably be too expensive for any but very valuable freight. The development of the northern States of Mexico, under a change of population, may become such as to render the saving of time more important than it is now, but the trade of Sonora and Cinaloa offers no inducements at present for so extensive and costly an undertaking. These States, however, are extremely rich in agricultural and mineral lands, and their acquisition by the United States would soon lead to a development of their resources.

A southern route, terminating at some point on the Gulf, would undoubtedly follow in a very short time the cession to our government of the northern States of Mexico.

There are difficulties connected with the proposed routes through Arizona to Upper California not yet fully appreciated, and the effect of which will be to concentrate attention on a Gulf terminus. The deserts lying between Colorado and the coast range are subject to shifting sands and overflows, which would render the construction of a railroad across to San Diego or Los Angeles, from any point on the Colorado, an expensive and hazardous undertaking.

Notwithstanding these views, I regard the question of the acquisition of Lower California by the United States as one of great importance.

This Peninsula commands the Gulf, the adjacent shores of Mexico, and the mouth of the Colorado. Its geographical position gives it a value, in a national point of view, to which its intrinsic resources can never entitle it. Combined with the acquisition of Cinaloa, Sonora, and Chihuahua, it would be not only of the greatest importance to commerce and navigation, but absolutely essential to our naval and military defenses. A strip of foreign territory could not be suffered to exist directly in front of our own possessions.

The State of Cinaloa and portions of the States of Sonora and Chihuahua are unquestionably rich in precious metals. Baron Humboldt and Mr. Ward, the standard authorities on the mineral resources of Mexico, refer to the mines of these States as among the richest in the world. In Cinaloa there are extensive tracts of land suitable for the cultivation of cotton and sugar-cane on a large scale; in Chihuahua there are forests of timber and extensive grazing ranges, with a reasonable quantity of land suitable for agriculture; in Sonora—especially on the Yaqui River—there are valuable tracts of stock-raising and arable land—all in addition to their known mineral resources.

So far as the navigation of the Colorado is concerned, I am inclined to doubt the practicability of improving it to any considerable extent. The following table of distances will show what is generally regarded as the navigable portion of the river:

	Miles by water.
From Port Isabel to Fort Yuma.....	240
From Fort Yuma to La Paz (by land 120 m.)..	170
From La Paz to Aubrey City.....	90
From Aubrey City to Hardyville.....	90
From Hardyville to El Dorado Cañon.....	70
From El Dorado Cañon to Callville.....	60
Total miles by water.....	720

The banks of the Colorado, with the exception of a few points where the river cuts through the mountains, consist of sand and alluvial soil washed down from its tributary sources.

During the greater part of the year there are

but 22 inches of water in the channel between Fort Yuma and La Paz; and higher up the navigation is still more difficult.

I made the trip from Fort Mojave to Fort Yuma, a distance of 300 miles, on board the *Cocopah*, commanded by Captain Robinson, pilot to the Ives expedition. It required nine days to travel that distance in an empty boat. The up trip to the fort, with fifty tons of barley, occupied about two months. The fact is there is no permanent channel in the river, and no amount of money can make one, so constantly are the banks breaking down and the course of the river shifting. For all the purposes of commerce it is practically unnavigable for at least six months in the year. The statements in the newspapers to the effect that Callville is the head of navigation and the great future dépôt for the supply of freight to Utah and the adjacent Territories are intended for speculative purposes. Small boats have been forced through the cañons above Fort Mojave, but on the same principle they could be driven over the Sierra Nevada Mountains. It is all a question of expense and locomotive power.

La Paz is probably as high as it will ever pay to carry freight during the months of low water in the Colorado.

I state these facts partly from my own knowledge and partly on reliable information obtained from others. I made two visits to Arizona, and saw something of the Colorado and the Gila during the winter season, when these rivers are at their lowest stage. The Gila is unnavigable at any stage of water, in a commercial point of view; the Colorado is unnavigable six months in the year. The importance, therefore, to be attached to the Colorado as a navigable stream must be taken with these deductions.

And now, reader, you have had a candid and unprejudiced account of my visit to Lower California. I have neither exaggerated nor depreciated the resources of the country. It is possible I may be mistaken on many points; but I feel conscious of having stated nothing calculated to produce a false impression.

I should be very glad to be the humble instrument of promoting, even in a degree, the acquisition to the United States of Lower California. It would be, in many points of view, a valuable addition to our territory on the Pacific coast. Russian America and British Columbia on the north, and Lower California on the south, would complete a coast-line without parallel in the territorial possessions of the nations of the world. But with this grand object, and the magnificent future it reveals, fully impressed upon my mind, I should deem even such an acquisition costly at the expense of truth.

SOUTH-COAST SAUNTERINGS IN ENGLAND.

[Saunter I.]

ON THE DEVONSHIRE COAST, NEAR DAWLISH.

ONE morning, a few months past, I read in the *Times* that the party of exploration to Palestine, for whose expenses the English public had so long been invited to subscribe, had at last sailed; whereat I was exceedingly filled with contempt. When will Englishmen be able to spare time from the tomb and the grave-clothes of the dead Christ to minister to the living Christ—hungry, naked, sick, in prison—who stands with mute appeal on every London street? And when will English students and explorers return from picking straws from fields whose last grain has been gleaned, from exhuming Nineveh and deciphering Herculaneum, to trace in their own country the vestiges of races and temples, of which almost as little is known as if they had lived in the moon? Had Stonehenge only been in Syria, who doubts that it would have long since yielded up that secret which it has held fast through so many ages?

As I questioned thus there appeared before me a venerable personage with long white robe and long white hair and beard, his head wreathed with oak leaves—evidently a Druid—who said, mildly: “The path of the pioneer is West, that of the antiquarian is East: as England explores Syria so shall America explore England.” Wherewith the old man vanished, leaving me to my reflections on this odd apparition.

What these reflections were I need not state: the sum of them was, that next morning an American Exploration Party, consisting of the writer hereof and his portmanteau, started forth to wander through the most ancient and mysterious region of England. In this long saunter—“Saunter,” from *Saint Terre*, is the right word for my pilgrimage through a land once hallowed by the human heart—I followed no prescribed path and took no “Murray;”

and I report only what I myself found interesting, whether it belong to the year eight or eighteen hundred and sixty-eight; and my journey has strengthened a suspicion, received from Kant, that there is much less difference between the two periods than many people imagine.

An engagement to give a lecture at Plymouth led me to take that as a starting-point; and surely there can be none better for an American than the old city which was the last the founders of his country ever saw in the Old World. Within a few rods of the inner haven—now called “The Catwater”—where the *Mayflower* took refuge for a little time, I read before a pleasant literary institution the story of the founding of the other Plymouth across the sea, and tried to show something of what had unfolded from that storm-wafted seed in the course of seven generations. At the close of the lecture a number of persons in the audience asked questions about the United States, relating chiefly to its modern politics and to the war. “Did I think the war was to abolish slavery?” “Did the South or the North hate the negro most?” “Was Fenianism popular in America?” These and other questions like them I answered as well as I could. I found the people generally proud of having accidentally harbored the pilgrims of “New Plymouth,” as they always call their American namesake; but I also felt at every step that among all English towns this was as little likely as any to have had any real connection with the men who were driven to it by stress of weather. There is no monument or trace of them whatever in the town.

I have met with an impression in some parts of America that the sect known as “The Plymouth Brethren,” which did not originate but

gained its first strong-hold here, was something of a Puritan movement, but it is more like the American "Campbellite" Church. I am told that the "Brethren" are very mystical, and their *culte* an extreme worship of the letter. This body has recently split into two parties on some question of interpretation so unimportant that the conflict—so fierce that the members of one side will not speak to the other—is the joke of the place. A gentleman explained to me that one party believed the devil had horns, while the other asserted he was an ass.

The town abounds in handsome residences and terraces, and has a superb garden overlooking the entire harbor and the landscape for miles around called "The Hoe." From this point on a clear day the Eddystone light-house is seen rising like a tall tree out of the sea. When I saw it there was a fine ship on the rocks near its base going to pieces. Around this carcass were hovering a number of boats and yachts, like birds of prey, seeking to save what they could of its cargo. Boat after boat came in laden with wet dry-goods, hams, and the like, and there was a large auction sale of these in the town. The sale was very largely attended by tradesmen and the country people of the neighborhood. A heavier, duller set of people in looks I never saw, and the proceedings of the auction attested the stupidity of their looks. Convinced that every thing was an inevitable bargain, they competed furiously for these damaged goods, of which lot after lot brought more than the same goods could possi-

bly have brought if purchased at the manufactories of Bradford, where most of them were made.

I found the past of Plymouth more interesting than its present, and spent much of my time among the quaint old monuments and tombs in its oldest church. The oldest of these was dated 1583. Many had carved on them figures of the whole families of counts and knights, gaudily painted; they had been often repainted, but always, I was told, after the original colors. Joane Townes, the Mayor's wife, had a tomb, which in its day must have been quite fine; it bore the following inscription:

"O - THAT - MY - WORDS - WERE - NOW - WRITTEN -
OR - GRAVEN - WITH - AN - IRON - PENNE - IN -
LEADE - OR - STONE - TO - CONTINUE - FOR -
I - KNOW - THAT - MY - REDEEMER - LIUETH - AND -
THAT - I - SHALL - RISE - OVT - OF - THE - EART
H - IN - THE - LAST - DAIE - AND - SHALL - BE -
COVERED - AGAINE - WITH - MY - SKINNE -
AND - SHALL - SEE - GOD - IN - MY - FLESH - YEA -
AND - SHALL - MYSELF - BEHOLDE - HIM -
NOT - WITH - OTHER - BVT - WITH - THESE - SAME -
EYES - ANNO - DOMINI - 1589."

Now and then one comes across words on these old English tombs which baffle philology. Can any one say what is the meaning of "newiste" in the following?

"When Death did me assayle
To God thuse did I crye,
Of Jacobs well to newiste my soule
That it might never die."

The black features of negro pages and serv-

THE HOE.

EDDYSTONE LIGHT-HOUSE.

ants are prominent on several of the monuments of the nobility, especially those that belong to the reign of Elizabeth, when the possession of negroes was almost essential to the highest aristocratic position. Mr. George Dawson, one of the finest lecturers in England, has pointed out, in an unpublished essay on Sir Francis Drake, good reasons for believing that in Othello Shakspeare meant to portray a negro. When Drake returned from his famous discovery of the Pacific, Queen Elizabeth, in knighting him, gave him, as a device on his coat of arms, the figure of a Moor, which meant simply a compliment to the then highly respectable business of negro slave-trading; from which Mr. Dawson deduces that in those days there was no distinction between "Moor" and "Negro" in the English mind. Shakspeare, like others, knew of only one race of blacks, *negroes*—popularly called "Moors" or "Blackamoors"—and meant to draw one of these in his tragedy. The allusions in the play to Othello's peculiar heels, lips, and other traits generally ascribed to the Negro, but not to the Moor, give force to this criticism.

Memorials, relics, and monuments of Drake are met with at every turn throughout Devonshire. At Plymouth tradition points out the spot where his five ships weighed anchor on the 13th of December, 1577, for the famous voyage—illuminated by burning Spanish ships—and that at which, two years later, four of those ships, laden with the gold of California, cast anchor again, and Drake stood on a deck where the Queen was proud to visit him, to partake a banquet, and knight him as he knelt there.

At Buckland Abbey, in the neighborhood of Crowndale, where Drake was born, the descendants of the family still reside, and myth is busy in converting it all into a monument of the old navigator, or "wayrier," as the country-folk call him. A tree is shown in the park where the conqueror of the Armada took refuge, by climbing, from an enraged wounded stag. There is an old private chapel, which seems to hint that Drake still practiced Catholic rites under his Protestant Queen. His drum and his banner are preserved. The walls are lined with pictures of the Armada, on one of which is the following inscription:

"Upon the defeat of the Spanish Armada a pasquinade was found on a column at Rome, signifying that the Pope would grant indulgences for a thousand years to any one that would indicate to a certainty what was become of the Spanish fleet; whether it was taken up into heaven, or thrust down into Tartarus; suspended in the air, or floating in the sea."

The world hardly yet knows just what became of that brilliant fleet of 130 ships that hovered on the Channel like a silvery dead-wreath, and the next moment was scattered on every shore of the northern world; it is known, however, that the storms of Nature did far more than Drake toward its destruction. I have reason to believe that the next volume of Mr. Froude's History will give a strange and new chapter on this subject, and will especially reveal the terrible fate which befell the thirty or forty ships which were stranded on the Irish coast. Little as any civilized generation can sympathize with the aims of the Armada, or regret its destruction, the cruelties with which the Irish people themselves plundered and slew every man of them—each a soldier for the faith and cause of Ireland—are unparalleled among atrocities committed by a whole people. Sympathizing, so far as so respectable a word can be used in such a connection, with the object for which these Spaniards sailed, the Irish resolved themselves into a nation of robbers, and dragged their helpless defenders from the waves only to stab and behead them, apparently for sport, for even that was not necessary in order to take their clothing and jewelry.

In front of the noble gates of the Plymouth fortress, or "citadel," the sward is still green where Drake was playing at bowls when told that the Armada was in sight, and, as the legend runs, insisted that the game should be finished first and the Spaniards whipped afterward. Some boys were playing ball on the spot when I saw it. But few at Plymouth, however, knew or remembered, amidst these grand stories, one thing which Drake really did of importance—he devised a scheme, and at a heavy expense to himself carried it out, of supplying Plymouth with pure water by a leat running from Dartmoor, about thirty miles distant.

One may sit here, before this ancient portal between England and the world, and dream the Past over again through many hours—seeing ships as on a mirage of history floating out with

the explorers and traders of the world on board of them—Captain Cook, Hawkins, Drake—and others sailing in, bearing, it may be, the gentle savage Pocahontas, or Sir Walter Raleigh coming back (1617) from his unfortunate expedition to Guiana, to be arrested as he touches the shore. Here was the nest wherein was nursed the maritime strength of England; here she fledged and plumed the sail-wings that were to bear her sceptre through all the world. It is strange to think by what illusions the world is led from age to age, and what fatal realities are concealed under these illusions. Four centuries ago the whole world was impelled by the illusion of a Northwestern passage to spice-laden islands whose streams ran over golden sands. On the rough map made by Columbus there is marked “St. Brandon’s Isle,” which is a memorial of the superstition which helped to keep alive the all-absorbing dream of the age. A great sea-giant, it was believed, had informed St. Brandon of an island in the west made of solid gold set in crystal, and offered to swim to it with a ship in tow; but a storm came on and the giant perished, leaving the navigators to find the golden island as best they could. From this region sailed Cabot until his ship was stopped by land. Up and down he sailed, trying to avoid and sail through this land; but it remained obstinately in front of him. At last, wearied out, he went ashore and brought away with him three wild Indians, whom he presented to King Henry VII., who gave him ten pounds for discovering “the new isle.” The belief that America was an island lived long in England. The Duke of Newcastle, who administered for all North America for the generation preceding the Revolution, added to his impression that Jamaica was somewhere in the Mediterranean Sea this other, and always addressed his dispatches to “the Isle of New England.”

Cabot took his ten pounds from the King and came down here to die at Bristol, a disappointed man. He never forgave the American continent for having been in his way when he was seeking the Northwestern passage. But he was not the only navigator who threw aside with scorn the most important discoveries for the sake of that which did not exist. It was said that the sailors who voyaged with Columbus placed a magnet near his compass so as to divert him from sailing further westward than Cuba; but there is now more reason to believe that his course was warped by the dominant theory. The natives whom he encountered at Cuba told him that due west there was a people who knew many arts; and had he sailed as they pointed we would not now be painfully spelling out, from letters traced in dust, the history of those wonderful civilizations of Peru and Mexico which Columbus would have found at their height. He must also pursue the rainbow with the mythic bag of gold at its end—pursue it to bitter disappointment. What navies were crushed and stranded by that theory!

What brave ships and braver mariners perished through those centuries of illusion! But Nature and Destiny had their own aims, and were busy sending the races of the world to prepare the way for the ages that were to mingle them all in the West into a great human race. Thus they allured the men who were to be moulded into MAN.

Moreover these great voyages were the gymnasium in which Nature was training the sinews of her Anglo-Saxon race for the part it had to play in exploring, colonizing, and afterward emancipating the human race from the despotism and superstition inherited from the far East, whence the elements of it had migrated. I have said that there is little or no historical connection between the Plymouth of the Old and that of the New World; but the philosophical connection is direct. The ship of Drake and the *Mayflower* were really twins; and the larger room for the race physically which one sought in exploring the Pacific, the other sought morally and religiously in its voyage to New England. The *Mayflower* was the natural blossom on that sturdy Saxon stem which ages of adventure and struggle had made strong. Advance Drake into a religious era and he becomes stout Miles Standish.

But if there is a world this side of the brave mariners who made this whole region from Bristol to Plymouth classic, one is reminded at every step that there are worlds anterior to them—a world of savage life, and back of that a world of brute forces. No part of England is so rich in scientific interest as Devonshire. So much every geological student knows who has studied the wealth of the formation called “Devonian,” since Murchison and Sedgwick distinguished that great sandstone from the “Silurian.” This formation, with its treasures of fossil and coral, corresponds to a formation in human knowledge. But the old geologists only went to the threshold of the discoveries which science has since made in this region. The centre of the discoveries to which I now refer is Torquay, and Kent’s Cavern thereat.

Two hours by train, through a pleasant region, bring one across from Plymouth to this beautiful town—as beautiful in its way as Naples, and sitting on its crescent beach much in the same way. Having arrived early in the morning—too early to call on the eminent man to whom the scientific exploration of the cavern has been intrusted, I wandered for some hours about the embowered lanes for which Devonshire suburbs are famous. On one occasion, having walked some distance, forward as I thought, and finding myself close on my starting-point, I remembered an ingenious illustration made by the late Archbishop Whately from an incident in these lanes. A gentleman, he said, riding through the deep and shady Devonshire lanes did not reach the place for which he started so soon as he expected, but saw no one of whom he could inquire the right way; nevertheless the increasing number of

TORQUAY.

horses' tracks encouraged him to believe that he was in a frequented road, and on he went. At length a certain familiarity in the objects around him led to a misgiving; and he soon discovered that he had been riding round and round in a circle, the increasing number of tracks being those of his own horse. The prelate illustrated thus the mental career of those who imagine they are making progress, when they are but vehemently moving in a circle and mistaking their own multiplied tracks for those of the march of Humanity.

Another ingenious story of this neighborhood I heard used in a half-scientific, half religious discussion which occurred in a company during a meeting of the British Association. Some persons having expressed apprehension as to the general skepticism that might follow an unchecked pursuit of certain scientific inquiries, Mr. Froude, the Engineer (brother of the historian), gave the narrative of a man who had lost his way at night among the moors near Torquay. These moors sometimes lead to precipices, and are not free from pits; this the lost traveler knew, and at every step he was in deadly fear of falling into one of these pits. At last his foot slipped downward! He threw up his hands and fortunately grasped the branch of a tree, which extended over the abyss. It was pitch-dark and he could not see the bank from which he had fallen; he swung his feet that way, but no—he could not reach it. Hanging by his straining arms over the pit he shouted for help, but no help came. After struggling

as long as he could, and losing his voice, he resigned himself to the idea of a terrible death, and, his weary hands releasing their hold, he fell! The distance between his feet and the solid ground was just twelve inches. "If people," said Mr. Froude, "would only have less panic, and more faith in truth, they might often find solid ground under them instead of pitfalls."

My reader has, doubtless, by this time perceived that my story is of the cactus kind—one leaf budding into another—and will not be surprised if Mr. Froude's anecdote reminds me that it was in this neighborhood that the very remarkable family of which he is a member was reared. The father of the Froudes—the Venerable R. H. Froude—was Archdeacon of Totnes, and resided, I believe, at Dartmoor. There, at any rate, the historian Anthony Froude was born in 1818. Like nearly all the more thoughtful scholars who were at Oxford twenty-five years ago, he and his brother (now deceased) came under the powerful sway of John Henry Newman, and were High Church enthusiasts. It was at this time that he wrote "The Lives of the English Saints." In 1847 and 1848 there came out those strange books, "The Shadows of the Clouds" and "The Nemesis of Faith," which showed that his mind and heart were but girding themselves for another kind of journey from that on which he had started when he took orders as a deacon with Dr. Newman. When the latter passed into the Church of Rome Anthony's brother went with him, but for the fu-

ture historian it was the crumbling of the last temple in which he had sought refuge, and it left above him only the vault of heaven, within him the dome of reason. There was nothing in him that could make a zealot of any kind; so he gave up his orders and his Oxford fellowship and betook himself to the quiet paths of literature. The Oxonian authorities have never ceased to malign and persecute him for the books he wrote while a student there; he never replies, but pursues patiently his own work. He is nearly connected by marriage with Charles Kingsley, and his home at Brompton, in London, is very dear to the circle of fine spirits—Carlyle, Arnold, Palgrave, Spedding, and others—who are often found around its hospitable fireside. The brother who became a Catholic died. The other brother, civil engineer, has a beautiful home here at Torquay: he is the youngest of the brothers, but is already widely esteemed as a man of science. They are all remarkably handsome; Anthony, especially, is by all odds the handsomest literary man in London.

It is very notable, by-the-way, how in England—and, measurably, in America—genius runs in families: as witness the Napiers, Mackintoshes, Froudes, Newmans, Arnolds, Martineaus, Darwins, Kingsleys. The Kingsleys come from the north of Devonshire. An old family of Cheshire it was, which in the civil wars had suffered more for its adherence to the cause of the Parliament than its most distinguished descendant has suffered from his early Chartist propensities. It was probably, however, rather from his mother than from “the Kingsleys of Kingsley, in the forest of Delamere,” that Charles inherited his noble discontent with the actual, and his impulsive free thought. Mr. Carlyle told me that he remembered visiting the rectory of his father, who was a clergyman, when Charles was but a small lad. He observed then that the dreamy eyes of the mother—a lovely woman—reappeared in the boy, who sat in entire silence during the conversation, evidently drinking in every thing he saw or heard. Carlyle became the hero of Kingsley’s boyhood and youth, as he now is of his fiftieth year: that pillar he followed, when it turned its fiery side, into the land of radicalism, and now he has followed its cloudy side back into the land of bondage. The course of many a gifted young Englishman of these times is to be the historic comment on the tremendous action and reaction of Carlyle’s great brain. The reaction in Charles Kingsley’s case, coincident as it has been with his progress out of poverty to comparative prosperity, has subjected him to many taunts. A popular speaker recently said, “How can we not expect him to smile on the world when the world smiles on him?” My belief is, however, that the change is far more due to his temperament—in which moral timidity is strangely blended with physical pluck. It is a curious commentary that “muscular Christianity” should have for its chief champion a man who trembles like

a leaf before moral opposition. At the outset of his career Kingsley indulged in some heresy while preaching on a certain occasion in London, when some layman arose in the church and invited all who believed the doctrine of the Church to leave the house. Kingsley was much excited, and denounced as a “liar” any one who should charge him with heresy; but he never recovered from this blow, and has hardly ventured to speak his mind since. Of late years he has completely identified England with Justice and (apparently) the Establishment with Truth, and has merged “muscular Christianity” into Carlyle’s worship of Force.

He is far from being a pleasant speaker, his manner being affected and his voice afflicted with a sad stammer; but what he says is always profoundly interesting. Last year he preached to the Volunteers, at their camp near Wimbledon, a discourse about Judah’s lion—the lion being the British lion, and the doctrine an apotheosis of war. He was so much excited at one time, his stammer at the same time damping his utterance, that some feared he would fall into apoplexy. The discourse was powerful; but an old reader of his could not forget how he said in “Alton Locke”—I don’t know how it stands in the expurgated edition—that one of the most inscrutable things on this earth to him is a soldier. There would seem to be in his mind, and his brother Henry’s also, enough or more than enough of sinew, but a lack of bone: what they do and write is not organic, and it must pass away. Many of his warmest friends have tried to hold on to their faith that he would recur to his earlier manliness and his “first love.” Thomas Hughes despaired of him when he found him taking sides with the Confederates during the American War.

But the final blow that has severed him from nearly all of his old comrades was given when, at his inauguration as Professor of History at Cambridge, he made a formal retraction of the reformatory sentiments of his books; declaring that he regretted them, and that hereafter he meant to follow the views of older and wiser thinkers than himself. Many of those present, who had been most instrumental in securing him the professorship, hung their heads in shame; and one of his most intimate acquaintances told me that it was the saddest scene he ever witnessed. It is understood that he is now ambitious for promotion in the Church, and willing to sacrifice any thing for it. He is impressed with a belief that his only obstacle in that direction is the heresies promulgated in his works; but the advancement of Dean Stanley—who is a pure rationalist—shows that such is not the case. Heresy is rather popular just now with the ruling powers of the Establishment. The fact is, that Mr. Kingsley has not the elements of popularity, nor the suavity of manner which attain such positions; and the only pity is that he should not be content to stand by his own nature and heart and reach the honors, and ulti-

LONDON BRIDGE.

mately the homage, which the gifted and true in England are sure to win from their peers. What a strange chapter in the next "Curiosities of Literature" his career as a writer will make! He began with the palpitations of living England; with stories of Chartism, and the "Yeast" leavening Church and State; then he went backward, to old English mariners, to Hypatia and ancient Alexandria, and now he has got so far away from the great heart of to-day that he is engaged translating the very foolish life of St. Anthony, as recorded by Athanasius!

"Blot out his name then! Record one lost soul more;
One task more declined, one more foot-path untrod."

LAND'S END.

It would be difficult to imagine any thing more excitingly beautiful than the cliffs and rocks about Torbay. The water and the elements have carved them in such strange, almost artistic designs, that one can readily imagine how the early dwellers hereabout should have thought it some watering-place for the gods of Walhalla, after whose chief it was named Thor's-bay. Now there is a neatly-formed bridge, and again there is a brow called "Land's End," which looks as if Mr. Bull's head, with two horns, had set itself to confront the country across the channel for evermore. At another moment the wanderer may find himself gazing

DADDY'S HOLE.

afar, with his feet perilously close to some bottomless chasm—of which one called “Daddy’s Hole” is the most remarkable. There is a very striking correspondence between the earliest towers and castles throughout this region and the massive, solemn crags and rocks of the coast. They were plainly built in ages and by men with whom life was as serious and vigorous as the ancient forces that carved the rocks. We repeat now the brackets and turrets and openings in the spires of our churches, for their beauty simply; but those who first built them built for emergencies, and arranged for cross-bows, for hurling rocks on enemies. The fair ladies prayed for their lords and brothers, their retainers and their cause, at the shrines beneath; while those for whom they prayed stood upon their towers for watch or for defense. The forces amidst which they lived—the struggles of races, of clans, of religions—were also of Nature, and she now gently adopts their monuments and twines her green ivies and mosses about them, and sheds on them the tints of many-colored lichens and gayer blooms.

Having strolled about Torquay for some hours I proceeded to find out the Representative Man of Kent’s Cavern, the geologist Pengelly, for the purpose of visiting under his guidance that now famous hole. The explorations of it are considered so important to Science that in order to escape all possibility of “sham fossils” the public are excluded, and no one can see the workmen, who are engaged in excavations from morning until night, except in the presence of Mr. Pengelly. The general public has little reason

MR. PENGELLY.

to regret this exclusion, for a more uninteresting hole, so far as beauty is concerned, can hardly be imagined. The public, however, has its own views about the cavern, and the rigidly orthodox have an impression—derived possibly from the constant reference to it by those who discredit the Mosaic Cosmogony—that it is a by-way to a certain very warm and unmentionable place. The legend as to its name is, that a traveler went in there with his dog; the traveler was never again heard of, but the dog was found in a weak condition in the county of Kent, about 170 miles distance. (The utmost extent of the cavern is 600 feet.) When I visited Mr. Pengelly I found him in great glee over the important “find” he had just made—the most important perhaps ever made bearing on the antiquity of man—namely, the jaw-bone of a human being in the same bed with the bones of the red deer, bear, rhinoceros, and other animals of species long extinct in England. Personally, Mr. Pengelly strongly resembles the late Theodore Parker; he is an enthusiast about the cavern, for which he seems to have conceived a personal attachment. While we were present the workmen were engaged with their picks on the bed where the human remains had been found, and about a dozen fossils, all belonging to extinct animal species, were brought up. There have been found in Kent’s Hole the remains of the elephant, rhinoceros, ox, deer, horse, bear, hyena, some huge cat, and man. In front of the cavern is a huge chasm, nearly 200 feet in depth and a quarter of a mile in breadth. The character of the formation in the cavern shows that it was made by the action of waves that once beat from an arm of the sea which filled that chasm, and washed in the remains and the drift in which they are imbedded. The geographical changes which this implies, and the certainty that human eyes once saw a sea where now an ancient forest stands, give an impression of duration almost fearful. When in the afternoon I looked upon the spot on the shore of Torbay where the Prince of Orange landed when he came to take possession of England, it seemed to me I was considering an event of yesterday.

Mr. Pengelly related many amusing adven-

OLD TOWER AT PAIGNTON.

tures that he and other geologists had met during their researches in the neighborhood, arising chiefly from the horror which the country clergymen had of them. A flint arrow acted on these divines as a red rag on a bull. On one occasion he had visited a poor stone-breaker, whom he found conversing with the parish clergyman. When he showed the poor man a flint arrow-head, and asked him if he had met with such in his work, the parson raised his eyes and hands and rushed from the room. We sometimes fancy that the age in which Galileo vainly tried to persuade the Paduan professors to look through his telescope, which revealed the moons of Jupiter, has passed; but there are several places in Great Britain where that age survives. When Lord Rosse's great telescope was completed two religious fanatics managed to get near it, and were caught in the act of breaking one of its lenses with a stone. The efforts of some of the universities to keep out heresy have led to some amusing results. Once, when the Chair of Natural History at Edinburgh became vacant, it was proposed to invite Agassiz to accept it, but the proposition was voted down because the famous Swiss was regarded as a heretic. Professor Altmann, who received the election, was soon after entertained at a grand banquet by all the dignitaries of the city. After it he and his wife were told that they would, on the following Sabbath, be taken to the Kirk in state. Fancy the horror when the new Professor replied, "We are Unitarians, but are willing to go any where." Professor Blackie, too, of the same University, was asked:

"Does this book (the Bible) contain all you believe?" "Yes," he replied, "and a deal more!" The English Universities have long since given up subjecting their professors to this species of inquisition. It is, in fact, becoming more and more impossible to get really able men to accept positions at the thresholds of which they have to lay down their intellectual independence.

The more I travel in England the more impatient I feel with our American forefathers for having taken these names of towns and places where they are real and characteristic, and applied them to others in America where they are as much out of place as primogeniture would be among our laws. It might be pardoned that they should call their first landing-place in New England after the last point they had touched in their mother-country; but to go on naming places Dartmouth, Exeter, and the like, when the Indians had already left for such natural and beautiful names, was too bad, especially as the Indians had so much to do with its foundation. There is no classic or other reason why Lord Dartmouth should have given his name to one of our chief colleges. Dartmouth here is really at the mouth of the River Dart, which darts like a silver-feathered arrow to the sea. And Exeter is on the River Exe, once *Isca*, where the Romans fixed their *castra*. Time has modulated *Isca castra*, or "Camp on the Isca," into Exeter. But what has an old town in New Hampshire (*ecce iterum!*) to do with the Exe and the Romans? Yet one can not help being curious to see the towns of Old England

DARTMOUTH.

which have managed to get namesakes in the New World, and I have reason to thank this curiosity for some of the exquisite scenes I saw on the River Dart.

A saunterer will find a day or two well spent in rambling from the bold hills under which Dartmouth nestles to where they stretch away to the heavy ground-swells of Dartmoor. This last place has an unusual interest for an American as the situation of the prison built for Frenchmen (1809), but destined to hold the 2500 American citizens whose imprisonment by Great Britain, to whom they refused service, exasperated the war of 1812. The prison covers thirty acres, and is fortified by high walls; it is entirely refitted, and used for convicts. In one of its rooms are pathetic inscriptions left by the French prisoners. In the old burial-ground rests the dust of hundreds of Americans, who perished under the harsh prison treatment of those days, and the malaria of the bogs. Only the grave of one of them is marked, and that one by an old piece of slate; on which, however, American eyes can see an unsettled account standing.

This whole region is yet comparatively wild and unrecovered; the very winds seem to have caught the howl of the wolves that once infested it, as they sweep over the heath and moor. The wolves have not been so long gone, and there are still old moorlanders who claim vested rights in the peat and sod on account of the services rendered by their ancestors in exterminating wild beasts. The sods are used for building, and the peat for fuel, by the very primitive inhabitants of this wild region. Some of these people may even yet be found who are as nearly savages as any to be found in England—which is saying a good deal. They are mixed of Cornish, Celtic, Saxon, and Briton, and it is not impossible that the moor was originally settled by the outlaws of all these tribes; its legends, at least, are chiefly of the robbers of whom it was an ancient haunt. Their language is a formidable mixture of all the old dialects of Great Britain, and is unintelligible to any but themselves. Their dwellings look at a little distance like large mushrooms; they are built of sod, mud, peat, and loose stones, and thatched with straw and rushes. These the earth has gradually adopted, and the weather has made gray. The masses of dry mosses and lichens on them have so accumulated and mingled that a stratum is formed worthy the geologist's attention. Some of the huts still keep as an inmate the shaggy little donkey who is the capitalist, or rich relation, of the family. The missionary has an unquestionable if not a hopeful field in this region.

Lately a little girl, being asked in a new Sunday-school for what end she was created, replied, "To carry dung to the field." Yet it is said that the people on the coast are much wilder. Archdeacon Froude, to whom allusion has been made, used to wander among the huts of the shore-people who got their living

by fishing and from wrecks. His son Anthony told me that on one of these excursions his father engaged in conversation with a pious old woman, who, on being asked how they had been faring lately, replied that they "had found it hard to get along until the Lord in his mercy had sent them a wreck, from which they got a good lot!" Another story, for whose veracity my informant vouched, was that at a place called "Hope," where the breakers are hopelessly terrible, a Spanish ship went to pieces, and the only person who reached the shore alive was the chaplain. The people got around him and locked him up. They then went to the village and called on the Squire, and said that a ship had gone down, and the only man saved was "a kind o' Jesuit. They didn't like the looks o' he, so they had locked him in a barn. And if the Squire would come down they were ready to set the dogs on the Jesuit fellow." The Squire went down, and only with difficulty could persuade them to release the poor half-drowned chaplain. This occurred within the present generation. They live on strange dishes, one of the most popular being a pie made of fish and apples mixed. The inhabitants of Dartmoor are not so brutal as those on the coast, but are more stupid. They are not so dangerous as the singularly untamed wilderness in which they live.

One can hardly imagine a drearier fate than to lose one's way on these wilds at night, under the perpetual drizzle which keeps its bogs and pools ever-ready graves for the wanderer; and the many stories of such tragedies which one hears in the neighborhood might spring up there naturally as the ferns. Nearly all of such were mere narratives of people found frozen, drowned, and so on; but one which a fellow-traveler related to me has a touch of poetry in it. In one of the villages on the verge of a wild heath a bell is rung every night between two and three o'clock. This custom has been followed for over three centuries. A gentleman who had lost his way on the heath on a very dark night was guided to the village by the sound of this bell, which was rung in the night for some unexplained reason; and in his will he bequeathed a sufficient sum to have that bell rung at the same hour of the night, that no future wanderer might want the guidance which rescued him.

I had while in Devonshire, and especially amidst its wilder spots, a constant feeling of being at the bottom of a sea, as indeed I was where the sea had once rolled. It was a feeling traceable to the continual recurrence of reedy and slimy vegetation; the red earth and bogs; the water-washed cavernous rocks, and others tall, like chimneys, their sides perforated and jagged from the action of water, and their tops smoothed as if they had risen just out of the water, but had been rounded by them; and especially the "tors," which may have been little islands, flowering green on those primal seas, but whose titanic stems of

rock the abated waters have revealed. I read in the book of an old philosopher that the bottom of the sea is covered with forms exactly corresponding to those we see at the bottom of the atmosphere, but all dwarfed. Forests of coral, miniature oaks, dwarf mountains and volcanoes, human-like creatures, which we never see, because they can not soar on fin-wings to the top of their watery atmosphere any more than man can fly like his inferiors. Treeless Dartmoor, with its "tors," its huts, and its swarming gipsies, would well enough confirm this account. It has too, as if to rivet the impression, a queer little forest of dwarf oaks, which might be esteemed an eighth wonder of the world. The pigmy oaks of "Wistman's Wood" grow amidst blocks of granite on the bank of the Dart, and average eight feet in height, never exceeding ten. They are evidently of extreme age, and their branches are enveloped in moss so thick as to make some limbs of the wrist's size a foot in diameter. In the very heart of the famous Druidical region, stretching up toward frowning giant "tors," one beholds what, with a more imaginative race, would have been accounted for by legends of some enchantment by which the pagan Druids were transformed into their sacred oaks, and the oaks stunted; a work for which the Cambrian Saint Cadoc was quite adequate, if the Welsh bards sing truly.

Dartmoor, though a park for a geologist, and a paradise for a stone-mason—having "enough rock to build all the cities in England," as some one reported—has little to reward the zoologist or the lover of flowers. The cotton-grass (*Eriophorum*) covers the bogs in summer, and at all times there are long tufts of rushes, from which the wind elicits a weird music, as from harp-strings. There are here swamps filled with the whortleberry and bilberry—both rare in England—foxglove, woodbine, golden-rod, wild thyme, digitalis; and now and then a knowing one may find the pyramidal orchis and the butterfly (*Habenaria bifolia*); and if the botanist be distinguished from the gatherer of flowers he will find many plants rarer than those I have named. There is a moor-hen, and the black-cock, which seem to be indigenous; but, like all other regions, this is chiefly indebted to the lark, which sheds its "noon-dew" on the forlornest and fairest of them alike, with the impartiality of the All-Beautiful by whom its blissful strain was taught.

I stopped in Exeter only long enough to glance at its grand old cathedral. "There be divers fair streets in Exeter," writes old Leland; and although it is a very different city from the Exeter of Henry VIII.'s time, the compliment is still deserved. A fine broad street suggested its own fitness for the proud entry of the Prince of Orange, three days after his landing at Torbay. "The Earl of Macclesfield, with two hundred noblemen and gentlemen, on Flanders steeds, completely clothed in armor; two hundred negroes in attendance on

the said gentlemen, with embroidered caps and plumes of white feathers; two hundred Finlanders, clothed in beavers' skins, in black armor, and with broadswords; fifty gentlemen, and as many pages, to attend and support the Prince's standard; fifty led horses, trained to war, with two grooms to each; two state coaches; the Prince on a white charger, in a complete suit of armor, with white ostrich feathers in his helmet, and forty-two footmen running by his side; two hundred gentlemen and pages on horseback; three hundred Swiss guards armed with fuses; five hundred volunteers, with two led horses each; the Prince's guards, in number six hundred, armed cap-a-pie. The rest of the army brought up the rear. They had fifty wagons loaded with cash, and one hundred and twenty pieces of cannon."

In 1112 William Warlewast, one of the Normans who followed William I. to England, and who was by that monarch made the third Bishop of Exeter, laid the first stone of this grand cathedral. It was completed near the close of that century. A century later it was enlarged into its present imposing dimensions. The chief interest about Exeter is the cathedral, which is grand as well as historical. It is a conglomerate of the various epochs through which it has passed, and is traced over with the records of the dynasties that have presided over it. The Gothic front is inclosed between two massive Norman towers; and one feels in looking upon it that conqueror and conquered were overarched by a common majesty of religious faith. The Continental character preponderates, however, and the chief ornament is the *fleur-de-*

EXETER CATHEDRAL.

lis of the roof. Even Puritanism had taste enough, when the soldiers of the Commonwealth occupied this cathedral, to spare some of its sweetest attractions, notably its finest stained window. They laid waste, however, the cloisters, and let the bishop's palace to a sugar-refiner, whose troughs and pans remained until it was repaired in 1821. The most impressive thing, however, is its noble organ, one of the finest in England. One can almost always hear it, as services are very frequent. The choir of boys is exquisite. A gentleman of Exeter told me that he once knew the choir to sing "Blest are the departed," from Spohr's "Last Judgment," with such pathos that the great audience was thrilled, and the clergyman was so much overcome with emotion that he could not deliver his discourse. In the south tower is the heaviest peal of bells in Great Britain. In the north tower is one of the largest bells in the country. It is named Peter Bell, and is used to strike the hours. Southey wrote in "The Doctor:" "There are, I believe, only two bells in England which are known by their Christian names, and they are both called Tom. Were I called upon to act as sponsor upon such an occasion I would name my bell Peter Bell, in honor of Mr. Wordsworth." Southey evidently did not know that the Exeter bell was named Peter Bell. It was so named, however, after a bishop, centuries before Wordsworth's wagoner was dreamed of. The two "Toms" are at Lincoln and Oxford. The Exeter bell is five hundred pounds heavier than the former, and only inferior in weight and tongue to the latter.

The women of Devonshire have a reputation for homeliness, which is due to Queen Elizabeth rather than to their physical demerits. The Queen named an award—a small homestead, I believe—to every man that married an Exeter woman. Her grant was due to the ill effects on the woolen manufactures of the district, owing, as her advisers thought, to the preponderance of the female population—the men generally devoting themselves from early life to a sea-faring career—which caused the birth-rates to diminish. I was told that the ladies of the upper and middle classes in the city were good-looking enough; but certainly the people of the lower classes that I saw had the slovenly and coarse look which is noticeable in nearly all the cathedral towns of England.

Vice and brutality are the rank weeds that grow under the shadow of cathedrals in England. And one always feels, in seeing the filthy tenements, with their miserable occupants, which cluster about a great cathedral in England, that these grand buildings were never reared by the people around them. We do not need the Norman tower and the *fleur-de-lis* to remind us that both the religion and its domes were imported. Mr. Ruskin, in his recent lectures at Manchester, assured the people that there could never be a noble English architecture until there were beautiful English

homes. He exhibited there some drawings he had made of several of the finest old cathedrals of France, in which he showed that their finest architectural traits are traceable to the features of the houses of the people around them. Their most beautiful spires are but the up-raised elongated cottage-roofs; their most exquisite windows are French dormer-windows; and the chief ornament is a kind of mail, evidently suggested by the tiles on the surrounding houses. But in these English cathedrals one finds at every point a sharp contrast with the dismal square huts in which the common people live; and, indeed, the mansions of the wealthy, in the cities, are still dismal and square boxes, differing from the others only in the costliness of materials. At the time I was in Exeter the people were especially hungry and surly on account of the unusually high prices of bread and meat, and the want of employment. The beautiful cathedral, looking down upon the hungry idlers around it, reminded one of the poor boy in Squeers's Dotheboys' Hall whose mother sent him a tract. If a man or woman starves here it will not be for want of tracts and churches. The Exeter people, however, concluded, a few weeks ago, that they could not live on spiritual any more than on material bread alone; and they smashed the windows of nearly every butcher's and baker's shop in the city. "Bread-rioting" has been a constitutional infirmity in that region from early times.

That which I found most interesting throughout Devonshire was the language, the superstitions, and the customs of the people. In the cities and towns, of course, the peculiarities of these have to a great extent disappeared before the all-invading genius of the nineteenth century—Steam. But in villages and rural districts one still meets with men and women whose minds dwell in the atmosphere, and who speak in the language, of the first century. The ethnologist can not get so much from the old English and Celtic chronicles as he can by mingling with these queer folk of Devonshire and Cornwall. And first, with regard to their speech, I am fortunately able to give the reader an exact idea of it by quoting from a dialogue in the Devonshire dialect, taken down by a lady of the county. (It must not be confused, however, with the Cornish, which is as incommunicable as Chinese.) I will first give the specimens, and afterward explain the peculiar words employed.

RAB. "Well, Bet, wot'n go up to the Church town to rail an zee the wraxlin. Every body keep'th holiday to-day; the crowder and a whole gubby; thee shet dance for the cap."

BET. "I can't go, zure."

RAB. "Wull, very wull."

BET. "You be a-purt now."

RAB. "Fay! But I'm a-guest thee wot'n meend my purting; but tell ma than why thee cast'n go."

BET. "Don't be so pettish, and I wol. Why I be going to Shaleacott to zee my old gonmar."

RAB. "Won wot go? How long vurst?"

BET. "I can't tell tha; I've a gurt many chures, and here I be drilling away my time."

RAB. "Pithee don't be spare about men: I'll meet tha here a leet odds of two o'clock."

In the course of the conversation Bet gives Rab an account of one of her adventures, from which I take a paragraph:

"'Other day you must know I went to winding, and took the boy way me to cry em, and ruise away the pigs from muzzling in the corn; 'twas a tingley frost—quite a-glidder down the lane; 'twas so hard avrore that the juggymire was all one clitch of ice; et blunk'd at the same time as the weend huffed and hulder'd it in wan's eyes. I was in a sad taking—no gwain to the lewside you know—I must vace it; though ma nose and lips were a-sprayed, and my arms as spragg'd as a long cripple. By the time us a-do, the weend was a-go lie. Cryal! I was a-stugg'd in plid—I never was in such a pickle avore—my coats was a-dagg'd up, and my shoe heled in mux, for 'twas as dark as a pit. Well, to be sure, when we come home, maester was routing in the zettle (a pix take em!) before a gurt rousing fire, even to swelter wan, an we a-scrim'd way the cold."

To begin now with the first of these specimens, there is no difficulty in seeing how "rev-el" should be shortened into *rail*. "Wrax-lin" (*wrestling*) is from the Saxon *wraxlung*. "Crowder" means *fiddler*; why, unless because he draws a crowd around him, I can not imagine. "Gubby" (*crowd*) relates to the term *gubbins*, by which the wild people of Dartmoor are known; it is a word to which I shall have to refer hereafter. "A-purt" is from the French *bouter*, to pout. "A-guest" is the same as the Yankee *I guess*—an expression rarely met with out of Devonshire and New England. "Gonmar" is a mere corruption for *grandmother*. "Chures" is *household jobs*—simply the Yankee *chores*. This word is probably from the Saxon *cyrre*, "work," the form of the word in Exmoor being "chewry," but it is unknown in England outside of Devonshire. Although, as has been said, the touching of the Pilgrims on Devonshire was so incidental, more Yankee words are found here than elsewhere. "Driling" is *drawling*. In the second paragraph "winding" means *winnowing*; "cry," *carry*; "ruise," *drive*. "A-glidder" (*slippery*) is from the Saxon *glidem*, "to slip." "Juggy-mire" (*bog*) means *jog-mire*, mire through which one jogs. "Clitch" means something that has run together. "Blunk" is any light flaky body falling—as sparks, or snow. "Huffed" means *shifted*; and "huldered," *hurtled*. "Lewside" is the *leeside*, or sheltered side. "A-sprayed" means *chapped*; "spragg'd," *roughened*. The phrase "us a-do" is found in Chaucer—"I've a-do (*done*) it." "Cryal" is a modification of the exclamation *Christ!* "Plid" means *dirt*; "a-dagg'd," *tucked*; "heled," *covered* (from Saxon *helan* "to hide"). "Mux" is the Saxon *Meox*, and means *clean road dirt*. "Zettle" is the Saxon *setl*, "seat," and is imitated in our common word *settee*. "A-scrim'd" is from the Teutonic *krimpen*, and means *shriveled*.

The specimens of the dialect given above do not by any means give a fair proportion of the German words to be met with in Devonshire. They use, for example, "dring" (*to throng*),

and a narrow way is called a "drang-way;" "schilt" for *shield* (German *schild*); "avrore" (German *erfroren*) for *frozen*; and many others that could be named.

Among their most ancient words are some that we meet with occasionally in America, and usually regard as modern vulgarisms; e. g. "transmogerrefy" and "argufy." Some of their words are also significant enough. Thus "barthless" means *houseless*; it is related to the word *berth*. The root of the word is the Welsh *bar*, a "bush," and points infallibly to the period when the house was a hut made of bushes and their inhabitants literally *barbaroi*. The word "gubby," applied to the Dartmoor people in their wilder days, and now heard occasionally, is from *gubber*, "black mud," and similarly reports the era when they lived in mud huts—an era, by-the-way, not every where past in that region.

There may be a remote connection between the words "gubby" and *goblin*. Many children in the large towns of Devonshire still regard Dartmoor with superstitious awe; and a century ago the belief was quite common that on that moor there lived a race of infra-human beings, with long tusks, adepts in witchcraft, who usually passed the nights in dances around mysterious circles, such as Tam O'Shanter saw, and in various other diabolical orgies. These wild beings lived in the region of the famous lead and tin mines. Now a settlement of Germans was, in historic times at least, the first to work the Devonshire mines. The "goblin" is in Germany essentially the spirit of mines, and also caverns—but particularly it is a mining demon. He is called "Kobbold," and with the Dutch "Kabouter;" the derivative meaning being one who *knocks* (as in mines), and the superstition being that they could be at times heard thumping underground. From this certainly comes the Welsh word "cob," a *thump* (*club* is a related word), and "coblyn," a *knocker*—substantially the same with *goblin*. It is possible, also, that the definition of *black mud* applied to "gubby" may have referred to the dark complexion ascribed by so many ancient writers to the original inhabitants of this district, who were, and sometimes are now, called "gubbins."

All of these words and facts point to the belief that among the early settlers here were people of Saxon or Danish origin. And indeed we are hardly left a doubt in the matter when we consider the constant recurrence of relics of the worship of Thor with which the neighborhood abounds. Every hill is called a "tor." And here I must ask my reader's company on an excursion to Scandinavia, as the only route to ancient England.

Thor with his hammer succeeded Odin with the sword; an era of work, that is, followed that of battle. The Hammer built ships, the ships bore emigrants, and so they were worshippers of Thor who occupied Britain. They found the "gubbins" already here, and probably

made slaves of them, putting them to work in the mines, where they lived so much out of sight—as the coal-miners do now—that they became mythic, as “Goblins” and “Tröll”—this last word being simply *thralls*, or slaves. The original inhabitants were dwarfish in stature and of dark complexion; their conquerors were fair and, comparatively, giants. The god Thor was called “Red-beard;” he belonged to a race that had red beards, and consequently blue eyes and fair complexion. The Sagas represent Thor as destroying dwarfs and goblins. These were no doubt the Laps. In his “Journey to Lapland” Regnarden says, “Such is the description of this little animal called a Laplander; and it may be safely said that, after the monkey, he approaches nearest to man.” The superstition may be yet found with Swedish and other northern peasantries that the Laps are a preternatural or infernal race, and in 1576 Frobisher’s crew, having caught a Lap woman, pulled off her boots to see if her feet were cloven. Thunder and lightning are still called “Thördin” in the South of Sweden; and an old saying is known there, “If there were no thunder-storms the world would be destroyed by goblins.” Thor’s-day or *Thursday* was within a hundred years a holiday there. A superstition concerning Freya’s-day (*Friday*) still accompanies the British race in all its migrations, only whereas it was once a sacred day the Christians have made it a day of ill omen. It seems, then, that we have well-founded tradition for the belief that a large blonde race in its northwestward migration overtook and came into conflict with a dwarfish people whom they regarded as most absolutely diabolical.

The causes of this superstitious awe of the dwarfs it is not difficult to trace. Weakness is the mother of cunning. The dwarf, unable to cope with the giant in physical strength, must outwit him or perish. He utilizes his smallness; it enables him to hide in crevices. Living in the region of caverns, he hides in them, and gathers from their stalactites the idea of a stone arrow, which he lets fly at his burly antagonist. His complexion helps to render him invisible against the dark earth, while the blonde giant is a shining mark. In a primitive age all these would combine to engender the impression that he was in league with infernal powers. All of our giant tales come from this source. They all indicate that the giant was a huge lubberly simpleton who was perpetually conquered through the superior wit of some Jack the Giant-killer.

One story, long a favorite with the Scandinavian peasantry, relates that a giant was carrying home with him Askovis, a dwarf, whom he had taken captive. On the way the dwarf pointed to the horizon and described many beautiful sights of cities, men and women, which he saw there. The giant, seeing nothing, asked the dwarf how he managed to see such things. The dwarf replied that the power could be acquired only by pouring melted lead in one’s

eyes. The giant, desirous of obtaining such magic vision, requested the dwarf to melt and pour lead in his eyes—an operation which the little man was not slow in performing, and was soon leading his blind enemy a captive to his own people. This story is characteristic of nearly all the giant stories. In the end, however, the big men forced the little men to the wall and beyond it; and such as could not move on were made “thralls,” their chief work, probably, being to make for their conquerors those stone arrows which had already gained the reputation of possessing magical virtue. The invaders, of whose origin I shall have something to say hereafter, probably hurled rough rocks in battle, their leaders only being provided with iron weapons, that metal as yet being very scarce.

It is related in a Scanian story that once, when a Northman discovered a dwarf, the latter ran away, dropping his weapons as he fled. The Northman went to get the weapons, but the dwarf had by infernal art “turned them all to stone.” Of course they were ordinary flint weapons. These flint arrows became gradually associated with occult virtues. Few of us, perhaps, who listen to Weber’s most charming opera, think to what a venerable antiquity those magic bullets of Der Freischütz may be traced. Yet, in “Orva Oda’s Saga,” we read that the Norse warrior, having saved the life of a child of the Lapland chief, Guse, when an eagle was bearing it away, that chief presented to him three magical stone arrows warranted to hit whatever they were aimed at. The Swedish peasants place even now flint arrows over their doors as preventives against witchcraft, as the horseshoe is used elsewhere. They were led to this, however, by the supposition that these arrow-heads, which they picked up every where, were not the dwarfs’ arrows, but such as Thor had hurled against the dwarfs, goblins, and the like. Showers of them fell to the earth during every thunder-storm. Peasants wore them around their necks as amulets, and warriors wore them in battle as “Victory-Stones,” or “Life-Stones.” It is possible that our “madstones” have this pedigree, and the “Agnus Dei,” worn by the Irish Catholic, curiously resembles one kind of flint arrow.

In Didrik of Bern’s Saga it is related that King Nidung once feared to go into battle because he had left his “Victory-Stone” at home. He offered his daughter’s hand to the man that should bring it to him. Valent thus won his bride, and the king the victory. It was but a step from the worship of the stone arrow to the worship of the hammer which made it, and every thing else. Thus the emblem of Thor was set up. When Christianity came to Scandinavia it found the stone hammer stuck in mounds of stones; and by its ingenuity the hammer was made more and more to resemble the cross, until it actually became a cross, as the people were graduated from their old religion to the new.

Whither went these Laps—the dwarf race—when they were pressed farther and farther out of their own country? Despite all the arguments I have heard from Agassiz in America and Craufurd in England against the Old-World origin of American tribes, I can not rid myself of the belief that the Esquimaux are a branch of this same race. Not only are they exactly the same in personal appearance, but wherever they go among the American Indians they are associated with witchcraft and diabolism, exactly as the Laps were in ancient Scandinavia. In warring against them the other American Indians call in the aid of their deities to protect them against Esquimaux sorceries, and purify themselves if they have touched one of them.

About seventy years ago Samuel Hearne went to examine the Coppermine River in British America to its mouth, and for that end joined himself to a tribe of Copperhead Indians. He found them regarding the Esquimaux with the utmost hostility, solely on the ground of a belief in their diabolical relations. Wherever they found man, woman, or child of that race they were instantly murdered. On one occasion the Copperhead spies brought in tidings that five tents of Esquimaux—for so, gipsy-like, they wandered—had been pitched at a certain spot, and Hearne accompanied them, as a non-combatant observer, in their expedition against the doomed nomads. In his narrative (London, 1795) Hearne says: “When we arrived on the west side of the river each painted the front of his target or shield; some with the figure of the sun, others with that of the moon, several with different kinds of birds and beasts of prey, and many with the images of imaginary beings, which, according to their silly notions, are the inhabitants of the different elements—earth, sea, air, etc. On inquiring the reason of their doing so I learned that each man painted his shield with the image of that being on which he relied most for success in the intended engagement.” A very horrible massacre of the poor Esquimaux followed, and afterward the murderers performed a solemn ceremony of purification to prevent any evil effects following the contact with the witches. This, quite unconsciously on Hearne’s part, might do, with names changed, for a paragraph out of a Saga about some expedition of Thorwald against Vanaland.

I must now ask my reader to return with me to Devonshire and Cornwall; and, if we but remember that we are as yet in pre-historic times, the transition from Arctic America to Britain is not such a leap as may at first seem. There are not wanting evidences of enormous geographical changes in the Northern world of comparatively recent date. Seas roll where land once abounded, and a forest of icebergs glitters where once spread green foliage with gay blossoms and birds. The tendency of archaic and ethnological research now is to show that there was an era when the world had not yet

gone to pieces; and that in those days there spread over it a stubby, primitive, pioneer race, very much of the character now represented by the Laps, Esquimaux, and some of the more primitive people found in these Southwestern regions of England. They were the pre-Celtic population of these islands. The Celts found them here, and probably made slaves of them. Whence did they come?

At first the opinion prevailed that the people of the Stone Age in Great Britain might have been a clan of the dwarfish Laps who fled from their invaders to Scotland, and were thence driven by Northern hordes step by step into Ireland and Southwestern England. But there is one remarkable fact which militates against that conclusion. The skulls obtained from tumuli in Scandinavia, supposed to belong to the Stone Age, and to be those of Laps, are distinguished from the later Celtic people of that region by their being round, with heavy, overhanging brows. The skulls of the pre-Celtic population found in the British tumuli are, on the contrary, known as *Kumbecephalic*, or “boat-shaped heads.” Laps occasionally find their way to Scotland now, where they encamp, gipsy-like, and, at the centre of masses of leather clothing, look like small moving haystacks. In respect of stature and color they resemble the more primitive people of the Southwest; but the shape of their heads is different in the same way, as the skulls of the tumuli indicate. There is, therefore, reason to think that the pre-Celtic population of England came from the South, and extended into Ireland. If so, it was certainly from the Basque country, and their name, “Hibernians,” correctly points to their having come from the River *Iberos*, in Spain. And it is probable that the word “Gipsies”—an evident corruption of *Egyptians*—may quite as correctly point us to the more remote origin of this prehistoric people, whether in Scandinavia, Britain, the Basque country, or even in Arctic America. Undoubtedly in the graves of all of them—Esquimaux included—kajaks, spears, and beads have been found, exactly similar to those found in Egyptian tombs. In short, the probabilities are that somewhere in the primeval world some convulsion threw a number of people into Armenia; that there some schism parted them, the one party to go westward by the north, the other by the south; and that these two finally reached these islands, the one to be the Picts, the original inhabitants of Scotland, the other the Hibernians, the original inhabitants of Devon, Cornwall, and a southern fringe of Ireland.

The tendency of modern ethnology is to divide all the races of the world known to us into the Aryan and Turanian stocks, which, again, are possibly two branches of one original trunk. The Turanian is represented by the small-statured, dark races, and was the earliest of all races. It overran the world at an inconceivably remote period of time—before the earth was divided up into continents and islands, as now—

and thence budded and blossomed into Chinese, Aztec, Peruvian, and other empires and comparative civilizations, which were to be modified into other social formations by the subsequent admixtures of the great Aryan peoples, who occupied and spread over the great central lands of Western Asia and Europe. I venture to quote here a private note which I have received from Professor Huxley on this point:

"My impression is," he states, "that before the Aryan immigration a race of short, swarthy people (of whom I imagine the Iberians of Spain and the Silures of Britain to have been specimens) inhabited the southern and western parts of Europe, and very likely extended into Ireland. But where these people came from I know not. So far as I am aware there is no evidence that they came from the northeast. At the earliest periods to which our records extend the Iberians proper seem to have spoken Basque, while the corresponding people in the British Islands appear to have spoken Celtic dialects. But the Gauls who invaded the Roman Empire, and who were tall, fair, blue-eyed people, just like the Teutons and Scandinavians, also spoke Celtic dialects. But the Celtic dialects, philologists tell us, are derivations from the great Aryan stock of languages. Hence there seems to be every probability that the Celtic dialects were as much the proper language of the fair Gauls as the Norse and German dialects were the proper language of the people to whom they were physically similar. And, if this be the case, I can only conclude that the short and dark Celtic-speaking, Gaulish, British, and Irish populations, adopted the tongues of their invaders, and are, properly-speaking, a pre-Celtic population. In fact, the question has often suggested itself to me, whether the Celtic dialects, which differ so much from the other Aryan tongues, may not have been evolved in consequence of the contact of Aryans with the short dark folk. Thus you see that I think that the stocks are included under the terms Gauls and Keltæ—a fair race, Aryan by tongue, and very likely from the Northeast; a dark, non-Aryan, coming from God knows where."

To this I may add, however, that in a lecture which I recently heard from Professor Huxley, at the Royal Institution in London, he indicated his belief, though he did not assert, that the primitive population of Southwestern England, Wales, and Ireland, came from the south. It may be also mentioned in this connection that the Irish "Milesians" have a tradition that their ancestors came from Spain, and that even St. Patrick was "a native of Ireland, born in Spain." They maintain, however, what is very doubtful, that their ancestors sailed directly from Spain to Ireland; there being some evidence that they settled in Devon and Cornwall, and were driven by invaders to Ireland. In these last-named counties the tradition of their having been settled by primitive Irishmen is very strong and clear.

May we not trace all the legends of giants with which Cornwall and the Scilly Isles abound to the contact of the tall, fair invaders with the small, dark people who originally occupied this region? Dubois de Montpereux has shown that the Cyclopes, on the east coast of the Bosphorus, pointed out by Homer as a frightful race of giants, hurling huge boulders at the Grecian ships, were a gigantic race of nomadic Cimbri, that is, Gauls. And Nillson, the most eminent Swedish ethnologist, has shown that correspond-

ing legends of dwarfs and giants have sprung up wherever a large race came into collision with a small one. "The Philistines," he says, "were the giants of the Israelites, and these were the dwarfs of the former. The Cimbri were the giants of the Greek adventurers, and these were the dwarfs of the former. The Germans and the Celts were the giants of the Romans, and these were the dwarfs of the former. The Icelanders, Normans, English, and other kindred tribes were the giants of the Greenlanders and North American Esquimaux, and these were the *Skrálinger* or dwarfs of the former."* Cornwall is named after the Roman Corineus, of whom the ancient chronicle says: "Corineus, cousin to Brutus, the first conqueror of England, wrestling at Plymouth with the celebrated giant Gog-magog, toppled him over the cliff, broke his neck, and received in reward for that great feat the county of Cornwall." Here also Jack the Giant-killer slew Cormelian and Thunderbore:

"Child Rowland to the dark tower come,
The giant roared and out he ran;
His word was still—Fie, foh, and fum,
I smell the blood of a British man."

It is quite probable that the word "Fenian," with whose etymology philologists (as it is now the ruling to call those who used to be termed philologists) have vainly grappled, is derived from this remote period. It is understood that Fenian means a "giant" of a belligerent disposition. The word *fionn* in Irish means "white." But in those days the "white" was to the dark, small Hibernian, a Gaul, consequently a giant. But, it may be asked, what part in the great march of races did this little pre-historic people play? Nature is a great economist, and wastes nothing. Whenever a migration occurs it is chiefly the males who go. It is now principally the Irish *men* who emigrate to America, and the proportion of women in California, and other Pacific regions, is small. The men, like the first wanderer Cain when he fled to the land of Nod, mingle and marry with the women they find in the country to which they go. From such a mixture of Spanish settlers and squaws came the Creoles of America. So when the fair blue-eyed race came to Britain they took wives of the swarthy people they found here, and thus the dark pigment got into our Anglo-Saxon people, and with it the practical shrewdness of "Jack" came to modify the dullness of the Norse "giant." "Black eyes for command," said Margaret Fuller. By this mixture the speculative German has been allied to the practical Turanian, and the Anglo-Saxon made the captain race of the world.

The British, Welsh, Irish, and Pictish chronicles of the tenth and eleventh centuries contain

* Concerning these Nillson quotes Mackenzie, who says that when he was traveling in North America the Esquimaux described some whites (English) on the west coast as giants, winged, who killed an enemy with the glance of an eye, and would swallow a whole beaver for a mouthful.

legends concerning the origin of the early inhabitants of these islands which are very fanciful, now and then poetical, but always to be well sifted before taken. They are believed, however, to point in the direction of the truth at least. Scotland is therein said to have been so named from Scotia, a daughter of Pharaoh, who married Gaythelos, son of Neolus, King of Greece. Neolus, it is related, visited Egypt in the days of Moses, and led a colony thence into Spain, and afterward to Ireland, under Symon Brek, King of Spain, who brought with him the marble chair on which all British kings sit when they are crowned, and which is now a curiosity of Westminster Abbey. Under the grandson of Neolus the colony passed over to Scotland. Another chronicle derives Scotia from Scythia, whence it says the Scots originally came. The original Scots were undoubtedly Hibernians from Ireland, and the legend just quoted points again to the Spanish origin of that people. The Albani (whence Alba) are said in the same chronicles to have been a white-haired folk, their hair having gained its whiteness from the region of perpetual snows from which they came. These were probably the early Britons, the first of the many Celtic immigrant bands. The Goths are said to have been the descendants of Japhet, and to have been so called from Japhet's son Magog—no doubt another Celtic colony. Much controversy has occurred concerning the Scots. The charge that they were originally cannibals rests on a sentence by St. Jerome, who says: "When a very young boy I beheld in Gaul a tribe called Scotas devouring human flesh." When that was written the world knew no difference between the Irish and the Scots. Scot is probably from an old word *Scuet*—cognate with "scud"—and meaning a fugitive, or, as some say, a thief. They were not at all the Scots of the present day, but a set of Hibernians who fled to Ireland and afterward to Scotland before the first Celts. And in the latter country they came into alliance with the Picts, who have already been described as the first inhabitants of Scotland. Who, then, were the Picts? They were first called Picts by the Romans, "*a picto corpore*"—that is, from their habit of tattooing their bodies. They were known to the northern tribes as the Cruthneach.

"The Cruthneach," says their most ancient chronicle, "came from the land of Thracia; that is, they are the children of Glevin, son of Ercol. Agathirsi was their name. Five brothers of them came at first, viz., Solen, Ulf, Drosten, Ængus, Leithuin. The cause of their coming: Policornus, King of Thrace, fell in love with their sister, and proposed to take her without a dowry. They after this passed across the Roman territory into France, and built a city there, viz., Pictavis (Poitiers), *a pictos*; that is, from their arms; and the King of France fell in love with their sister. They put to sea after the death of their fifth brother, Leithuin; and in two days after going on the sea their sister died."

Another chronicle says they entered Scotland under Cruithne, by way of Orkney and Caithness. A Welsh chronicle (A.D. 1120-35) says

that after the Britons had conquered this country the Picts came from Scythia with a fleet under their king, Roderic. "The Britons used poisoned weapons. These wounds a Druid of the Picts professed to cure by spilling the milk of 120 cows on the plain where a battle was to be fought." Roderic was slain, and all that remained of his army were made slaves; "and for the first time the land around Caithness was tilled." The Britons refused to let them marry of their women. So the Picts petitioned Gille Caor, the King of Ireland, who sent them wives; and of this intermarriage was descended the Scots. The Irish king exacted as a condition that the right to the throne in Scotland should always be in the maternal line. (It was much more certain in those days who a person's mother was than who his or her father was.)

"Three hundred women were given
To them; they were agreeable.
But they were most cunning,
Each woman with her brother.

"There were oaths imposed on them,
By the stars and by the earth,
That from the nobility of the mother
Should always be the right to the sovereignty."

It will be observed that there is much confusion and vagueness as to the origin of the Picts. In the absence of any thing definite it seems to me natural to suppose that the habit of tattooing and painting their bodies, from which they received their name, points to their relationship with the Mongolian tribes. The Aryans had no such custom. If this be so, we should have, as the pre-Celtic occupants of Great Britain, two colonies of small dark people, who, having parted in the East, and fringing, one the southern the other the northern coasts, meeting again, after the lapse of ages, in these islands; intermarrying, and forming one people, to defend, through many ages, their refuge from the more powerful Aryans, who may have originally driven them from the East. These are the root of the genealogical tree of the race that now leads the world.

It has been my purpose to confine myself in this first saunter to the most primitive inhabitants, and to leave for a visit to Stonehenge the great epochs of Saxon, Roman, Celt, and the mysterious Druids. The views which I have given may seem to some speculative; I may say, however, that they will before long cease to seem so. When Professor Huxley shall give to the world the facts which he has recently laid before the Royal Institution, and when Sir John Lubbock shall have published a work on the Stone and Bronze Ages, which I have reason to know he is now preparing on the basis of his volume already printed, these things that now seem to some theoretical will appear as facts.

Before leaving Devon I should say that I can not doubt that the legends of the little folk called there "Pixies" (fairies) are traceable to the last remnants of the Picts, who were re-

garded with superstitious feelings, just as the Laps and the Gubbins were. As these were transformed into Gnomes and Goblins the Picts became Pixies. From their name probably came "Puck," no doubt a mischievous, dwarfish Pict and an eminent Pixy. The "Picts' Houses," in which this ancient folk lived underground, gave rise to the belief that the fairies lived in the earth. The belief has had a great many ramifications, and has formed a vocabulary of its own. In one of his notes I see that Hawthorne derived the word "asphyxia" from pixy, the idea being that one so stricken was bewitched. It is quite likely that "pox" also refers to the theory that it was the work of Puck. Similarly derived, though this is not certain, may be "pyx," the Roman Catholic shrine for consecrated wafers. The Romanists derive their "pyx" from the Greek *πύξος*, "a cup;" but there is at least equal authority to believe that it was so called by the British natives from the belief that some kind of magic was in it. Clobery (1650) writes of "The pixie-led in popish piety." An old Devon MS. has the following definition:

"PYXIE-LED: to be in a maze; to be bewildered, as if led out of the way by a hobgoblin, or Puck, or one of the fairies. The cure is to turn one of your garments the inside outward, which gives a person time to recollect himself. The way to prevent it, some say, is for a woman to turn her cap inside outward, that the pixies may have no power over her; and for a man to do the same with some of his clothes."

Pickle is a cognate word. In Devon a fungus (*Lycoperdon giganteum*) is called "pixy-puff," because it was supposed a fairy seat. "Pixy-seats," again, are the tangles that get into horses' manes, where fairies were believed to ride. "Pixy-rings" are curious round circles of lichens—like ring-worms on the earth or stone—which were regarded as circles for fairy dances. It is still declared that cattle will not graze in fields where these are found. Puck may sometimes be surprised within

"Those rings and roundelays
.....which yet remaine
On many a grassy plaine."

The belief in the "Pixies"—otherwise called "Little People"—may yet be frequently found in the rural districts of Devon, Cornwall, and Wales. "They lived there before any human beings came into the country." A Welsh driver told me, lowering his voice at the time, that there "used to be a great many, and they could be heard under the ground in every field; but they were leaving the country." It was evident that he, for one, did not desire that they should stand on the order of their going. And thus, in the myths of one age and the lowest superstitions of another, the once powerful nation of Roderic disappears from history, to live still, however, in the blood and the language of the race which absorbed the quality and strength of every enemy it conquered.

THE OLD MAN'S SONG IN AUTUMN.

Oh, heart that beats in my breast,
Say why art thou so cast down?
Oh, is it grief for the days growing brief
And the fields that are gathering brown?
The wind blows gentle and soft;
The sun shines bright in the sky;
And the woods to-day were never more gay
In all of the years gone by.
The maples gleam in the vales
Like the watch-fires of a camp;
And the cardinal flower in her secret bower
Has lighted her crimson lamp.
Not all the birds have flown,
For the robin's voice sounds clear
From the orchard rows where his warm breast glows,
And the fields of stubble near.

But my heart an answer makes:—
"The robin's note is dry;
And the woods to day are not half so gay
As they were in the years gone by.
"The Summer I loved has flown;
The lily has left her stalk;
And the roses are dead, both white and red,
That grew by the garden walk.
"The Autumn, I love it not,
For cold to me is its breath;
And its deepening blush seems the hectic flush
That bodes the coming of death.
"And Winter will follow soon,
Sobbing and moaning aloud;
And the earth below will whiten with snow
That falls from the frosty cloud."

CHARLES LORING ELLIOTT.

I.—HIS EARLIER ARTISTIC LIFE.*

ON the morning of the twelfth anniversary of the conflagration of Moscow, a stinging winter day, while the boys were sliding down hill, and the sleigh-bells were merrily ringing through the beautiful village of Auburn (New York), a youngster—who must have been, according to the records of the parish church of Scipio, if said records were properly kept, about ten years old—might have been seen, but probably was not, taking a clay furnace of ig-

nited charcoal into a small bedroom on the ground-floor of a plain but comfortable dwelling-house, which was situated near the centre of the afore-mentioned village, then and since celebrated for its two well-regulated institutions, the State Prison and the Theological Seminary, intended by legislators and pious people to be the balance-wheels of society. When the urchin had safely deposited his furnace on the floor of the apartment he left it in haste for the kitchen, and soon reappeared with a broomstick, which, on entering his bedroom once more, he forced through the door-latch, that he might be able to prosecute his undertaking without fear of interruption from any unwelcome visitors. The reader will soon discover that these formidable preparations betokened an enterprise of no little magnitude. He must first be enlightened in regard to several matters which were more or less intimately con-

* This first portion was written in 1850 (mainly as it now appears), at the suggestion and request of some intimate friends of Elliott, for the purpose of preserving an *authentic* account of his earlier artistic life. After it had been emended and finished to our satisfaction we had a limited number of copies printed for special circulation. This was nearly twenty years ago. It is hardly possible that a sketch so entirely authentic and sharply minute could be prepared at this period.

C. E. L.

nected with the events of that particular day. So leaving the urchin to his solitude, we may briefly glance at his previous history, which will be likely to cast the light of probable conjecture upon his present design.

His father was an architect of considerable mechanical genius, and many of "the principal men" of the neighborhood were indebted to his taste and skill for the somewhat imposing mansions which drew the attention of passing travelers. Like all good fathers, when they can, he sent his boy regularly to the district school.

He had at a very early period displayed a taste for artistic mechanism, and most of his leisure hours and holidays were spent in his father's work-shop, from which he had sent forth sleds, wagons, wind-mills, and saw-mills, of many different sizes, but of very beautiful workmanship, which gave him a reputation among the young folks of being the most consummate operator of this kind in the village. But a dangerous rival had appeared in the school, who threatened by his skill as a draughtsman of horses—on the slate—to eclipse the fame of the hitherto unrivaled constructor. But this artist's genius seemed to have a somewhat limited range, since he always made the *same* horse, although, by dint of hard practice, he had succeeded in representing that particular animal in a very respectable state; and since the versatility of his talent was not brought in question by his critics, he was luxuriating in the wealth of his fame.

The architect's son began to feel the stirrings of ambition, and he secretly determined to distance his rival on his own field. He collected all the pictures of horses he could lay his hands on, and began his studies on the slate. A common observer, however, could make little more out of these first attempts than oblong bodies with four uprights, evidently intended to represent horses' legs. But he gradually improved, until, with all his drawings, he began to draw on his rival. Not satisfied, however, with his success, he kept his secret and obstinately persevered, trying his subject in one position for a while, and then in another; but he grew less and less satisfied with his performances, and thinking he had "gone to work at the wrong end," he cast aside all his picture-models and *began to study from life*. He watched horses as they passed in the streets, went to the stables to examine their limbs and proportions; but he still found it "no easy matter to draw a good horse." "Why is it," he said, "that I can't draw one good horse in a month, while that fellow can draw fifty in a day?"

The mystery was not completely solved by him for years, for the good reason that its solution opens the whole arcana of art. Long afterward he discovered that while his rival had, by dint of sheer manipulation, succeeded in copying a horse standing still, without life or action, and succeeded commendably well, he had done

it only as a mechanic; while he himself went to work on his ideal—a horse in motion, in any attitude; for the innocent young soul thought one attitude as easy to draw as another. He had done a great thing, however, in beginning *to draw as an artist*, little as he knew what he was doing. He had been making *the* horse his study, and not any particular horse in one particular attitude. The difference was as great between him and his rival as between the dunce who learns by rote to scan the first book of the *Æneid* glibly and the scholar who reads Tacitus with delight and Horace with enthusiasm. The one was overcoming only the difficulties of imitating a stiff, hard, unyielding form; the other was learning principles of art which would enable him to master *all* forms. But the dear boy knew not that he had begun as Giotto began: to draw the forms of the sheep he watched on the sunny slopes of the Tuscan hills; to represent life by lines without color. He was "out of patience with himself for his stupidity!" Long afterward he learned that he had lost his patience because he could not do in his tenth year what cost the old masters so much toil.

But light began to break in on the path of his studies. Gleam after gleam came out from his pencilings. He could at last draw a horse hitched to a post, or chafing under the spur, with swelling veins, snorting nostrils, and prancing feet. At last "it mattered little to him what his horse must do." He could make him do one thing as well as another. He had passed the Rubicon of Art, although he still knew so little what he had done. But judging of himself as he judged his rival, he "thought his horse could pass muster." Having now, as patiently as he could, endured the reproach of defeat for several weeks, the time which he had bided had at last come.

One evening he drew a fine, prancing horse, full of mettle, with flowing mane and tail, and laying his slate up carefully on the kitchen mantle-piece he went to bed. All night long squadrons of prancing horses danced on his vision. In the morning he took down his slate, and hurrying off to school before the usual hour, showed his drawing to one of his little friends, who had taken his part from the beginning, and asked him privately "how he liked it." The noble little sympathizer's eyes (we have always had a liking for that boy since we heard the story) grew as large as saucers—tiny ones. He could hardly trust his senses. He gazed intensely on the picture, seized the slate, and when he could contain himself rushed across the school-room, and thrusting it triumphantly before the face of the *still-horse* boy, said, "Now, old feller, make a horse like *that*—you can't do it." There was no retreat; he was in the lists with his rival. He was to have one day to copy the *prancing* horse. He tried and failed. "Well," said the hitherto unrivaled draughtsman of still-horses, "now let him try *my* horse. I can't do *his'n*, and he can't do *mine*." This, too, was fair play. His antago-

nist also was to have a day. He did it during the ten minutes the school were at play. At noon the still-horse was shown. Even the still-horse boy acknowledged that "he had done it." Thus ended the conflict, and after that day young Elliott had as many horses to draw for his comrades as he had hitherto had of sleds, wagons, and wind-mills.

We have told this story in all its detail because it is a miniature history of the life of every true artist. We find such things in the lives of all great painters. But we must return to the youngster in his bedroom (which occurred some time later than "the horse trial"), for the chances are that before now his enterprise has got under way, nor should we be surprised if the furnace of ignited charcoal had already begun to work.

The boy shut up in that bedroom we need hardly say is the one who made so many laborious slate-studies on the horse. He had distanced all competitors in horses, and begun to extend the field of his operations. He abandoned the slate for India ink and crayons. At last he resolved to make an essay in oil-painting. Keeping his own counsels, "that no one might laugh at him," he procured a rather huge canvas, with the requisite utensils, and we now find him shut up in that little bedroom, on that "bitter cold day," attempting to copy a picture in the History of England—"The Conflagration of Moscow." But this expedition to Moscow was likely to become to the young painter even more fatal than it had proved to Napoleon himself. The dinner hour came round, but he did not show himself. Some time passed, and his mother became anxious. A search was made for him every where. Having occasion to visit the bedroom, his mother found the door fastened. She ran to the outside window, through which she saw her son sitting in his chair, his head fallen down on his breast, apparently asleep. She rapped on the window and called, but received no answer. She forced the window open, when a sight of the charcoal furnace explained the mystery to the frightened mother, who "supposed that her Charlie was dead." She sprang through the window, and rushing to his side, shook him violently; but he showed no sign of life. And there on the chair before him stood "Moscow Burning," a rude but bold sketch, in which the idea of the artist was not to be mistaken. By his side on a little stand lay the open History of England, from which he had copied—his pallet and brushes fallen from his hands; and to all appearances the young artist had painted his first and last oil-picture. But the rush of winter air soon revived him, and in a few hours he was as well as ever.

This narrow escape was far enough from curing the boy of his passion for painting; but it taught him how much better is charcoal for sketching than for breathing. He afterward finished "The Conflagration," and a good judge who saw it said it was an astonishing produc-

tion for a boy of his age, who had received no instruction whatever in art, and who had never before attempted to paint in oil. Elliott said of it: "It couldn't, of course, have been any great thing as a picture, but it was generally acknowledged that it made an excellent *fire-board*."

It is pretty evident that ideas of art were now growing into shape in the mind of the boy, and we are not much surprised that he "made up his mind that, for better or worse, he would be a painter"—a resolution he seems to have adhered to pretty obstinately, until he has won for himself a reputation in the acquisition of which any man may have considered himself fortunate had it cost him a lifetime of unceasing toil.

About this time his father had employed two men of doubtful genius in that line "to landscape" the parlor of a house he was finishing, and they had gone on daubing the walls by the yard with all sorts of enormities in the shape of woods, waters, and animals, without much regard to the laws which the Almighty originally intended should control the animal, mineral, or vegetable kingdoms. While these worthies were gone to dinner one day, Charlie, who was sure to know what was going on in the limits of the narrow artistic world around him, entered the room, and seizing up one of the pallets, sketched a bridge with a man walking over. He "worked quick and fled." When the men returned they honestly expressed their amazement and delight, and to their immortal honor "they allowed the bridge to stand, with the walking man." It may have been a no very great thing, and probably was so considered by the next proprietor of the mansion, for he had all the wall embellishments decently covered over with paper, not excepting "the bridge and the man walking over it"—which may be carefully uncovered some day. Stranger things have happened.

Charles L. Elliott used to talk with his young friends about art and artists (these associates still remember it all), and "what would be the end of all this" they could not tell. Some of them, in a certain way, entered into his feelings, but many of his hours and days were left without sympathy, and he "was driven to books for comfort and company." He became a great reader, especially of two kinds—those that described battles, and those which spoke about artists. After exhausting his father's library he used to borrow from neighbors. Chance put him in possession of a large Biographical Dictionary, and he hunted all through its thousand pages in his eleventh year, and read a great many times over its accounts of painters and sculptors, engineers and engravers, who had become famous in past ages. The miscarriage of his "charcoal picture" had not cured him of great subjects. He was fond of "battle-pieces, Scripture scenes, and heroic subjects." He copied in oil many of the pictures in the old Family Bible. "Ahasuerus and Esther" was

of no little merit; it is still in the artist's possession.

Some good instruction in art would now have been a world to him. But Auburn at that period had no artist's studio, and he had to work his way on in the dark, as West, the father of painting in this country, did, with only nature to help him. In his fifteenth year Elliott's father removed to Syracuse, which was then (1827) but a hamlet with a handful of people. Heavy forest trees were then growing where churches, villas, and groaning warehouses now stand. The site of the great railway dépôt was then "an irredeemable marsh." But a spirit of civilized bustle was beginning, and Clinton's canal would do the rest. Elliott's father had never troubled himself much about his son's paints and brushes. He considered it "a freak of boyhood that would give way to better things when the time came." But finding the freak likely to last longer than he "calculated" he determined to put a stop to it, or at all events train up the lad to some occupation more likely to keep him out of the poor-house.

So "Charles" was put behind the counter of a dry-goods and grocery store, in which his father was a partner. "Now, Charles, you may make up your mind to give up your picture business." But it happened that "of all things in the wide world *that* was the very thing he had determined never to do—poor-house or palace—come what might." Mr. Elliott *père* happened to be more proprietor of the dry-goods and groceries than he was of the painter; and customers who wanted to make careful inquiries on "the prices of Bohea tea, starch, cut-nails, New England rum, molasses, and Webster's spelling-books, and sich like," were left to solve their own problems, while Charlie retired to some garret, or out of the way nook or corner of Syracuse, to copy an engraving of Inman's "Fisher-Boy."

Things were now going on badly. In about three months Mr. Elliott informed the young gentleman that he must enter the store of a very worthy Scotchman, where, as the father had no interest, the son "would be obliged to walk Spanish." He entered; but in about another three months the worthy Scotch merchant took Mr. Elliott *père* aside, and quietly expressed "some, yes, *serious* doubts about his son's ever making a *very* great merchant." Mr. Elliott himself finally began to fear that "those paints and brushes" would prove too strong for him, and he sent his son to an academy of some repute in Onondaga Hollow. Here he had to go through "a routine not much more to his taste than dry-goods and groceries," particularly when he had some "great picture" on hand—and once more a three months' trial had turned out a failure. His father became "satisfied that even academies were not the thing." "Charles had studied very little, and painted a great deal; but he *had* painted a landscape, embracing the academy, which pleased us all." This clause in the report of Charlie's term had its effect. A point

of some importance in this narrative is, that this picture was what the painter long afterward spoke of as "my first *sober* attempt at delineation from nature, *strictly speaking*."

The academician went home, and found his father in a different state of mind. No change had perhaps taken place in his mind about the profitableness of painting pictures; but, like other sensible men, he "made the best of it," and was prepared to negotiate. Nothing more was said about "dry-goods and groceries" or "academies." These offensive subjects were not even brought up; and therefore something was likely to be done, since both "the high contracting parties" met on terms of equality. And here let us not be misunderstood. In all these trials and tests to which the father subjected the son he not only displayed true affection, but true common-sense. There is no error more fatal, nor one into which spirited boys so often fall, as to think they are born for something better than the common business of life. The world staggers under the curse of incompetency in all its high places. We have a hundred pettifoggers where we have one lawyer—a hundred daubers to one painter. It was a thousand to one that Mr. Elliott would not find in his son the all-excelling portrait painter. So we find no fault with Mr. Elliott. And it was doubtless the best thing for the boy—it *was part of his training*. If a young man has in him the passion for art too deep to be eradicated by opposition—an enthusiasm too blood-felt to be chilled by ridicule, rebuke, or rebuff—he will work his way. If he can not withstand and finally surmount such obstacles his blade is not made of Damascus steel.

Young Elliott's best and fairest test was now coming. His father had large contracts for building. Architectural drawing was an important branch of the business, and when he made known to his son his desire to have his best assistance, it was faithfully pledged. The compact was fairly entered into, and honorably fulfilled on both sides. Partly as a necessary facility to his progress, and partly to gratify his taste, he was sent to a select school for two years, where he was contented, because he could follow congenial studies, and when his father wanted any help, artistic and well-executed drawings were always furnished by the willing artist. Discerning the irremediable bent of his genius, and wishing to divert it exclusively to architecture, he procured for him elaborate and costly works in that range of art, and so accurate and beautiful was every design and combination the builder called for executed he became proud of his son's talent, and was happy in the fact that he could turn these gifts to advantage. "Art seemed now not to be squinting quite so straight to the poor-house."

During this period Elliott made a profound study of architecture and drawing in their application to practical use in common edifices—in chastening the proportions of dwellings, elaborating, and refining, and embellishments of

porticoes, windows, mantles, reliefs, etc. He suggested many tasteful and valuable models for his father, which proved essentially useful. But this study soon lost what little charm it had for "the young man who was born to be a portrait painter." His "long thinkings about the future" ended in his asking his father's consent to come to New York "to learn to be a painter." This was at once granted, and the glad day of freedom came. He started, too, with as generous a provision as his wants required.

Here the young painter made his way at once with a letter of introduction to Colonel Trumbull, who had his studio at the time in the old Academy of Fine Arts, of which he was then President. The veteran painter examined all the candidate's drawings, and one or two of his essays in oil, and then "strongly advised him to give up all idea of becoming a painter, and to apply himself wholly to architecture." "I do this," said the Colonel, "for two reasons. You don't seem to possess so much genius for painting as for architecture; and you will make a better living in this country by the latter profession. America will yet be a great field for the architect, and you certainly indicate *uncommon talents that way*."

Elliott respectfully replied that "he had gratified all his architectural propensities *up in the country*, and was fully determined, and had been ever since he was ten years old, to be a painter, and live or die by that business." It was very natural for Trumbull, on the evidence before him, to give that advice; for young Elliott had bestowed little care upon any thing but architectural drawing; and as these drawings seen by the great painter indicated extraordinary genius, he was fully justified in his opinion.

"Let me dissuade you, my young friend," replied Trumbull, "from this resolution by the history of my own life. I have devoted many years to my art, and from my career you can judge all you may hope for, even if you should be very successful. I have, it is true, received some commissions from Congress for national pictures, but this was only a piece of good luck. Aside from this what shall I say? I have painted a great many pictures which have been praised by connoisseurs, and amateurs, and artists; and yet you see hanging around this room nearly all the works on which I expended the principal energies of my artistic life. People come, and admire them, and go away; and yet here are nearly all the pictures of almost half a century of labor. I am now an old man, and time and disappointment have chilled my ambition. I have waked from the dream of life, and its *reality*, death, is looking steadily on me. My principal solicitude now is to make some good disposition of this gallery, which I think will yet have value even in the estimation of my own countrymen. I must take time to look about and see if I have friends enough in the world to give these pictures to."

"This was said," remarked Elliott himself, in narrating the facts, "with a sad feeling. He

seemed to feel that the world had not done him justice, and I have long felt so myself. But, although I could hardly help weeping at the sight of the gray-haired painter, grown sad, and perhaps misanthropic by disappointment and neglect, yet it didn't discourage me much. I thought the world would treat other painters better, and I was determined to run my chance. Seeing me resolute he said 'he would transgress the rules of the Academy, which admitted students only during the winter, and allow me to visit the Antique Gallery. He had a good deal of leisure time, and would give me instruction in drawing, and furnish me the necessary apparatus.' I began immediately, and I am happy to say that he more than redeemed his pledge. I owe much to the good old man, and I shall always be proud to own it."

Elliott remained a considerable time with Trumbull, and applied himself with great industry and earnestness *to correct drawing*. His progress was evident enough. But still Trumbull, who, during the later years of his life, advised all young painters to turn cobblers, insisted upon Elliott's becoming an architect. "But," Elliott said, "do what I could for the old man, I could not agree with him." And he went to study with Quidor, a fellow-pupil with Inman under Jarvis.

"While I was with Quidor," says Elliott, "I spent most of my time in copying prints in oil, which, for want of a better market, I sent to the auction; for, being determined to support myself, it had now become with me *most decidedly* a question of bread and butter."

It was not long, however, before he began to paint portraits, at any price he could get; and although these early efforts could not of course indicate much knowledge of the practice or principles of art as taught in the schools, "yet" (as Inman once said to the writer) "there was in Elliott's portraits, *from the beginning*, an air of fidelity, earnestness, and truth; there was warm and genial expression, and a rich, glowing, generous coloring in his rude portraits which make them still charming to look at, even to those who are not familiar with his later masterly creations."

He said "sometimes during this period how glad he would have been if he could have had the opportunity of painting *some things* besides portraits—especially if he could devote some years to a careful, elaborate, and persevering course of study in the principles and the practice of correct delineation."

While in Quidor's studio with some four or five other young men who have since been heard from (among them Colonel T. B. Thorpe), Elliott went off on another "great picture"—"The Battle of Christina," drawn from "Knick-erbocker's History of New York," in which Peter Stuyvesant and his wooden leg are very conspicuous characters. It is perhaps safe to say that even to this time that is the only *great* historical representation of that decisive battle, which terminated after ten hours of hard

fighting without the loss of a man on either side!

After a year of hard work Elliott returned to pass a winter with his friends, painting, in the mean while, a great number of excellent portraits. The following spring he resumed his labors in New York, and with considerable success. In the intervals of his portrait painting he threw off two compositions of peculiar merit—"The Bold Dragoon," and a spirited illustration of Paulding's "Dutchman's Fireside," which were exposed for sale in a shop-window. Trumbull, who had not met Elliott since he left his studio, happened to see them while walking leisurely by "in the style of a gentleman of the old school." "Who painted these pictures?" he asked of the shop-keeper. "Elliott, Colonel Trumbull." "Where is his room?"

He hurried to the place, knocked, and entering uncovered with all the stateliness of the last century, said to the young artist: "You can go on painting, Sir. You need not follow architecture. I wish you good-day, Sir," and withdrew. Elliott never saw him again.

Banishment from the inspiring scenes of nature to a man who loved her so well could not last long; and, "tired of the city and the city's ways, I determined," he said to a friend, "to go back into the country for a considerable period." And, fixed in this purpose, he returned to the region where his boyhood had been passed. There he lacked not employment; "and above all," said he, "I found more satisfaction in the honest way of doing things among old neighbors and friends than can be found in great towns, and I am satisfied I painted better pictures."

The next ten years he passed chiefly in Central New York—ten of the brightest and best years of his life. Elliott's love of nature was deep as the earnest, true man ever feels for any thing, and tender, trusting, and filial as a child's. Nor did he cultivate this love of nature as a misanthropist, for his great heart was large enough for all that is true and generous. He once said: "There is something very great and inspiring in fine scenery; but what would it all amount to without the society of friends? After all, there is nothing in all nature like a fine *human face*. Portrait painting is a big thing when it is portrait painting."

While painting the portraits of the Faculty of Hamilton College (Oneida County, New York) Elliott fell in with Huntington (now President of the National Academy of Art), a young student, whose portrait he painted with great care—a picture which even now would not be thrown into the back-ground of any collection. The meeting of those two young men in that secluded place will hereafter furnish suggestive matter for the pen or pencil of some true artist, who, when the men now living have rested from their labors, will conjure up beautiful thoughts and glowing images to thrill the fancy and touch the heart of future times. Already the world loves both their names.

It can hardly be known, while Elliott lives, how many portraits he painted during these ten years of country life; but (carefully and conscientiously as he always painted) the number must have been very great. We find, too, in comparing his pictures at the beginning and the end of these ten years, that he had made astonishing progress in his art. He was never stiff, or clumsy, or cold; but gradually grace, and ease, and warmth, and high feeling, stole into the forms on his canvas, until he reached the point—which every true painter and writer reaches on his road to excellence—when *all* things undertaken are ennobled, and forms of real beauty come forth clothed with celestial light.

Nor were those ten years of exile from the heated air of artificial life lost in any sense whatever. Nature sometimes asserts her right to nurse her great children on her own breast, and Providence comes to her aid. The schools can not do much except for common men. Nature is the great teacher; from her the highest and deepest lessons are learned. But Elliott had learned those lessons; he "had staid in the country long enough;" he "needed the electric influences of metropolitan life;" he "felt that he could now go to New York with real pleasure and brush up," "for I had begun to get lazy."

But once in the metropolis he "had to begin his career anew." His old circle had been broken up. Some of his patrons and friends had gone abroad, many "gone West," and "not a few were dead." But he got a studio, and went to work with a serious and fixed "purpose to do something *worth while* in art." He sent some of his best portraits ("for," said he, "by this time I had thrown aside every thing but portraits—I wasn't made for any thing else") to the Academy, and had the satisfaction of knowing that an unbiased judgment had set upon them the seal of judicious and enlightened approbation. He now went on painting with industry and conscientiousness any and all portraits that were offered. But there was nothing in the man or his pictures of the *sensation style*. In the very depths of his honest soul he "hated the whole thing; only let us have fair play." His reputation grew rather slow, but it was to be enduring.

He met with no great "success" till 1845, when his picture of Colonel Ericsson excited universal admiration. The best judges unhesitatingly said it was the best American portrait since Stuart. This soon became the general feeling, and that feeling has been growing, until now (1850) Elliott stands unquestionably at the head of the portrait painters of his time.

The following year (1846) a considerable number of his pictures were sent to the Academy—among others those of Horatio Stone (the sculptor, now in Rome), T. B. Thorpe, Clarke (of the *Knickerbocker*), and Thayer, which seemed to be regarded, especially by the best judges, as the finest work Elliott had yet done. The

latter was one of the finest subjects the painter is ever favored with. In transparent honesty of likeness, in earnestness of expression, in geniality of feeling, in deep, rich flesh-tints which come out from fine faces around the fireside of home, and, above all, in the spirituality of the man's individual human soul, "the Thayer picture" (as every body called it) created the same impression upon every body. In the estimation of his own countrymen Elliott's place was now defined. Competent foreign judges among us soon ratified the sentence of America.

In recalling that year (1846) we can never forget how sad the world of art was made by the too-early death of Henry Inman. He had just returned from Great Britain with his executed commissions of the portraits of Wordsworth, Chalmers, etc. His works had commanded universal admiration, as the man had inspired the deepest love. He had none of the jealousies which so often mar the magnanimity of contemporary artists, and although the world was ringing with Elliott's praises, and he had not met him for many years, yet he said, "I must choose the first fine day to go to Elliott's studio—he is painting so superbly, and he is so fine a fellow." Inman's friends saw that his life was drawing to a close, although he did not seem to notice the shadow that was moving over his path. We all felt that it would have been cruel to pluck from his "hope-illuminated brow" those last golden beams which the genial sun was casting as he went to his setting.

Inman entered Elliott's studio, and gave him the thin white hand and loving look of the great-hearted artist, and sat down. Still looking at him with a tenderness all his own, he finally said, after much friendly and sunny talk: "My dear Elliott, when I shall have somewhat recovered my health and spirits we must exchange portraits. I have never been quite so well painted as I desire. Nothing will give me more pleasure than to paint yours, except to have you paint mine."

They pledged each other that the first work they were to do after Inman got ready should be this courteous exchange of the fruits of their gifted pencils. It must have been a touching scene to them; for it is impossible for those two men not to have known that in that studio were then standing the first two portrait painters in America. Poor Inman pressed Elliott's hand kindly, and gave him his characteristic "Good-by," just as we do so carelessly when we expect to meet again in a day or two.

Inman returned to his home, never to leave it again till we bore him in that wild winter day to his home at Greenwood. The friends of art will never cease to regret that those portraits were never exchanged.

"Elliott is now painting great pictures all the time." These words were uttered a few days ago by one of the dearest and best names in this country, for which, in another department of the highest culture, he has done more perhaps than any other man. We have not the

space, even if we could, to make out the list of all Elliott's portraits executed up till the present time which will be considered well worthy of preserving. As this sketch is but the merest outline of Elliott's artistic life thus far, we shall close it by a word or two concerning the chief characteristics of his portraits, and inquire in what the power and charm of his genius for portraiture consist.

1. Extreme fidelity of likeness—this is the starting-point; without it there can be no complete portrait painting. When we look on one of Elliott's portraits we feel that he must have known not only the peculiarities of the person's face and form, but that he must have read intimately and genially the spirit of the character. In all his pictures we can trace the decisive points of the individuality—the prevailing expression.

2. But having observed that all Elliott's people, like Vandyck's, *look well*, we naturally ask, "How is this? all people are not good-looking." True, but it so happens that artists of reputation either *choose* good subjects, or, as Elliott once said, "People who want good portraits are generally apt to be good-looking themselves." Art, however, claims the right of portraying the best expression. It is the attribute of the pencil, as it is of love, to usurp those golden moments of enchantment, when every look is wreathed with fascination, when every smile breathes voluptuousness, when every glance flashes with a higher passion than the common observer sees.

There should be—and is there not?—some holy spot left in the heart of every man and woman from which something joyous, touching, loving, humane at least, and perhaps divine, will now and then come forth with a flash which, when genius holds the pencil, sets the canvas all aglow. Elliott used to say, "Every face almost *ought* to make a good picture."

We take it for granted that when Elliott paints a portrait he can not miss a likeness—nor a good picture. The first point is gained by accurate delineation—the rest follows by a skillful arrangement of position, light, shadow, and the artistic *blending* of all the accessories, and the *infusion* of the sentiment of the subject into the whole work. This brings the picture out on the sunny side of each sitter's better life. This charm belonged to Elliott, and his magnetic genius infused it into all he painted. When the man Elliott has painted looks on his own picture he becomes, in spite of himself, a better man. He is inspired with purer imaginations, tenderer sentiments, and loftier purposes. He goes away from the portrait more generous in impulse, purer in fancy, and more courteous in manner. In a word, there is something in Elliott's painting not unlike that *spirituelle aura* that pervades the writings and breathed from the form and manner of William Ellery Channing, who sanctified the atmosphere around him by the perfect human sympathy he every where inspired. We feel while we read

the writings of the one as we do when we look on the portraits of the other. We go away, and as our better nature speaks to us from the inspiration given, we feel that the world is better, and life worth more than it was before.

II.—LATER ARTISTIC LIFE.

The foregoing sketch left Elliott on the threshold of his fame. Long years of patient toil were to fix the verdict of history. He had reached the point on which the eye of every true artist rests from the beginning of his career. Subjects came to him without seeking, and he could now enforce upon the tyrant of circumstances the despotism once imposed on himself. He could paint when and whom he pleased. "This was a great comfort to me," he once said, "for I never liked even the *thought* of slighting *any* picture, and I was glad to be placed beyond the *temptation*."

We need not enumerate even the best of Elliott's pictures; the world knows them by heart, as it does the names of Irving's and Cooper's books—a word tells the whole story. Elliott was throughout life a great, unspoiled child of Nature. He loved her in the depths of his soul. He communed with her there—there he heard her own language, and in his pictures he gave her utterances to the world. He loved all her works, but man the most, for he was her last and greatest. And of this human form, the noblest part of it, the human face, was the study and the worship of his life.

For twenty years now he lived a serene, cheerful, beautiful life. He painted many of the first, the fairest, and the best forms of the nation. Happy are the possessors of his works. Of him it may be said with truth, each of his portraits is an historical picture.

If the suggestion of his life-long friend Thorpe be carried out (and the world will demand it), that some of his pictures should be brought together in an Elliott Gallery for a while, the collection will be his apotheosis in the Temple of Art forever, while the fund thus raised will build him a tomb where sculpture may write his epic in stone.

III.—SOCIAL LIFE.

It was full of the light of love from dawn till sunset. His friends were all who knew him; his enemies! he had none. The loving and reverent old painters always traced the *halo* around "Mary's" head. The Rosicrucians held that each good person is surrounded by an *aura* which has something celestial in it. Where Elliott went, this *aura* seemed to go. It always came with him. Something of it seemed to linger when he went away. It was the magnetism of a fine soul, blended with the starry twinkle of white intellectual light—not of wit, which was too cold and ungenial for him. Once when a "man of genius" left the room after "scintillating away" for an hour, saying sharp things at the expense of most of his acquaintance, Elliott took my arm, and

looking into my face with one of those rosy expressions which sometimes made his always handsome face look divine, said: "There! that fellow has gone; let's get on the sunny side of the hedge now."

Elliott was supremely happy in his home, with a wife who was his angel of love and tenderness till the last hour. And he provided generously for that home, and with rare foresight and judgment put a solid thatch over the dwelling where those he loved can rest securely.

Of most men we are apt to speak of (in certain moods) "their better nature." Nobody ever made such a distinction in talking of Elliott. He had no *bad* nature. Like the finest fruit ripening in the Italian sun, one can hardly say which is the sunny side—so luscious is it all the way through. Its first petal opens on joyous air; its whole life is a blissful bath of sunshine. You have seen the large *mezzo-giorno* nectarine thus growing on the purple shore of Sorrento. And yet a stray leaf—albeit a sheltering one—had lapped over and rested on the fairest nectarine there, till some insect (the warm air swarming with them—*all little ones*) had stopped and staid there. It did not eat in far, only it did not *go away*, and it cast a shade over quite a space, and it made a spot there. But at last, just before the ingathering gardener came round, a breeze, stronger than usual, but kinder it may be too, detached that leaf, and sent it and the dead worm whirling off, and so the spot went away, only the scar remained. But who thought of that? In all the grove there had been but one such nectarine.

A triple curse on rum—so often the baneful inheritance of genius, whose path through the Gardens of Armida seems to be haunted by the infernal enchantress forever and forever!

But see how superbly this orb moved out from the clouds as he went to his setting. Elliott and I had both trod the enchanted ground—we had wandered in these upas gardens together. Years before, after I had seen half the friends of my youth go down, and my own feet were pressing the same verge, I had waked from the spell and thrown down the wine-cup. My example had saved some; my love others. But the one of all others in the wide world my soul longed for I could not win. And yet the white-robed angel of redemption was winging his blessed flight that way. I find this record in my "Life Sketch-Book:"

April 17, '68.—Called to see Elliott by appointment, to talk about the new art of coloring marbles through the entire mass, and if it were a lost art. Found him down in the saloon. He had been drinking more than usual. But his head was clear, and his heart overflowing with the richest and most generous humanity. He was alone. He listened for a few moments, and then putting his hand on my shoulder said, with a deep and tender voice, "My dear L—, I don't want to talk art to-day—I want to speak of something a great deal bigger than that! *I must stop drinking*. I have thought it all over. You know all about this business. I want to take the pledge. Can't you give it to me as a friend? It will be better so."

"I can, my dear fellow."

"Well, then, come up to the bar, and write it out

here while I take my *last* drink. Mind, L——, write it *strong*."

I wrote it. He came to the table, and slowly taking the pen and holding it a while, as he turned on me his deep, earnest gaze, said:

"Friend L——, *this is a big thing*. Think of *my* giving this up at my time of life! Now in my old age! And yet it must be done."

He deliberately signed his name.

"Now," he continued, "you witness it—put your name there, right under mine. Now make a duplicate of this;" which we both signed.

Putting his copy carefully in his memorandum-book, and buttoning up his coat, he drew a deep breath, and, as large, generous tears rolled, one by one, down on his breast, he said:

"It's done. Now, L——, stand by me, and it will all be well."

And so he began his new life. After a brief visit to his home at Albany he resumed his painting, and with almost incredible rapidity dismissed from his easel that series of his last priceless portraits, working hard till his work was done.

A genial writer in the *Evening Post* says:

"All the houses he occupied were models of cheerfulness. The last house he bought was formerly owned by his friend Palmer, the sculptor. His studio, in which he hoped to pass the evening of his life in quiet enjoyment, was never used. At the time when he returned, and his sickness approached, he would lie down on the sofa and look around his beautiful studio with tears. He felt that he would never paint again. About a week before he died his mind seemed to wander. On Saturday he had his pencil and pallet in bed with him, and had a vision of most

beautiful colors. His last effort was to carry his pencil to his lips, as if to wet it, and then made the familiar motion with it in his fingers, as if he were painting, and then fell into a stupor from which he never recovered. For several days he lay totally without pain, and breathed his last as quietly as if an infant had fallen asleep."

"My God, Charley, you must not die now!"

This was the single loud plaint of unsubmissive sorrow that went up from a thousand of the best hearts in America. But his earthly task was done. "Home he'd gone and ta'en his wages." Apelles and Raphael, young Vandyck and old Titian, were waiting for their younger brother—the all-excelling Portrait Painter of the New World.

His brother artists bore that casket from the National Academy of Art (his proper receiving tomb) to Greenwood—a fitting train of pall-bearers. But our fancy saw another and fonder procession in that evening's twilight flitting through the sacred groves of that peerless City of the Dead:

"A pall of withered leaves sad fays are bearing
Through the long shadows of the wood-land dim,
While mourning nymphs, their golden tresses tearing,
Weep o'er the urn and wail the funeral hymn.

"The artist's dead! The gifted's task is ended;
The brush and canvas lie all useless now.
Life's picture's finished—light and shade are blended
By the Great Master to whom all must bow."

THE WOMAN'S KINGDOM:

A LOVE STORY.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

CHAPTER XXIX.

MRS. STEDMAN was sitting with all her children round her, trying to make the evening pass as usual, in reading, lesson-learning, drawing; broken by fits of play and merry chat. None of the boys, except the eldest, knew of what had occurred, or saw any thing remarkable in their father's absence—and she had charged Julius to be silent for the present. He, wise and grave beyond his years, and his parents' confidant in many things, was the only one who had been told more about Uncle Julius than that his father had had such a brother, who died abroad. And even he knew comparatively little; but it was enough greatly to interest and excite him. Besides, his mother—the one grand idol of his life, whom he worshiped with that adoring filial tenderness which is Heaven's best instrument for making noble men—his mother had been put into his charge, and he watched her with especial care—distracted the attention of the rest from her—and hovered about her with endless little caresses, listening all the while to every sound of the hall-bell, which made her start whenever it rang.

For Edna, more imaginative and quicker than her husband to put things together, could not get out of her mind a strange impression, which came very near the truth. And when her son brought her the letter, having first carefully allured her away from the rest, that she might read it unobserved, her hands shook so that she could scarcely break the seal.

The next minute she had burst out with a great cry of "Julius!"

Her boy ran to her alarmed, and took her in his arms—his dear little mother.

"Not you, my son. I did not mean you, but your Uncle Julius. Papa has found Uncle Julius."

There is a belief—a feeling—Julius had had it strongly not so many weeks before, when he stood in the dark outside his brother's shut door—that if the dead were to come back to us again, they would find their place filled up, their loss mourned no longer, and the smooth surface of daily life grown greenly over them, like the grass over their graves. This is true, in degree, and Infinite Mercy makes it so; else human nature could not possibly endure its anguish to the end. But there are exceptions,

and the present was one of them. Julius—poor prodigal as he might be—had fed on his own swines' husks silently, far away; he had never either disgraced or wronged any one, least of all his brother. Heavy grief though he had caused, there was mixed with it none of that aching bitterness which Edna felt in her own heart, and the mute contempt which she read in her husband's face, whenever she chanced to mention her sister. Therefore, her rejoicing over the lost and found was as unclouded as her love—and she had always loved Julius.

The wonderful news could not be long hid, especially in this loving family, where the parents kept none but necessary secrets from their children. The mother was soon the centre of an eager group, asking all manner of questions, and evidently regarding the whole matter as a sort of real-life fairy tale.

"Don't bother mamma, children," said Julius, with tender authoritativeness. "Come away with me, and I'll tell you as much as I know, while she reads papa's letter."

Dr. Stedman had written, not telegraphed, that he might startle her less and give her the latest intelligence, and had sent his letter by the faithful Tommy Fox, who was to remain that night at Brook Street, and bring Mrs. Stedman back with him the first thing next morning.

"I do not want you until the morning," wrote William to his wife. "You must get a good night's rest, for I fear you may have some days, or perhaps weeks, of heavy nursing here. However, if he survives the next twenty-four hours, he will live, I doubt not. I might have sent for you to-night, but I thought it best not."

Edna felt also that it was best not—that not even his wife should share in this solemn watch which William kept so faithfully—uncertain whether after all his brother might not slip away, unrecognizing and unrecognized, into the next world. But even if Julius died, it would be a lighter burden to bear than that which Dr. Stedman had borne so patiently, so silently, all these years; not suffering it to darken his home-life, which would indeed have been both foolish and wrong. Still it was there—and his wife knew it. Almost every human heart has some such dark chamber in it; she had had hers too.

Now, was the grief to be lifted off or not? Edna could not tell; nor William. He had only said, in reference to the future, one thing—"If Julius recovers, will my wife take him home?" At which the wife smiled to herself. There was no need to answer that question.

So, it was necessary to prepare for possibilities; and first, by telling the children as much of their uncle's history as she thought advisable. They were not inquisitive or worrying children. Still they had their natural curiosity, increased by the very few facts she was able to

give them; indeed little more than that Uncle Julius, whom they had supposed to be dead, had reappeared, and at last come home.

"But why did he not come home before, mamma?"

"Being a soldier he could not do that, I suppose."

"Still, he might have written," said Julius, a little severely. "It was unkind of him to let you and papa imagine he was dead, and grieve after him for so many years."

"People sometimes do unkind things without meaning it, or, at least, without definitely intending it," said the mother, gently. "When you are as old as I am, my son, you will have learned that—" Here she stopped, hindered by the great difficulty with all young people—how to keep them sternly to the right; and yet while preaching strict justice, to remember mercy. "In truth, my children," added she, with that plain candor which had been her safeguard all her life, and taught her sons to be as fearlessly true as herself, "it is useless to question me; for I know almost nothing, except that papa has found his brother again, which will make him so happy. You like papa to be happy, all of you?"

"Ah, yes!" and they ceased troubling her with their wonderings, but with the brilliant imagination of youth darted at once to the possibility of Uncle Julius's appearance among them, making endless speculations and arrangements concerning him. The twins, hearing he had been a soldier, brought out their favorite toy-cannon, with a man behind it, which man they immediately named "Uncle Julius." Robert, who had set his heart upon wandering half over the world, exulted in the thought of all the information he should get about foreign countries; and Will, after much meditation, leaped at once to a most brilliant conclusion.

"That folio of drawings you keep, beside the old easel in your bedroom, mamma—were they not done by Uncle Julius? You said he was an artist before he went away to India."

"Yes."

"And clever, too, to judge by those sketches, which you have never properly shown me yet, and will not let me have to copy; very good they are, some of them," continued Will, with the slightly patronizing tone of the younger generation. "Of course, he is too old to make an artist now; but he might help to make me one."

"Perhaps," said the mother, and wondered whether Uncle Julius would recognize, as his brother and she had long since began to do, the eternal law of progression, whereby one generation slips aside, or is set aside, and another takes its place—a law righteous and easy of belief to happy parents, but hard to others, who have to drop down, solitary and childless, into the great sea of oblivion, leaving not a trace behind. As she looked on her bright, brave boys growing up around her, in whom her memory and their father's would live, long

after both were in the dust, Edna thought of Julius, and sighed.

"Now, my little man, you must chatter no more, but be off to bed; for mamma has a great deal to do to-night."

Nevertheless, she was not afraid, though it was a small and already full house in which she had to make room for the wanderer; but the capacity of people's houses often corresponds with that of their hearts. And she had good servants—a good mistress usually has—and helpful, unselfish children. Her eldest, especially, followed her about the house, assisting in her plans and arrangements almost as cleverly as a daughter, and yet so manly, so wise, so reliable that for the hundredth time his mother pitied all women who had not a son like Julius.

Yet when he and she sat together over the fire, the house being silent and all preparations made, both for her temporary absence and for her return with poor Uncle Julius, if he recovered—with the reaction from her first joyful excitement over—anxious thoughts came into Edna's mind. Was she right in bringing into her household and among her young sons this man, who might be so changed—whose life for fifteen years and more was utterly unknown to her, except that he had sunk deplorably from his former estate? When her eldest son, looking at her with his honest, innocent, boyish eyes, said, earnestly, "Now, mamma, tell me all about poor Uncle Julius," Edna trembled.

But only for a moment. She knew well, her anxious life had often taught her, the plain fact that we can not live two days at once; that beyond a certain prudent forecasting of consequences we have but to see the right for the time being, and act upon it.

"My son," she answered, cautiously, as her judgment prompted, but honestly, as mothers ought who have their children's souls in their hands, "Uncle Julius has had a very hard, sad life. It may have been not even a good life. I do not know. But papa does; and he understands what is right far better than we. He says he wishes Uncle Julius to come home—he is so glad and thankful to have him at home. So of course it is all right. We can trust papa, both you and I."

"To be sure we can," said Julius, and looked his father's very image while he spoke: so that Edna had no farther fear even for her darling boy.

It was little more than ten in the forenoon, and Holt Common was bathed in the brightest spring sunshine, when Edna crossed it under Tommy Fox's guidance, to take the shortest cut to the "Goat and Compasses." She scarcely looked at the sweet sights around her—the green mosses, the perfumed gorse—so full was her heart, trembling between hope and fear, wondering whether it would please God to give this poor wrecked life into their hands—hers and Will's—to be made whole and sound again, even in this world; or whether, in His infinite

wisdom, He would take it to Himself, to do with it according to His omnipotent will, which *must* be perfect, or it would not be omnipotent.

There was a figure standing at the ale-house door—her husband watching for her. Edna looked rather than asked the trembling question, "Is he alive?" which William's smile answered at once.

He had held up bravely till now; but when he found himself alone with his wife he broke down. Edna took his head to her bosom, and let him weep there, almost like one of his own little children.

But there was no time to waste in mere emotion—the patient must not be left for ten minutes. Nothing but constant watching could save the life which flickered like a dying taper, half in and half out of the body. Julius might slip away at any moment, giving no sign, as all the night through he had given none. It was impossible to say whether he even recognized his brother, though the pressure on the brain produced stupor rather than delirium.

"He lies, looking as quiet as a baby," said Will, with a great sob. "I have cut his hair and beard; he is quite bald. You would hardly know him. I wonder if he will know you, Edna?"

"Let us come and see," answered Mrs. Stedman, as she laid aside her bonnet, and made silently all her little arrangements for the long, long sisterly watch, of which God only knew the end.

Her husband followed her with eyes full of love. "There is nobody to do this but you, my wife. You would do it, I knew." She smiled. "And I have made things as light for you as I can. Mrs. Fox will take the night-nursing. She is evidently very fond of him—but every body was always fond of Julius. My poor dear lad!"

The strong fraternal love—rare between men, but, when it does happen, the heavenliest, noblest bond, a help through life, and faithful even unto death—shone in William's eyes; and his wife honored and loved him for it.

"Come," she whispered, "perhaps, please God, we may save him yet. Come and take me to Julius's room."

For another day and night the poor brain—worn out with misery, and disordered by the continual use of opium—lay in a torpid condition, of which it was impossible to foretell the next change. Then sharp physical pain supervened, and forced into a kind of semi-consciousness the bewildered mind.

The day he had spent out on the common—(Tommy Fox afterward confessed to having seen Mr. Stone lying for hours under a damp furze-bush)—brought back his old rheumatic torments. He had over again the same illness, rheumatic fever, through which his brother had nursed him twenty years ago. Strangely enough, this agony of body was the most merciful thing that could have happened to the mind. It seemed to annihilate the present entirely, and thrust him

UNDER THE FURZE-BUSH.

back to the days of his youth. He took quite naturally the presence of Will and Edna, and very soon began to call them by their right names, and comprehend, in a confused way, that he was under their charge. And in his total helplessness the great difficulty which William had foreseen, the stopping of the supplies of opium, became easier than they had anticipated. After he had been brought back, as it were, from the very gates of the grave, to some slight recognition of where he was, and what had happened to him, he seemed to wake up, as people often do after very severe illnesses, with the freshness of a child—asking no questions, but helplessly and obediently clinging to those about him, till sometimes none of his nurses could look at him without tears.

Gradually he passed out of sickness into convalescence, began visibly to amend in body, though how far his mind was alive to the things around him it was difficult to say. He noticed nothing much—neither the changes which Edna had gradually instituted in his ragged wardrobe, nor the comforts which she gathered around him in his homely room. He spoke little, and his whole intelligence seemed to be absorbed in trying to bear, as patiently as he could, his physical sufferings, which, for a long time, were very great. When at last Edna, to whose ministering care he had grown quite accustomed, proposed taking him “home,” he assented, but without asking the slightest question as to what and where “home” was.

Letty, either as Letty or as Mrs. Vanderdecken, he never once named.

Indeed, in the complete absorption of the time, neither Edna nor her husband thought much about her themselves. The near neighborhood of Holywell Park troubled them not; the place was half shut up, the mistress being away at Brighton. Thence she never sent, never wrote; at which they were neither surprised nor sorry.

But the night before they had settled to quit Mrs. Fox’s kindly roof the good woman brought to Mrs. Stedman, for whom she had conceived a great admiration, a note from the Hall.

“I don’t know if you knows Mrs. Vanderdecken, ma’am, but perhaps you do; as it was through her little girl I heard of Dr. Stedman. And she’s a kind lady—a very kind lady indeed: *he* saw her the day before he was ill. Didn’t you, Sir?”

Edna interposed, and stopped the conversation, but her caution seemed needless. The sick man took no notice, and she hoped he had seen and heard nothing. However, just before she left him for the night, Julius called her back.

“What was that note you had? From your sister?”

“Yes.”

“Have you seen her?”

“No.”

This was all he asked, or was told, though, in much anxiety, Edna sat down beside him for another half hour. By-and-by Julius felt feebly for her hand.

"Are you there still, sister Edna? I like to have you beside me. I know you now, and Will too, though at first I did not. I thought I was dreaming. I have had so many queer dreams. They all came out of that box which you never will let me have."

"No, never again."

"Does Will say so?"

"Yes."

"Then I suppose he must be obeyed. When we were lads, kind as he was to me, Will always made me obey him." Julius smiled faintly, yet more like his own smile than Edna had ever seen yet. "Where is Will to-night?"

"Gone home, to get ready the house for us to-morrow, you know. Besides, he has his work to do."

"Ah, yes! and mine is all done. I shirked it once; and now, when I want to do it, I can not. Why do you and Will take me home? I would never have come of myself. I shall only be a burden upon you. Do you know, Edna, that I have not a half-penny in the world?"

"Yes."

"Except, of course, my pension as a soldier—a common soldier, which I have been—I ceased to be a gentleman years ago."

Edna smiled.

"Do not mock me, it is true. You had better not take me back. I shall only be a trouble to you. Nay, even a disgrace. Will is an honest, honorable, prosperous man, while I— What will all your friends say?"

"We shall never ask them. But," added Will's wife, in reasoning not her own, for her own failed her, "it is just the story of the piece of silver—'And when she hath found it she calleth her friends and neighbors together, saying, Rejoice with me, for I have found my piece that was lost.'"

Julius turned away bitterly. "Don't talk to me out of the Bible. I do not believe in the Bible. Only"—as if he feared he had hurt her—"I believe in you."

"Thank you, dear." She often called him "dear" now, in the tone she used to her own children; for, in many ways, Julius had grown so very like a child. "And I believe in the Bible. Therefore, I came here to nurse you, and keep you alive if we could. Therefore, as soon as you are stronger, I mean to take you home, to begin a new life, and never to speak of the old life any more."

Tender as her words were, there was a certain authority in them—the quiet decision which Edna always showed—and nobody attempted to gainsay.

Julius did not, but lay quiet, with his eyelids closed, till at length he suddenly opened them.

"There was a packet—letters—which I think I made up just before I was ill. Where is it?"

"Mrs. Fox found it, and delivered it to the person to whom it was addressed."

"And that was—"

"Mrs. Vanderdecken."

"Are you sure of that?"

"Quite sure. Now go to sleep."

"One minute"—and Julius lifted himself up and caught Edna's hand. "Tell her—your sister—that for the child's sake I have forgiven her all. I will never harm her. Her daughter knows nothing—never will know. Say I forgive her, and bid her good-by from me."

"I will," said Edna; and then, still holding her hand, Julius dropped into the quietest slumber which he had yet known.

When alone for the night Mrs. Stedman read over again the dirty-looking note, which had lain a whole day in the pocket of a small child, one of Mrs. Vanderdecken's Sunday-class, by whom it had been sent. Letty's cowardice had followed her to the last. There was in the missive neither beginning nor ending. Nothing that could identify it or its writer, or betray any fact that it was safer to conceal.

"I know all, and was glad your husband had been sent for to the poor man, you and he being the proper persons to manage the business. Give him my best wishes, and I hope he will soon get well. If I could do any thing—but it is better not—you will understand that. Only, if you like to come and talk it over with me, I shall be very glad to see you, for I am quite alone here, though I shall return to Brighton in two days."

Edna closed the letter with a heavy sigh, and sat long pondering over it, and how she should answer it; whether it would not be advisable, under the circumstances, and especially with regard to a future that was very difficult at best, to go and see Letty, as she asked, in her own house, and, calmly but not unkindly, "talk it over," as she proposed, thus closing forever the grave of a past that could return no more.

In her husband's absence Edna was obliged to trust to her own judgment, and what she knew his would be. He had said more than once that nothing should induce him to enter his sister-in-law's door, nor did his wife dissent from this. There is a limit beyond which self-respect can not pass; and charity itself changes its character when it becomes the subserviency of weak right to rampant wrong. But Mrs. Stedman, who had not an atom of weakness about her, or pride either, felt no hesitation whatever in crossing, just once and no more, her sister's grand threshold; neither humbly nor scornfully, but with a kindly sisterly heart. If she could do Letty any good, why, well! If not, still it was well too. They would both see clearly, once for all, what their future relations to one another were to be.

So next morning, before Julius was well awake, without saying any thing to him or any body, she started off across the common to Holywell Hall.

It was a very fine house, the finest Mrs. Stedman had ever entered; for her busy domestic life and narrow means had, until lately, kept her very much out of society. She admired it extremely, for she had such pleasure in any thing orderly, fit, and beautiful. Yet, when her little feet trod on the polished black and white

LETTY'S LETTER.

marble of the hall, and followed two tall liveried footmen up a magnificent staircase, stately, silent, and chill, her heart sank a little, and she was glad fate had not burdened her with her sister's splendid lot. It did not occur to her, in her utter lack of self-consciousness, that, had such been the case, the probabilities were that Holywell Hall would have been as bright as Brook Street.

The footman went before, and she was following him at once into Mrs. Vanderdecken's morning-room, when she heard her sister's voice within, and hesitated.

"Stedman is the name, Wood?—I don't know—yes, I do know the lady. Show her into the yellow drawing-room. Oh, she's here."

Rather awkwardly Mrs. Vanderdecken came forward, merely to shake hands, till, the servant having closed the door behind him, she stooped and kissed her sister, though not with much demonstration of affection.

"I am very glad to see you. It is extremely kind of you to come. You see I couldn't come to you—it was quite an impossibility."

"Certainly."

Then Letty burst out:

"Oh! Edna, do give me a little comfort. I have been so frightened—so thoroughly miserable. This is indeed a wretched business."

"I do not see that, since it has ended so well in Julius's recovery. He might have died. It was such a merciful chance that your little girl wrote to my husband."

"Yes; and I assure you I did not scold her

at all for doing so. I was only too thankful to get her safe away, where she would hear no more of that dreadful story, or of him, poor fellow; he made her so fond of him. She cried her eyes out till I told her Dr. Stedman was with him, and that he was getting well. That is true, is it not?"

"Yes, thank God!"

"And nobody here knows who he is; but, like Gertrude, people think him Mr. Stone?"

"No—Mr. Stedman," said Edna, coldly. "My husband was not likely to be ashamed of his brother, or to conceal his relationship to him. But you need not be alarmed; we have carefully hidden our connection with you. No one here has the least idea that you are my sister."

"Thank you, thank you!" And then, some dim notion striking Letty that it was an odd thing to express gratitude for, she added, half-apologetically, "You see, we are obliged to be careful. In our position people do talk of us so. And he was so violent, so cruel, to me—Julius, I mean. And there was something so disreputable—so dreadful—about his story. You know it, of course."

"No; he has told us almost nothing; and we are determined to inquire nothing. My husband believes less in the confession of sins than in the forsaking of them. Unless Julius speaks himself we shall never ask him a single question about his past life."

"Well, perhaps that is your best course; any other would be so very inconvenient. I de-

clare, when I listen to Gertrude's story—but I'll just repeat it to you, for it will relieve my mind."

And she told, accurately enough for her, Julius's whole sad tale, which he had told to the child, and her own interview with him, which had followed it.

The facts were all new to Edna, but she said nothing; how could she? From the sick-bed beside which she had watched so long she seemed to gaze on her elegant sister, gifted with every thing that the world could give; and she understood something about the joy in heaven, not over the rich and the prosperous, but over one sinner that repenteth. The one question, Did he repent? was all she ever asked herself, and that time alone could answer.

"Was it not dreadful of him," Letty continued, "after all these years, and when I would have met him so friendly, to try to injure me thus? Ah, Edna, you don't know the agony of a poor mother who fears losing her child's heart."

"No," said Edna; "but you need have no fear now;" and then she delivered, word for word, the message Julius had sent.

Letty was a good deal touched. "Poor fellow, poor fellow!" she repeated several times, and wiped her eyes with her lace pocket-handkerchief. "But why does he bid me good-by? Will he die, do you think?"

"God only knows. The first danger is past, but there is a weary convalescence before him. He will never be really strong, William says; and if any ill turn comes— But we will not forebode evils. I hope for the best."

"Ah, you always did. You were always the cheerfulest, bravest girl. I wish I had been more like you."

But these sudden compunctions, which ended in nothing, only made Edna sigh. She rose.

"I must go now, Letty. He will be waiting for me. I take him home to-day."

"He? Oh, I had forgotten! You mean poor Julius. I do hope he will recover; tell him I said so. Where are you taking him? to Brook Street? But of course you have no other house. Poor dear fellow, I am sure I wish him well. But are you sure he will not attempt to injure me?"

Edna smiled. It would have been a sarcastic smile once, when she was scornful and young; now it was only sad. She did not attempt to grow grapes from thorns, or figs from thistles, any more. She only understood, though it had been bitter learning, that all human creatures were of God's handiwork, and, if he had patience with them, so must she have.

"And now, Letty, good-by; for I really must go."

Upon which Letty eagerly begged her to stay.

"Why can't you have lunch with me, Edna, my dear? I am so dull, alone here. And besides, I should like to show you the house and the conservatory; you were always fond of

flowers. Ours are considered very fine, especially our orchids. Mr. Vanderdecken has paid sixty guineas apiece for some of them."

Edna shook her head. "I have no time for orchids just at present." And then, seeing real disappointment in her sister's looks, she agreed to stay with her another half hour.

"Especially as we may not meet again for some time. You must perceive, I can not ask you to Brook Street; and as for my coming here— But we shall remain sisters, feeling very kindly to one another, I trust. And, Letty dear, if ever you are in trouble, and want somebody to help you—"

Here she quite broke down. To the last day of her life Edna would never lose this sore-wounded, ill-requited love for her only sister.

Letty kissed her, not unaffectionately.

"Thank you. We all have trouble, some time or other, I suppose. But I hope mine is far off, still. I am very comfortable, and Mr. Vanderdecken is extremely kind. Then, too, I have such a pretty house. Won't you come and look at it? People say many a nobleman's mansion is not near so fine."

This was true; and Edna's innocent, generous heart admired it so warmly that her sister's spirits quite rose.

"Yes, I do think ours is a charming place, and it is a pleasure to show it to you. I am very glad you came to see me, and I only wish we could meet oftener, my dear. But I suppose that is impossible."

Edna was silent; she also felt that it was impossible.

"Gertrude will be so disappointed that she has not seen you. She thinks a great deal of her aunt Edna. And, perhaps, by-and-by, when she has forgotten all about Mr. Stone, who I shall tell her is quite well, and gone away to his own relations—"

"Oh, Letty!" broke in the other, earnestly, "whatever you tell her, let it be the exact truth. With such a child as Gertrude—with any child—straightforward truth is the only way. Forgive me—it will be long before I 'preach' to you again—but I have no little girl of my own; and Gertrude is a dear child! Be careful with her."

Letty looked a little vexed. "It is hardly needful to say that to me; but, Edna, I will take care of her. She is the light of my eyes—the best little girl that ever was born! Julius said he wished my child to grow up a better woman than her mother. Tell him, I trust she may."

They had now passed out of the winter-garden, with its overpowering atmosphere of scent, into the healthy freshness of the spring morning—the delicious spring, which always brought back to Edna the days of her childhood, and, though it came late, and long afterward, the spring-time of her happy love. This was twenty years ago, and yet, at scent of violets and primroses, and singing of nest-making birds, every year it came back again fresh as yester-

day. It did now, when she thought of going home to her own blessed home, from which, in all her married life, she had never been absent so long.

"I must be gone, indeed. I have not another moment to spare."

"Stay," said Letty, hesitating. "What hour do you go to the station? Let me send my carriage to take you—it would be easier than a fly—and—I should rather like to do it."

But Edna declined. Kindly as she felt toward her sister, to accept favors from her was impossible.

"Ah, well, perhaps you know best. Julius might not have liked it; and, after all, it might have looked a little peculiar. So good-by, Edna. Remember me kindly to all at home."

So the sisters parted, indefinitely, without hinting at any future meeting. They were so different in themselves, and their lives had grown so wide apart, that much personal association would have been worse than foolish—fatal. It was far best that each should go her own way, until, or unless, the infinite chances and changes of this world should bring about a future which now seemed impossible—as impossible as that the dead should come to life again, and the lost be found. Yet this had been.

As Edna crossed the park, her heart lightened almost into mirth by the gladness of the glad spring morning, and thought of Julius, whom she was this day taking home, with a wondering thankfulness almost equal to that with which the sisters of Bethany took home their brother Lazarus—it seemed to her as if, unto Infinite Mercy, nothing were impossible.

CHAPTER XXX.

WHEN his sister-in-law entered his room, Julius was already up and dressed, in the clothes to which they had gradually accustomed him—Edna having spirited away the old regimentals, with every thing that could remind him of his former life. To put it all behind him, and help him to begin anew, so far as there was any new life left in him, was their grand aim; and, so far, they had succeeded.

"Doesn't he look a sweet, dear fellow, ma'am, and not so very ill, after all?" said Mrs. Fox, who had hovered about him the last day or two with a tenderness indescribable.

Julius took the old woman's hand—her rough working hand—and kissed it with something of his old chivalrous air, which had made him, even under his rags and tatters, still so completely, often so painfully, "the gentleman."

"It is all owing to you, and my sister there, that the 'dear fellow' is not underground now. Off with you, Mrs. Fox, and cook my last dinner for me in your own perfect style. I'm so hungry."

"Bless you for that, my dear Mr. Stedman," said the good landlady as she hurried away;

and then Julius turned to Edna with a keen inquiry.

"You were out this morning. Where have you been?"

She never thought of answering other than the direct truth.

"I have been across the park, to see my sister. I wanted to bid her good-by before leaving this place, as she and I are not likely to meet again soon."

"You do not often meet?"

"No."

"Did you give her my message?"

"Word for word."

These were the sole questions he asked; indeed, it was the only time he mentioned Letty. Nay, when, on their way to the station, they met her carriage, and, to Edna's utter amazement, Mrs. Vanderdecken bent forward to bow and smile—altogether the courteous and stately Mrs. Vanderdecken—Julius returned the salute as he would have done to any other lady, and then leaned back, taking no more notice of her than if she had been a stranger.

But he did take notice, in a way that to Edna was infinitely pathetic, of every thing around them in the outside world, which seemed as fresh to him as if he had never seen it before. He examined, with that keen, artistic eye of his, every bit of landscape that Edna pointed out to amuse him; saw the primroses peeping through the road-side coppices, and the merry little birds flitting in and out—nest building—among the hedges as they passed. And though, when they reached the railway, he seemed to shrink a little from the sight of human beings, and entreated that they might have a carriage all to themselves, still there was no morbid misery in his aspect, and no bitterness in his words. He seemed weak and weary—that was all. Only sometimes, in words he let fall—for he did not express it directly—there was the sad longing for rest, mingled with what seemed an unconscious echo of the Psalmist's cry, "Oh, spare me a little, that I may recover my strength, before I go hence, and be no more seen!"

At the London terminus William met them, and almost without saying a word—he seemed as if he could not speak—half led, half carried his brother to his carriage.

"This is your own brougham, I see. You are a prosperous man now, Will," said Julius, feebly smiling.

And then he lay back, exhausted, and scarcely conscious of what was passing, till Edna thought that his "going hence" was a possibility by no means far off. Still, if he died, he would die at home!

Home! A little, little word—only four letters—a thing easy to be had, and yet some never have it—never know what it means, in all their lives.

Some do not care for it, either; Edna had once thought that Julius did not—but she changed her opinion now.

When they brought him, with considerable difficulty, to the large upper chamber, once the twins' nursery, but from which they had delightedly retired, on promotion, in favor of Uncle Julius—he looked round the room with a strange, sad, wondering air.

"How pretty!" he said; and then, "How comfortable!"

It was both—having been arranged, half as a bedroom, half as a sitting-room, with all the skill that his sister could devise, and his brother carry out. But, as the sick man sank into the easy-chair by the fire, and drew close to the blaze, shivering, though it was May—Edna and William turned away, almost ready to weep. For he looked so frail, so feeble—as if, let them kill the fatted calf, and bring the purple robe as they would—the festive food might drop untasted from his lips, and the raiment of welcome be used only to wrap the pale limbs of the dead.

Things seemed dreary enough for some hours. The first excitement of his journey over—the first pleasure of finding himself in a real home—his brother's home, with all the old comforts about him, and, above all, the love that made comforts quite secondary things—Julius broke down. With a great and bitter cry about his own "unworthiness," he turned his face to the wall, and sank into a paroxysm of despair.

"It is no use—it is all of no use. I am like that wreck off the Isle of Wight, which we used to watch—do you remember, Edna, how they tried and tried to save it, but could not? You can not. This poor, ruined, wasted life of mine—you had better let it go down."

"No," said Will. "No, we'll never let it go down."

"And that wreck was not a wreck after all, Julius," said Edna, cheerfully. "After months of labor they got her safe off, and now she goes sailing over the seas as bravely as ever."

"Does she really?" said Julius, with a strange superstitious feeling that brightened him in spite of himself for a moment.

"Yes; for I saw her name in the 'shipping intelligence' only two months ago. She has ceased to be A 1, of course, by this time; but she is a capital ship still, and sails steadily between here and America."

"You don't say so?" cried Julius, rousing himself with a childish interest. But the momentary brightness soon faded, and he fell back into his former depression.

Will signed to his wife to go, and joined her a minute afterward on the stair-head.

"Oh, husband, this is very hard."

"No; I expected it. We must have patience. The evil of years is not conquered in a day."

"But have you any hope?"

"While there is life there is hope. And then, we know, another and a safer Hope begins. I should not lose it, I trust, even if after all our care He took Julius out of our hands, and said, 'Give Me thy brother.'"

William was deeply affected; but still, his wife saw, he was determined not to yield to despair. She put her arms round his neck.

"Yes; we'll hope still, and strive on, to the last. And however it ends you have still me and the children."

She went down stairs and collected round her her eager little flock, whom their eldest brother had cleverly contrived to keep out of the way till now. She tried to sun herself in their merry loving faces, unseen for so long; to hear all their history since she was away; and answer, so far as she thought it well, their endless questions about her own. But in the midst of them all, half her heart went back to the lonely childless man up stairs, whose blighted and blasted life contrasted so bitterly with her own full harvest of content. And when she looked round on her five boys, and thought, what if it were one day with any of them as with Julius, when there was no father's house to come to, no mother's bosom to shelter in? And she grew almost sick with fear and sad out-looking to the future, till William appeared. It was the blessedness of Edna's life that strength, comfort, and peace always came to her with the sight of her husband.

"How is he?"

"He is asleep," said Will. "And now let me come and sit in my old place, and let all go on as usual."

Taking up his newspaper, he pretended to read, but soon stopped, to possess himself of his wife's hand, the small, soft hand, lovely still, though, like herself, it was fading a little—changing into that sweet decline which is scarcely like growing old.

"Oh, how delicious it is to have you at home! How different the house looks, boys, now your mother is come back!"

"If she had staid much longer," said Robert, indignantly, "I think we should have gone and fetched her back—from Uncle Julius or any body. If she ever goes away again—"

"Nay, I shall never go away again. Never, I hope, till—"

But when the mother saw the bright faces all fixed on hers, and looking to her for their very light of life, her heart failed her: she could not finish the sentence.

Soon all the evening routine went on as usual, broken only by those bursts of family fun, so small in repetition, so great in enjoyment; foolish family jokes, which brothers and sisters recall afterward, when scattered far and wide, as having been the best jokes in the world. Gradually the troubled elders were won, too, from their cares, and relaxed into the pleasure of their children. The mirth was at its loudest—the boys laughing so that Edna could hardly hear herself speak—when the door opened, and there stood in front of his brother's bright hearth and circle of happy children, Uncle Julius.

He was so pale, so haggard, his eyes so sad and wild, that the little twins gave a scream, and even Will, who was a boy given to poetic

imaginings, shrunk back as if he had seen a ghost.

Julius saw this—saw them all. In a moment the door would have been shut again, and the apparition vanished, but Dr. Stedman darted forward, caught him, and brought him in.

"No, no. Let me go back again. Never mind me, Will. I am used to be alone."

And even when he was coaxed forward, and seated in his brother's own comfortable easy-chair, he shrank and shivered, like a person who has so long been out in the dark and cold that the light only dazzles him, and reviving warmth gives actual pain.

"Indeed I'll not intrude," he said, nervously, to Edna. "You are all so merry here. I can go up to my room again. I only came down because I was restless—so restless; and I thought I should like to see you all."

"And here we all are; and every one of us is delighted to see Uncle Julius," said the mother, in her cheerfulest and most everyday tone. "Boys, come here, and let me exhibit you to your uncle."

Somewhat shyly, for they owned afterward he was quite different to what they had expected—not at all their hero of romance, the ideal "uncle from India"—the lads came forward, one and one. He shook hands with them timidly—as afraid of them as they of him; and tried, with a great effort, to distinguish their ages, and learn to call them by their right Christian names. But his mind seemed feeble and confused, and very soon his interest in them flagged, his eyes grew dull and heavy, and he looked piteously at his brother, as if for protection against this new, old, dreadful world.

"It is all so strange, Will; I can't understand it."

"Don't try to understand it, dear old boy. Every thing will come right presently. Sit still here, and we will go on just as if you were not present. You will get accustomed to us soon."

"Shall I? But no matter; it's not for long—I hope not for long." And then, as if struck by a sudden apprehension, he called his brother back, and whispered hurriedly, "What do they know about me—all these lads? Are you not afraid to bring me among your sons?"

Will smiled.

"I might harm them, you know. At any rate they will be ashamed of me, and so will you. Do you remember"—half his talk now consisted of his pathetic "do you remember"—"that picture I sat for, 'In another man's garden?' You laughed at it then; but it has all come true. The poor vagabond, looking on at his brother's happiness: it's just like me now, isn't it, Edna? Nay, I beg your pardon, my good little sister. I did not see you were crying." He held out his hand, and pressed hers tenderly.

"Behave better, then, brother Julius, or I'll not be good to you any more. And talking of pictures, I think you will not be the only artist

in the family. Will, my son, come over here, and show your drawings to your uncle."

This was a grand stroke of policy on Edna's part. Julius roused himself, like a dying war-horse at sound of the trumpet, and examined keenly, first the sketches, and then the face of his young nephew, so curiously like his own.

"Sixteen are you, my boy? I was sixteen once, and people called me clever, and said I should make a great painter some day. But that is all past and gone. Ah me!"

He leaned back with a groan; and that sharp agony, perhaps the sharpest next to actual guilt that any man can know, the remorse over a wasted life, came over him heavy and sore.

Edna was sending her son away; but the next moment, in one of his strange, fitful fluctuations, Julius looked up.

"Don't disappoint the boy, if, as you said, he wants me to look over his drawings. Give me them again."

They were very good for so young a draughtsman, and well chosen, being chiefly copied from the grand old Elgin marbles. As he turned them over the eyes of the sick man began to glow.

"Ah! this is well done, and this—all except the arm. But that bit of foreshortening is difficult. I remember how it bothered me when I drew it at the Academy. It was my best drawing, though; but I think yours is better still."

And he regarded, with his observant artist-eye, but also with a sad, half tender interest, the little fellow who, his face hot with happy blushes, knelt at his side; then put his hand on his nephew's shoulder.

"Any thing more to show me, my boy? Any thing of your very own?"

Shyly enough young Will drew from the very bottom of his port-folio a page of heads, which, when his mother saw, she wished had been at the bottom of the sea. But it was too late.

Uncle Julius started. "What is this?"

"It is Aunt Letty. I try to draw her over and over again from memory; but I can't succeed. She has the loveliest face in all the world," added the boy, growing quite excited. "Did you ever see her?"

Edna's heart almost stopped beating.

"Yes, I have seen her."

"And do you think you could draw her? From memory? You might. No one who had once seen Aunt Letty could ever forget her."

"No."

With a calmness that almost startled Edna—only she had ceased to be surprised at any thing now—Julius took up a crayon, and eyed it tenderly as he did so.

"I don't know if I can use this. It is years since I have touched a pencil—years!"

"Please try," entreated Will, creeping up to his uncle, as if he had an especial property in him. Truly, if the younger generation sometimes "push us from our stools," they have

likewise a wonderful power of soothing, and can often heal over the past, which they in their innocence annul and ignore.

The five boys all crowded round, watching, with different degrees of curiosity, the beautiful face growing under Uncle Julius's hand, which, in the eagerness of its long-forsaken labor, gradually became firm and bold. It seemed as if the artist's pure delight in work for work's sake were faintly dawning in him again. When the sketch was done, he held it at arm's-length, critically yet tenderly. It was Aunt Letty—feature by feature, as the boys at once exclaimed. Only, not Aunt Letty as she looked now. It was the face, young and fresh and sweet, of lovely Letty Kenderdine.

ONLY A FACE.

"Yes; that will do, I think," said Uncle Julius, holding it at arm's-length, and looking at it. "As you say, my boy, it is the most beautiful face in all the world—but only a face. I have drawn it many times: now I shall never draw it any more. Put it away."

Will obeyed, but shortly afterward came and settled himself beside his uncle, to whom from that hour he attached himself with a devotedness that nothing ever altered, though it was long before it was either noticed or returned.

Yet, until the children went to bed, Uncle Julius roused himself from time to time out of his drowsy weakness and sad preoccupation, to observe them a little, with a half inquisitive, half melancholy curiosity, as if trying to fathom the mystery of these young lives, which had been growing up, as it were, on the ruins of his own, and to trace in the new faces glimpses of the old familiar ones—now fading, fast fading, as we all do fade.

"Five sons! five hostages to fortune, as peo-

ple say. Will, your name is not likely to cease out of the earth."

"Our name, Julius," said Will, tenderly.

"Fine fellows they are, and, I dare say, you and their mother are very proud of them; but I thought—somebody must have told me, only my memory is so bad now—there was a little girl too—Edna, I should have liked so much a little girl of yours."

William touched his brother on the arm to enjoin silence, and glanced uneasily at his wife. But Edna had heard.

"Yes," she said, speaking in a low voice, but quite calmly, "Yes, I had a little girl once, but God took her. I have learned now to be happy in my boys."

Julius looked intently at his sister-in-law, as she sat there, wife and mother, fulfilling all her duties, and rejoicing in all her joys; and saw something in her face which he had never noticed before, which showed that she, too, had known sorrow, and been taught the hard lesson which we all have to learn soon or late, in one form or other—to be content, not only with what is given, but with what is taken away. And the solitary, broken-down man, who had suffered so much, but whose suffering was always in and for himself, recognized probably for the first time in his life, but with a force the effect of which was never afterward obliterated, that there might be griefs of which he knew nothing, and in which he had never attempted to sympathize, yet which were in reality as sharp as, or sharper than, his own.

CHAPTER XXXI.

It might have been best, according to poetical justice, and certainly as to tragical effect, that Julius Stedman should die—die in the odor of sanctity and the arms of his brother and sister, leaving to them a perpetual regret, and to his faithless Letty a perpetual punishment. But Heaven's justice is not always "poetical," and Heaven's mercy is above all. Sometimes—most often—it is shown in that blessed death which alone can retrieve all things, give to the wanderer home and the weary rest; but in this present case it was not so.

Julius did not die. In spite of his own prognostications and his brother's still more serious fears, he began to amend; very slowly at first, with many retrogressions, still it was an amendment. The most fatal element of destruction in his career, his opium-eating, had not, happily, been of sufficiently long standing to be incurable, and after his illness he conceived a horror of it, and never touched it more. Nevertheless, his constitution was so shaken that, in all human probability, nothing except his brother's great medical skill, in addition to constant watching, could have saved him; but he was saved. At least he was gradually brought into a state of convalescence—a sort of moonlight

existence, compared to the full day of health and strength—yet calm and quiet enough, so as to make his life bearable to himself, and, by-and-by, no very great burden upon other people—a condition which would have been to him ten times worse than death.

Whether he will have a long life is doubtful. Probably not; for, at best, his was a temperament in which the sword early wears out the scabbard. By fifty Julius Stedman will be quite an old man; as, indeed, he often looks now. But the value of life consists not in its length; and his is now as full as it used to be empty.

He still lives, nominally, in his brother's house, though he is frequently absent from it, for he hates London, and enjoys, with all his heart, the little cottage at Sevenoaks, which, though silently given up for one summer—Julius never learned why—was taken the next, bought by Dr. Stedman, and presented formally to his wife, to be a perpetual delight unto her and all the family.

There, in the deep peace of country life, Julius spends his days, mostly all the year round, keeping house in the absence of his brother and sister; and painting a good deal, though not at his former large subjects. Like many other people, as he grew older he grew much simpler in his tastes—humbler, too, and doubtful of his own powers; so that he contents himself with sitting at the feet of gentle Mother Nature, and reproducing her lovely little “bits,” which people call pre-Raphaelite—pictures which, unpretending as they are, have such a reality, and often such a deep pathos about them, that they are always admired, and, moreover, sold—a circumstance of no slight importance to the artist, since as long as a fragment of health and life remained in him, Julius would have been far too honest and honorable to subsist upon another man's bounty, even though that man were his own brother.

As it is, he earns quite enough money to maintain himself in the moderate way, which is all he cares for now, for his ambition has long died out, and his extremely precarious health will always prevent his working as hard as those must work who would attain eminence in any thing. He himself will never become a great artist—he knows that—but he is bent upon making one of his nephew Will.

There are few things more touching, and at the same time more ennobling, than the intense devotion of a young man to an elder one; and Will is devoted heart and soul to a passionate extent—which his father and mother, though not a bit jealous, are sometimes half frightened at—to his uncle Julius. The two are constantly together, and have been, ever since Dr. Stedman, for both their sakes, and at their earnest entreaty, allowed his son to begin, regularly and decisively, the career of an artist. So Uncle Julius and his nephew are sworn companions, delighting in one another's society, and bound together by a tie as close as that of brothers, and as reverently tender as that be-

tween father and son. In his great love for the boy, and his eager anticipations of Will's future, Julius Stedman has a life neither forlorn nor unhappy, for he has learned to place his happiness on something out of himself—to help to win for another the fame that can never be his own. When he looks at young Will, and hears him praised on every hand, he feels that his own name will not be quite blotted out, nor his memory forgotten upon earth, even though he should die an old bachelor, wifeless and childless.

He has never again seen Mrs. Vanderdecken. She lives still at Holywell Hall, in great honor and undiminished wealth, flourishing like a green bay-tree, except that—poor woman—she can not fairly be likened to “the wicked.” She is not wicked, only weak. Her little daughter loves her dearly, and has unlimited influence over her, so that Gertrude has no difficulty in obtaining leave to visit Aunt Edna whenever she chooses—at whose house, of course, she meets Uncle Julius, in whom she was quick enough at once to recognize her friend Mr. Stone. But Gertrude has tact and delicacy enough not to take notice of this, except confidentially to her Aunt Edna. Nor does Julius Stedman take much notice of her: but Julius the younger does, showing as fatal a predilection for her sweet little plain face, so loving and sensible, kind and true, as his uncle did for her mother's. This new little romance may, alas! cause mischief sometime: for Dr. and Mrs. Stedman dislike the idea of cousins marrying: still, they will never imagine themselves wiser than Providence, but if any serious attachment should occur, will leave their children's choice in their own hands.

Mrs. Vanderdecken herself never comes to visit her sister. That sad cowardliness, that weak shrinking from all things difficult or painful, which had been the bane of her life—nay, of more lives than her own—haunts her still. Yet poor Letty has her good points, growing better as she grows older, through the influence of her child. She is always ready to do a kindness that does not give her very much trouble, and she is not a bad wife to her disagreeable old husband, who leads her any thing but an easy life. There is many a small skeleton hid in the cupboard at Holywell Hall, but outside her home she enjoys a good deal both of pleasantness and popularity, being a very important person in her neighborhood, where every body agrees that Mrs. Vanderdecken is not only the handsomest, but the most charming, of middle-aged women.

Every body does not say that of her sister, by any means, for Mrs. Stedman is one of those women who live so entirely within their own family that beyond it they are little known, and not half appreciated. But those who really do know her, love her; and those who know her best love her most of all.

She and her husband are still in the prime of life, or at least only beginning to descend the

brow of the hill which their children are climbing so fast. All good children—diligent, upright, affectionate, honorable; no “black sheep” has yet been found in that happy little flock, out of which the only one lost is the little one—not lost, but gone before. Very few families can say as much; but then, very few are blessed with such parents as William and Edna.

They have, to all appearance, half their life's work, and enjoyment too, still before them—but who can tell? However, they have learned not to be afraid of evil tidings; for their hearts stand fast, trusting in one another, and in the Lord. Only sometimes when they feel—this husband and wife—how very close they have grown together, and how impossible it is even to conceive the idea of being apart, a vague dread comes over them, followed by an unspoken prayer.

Such a one was in Edna's eyes, at breakfast one morning, when she looked up at her husband, and silently pointed out an obituary notice in the *Times*.

“DIED—ISAAC MARCHMONT, Esq., merchant, aged 84; and, two days afterward, aged 80, ELIZABETH LILLIAS, his wife.”

“What is that?” asked Uncle Julius—and they passed round the newspaper to him without a word.

“One can hardly be sorry,” said Edna, at

last. “They had such a long life together, and, except for the loss of dear Lily, it was a very happy life; I used sometimes to fancy almost as happy as our own. And this,” she added softly, as her hand sought her husband's, “this—their dying within two days of one another—seems to me the happiest lot of all.”

“I think so too,” said William Stedman.

Julius turned, and suddenly regarded his brother and sister with those wonderful dark eyes of his—very quiet eyes now, for the fire of passion had all burned out of them—a little sad at times, though not painfully so—but bright with a strange, far-away look, such as those have to whom life has been such sharp suffering, that even in their most restful seasons the other world seems sweeter and nearer than this one. He seemed to understand what they were talking about—he understood so many things now—griefs which he himself had never known, and joys in which he could never more have any part.

“Will and Edna,” whispered he, affectionately, “I think I guess what you mean. You would fain go together—and I go alone. But we shall all meet there. I know that now. May God give you your heart's desire!”

He rose, and leaning a moment on Will's shoulder as he passed him, kissed Edna, and went away up stairs to his own peaceful, solitary room.

THE END.

A STROKE OF BUSINESS.

I SEATED myself resolutely in my low rocking-chair, with my head pressed firmly against the back, and began a vigorous thinking.

This was none of your dreamy reveries, born of pleasant surroundings and luxurious indolence; but real, hard thinking, with the practical foundation that *something had got to come of it*. This "something" was perplexingly vague; but it must assume a tangible form before I could relax the muscles of my mind, now drawn to their utmost tension. I turned the subject around, and viewed it in all its points, past, present, and future; but look which way I would, it presented such a hopeless snarl that, unless some good fairy came to my assistance, there seemed to be no possible way out of it.

The facts were these: I had a small school—I should modestly say, a *very* small school, since the number of pupils had that very day been reduced from five to three; and if it continued to progress backward at this rate I should not long be able to say that I had any school at all.

Six months ago I had thrown all the energies of my nature into this one venture; I had worked, talked, calculated, consulted every body I knew, annihilated distance with my feet in endless tramps about the city in search of rooms, in search of parents, in search of responsible names for my circulars; and encountered in this circuit more disagreeable people, more faithless people, and more utterly stupid and absurd people than I had supposed it possible for the world to contain.

I was in a sort of fever; and, like a madman or a somnambulist, accomplished feats that I could by no possibility have undertaken in my sober senses. Driven to frenzy by the perversity of people in always being out when I wanted them to be in, I actually followed a reverend gentleman whose name I *must* have on my circular, and who seemed possessed with the spirit of gadding, to the fearful precincts of his dentist's sanctum, whither he had gone to enjoy himself for a couple of hours; and came suddenly upon him as, with his mouth stuffed with a napkin, the dentist's hand, and an instrument or two, he was wholly at the mercy of any unscrupulous applicant who chose to take advantage of him.

I shall never forget his expression of astonishment when I opened my battery upon him, nor the dentist's of disappointment when he found that I did not want *him*. I think the latter had rather calculated on taking out all my teeth and putting in a new set.

When the Doctor of Divinity had fairly gotten himself free, and his mouth was restored to its natural size and shape, he proved to be a very pleasant-looking gentleman; and regarded me so kindly, while I stammered out my errand with an apology for my ill-timed attack, that I was very much relieved. I got the name in full, and also the smiling assurance that I

would certainly succeed, with such an amount of energy and perseverance.

I sighed now as I remembered how much this encouraged me at the time; for, alas! he had not proved a true prophet.

My school-room was not altogether what I desired, but it was the best that I could do. Such rooms as I wanted were not to be had; and half a dozen eligible ones had been almost closed and double-barred in my face as soon as I mentioned the word "school." I began with five scholars, and devoted myself to the improvement of their minds in what I considered a highly original and thorough manner; for did not my circulars say that "Miss Berenice Mapleton's select school for beginners would be conducted upon principles especially favorable for acquiring the rudiments of a thorough English education; and French would be taught orally, and reduced to the comprehension of the youngest child?"

Every one admired the phraseology; and I must say that I expected more from those circulars, and all the visits that I had paid to parents of promising families, than the five frightened-looking little girls who made their appearance in my school-room on that sunny September morning. However, I put a cheerful face on the matter, and taught them as carefully as though there had been thirty instead of five.

Friends assured me that this was quite an encouraging beginning; and some one cited the experience of a lady who opened with one scholar and finished with a school of eighty! At this rate my proper maximum would be four hundred; and I went on hopefully from day to day—walking to school in storms that, but for the school, would have seen me snug at home, and sometimes finding no scholars to teach when I got there.

On such occasions I solaced myself with composition, and was sometimes rewarded by the sight of a business-like letter containing a check; and sometimes my poor little rolls were returned to me "declined with thanks." One of these bundles now greeted my eyes on the mantle as I sat thinking.

By degrees I learned that my room was not in the right situation. A railroad had to be crossed from one direction that was a stumbling-block to several anxious parents who would have sent had it not been for that; I was too far off from others who professed a great regard for me, and urged me to move into their neighborhood; and others held back because the school was so small!

When I sent in my bills the father of two of the children, whom I had looked upon as quite a friend of mine, and who had advised me strongly to get up the school, promising the full benefit of his countenance and support, took no notice of the neat slip of paper that I pinned in the pinafore of the oldest girl. Edith assured me that she had given it to her father; but weeks passed on, and the end of the quarter came. My last \$10 bill had been broken, and

I sent a very carefully worded note to Mr. Slight, reminding him of "the little debt which had probably slipped his memory in the press of what had seemed to him more important matters." The money (such a paltry sum at best!) was sent, with a curt, business-like note demanding a receipt; and now, without any apparent reason, Edith and Grace had collected their books and said that they were not coming to school any more.

It was a chilly, depressing day, and I walked thoughtfully home, to find the house chilly and depressing, and to hear from Miss Plidget that "coal had gone up," to partake of weak tea and strong butter, and to be told that "tea and butter had gone up"—until it seemed as though every thing must be resting on a foundation of yeast; and in despair I went "up" myself, and locked myself into my room.

This same room was not extensive, and was of a shape in which my eye took no delight, being long and narrow, with only one window, and all the arrangements economized space as much as possible. The lounge was my bed at night, and the various little nick-nacks disposed about the walls were thought to give it a home-like appearance. Sometimes it did look very pleasant to me, with the pictures, and books, and mosses, etc.; and I knew that Miss Plidget delighted in showing it to visitors as "Miss Mapleton's room," and that the visitors all admired it; but this evening nothing looked pleasant, as I sat, with compressed lips and weary head, trying to solve the problem of putting nothing and nothing together and having the result something.

It was quite evident to the most obtuse perception that the school would not support me, and no other line of business seemed open to me. I had just one thousand dollars in gold-bearing bonds, and my ships that I had already sent out to sea, instead of coming back to me laden with treasures never came back at all. It had always been the way with me, that my pound, instead of gaining ten pounds, dissolved itself into thin air and disappeared altogether. For I had had a few thousands, which, through the representations of one and another, and a strong natural desire of ease and luxury, I invested in various ways, having first secured the aforesaid thousand in government bonds. Never a penny did I receive from any thing else.

I had a thousand in oil stock, into which I went, as I was assured, "on the ground-floor"—which seemed to be considered a very good thing, though I could never quite understand it—but I thought, rather bitterly, that I had probably come out in the attic, if that was the end farthest removed from the treasure. For some time I was buoyed up by reports that the workers were just about to strike oil, though how they could continually come so near it, without actually doing it, is one of the unexplained mysteries; but, as I believe they are still boring down into the bowels of the earth, they seem much more likely to strike fire.

Then I went into a gold mine—or rather

my money did—and with the usual happy results. Every thing progressed flourishingly until the workmen struck water; and I had read somewhere that this was a pretty thorough extinguisher to all mining operations. And when I heard of the huge blocks of quartz that have to be crushed and pounded for the sake of a little gold, it seemed almost as reasonable to form a company and attack the city paving-stones.

I also dabbled in coal, and had lately been offered thirty cents on a dollar for that stock. I suppose that most young women, with no one in particular to look after them, would have acknowledged themselves extinguished after all these experiences, and meekly taken in sewing, or married some humdrum widower with a home and six children in it. But I think I would have preferred cutting my throat to either of these alternatives; and I had no idea of doing *that*.

Poor Miss Plidget, rather an advanced single lady, with whom I had been living very comfortably for some time, worried over her boarders, and had battles with unconscionable butchers and grocers, all for the sake of a home—for she assured me that she made nothing by it—and a lodging in the dining-room pantry. I did not feel disposed to go into business with her, even if it would have supported a partner.

I suddenly seized the daily paper, and looked at the advertisements. I skipped all the profitable employments into which people were to be initiated by enclosing a stamp, or a dollar, or something else that they would never see again; and my eye rested involuntarily on the list of houses for sale. Now, what in the name of common-sense had I to do with this? Would my \$1000 buy any thing of that sort, and what could I do with it after I had bought it?

Still my eye lingered, and I thought rapidly. One paragraph in particular riveted my attention:

FOR SALE—A small house in a central situation, in perfect repair. Will be sold a bargain if applied for immediately. BROAD AND LONG, Real Estate Agents, No. 40 Plum Street."

The indistinct phantom gradually assumed a well-defined outline; and when the chaotic clouds of fancy had cleared away I beheld as complete a little scheme as a desperate young woman, left entirely to her own resources, could possibly devise. I would buy that house; I would use the parlors for a school-room, and rent the remainder to some respectable family. Such houses were always in demand; and it was possible that by this arrangement I might get my school-room rent free.

It was rather a bold idea, considering that I had just one thousand dollars in my possession; but my determination was iron; and the next thing was to fix upon some one who would be likely to lend me the remainder of the money. Oh, my friends! (so-called) how little you knew that many of you were then weighed in a mental balance and found wanting! One after

another they came up at my call; but, although most of them were fully able to accommodate me, I hesitated to apply the test that would prove them sterling gold or worthless dross. It is a well-known saying that when a man is ready to put his hand in his pocket for you his love is not to be doubted. I had yet to prove that I had any true lovers.

Finally I came to the conclusion that I had done enough for one night, and went to bed upon it. In the morning, which was fortunately Saturday, I put on my bonnet with an air of great resolution, and bore straight down upon Mr. Portman.

Had I been a boy I should have encouraged myself by whistling all the way there; but as it was I could only keep up an incessant thinking, and wonder what my old friend would say when he saw me in his office—and, still more, what he would say when I told him my errand. This, however, was to be approached by gradual steps; and I tried to feel composed as I called to mind all the kindnesses I had received in the shape of handsome Christmas presents, and various attentions that rich old bachelors are apt to bestow on their friends' children.

For Mr. Portman had been my father's friend, and I had seen his face ever since I could remember. He had kindly said that he regretted not having twenty children to send to my school, and he had done all that he could toward establishing it. But would he now feel disposed to lend me three or four thousand dollars?

I peeped in timidly, but, to my great delight, he was entirely alone.

"My dear Miss Berenice!" he exclaimed, warmly, taking me by both hands; "this is indeed a pleasure! Sit right down here, and tell me what is the matter—for I know that you never would have bearded the old fellow in his den for nothing."

"There is a great deal the matter," said I, desperately, as I began to feel my nicely-prepared speech slipping entirely away from me.

"I am sorry to hear it," he replied, looking grave immediately, and evidently expecting some overwhelming communication.

I tried to begin as I had intended, but it would not come, and, exhausted with nervous excitement, I burst into tears. Then every thing came out in a perfect stream, without being "sorted" at all; and there was the strangest mixture of my hopes and fears and projects, and my intention of buying a house in the same breath that I acknowledged myself unable to pay for one room, until my hearer looked quite stunned, and evidently began to wonder if I had lost my senses.

Then he looked amused, and presently he said: "My dear girl, there is no need of crying; let us examine this matter rationally. You wish, you say, to buy a small house, that you may have a more desirable room for your school, and lessen the expense of rent; that strikes me as a particularly sensible idea. As

to the money part, you will not be obliged to pay the whole sum down; how much have you at your command?"

"I have just one thousand dollars in the world," I replied, shortly.

"*One thousand dollars!*" repeated Mr. Portman, in amazement. "You can not really mean it! The daughter of my old friend Edward Mapleton reduced to *this!* Why did you not let me know it before?"

"I would not have told you *now*," said I, proudly, "had you not asked me."

The old gentleman walked about the office, shaking his head in a very disapproving way. "Poor child!" said he, "poor child!"

"I am not so very much to be pitied," said I, determined to assert myself to the last; "I have youth and health, and although I *do* labor under the disadvantage of being a woman, I intend to accomplish something yet. I will never be dependent on any one except for kindness; but if you are willing, Mr. Portman, to lend me whatever is required above my thousand—"

"*'Willing!'*" he exclaimed, warmly; "I would be 'willing,' Berenice, to do far more; but if this is the only assistance you will accept, let us go at once and look at the house."

My heart was considerably lightened as we set forth, and directing our steps to No. 40 Plum Street, we found Messrs. Broad and Long in the shape of one hard-looking gentleman, who was neither broad nor long, except by name.

He eyed us critically, and then said, in an indifferent way: "Yes—neat little house—present owner going West. No. 99 Lumbago Street—take a look at it?"

Mr. Portman nodded assent, and a short walk brought us to a very clean little street, about the centre of which stood "my house"—its dimensions reminding me of a very delicate slice of cake. It was just the place for a school, as I saw at the first glance; and Mr. Portman evidently thought so too, although he was very quiet about it. A long saloon-parlor—the very thing for a school-room—a cunning little dining-room back, and nicely-finished chambers above, with a third story above them.

Mr. Portman examined every part of the house very critically, and when the agent left us for a moment he told me that it was very well built, and that the price, \$4000, was extremely moderate.

"You could probably get \$5000 for it, after a little time, if you wished to sell," said he.

This was a new view of the case; and it set me thinking more desperately than ever. Make a clear \$1000, after paying Mr. Portman what I owed him, and thus double my money! It was quite exciting; and I felt disposed to go at once into the real estate business.

The end of it all was that the house became mine, at least nominally, for I always felt that it really belonged to Mr. Portman; and when the deed was executed and placed in my hands I al-

most doubted my own identity. My æsthetic soul, however, received a severe shock in the wording of the document, wherein I was stigmatized as "Berenice Mapleton, *spinster*!" How much more agreeable to my feelings the term "damsel" or "maiden" would have been! I tried to remember that I was twenty-four; but "spinster" sounded like forty, at least. Spinster or not, though, the house was mine; and I, almost a pauper, was actually a property-holder!

"Now," said Mr. Portman, cheerfully, when the matter was all arranged, "I really think, Miss Berenice, this is the brightest thing you have done for many a day."

"That *you* have done, you mean," I murmured.

"No," he replied, stoutly, "*my* noddle didn't hatch out the plan at all; the credit of it all belongs to *you*. And, unless I am a false prophet, your fortunes will turn from this very day."

I had given heed already to too many false prophets to be much elated now; but, nevertheless, there *was* an excitement in buying a house; and it really seemed as though a school *must* flourish in such a neighborhood as that. I felt like laying violent hands on several little curly-pates who were playing around, and dragging them forcibly to my temple of learning.

Mr. Portman knew of a young married couple, just from Maine, who would be glad to occupy the remainder of my house; and before long they were installed there, at a rent that covered all expenses, and left my school-room rent free! I began to have quite a respect for my own business qualities. The bride was just the sweetest little thing I ever saw; and she would bring her sewing into the school-room, and listen to my style of teaching, and declare that she learned so much herself that she ought to be regularly entered as a pupil, and pay her tuition-fee like the others.

I took great pride in my new school-room; and two new scholars from the neighborhood came to supply the place of those I had lost. Every one prophesied brilliant success for me in the spring, and I looked quite hopefully forward.

But my fortune was destined to come from another quarter.

I had not been long in possession of my house when I was informed, one evening, that a gentleman wished to see me in the parlor. Now my room looked particularly cozy and pleasant, and I was, moreover, writing—deep in a story that promised to be a great success. My hair was somewhat tumbled about, but rather picturesquely so; and quite forgetful of my little apron, I concluded to go down just as I was. Probably some pompous-looking father of a family awaited me, with a string of questions about my school; and trying to assume a proper expression of dignity, I walked quietly into the room.

Rather a tall gentleman was bending over Miss Plidget's photograph-album—the grand ornament of the centre-table; and although

the gas was miserably low, I could see that he was just then occupied with *my* picture, or with that of Miss Plidget herself, which was just opposite to it. He seemed quite absorbed, and did not hear me when I came in.

The visitor was young and fine-looking, with a frank, determined face, that would win his way any where. On the card that I had received was written "George Helmwood." Surely *he* could not have any children to place at school! What could he possibly want with me?

He looked around surprised when I turned up the gas, and glanced hastily from me to the album again. He bowed politely as he said, "I called to see Miss Mapleton—I was told that she lives here."

"I am Miss Mapleton," I replied, rather surprised.

"A lady who has a school on Lumbago Street," he continued, hesitatingly, "who owns a house there."

I pleaded guilty to both of these charges, and the gentleman looked both amused and embarrassed.

"Pardon me," he said, presently, with a smile. "I—I expected to see an older lady. I scarcely know how to begin."

"Is it any thing about the school?" I asked, by way of helping him.

"No," was the reply; "it is about the house. The truth is, Miss Mapleton, I want to buy the house—or rather my father does—and he has authorized me to negotiate for it. Have you any desire to sell it?"

"I have only just bought it," said I, scarcely knowing what else to say; "and my school is there. Besides, it is rented for a year."

"Will you let my father call and see you about it?" asked my visitor, after a pause. "The truth is, I—I do not understand such business very well. My father is willing to give \$10,000 for the property—he *must* have it, if possible."

Was I really in my sober senses? Ten thousand dollars! I must have looked and acted in an inexpressibly silly manner, for Mr. Helmwood soon took his leave without arriving at any understanding whatever, except that I was to receive a visit from his father.

The next day I rushed down to Mr. Portman for instructions.

"Bravo! Miss Berenice," said he, laughing, when he had heard my story, "you will turn out a woman of fortune yet. I know the Helmwoods well—very nice people indeed—and the *son*, let me tell you, is particularly nice. Father and son are in business together, and their large importing warehouse is on the street back of your premises. By extending their place they will probably realize a few hundred thousands from increased business; and they can therefore well afford to pay you \$10,000 to get you out of the way. Let them do it, by all means."

Thus fortified I was quite ready for Mr. Helmwood senior, who was a remarkably fine-

looking old gentleman, not unlike his son, and who stared at me during the interview as though he had a dim recollection of having seen me before. He was quite at his ease, and I felt much less embarrassed in discussing business matters with him than with his son; there was, moreover, a warmth and urbanity in his manner that quite charmed me.

"Now, my dear young lady," said he, in a quick, earnest way, "the facts of the case are just these: I do not wish to be regarded by you in the light of a filibuster, nor as coveting what is legally and properly yours; but I have had my eye on that little property for some time past; and it was only lately, while in a neighboring city on a matter of business, that I was informed it was for sale. I immediately wrote to George to secure it at once; but he wrote back that it had been bought by a single lady for a school. (And here I may as well say in parenthesis that you do not at all answer the idea we had formed of the single lady in question, and I can not help looking upon you in some sort as an impostor.) I then marched George immediately off to this elderly maiden of our imaginations to see if she could be prevailed upon to sell at an advance. The young man, however, returned in an unsettled state of mind, having evidently failed to bring you to terms, and coolly requested me to finish the business myself. I believe, Miss Mapleton, that you paid \$4000 for the house. I will double that amount."

I bit my lip to keep from smiling. Truly the son *was* unbusiness-like. "I did not buy the house to sell again," I replied, very quietly.

"I know it. You bought it, of course, for your school, and I suppose it just suits you; but, unfortunately, it just suits *me* too. Would \$9000 tempt you?"

I remained silent, fearful that if I spoke I should laugh.

"Now," said Mr. Helmwood, rising in his earnestness, "I *must* have the place! and, rather than lose it, I will give you \$10,000 for it."

"That is just what your son offered me at first," I replied, without raising my eyelashes.

"The young idiot!" exclaimed his father, laughing. "Pray, how did he word his offer, if you can recall it?"

"To the best of my recollection he said: 'My father is willing to give \$10,000 for the property—he *must* have it, if possible.'"

"And you have been quietly laughing at me in your sleeve all this time!" said my visitor. "I *am* willing to give \$10,000 for the property, but I *preferred* getting it for \$8000, which is considerably above its value to any one but myself. Is it a bargain, then, at \$10,000?"

"Mr. Helmwood," said I, as I felt the color rising in my face, "one thing you will please to remember in this matter—I did not offer my property for sale, nor had I any idea of disposing of it; but, much to my surprise, I was solicited by you to part with it. I am not 'a sharp woman'—a character that I particularly

detest—as I have lost nearly all the little I possessed in foolish ventures; and after your son's visit to me I went, much perplexed, to consult my friend, Mr. Portman, through whose assistance I was enabled to buy the house. He advised me to accept Mr. George Helmwood's offer, and explained to me that you would be an immense gainer by purchasing my little property, even at this extravagant price. I have a great horror of taking advantage of any one, and I was afraid that it might not be quite right to receive so much more for a thing than I had given."

"My dear Miss Mapleton," replied Mr. Helmwood, with a manner of great respect, "I should never think of fastening upon you the term of 'sharp woman;' but you will not object, I hope, to my regarding you as a remarkably clever young lady. You are quite right in saying that the property is worth far more than \$10,000 to me; and I give it the more cheerfully since I have seen the owner. But I shall certainly have a good laugh at George for his style of doing business. Perhaps, however, had I been his age instead of mine, I should not have acquitted myself any better."

This was rather embarrassing, and I hastened to say: "Mr. George Helmwood could not have mentioned to you that I have rented the premises for a year?"

"Oh yes; he did say something of the kind. But I will undertake to reconcile the inmates to a change of residence, provided I have your consent to proceed in the matter."

Finally I gave it; it seemed to be the best thing I could do; and just as he was leaving Mr. Helmwood scrutinized me closely, as he asked:

"Will you allow me to inquire, Miss Mapleton, if Mr. Sylvester Willingfleet was a relative of yours?"

"He was my grandfather," I replied.

"I am very glad to hear it!" he exclaimed, seizing my hand warmly. "He was one of the old merchants of the city, and a valued friend of mine. Many a pleasant hour have I passed in his hospitable mansion, where, besides entertaining his equals, there was an especial table set for the poor every day. The grand-daughter of such a man should not—"

"Be earning her own living?" said I, seeing that he hesitated. "His grand-daughter, Sir, does not consider that she is disgracing either him or herself by such a course."

I knew that my head went up an inch or two, and that my eyes flashed; for he said, kindly: "You have just his look—a little haughty at times, for he was a thorough-bred old aristocrat. I was troubled the first moment I saw you to decide whom you resembled so strongly. And now, my dear young lady, you will, I hope, allow us to look upon you as a friend. My wife will call at once; and I hope very soon to welcome you at our house, as I have been so often welcomed at your grandfather's."

"Well, Berenice Mapleton," said I, when I

found myself alone with that individual, "what do you think of yourself *now*? Are you really yourself or somebody else? Or have you been dreaming all these bewildering things?"

Mr. Portman came in that very evening, and congratulated me on my good fortune, laughing heartily at my account of the interview with Mr. Helmwood; and by the next morning I was so fully persuaded that things were what they seemed that I bought a pound of French candy to celebrate the event, and tried to inveigle Miss Plidget into sharing the feast with me.

But that wary female, who was given to dyspepsia and other absurdities, solemnly worked her way through one sugar-plum, analyzing it all the while, as though it had been a fragment of quartz, or something else equally indigestible, and then absolutely refused to touch any more.

I was engaged in exploring the recesses of the neat little *bonbon* bag, when Mrs. Helmwood was announced; and I went down to receive a warm embrace from the most elegant-looking, not *old* lady, but middle-aged lady, I had ever seen. Her features were regular and beautiful, she was perfectly dressed, and had the air of a dowager duchess. She insisted upon my going home with her at once on a visit; declared, in answer to my objections, that I was not a stranger, as she had known my grandfather well; and, finally, I was deposited in a lovely square room, surrounded by every luxury, and expected to remain for an indefinite period.

There were no daughters, and only that one son; so Mrs. Helmwood declared that it was a real charity for a young lady to enliven their dullness. It was certainly a very pleasant task, as I enlivened my own at the same time; and I felt very thankful for the advantage of having had a grandfather.

Master George and I were rather shy of each other at first; but this gradually wore off—and, somehow or other, we found ourselves alone together very frequently. I tried to avoid this, for I had no desire to repay these people's kindness to me by taking their son from them, for whom they probably had some grander match in store. But one day the young gentleman made some exceedingly incoherent remarks to me, and drew a highly-colored picture of our first meeting—in which "my picturesquely careless hair" and "coquettish little apron" (it had a great blotch of ink in one corner, but fortunately he did not see that) figured largely—and the "exquisite picture" in Miss Plidget's album came in for a share of the general enthusiasm; and I conducted myself in consequence very much like an idiot, and came near forgetting every thing, until I suddenly remembered to assure him that his father and mother would probably be any thing but pleased at such an arrangement, and that I could never consent to enter a family that was not desirous of receiving me.

My lover suddenly disappeared, and soon returned with his father.

"It seems to me, young lady," said the older gentleman, with a very quizzical look, "that in all George's transactions with you I am brought in to finish the business. I would have nothing to do with such a stupid fellow. Your very honorable conduct, my dear little girl, only makes me more anxious than ever to welcome you as a daughter; and if I had entertained any objections to such a *finale*, do you think I would have been weak enough to expose my son to the peril of daily contact with a girl like *you*?"

I had nothing to say to this; and Mr. Helmwood took me in his arms and kissed me, and then led me to his wife, from whom I received an equally warm welcome.

It is needless to say that those five infants, on whom I had expended so much surplus energy, were turned out to pasture without any compunctions of conscience; and the young couple from Maine were provided with a larger domicile, and some very nice furniture to put in it.

Mr. Portman would not allow me to pay my debt to him, but insisted upon its being appropriated to my trousseau; and my identical gold bonds were returned to me just as I had given them to him. He had the pleasure of giving me away; but he said that the fact of my never having belonged to him made this considerably easier.

My father-in-law declared that he had rather outwitted me, after all, as the money was all in the family.

TRINITY SEASON.

MICHAELMAS TO ADVENT.

MICHAELMAS is the chief of the holidays which occur in the autumnal part of the Trinity season. The Feast of St. Michael and all the Holy Angels, popularly called Michaelmas, falls upon the 29th of September. Many years, yes, centuries ago a church was built upon Mount St. Angelo in Apulia and dedicated to St. Michael; hence the appellation of the day which is the anniversary of that dedication.

The hierarchy of heaven seems to be composed—outside of the Deity and the Great Angel of the Covenant—of archangels, angels, cherubim, and seraphim. The archangels are Michael, Raphael, Uriel, Gabriel, Seraphael, Lehodiel, and Barachiel. But before all these was "the anointed cherub, who sealed up the sum, full of wisdom and perfect in beauty; who was upon the holy mountain of God, and walked up and down in the midst of the stones of fire; who was perfect in his ways from the day he was created until iniquity was found in him"—was Heïlel, "the shining one"—Lucifer. "How art thou fallen from heaven, O Lucifer, son of the morning!" It has been noticed as a curious and interesting scriptural

fact that God the Father seems to have had his attendant archangel, Heïlcl; God the Son, his attendant archangel, Michael—"who is like to God;" God the Holy Spirit, his attendant archangel, Gabriel—"God is my strength." It is also very curious that the anointed cherub Heïlcl, the attendant of the Father, was the one who "lifted up his heart because of his beauty, who corrupted his wisdom by reason of his brightness," and was "cast as profane out of the mountain of God," and became Satan, the fallen spirit, and was "brought down to hell, to the sides of the pit."

After the disappearance of Heïlcl from heaven Michael became the Corypheus of the angelic host. "The Protestant Beadsman," a fine work by Barnard of Brantinghamthorpe on the holy-days of the Church, etc., says: "The rank of archangel is given in Scripture to none but Michael, who is represented as the guardian and protector both of the Jewish Church and of the Church of Christ, in which the former merged." On this account he is celebrated by name, while the rest of the holy angels are praised collectively. St. Michael is mentioned in Scripture five times, and always in a military view: thrice by Daniel, as fighting for the Jewish Church against Persia; once by St. John, as fighting at the head of his angelic troops against the dragon and his host; and once by St. Jude, as fighting personally with the devil about the body of Moses. An author of great name inclines to the opinion that there is no other archangel but Michael, and adds that he succeeded Lucifer in this high dignity." Bishop Horsely is disposed to infer from the title which Gabriel gave him—"Michael your prince"—that "he is the Son of God himself." We can not enter into a discussion of the subject.

Hone gives us a copy of an ancient print which represents Michael standing over the dragon, dressed in ancient Roman armor, bearing the banner of the cross in his right hand and a flaming sword in his left, with the six principal angels arranged three on each side, carrying various emblems. The apocryphal "Book of Enoch" describes Michael as the holy angel who presides over human virtue and commands the nations; Raphael as presiding over the spirits of men; Uriel as presiding over clamor and terror; and Gabriel as presiding over Paradise and the cherubim. Randle Holme, the herald, says that Michael is the head of the order of archangels, and that his design is a banner hanging on a cross; Raphael the leader of the order of powers; Uriel the commander of the seraphim; and Gabriel the governor of the angels. An old writer relates that "Michael bore the banner of the celestial host, and chased the angel Lucifer and his followers from heaven, and inclosed them in dark air until the day of judgment; not in the upper region, but betwixt heaven and earth, that when they look up they may see the joy they have lost, and when they look down they

may see men mount to heaven from whence they fell." This will recall to the reader the imprecation in *Lalla Rookh* where Moore makes the traitor dwell in front of Paradise, "beholding heaven and feeling hell."

Hone says: "In the great army of angels the archangels are deemed commanders. The angels themselves are said to be divided into as many legions as there are archangels; whether these are seven or nine does not appear to be determined."

St. Michael's Day, though set down in the Anglican as well as the Roman calendar, and there is also a special service provided for its due celebration in the Book of Common Prayer—"it being observed," says Wheatly, "that the people may know what benefits are derived from the ministry of angels"—is more particularly a distinguished festival in the Roman Church. It is believed in the latter Church that "angels as well as saints intercede for men, and that intercession may be moved by prayers to them. Thus patron saints and angels are sometimes drawn for by putting certain favorite names together and selecting one, to whom the invocations of the individual are from that time especially addressed." In Romanistic countries where superstition is most rife, as in Italy and Spain, nearly every one has a patron saint, and the greatest trust seems to be placed in these intercessors. "Bishop Patrick cites a Roman litany," says Hone, "wherein, after addresses to God, the Trinity, and the Virgin Mary, there are invocations to St. Michael, St. Gabriel, and St. Raphael, together with all the orders of angels, to 'pray for us.' He also instances that in the old Roman and Sarum missals there is a proper mass to Raphael the archangel, as the protector of pilgrims and travelers, and a skillful worker with medicine." This was doubtless suggested by the "Book of Tobit," in which Raphael enacts the parts of guide, friend, and physician. "Likewise," continues the Bishop, "there is an office for the continual intercession of St. Gabriel and all the heavenly militia. In these services St. Michael is invoked as a 'most glorious and warlike prince, chief officer of Paradise, the receiver of souls, captain of God's host, the admirable general, and the vanquisher of evil spirits.'" The old legends describe various miracles which were performed by St. Michael; but they are as absurd and improbable as those related of other saints.

Much is said about angels and cherubim and seraphim in the Scriptures, and more in the old Jewish writings. It would occupy too much space to go into an elaborate examination of the subject. Hence we forbear, presuming that what is said in the Bible is more or less familiar, and that what is merely tradition is probably of questionable value.

Michaelmas in England has long been a marked period in the civic year. It is the time on which many of the elections are held; when mayors and guardians of the peace are chosen. Bourne thinks that this time was se-

lected for such purposes "because the feast of angels naturally brings to the mind the old opinion of tutelar spirits, who have, or are thought to have, the particular charge of certain bodies of men or districts of country; as also that every man has his guardian angel, who attends him from the cradle to the grave, from the moment of his coming in to his going out of the world."

Michaelmas is also one of the four quarter-days for the payment of rent. It is also a holiday; and in the olden time the landlords always made it a gay season to their tenants, who upon quarter-days usually brought a present with the rent. Hence the Michaelmas goose, which every one has heard of, and yet no one can satisfactorily account for. Gascoigne says in his "Posies," written about the year 1575:

"And when the tenauntes come
To pay their quarter's rent,
They bring some fowle at Midsummer,
A dish of fish in Lent;
At Christmasse a capon,
At Michaelmasse a goose,
And somewhat else at New-yere's-tide,
For feare their lease flie loose."

When the calendar was reformed the people were alarmed lest stubble-geese should not synchronize with Michaelmas. Brande writes that the "plowmen always eat goose at the harvest-home; and that it is a popular saying, If you eat goose on Michaelmas-day you will not want money all the year round." We read, too, that a piece of land in Hereford was rented by one Barnaby of the lord of Sastres "for twenty pence a year and one goose fit for the lord's dinner on the feast of St. Michael the archangel." Martin says that in the Western Isles they have a celebration and bake the *ban-nock*, or St. Michael's cake, and that "strangers as well as the family must eat the bread that night." Macaulay refers to the custom as having been "universal until a late day." He also adds that St. Patrick is credited with working a miracle in Ireland by the assistance of St. Michael; and that "in commemoration of this Michaelmas was instituted a festival day of joy, plenty, and universal benevolence." Mr. Brande, likewise, has discovered traces of reveling which once took place in Hertfordshire upon Michaelmas, which the people of that county sometimes called Ganging-day, from the sport of every one following a leader who went, like Master Puck, "over bush, over brier, etc.," very much to the discomfort of those who were "ganging after." The gangers console or amuse themselves with bumping the persons they meet, which causes the better class of women to remain at home. Of course all ends with cakes and ale in the usual way.

"There have been merry times at Michaelmas," says William Howitt; "who would believe it? yet there have been merry times at Michaelmas. Mayors and aldermen were then elected, and made their bows to each other; and be sure there were merry doings when mayors and aldermen were in the case.

Stubble-geese, like the aldermen, were now in prime condition; but being the weaker, according to the proverb, went to the wall, and thence to the kitchen, and twirled upon the spit. It was a jolly day in old Mother Church; she ordered every body that could get it to eat a goose in honor of St. Michael and all the angels. So in church and corporation, in abbey and town-hall, in farm and cottage, there was an universal eating of fat geese; and nobody that I ever heard of complained of the injunction. Queen Elizabeth was eating her goose at the time that the news of the defeat of the Spanish Armada was brought to her, and no doubt she thought the Spaniards great and very green geese for having come there, and that they would be much greater geese if they ever came there again. Ever after Queen Bess most assiduously ate her goose at Michaelmas, and probably with Spanish chestnuts, as the people on the Continent do now; or, if she did not, she would not have repented if she had, for it is a princely addition. Queen Bess ate her goose all the more assiduously because it was an old saying that, if you ate your goose at Michaelmas, you would have plenty of money all the year round—a prescription that, if its efficacy were at all proportioned to its agreeableness, people would be geese indeed not to comply with. How, indeed, could any one desire a pleasanter way of replenishing a purse? Queen Bess was always dreadfully in want of money; and as this came to be seen, and not the less to be felt, by those who had the taxes to pay, and as no more Armadas came to be defeated, people lost all faith in eating roast goose, except the comfortable faith that Robert Southey had when he addressed one in a sonnet, and asking the goose where it could have been so bravely fed, and receiving no answer, added himself:

"But this I know, that thou art very fine,
Seasoned with sage, with onions, and port wine."

"Jolly times, it is clear, there have been at Michaelmas. Now, roast pigs no longer run about with oranges in their mouths, crying, Come eat me! but stubble-geese do seem to meet you at every turn, and cackle out invitingly that pathetic request.

"Nothing in this degenerating world has degenerated so much as Michaelmas. Nobody nowadays, if their fathers had not told them, could have any idea how easily Michaelmas was once made to go over. It once was a gay day in spite of its being a pay day. I remember, when a boy, how merry were our rent nights. The supper-table at my father's was set out in a large, old-fashioned dining-room, and in came one bright face after another, as if the thing money had not brought it there. We six lads were allowed to sit up on these nights later than usual, and to sit down with the whole rustic group. Never did any hours flow more magically than those. There were assembled the wits, the humorists, the histo-

rians, the rural patriarchs of the neighborhood; and the whole country round, its doings, and its character and traditions passed in review. At one end of the table sat the stately form of the landlord, radiant with the mirth of the present and remembrance of the past; at the other, the mild and maternal glance of one of the best and noblest of women, who thought, felt, and lived for every creature within the reach of her untiring sympathies. What knowledge of human life have I gleaned at these times! How entirely in memory do they seem to have belonged to some better and more patriarchal age!"

The scenes described so well by Howitt belong to a by-gone age. Michaelmas, in a great degree, has faded as a "jolly day," and become merely "quarter-day." But in the Church the festival of St. Michael and all the Holy Angels will ever be celebrated as long as devotion and love of the beautiful exist in the world.

St. Jerome's Day, the 30th, closes the month of September. It may be found in the English and Roman almanacs. Hieronymus, or St. Jerome, was a distinguished presbyter who lived about the year 400. He was one of the prominent Latin fathers. Inferior to Chrysostom and Augustine in genius, and perhaps talents, he excelled them both in learning. He traveled extensively, and wrote voluminously on a variety of subjects. His translation of the Bible was the foundation, to some extent, of the Vulgate version, and for that he will always be remembered. The latter days of his life he passed in a monastery, becoming gloomy and unsympathetic. His views are not perfectly reliable, and, we may add, no father is more disingenuously quoted. There is nothing of interest in his day beyond his memory. It is chiefly honored in the Roman Church, which of course duly celebrates it with a proper office.

October, or the eighth month of the Roman, was called by the Saxons Winter-fulleth, or Wynmonath—"Wine month." Spenser says:

"Then came October, full of merry glee,
For yet his noule was totty of the must."

The change in the year becomes now thoroughly apparent. The harvests are gathered, the flowers are gone, and the woods present, with the ripe leaves, hues ever varying and ever beautiful. Hardly any spectacle can be more rich and glorious than that presented by the American forest in October—"the many-colored woods."

In England shooting and fox-hunting begin in October. The pheasants are then in season, and the fox must lose his brush. As there is no riding after hounds in our own country, we substitute deer-stalking or a buffalo-chase. Squirrels and prairie-hens and quail are also favorite objects of sport with our people in October, especially in the Far West, where game abounds. But shooting is degenerating from a manly sport to a common business, and it is to be feared that the destruction of the game from

off the face of the earth may be one of the consequences.

The 1st of October is set down in the English almanac to St. Remigius. He is noted for having admitted Clovis to the Church through *trine* immersion, and having also instructed him in the faith. Clovis thus obtained the titles of the "most Christian king" and the "eldest son of the Church." The former title was one of the appellations of the king of France as long as France had a king. In similar style the king of Spain is called "his most Catholic Majesty," and the sovereign of Great Britain, "Defender of the Faith." On the 1st the Roman Church also commemorates the "Rosary," which is only a string of beads of various sizes to facilitate believers in saying *Paters* and *Aves* and other prayers in a perfunctory way.

The feast of the Holy Guardian Angels, which comes on the 2d, is entirely a Roman festival, and seems to be similar, but subordinate, to that of the feast of St. Michael. Holme ranks the angels in "nine quiores—seraphims, cherubims, archangels, angels, thrones, principalities, powers, dominions, virtues;" and Father Henriquez describes their mode of life, habits, dress, etc., but says that they have "no particular houses." St. Paul, however, warns people against worshiping of angels, and intruding into those things one hath not seen. Father Henriquez, being a Jesuit, did not heed the admonition, but describes Paradise and its inhabitants as minutely as if he had been in the heavenly Jerusalem. The truth is, no one knows any thing about the details of the next world and heaven; and though it may be a curious, yet it is a fruitless, subject of speculation.

The 4th is dedicated to St. Francis of Assis, the founder of the order of mendicant friars. He flourished about the year 1200, and gained a great reputation by his sanctity, his travels, and his works. The Romanists esteem him highly, and Cousin even pays a tribute to his memory.

St. Denys, whose name occurs in the calendars on the 8th, was another worthy who lived in the seventh and eighth centuries. He was the patron saint of France, which country, Bishop Patrick says, "glories in his relics." Nevertheless Germany claims to have his bones, and where they really are the saint himself perhaps knows. He is celebrated for the rather apocryphal act of walking after his martyrdom. The Roman Missal says:

"He fell indeed, but presently arose,
The breathless body finds both feet and way,
He takes his head in hand and forward goes."

He is thus usually represented in the old pictures.

The memory of King Edward the Confessor, so dear to the Anglo-Saxons, is preserved upon the 13th. The day which is in the English almanac is the anniversary of the so-called translation of his bones to their final resting-place. King Edward was long affectionately

remembered for his wise and beneficent laws, which made his people good and happy.

St. Theresa's Day, the 15th, is noted chiefly on account of the memorable speech she is said to have uttered. One day, being in poverty and sorrow, with only two sous left, she exclaimed, "Theresa and two sous—nothing!" Reflecting, she added, "Theresa, two sous, and *God*—every thing!" Such is faith in a pure mind. It savors of the sublime.

St. Luke's Day comes upon the 18th. Evangelist, historian, friend and physician of St. Paul, his day, of course, is in all Christian calendars. But little is known of Luke beyond what Scripture recounts. Tradition has partially confounded him with Lucius, but without reason. Some writers infer that he was a painter, and think that the old masters' ideas of the Madonna were derived from some work of his pencil. He accompanied St. Paul to Philippi, where he remained and wrote his gospel. At a later day he compiled the Acts. His style, though not always pure, is refined. The introduction to the gospel is the finest specimen of classic Greek in the New Testament. This is not the place to discuss his writings. Mr. Taylor, his biographer, thinks that he removed to Achaia at last, where he died at the age of eighty-four. There is a special service for his day in the Prayer-Book, and it is observed by all the Churches which honor the memories of the good and wise men of ancient days.

St. Crispin's Day, the 25th, will ever be remembered as the anniversary of the battle of Agincourt, fought in the year 1415, when Henry V. of England signally defeated the French under the Constable d'Albret. The scene at night before the action has been exquisitely described by Shakspeare in his play of Henry V. :

"From camp to camp, through the foul womb of night,
The hum of either army stilly sounds,
That the fix'd sentinels almost receive
The secret whispers of each other's watch."

Agincourt may be classed with Cressy and Poitiers in its importance and influence among the memorable battles of the world, and Henry could say with truth :

"And Crispin Crispian shall ne'er go by,
From this day to the ending of the world,
But we in it shall be remembered."

St. Crispin and St. Crispinian were two Christian cordwainers, who removed from Rome to Soissons in the third century, and in imitation of St. Paul followed their gentle craft and preached the Gospel. Having finished their course they suffered cruel martyrdom, and have ever since been the patron saints of the "mystery" of shoemakers. No miracle is reported of these saints, unless it be that they made shoes which fitted without being broken in—something not often accomplished in these more enlightened days. In former days the pious memory of St. Crispin was honored in England by feasting and jollity on the part of

the guild of shoemakers and cobblers; and as late as 1822 St. Crispin was crowned by the cordwainers of Newcastle. In Flanders the company of cobblers, by an ancient command of Charles V., who had been hospitably entertained by one of the craft, takes precedence of the company of shoemakers, and has for its arms a boot surmounted by a crown. In this country, however, we fancy "shoes are not sewed with merry notes," and St. Crispin's Day is not as familiar to shoemakers as Blue-Monday.

St. Simon and St. Jude have their day together on the 28th. We can not tell why these saints are allowed but half a day apiece, but so it is. Both belonged to the Twelve Apostles. The former was called Zelotes; little or nothing is known of him beyond a bare rumor that he went to Britain, where he suffered death. The latter was the brother of James, the uterine brother of Christ. He wrote the remarkable epistle of one chapter, which St. Peter probably had read when he wrote his second epistle. Tradition relates that Jude traveled as far east as Persia, where he preached and was martyred. St. Simon's and St. Jude's Day is observed by the Church generally, and there is a special office for its commemoration in the Book of Common Prayer.

All-Hallow-e'en comes upon the last day of the month. Ecclesiastically speaking, it is the vigil of All-Saints'-day. In early days it was a custom to keep the day before a leading feast, and especially the night, as a vigil or preparation for the more solemn observance of the coming festival. As asceticism has for the most part passed away, probably vigils are seldom kept now, even by the "rigidly righteous," and devotees are rare, too, in the few monasteries that remain. The loss of the vigil will not be esteemed great by those who, in religion, think it is far better to be good than to feel good.

"It's Hesper, Hallow-eve!
Sweet, new-old Hallow-eve!
For what thou wert, for what thou art,
Thrice welcome, Hallow-eve!"

Holy-eve, or Nutcrack-night, is another of those seasons which abound with curious and superstitious practices, or rather did so in the days of our Saxon ancestors. "In the north of England," says Mary Howitt, "many of these are still found to linger. One of the most common is that of diving for apples; or catching at them with the mouth only, the hands being tied behind and the apples suspended on one end of a long transverse beam, at the other extremity of which is fixed a lighted candle. The fruit and nuts form the most prominent part of the evening feast, and from this circumstance the night has received the name of Nutcrack-night. Nuts also were employed as one, and perhaps the oldest, of the many modes of divination practiced at this season, for Hutchinson is quite correct when he says of this eve that it seems to retain the celebration of a festival to Pomona, when it is supposed the summer stores are opened on the approach of win-

ter. Divinations and consulting of omens attended all these ceremonies in the practice of the heathen. Hence, in the rural sacrifice of nuts, if the nuts lie still and burn together it prognosticates a hopeful love; if, on the contrary, they bounce and fly asunder the sign is unpropitious. Here, again, as in so many instances, the custom may be traced back from an unmeaning frolic to a popish superstition, and from that to a classic rite. Nuts have a religious import, says the Roman calendar; and, going yet farther, we find this is but an echo from the times of paganism. Among the Romans it was a custom for the bridegroom to throw nuts about the room that the boys might scramble for them, thereby, as some will have it, intimating that the new husband meant henceforth to lay aside the sports of boyhood."

In an old pictured missal an individual is seen, according to Brand, on All-Hallow-e'en, "balancing himself upon a pole laid across two stools," playing antics. Harvey, the conjuror, writes: "This is the last day of October. I am alone; but the servants have demanded of me apples, ale, and nuts, and so I may run over my own annals of All-Hallows'-eve; for I have been an adept on occasion of this anile solemnity."

It was an old custom in Scotland for young girls to decide upon their future husbands by pulling cabbages, blindfold, upon Hallow-e'en. Burns says: "The first ceremony is pulling kail. They must go out, hand in hand, with eyes shut, and pull the first they meet with. Its being big or little, straight or crooked, is prophetic of the size and shape of the grand object of all their spells—the husband or wife. If any earth stick to the root, that is fortunate; and the taste of the stem is indicative of the disposition. The stalks are placed over the door, and the Christian names of those who by chance pass under are the names in question." We believe that pulling cabbages is in vogue even in our country in some rural districts on Hallow-e'en, so that at such a time notable housewives are very apt to keep a look-out on their cabbages.

The customs of All-Hallow-eve are too numerous to permit us to give any thing like a full account of them. Much on the subject may be found in the notes to Burns's poem of "All-Hallow-e'en." Hone tells us of bonfires, and divinations by ashes and white stones; burning and cracking of nuts; pulling of oats; winding of blue yarn; of eating the apple with an eye on a mirror; of harrowing hemp-seed; of winnowing corn; of stacking barley; of the Hallow-e'en cake, and we wot not how much more. The end or aim of all which practices is to enable young folk to find out what will be their future fortune, and how they will marry, if they are destined to marry at all.

"Mysterious Hallow-eve!
Weird-mantled Hallow-eve!
Much joy and pain have cause more vain
Than ours of Hallow-eve!"

November, the ninth month of the Roman, was termed Wintmonath or "Wind month" by the Saxons. This month bears an unfavorable reputation. Bishop Warburton writes: "The dreadful month of November! when little wretches hang and drown themselves, and great ones sell themselves to the court and the devil;" and Leigh Hunt adds: "The gloomy month of November, in which, Frenchmen say, we hang and drown ourselves;" but he admits, after all, that though "November, with its frequent rains, the fall of the leaf, and the visible approach of winter, is a gloomy month to the gloomy, to others it brings only pensiveness—a feeling very far from destitute of pleasure."

The 1st is All-Saints'-day, in fact a complement to All-Angels'-day. Indeed, it was also dedicated to the angel who guards seeds and fruits, and was hence called *La Mas Ubhal*, pronounced *Lamasool*—the origin of the name *Lambswool*, a drink composed of roasted apples, sugar, and ale, in vogue among the Saxons upon various occasions of festivity.

The festival of All-Saints was probably adapted from the pagans. The Pantheon, which Agrippa built, as its name seems to indicate—though that is questioned—as a circular temple for all the gods, after the establishment of Christianity, was purified by order of the Emperor Phocas, and dedicated to all the saints. Later Pope Gregory fixed the festival for the 1st of November. There is a regular service in the Prayer-Book for its celebration, on which occasion the chapter from the Apocalypse containing the sealing of the tribes is read.

Many of the old customs which we have described as practiced upon Hallow-e'en were continued upon All-Saints'-day, especially the divinations and festal fires; farther we read that "All-Saints'-day was a time of pleasant gossiping."

It is followed by All-Souls'-day. On this day the Abbot of Cluny, in the ninth century, introduced the ceremony of praying for the dead, and out of which grew the masses for the dead sung in the Roman Church. One of these contain the celebrated hymn *Dies Iræ*. All-Souls'-day, though in the English almanac, is not recognized in the Prayer-Book. The Romanists, however, regard the day as important; for if it occur on a Sunday it is kept on Saturday, and not postponed to Monday, as is the case with some other feasts. Protestants do not honor the day, as they only appeal to the "good examples" of those who have gone before, and do not pray for the departed. To preserve and prize the memory of the distinguished dead is just and profitable; it is a reward for right conduct in life; more is of no avail, and touches upon superstition.

The 4th is the day upon which the Italians recall the noble acts of the good Cardinal-Archbishop Charles Borromeo of Milan. He lived in the sixteenth century; and from the great

services that he rendered while Milan was afflicted by famine and plague will be remembered as long as time shall last. Never was there a more noble, pious, beneficent, self-sacrificing spirit. His tomb is revered even at this day.

The 5th is Guy Fawkes Day. The English Prayer-Book contains "A Form of Prayer with Thanksgiving, to be used yearly upon the Fifth day of November, for the happy deliverance of King James I. and the three Estates of England from the traitorous and bloody-intended Massacre by Gunpowder."

"Please to remember the fifth of November,
Gunpowder treason and plot;
We know no reason
Why gunpowder treason
Should ever be forgot!
Holla, boys! Huzza!"

So they sang when they burned "Guys" and cried "No popery!" Doubtless Guy Fawkes is too well remembered through history and romance to need that we should enlarge upon his day.

The service in the English Prayer-Book for the fifth also commemorates "The Happy Arrival of His Majesty King William III. on this day, and the Deliverance of the Church and Nation." It was the overflow of Protestant feeling which begot both the services of the fifth. Now they seem out of date, like the service for King Charles the Martyr. They are still used, however, in the cathedrals and in the Queen's chapel.

Lord Mayor's Day, the 9th, is a conspicuous day in London. Prior to the thirteenth century the chief magistrate of the city held his office for life, but in 1214 the mayoralty was made elective annually. Later, in the reign of Richard II., the title of *lord* was given to the incumbent, in consequence of the important service the Mayor Walworth was then considered to have rendered the crown in killing Wat Tyler in Smithfield. Upon the inauguration of the mayor a great parade is made. But the "Lord Mayor's Show," while it was a great exhibition, and awakened a great deal of interest among the people formerly, has declined. It was, as Mary Howitt remarks, "a degenerate copy of the old *pageant* or *triumph*, which assumed a variety of forms at different times, blending paganism, Christianity, and chivalry in marvelous confusion. At one period it was the fashion for the city to employ dramatists of note upon these matters; and there are extant pageants by Decker, Middleton, and Webster." The Mayor's Show is frequently alluded to in English novels, especially the scene on the Thames, which was quite brilliant.

Martinmas, or St. Martin's Day, occurs on the 11th. It is in both the calendars. The Romanists call this saint "the Great St. Martin, the glory of Gaul." He was a Hungarian soldier who lived in the fourth century, and became a hermit and exorcist. Tradition gives him the credit of working a number of miracles

and of being a man of wondrous ability. He is best known from the following anecdote which is related of him, and which has been illustrated by an old painter. Meeting one hard winter's day, at the gate of Amiens, a poor man, half naked and starved with cold, whom no one took compassion upon, he drew his sword and cut his cloak—the only garment he had on, having given his other clothes away to the poor—in twain and gave half to the beggar. It is said that he had a vision that night of Christ, who commended him for ministering to Him in the person of the pauper. As a consequence Martin became a devotee. His day is only observed in the Romish Church.

In olden time Martinmas had its customs, and was a convivial day in town and country. Martilmasse beef was as well known as Easter bacon and Michaelmas goose. But some affirm that Martinmas also had a goose, and that Martinmas goose was better than Michaelmas goose, for it was not so "green." An old ballad alludes to the day thus:

"It is the day of Martilmasse;
Cuppes of ale should frellie passe;
When the dailie sports be done,
Round the market-crosse they runne,
Prentis laddes and gallant blades,
Dancing with their gamesome maids,
Till the Beadel, stout and sowre,
Shakes his bell and calls the houre;
Then farewell ladde and farewell lasse
To the merry night of Martilmasse."

St. Cecilia's Day, the 22d in the English calendar, is worthy of a passing note. She is reputed to have been one of the early martyrs, but derives her particular reputation from being regarded as patroness of church music. She was married to a nobleman of the name of Valerian. Attracted by sweet sounds one day he entered her room suddenly and found her rapt in ecstasy, and a young man with wings playing upon an instrument. After that she had angel visits. Tradition gives her great pre-eminence in music, and she is generally represented as engaged in that art or in listening to the angelic choirs. The composition of an ode to St. Cecilia was once considered almost *the* test of poetic genius. The most celebrated are those of Dryden, Pope, and Collins. Hone has a copy of the engraving by Sadler giving the scene we have described. There are also pictures of her by the old painters.

St. Clement's Day, the 23d. Clemens Romanus, as he is sometimes styled, was one of the early fathers of the Church, and also Bishop of Rome before the establishment of the Papacy. Whether he is the same Clement whose name St. Paul says "is written in the Book of Life" is quite uncertain; but he is the author of the fine epistle to the Corinthians which bears his name. Apocryphal stories are told of the miracles he performed, and especially of his having caused the sea to retire on a certain occasion. He is the patron saint of blacksmiths. The guild of blacksmiths in England used to hold a festival upon St. Clement's Day and cel-

eborate it much as the cordwainers did the day of St. Crispin.

"Come all you Vulcans stout and strong,
Unto St. Clem we do belong;
And we must drink before we part
All for to cheer each merry heart.
Come all you Vulcans strong and stout,
Unto St. Clem I pray turn out."

St. Catherine's Day follows, upon the 25th. She lived in the third century, and was put to death by Maxentius upon a wheel, which gave name to the fire-work long known as a Catherine-wheel. Such were her piety and erudition that she was regarded after her martyrdom as the patroness of Christian philosophy. Barnaby Googe says:

"What should I tell what sophisters on Cathrin's-day devise,
Or else the superstitious toys that maisters exercise?"

It would be unkind to forget that St. Catherine is the patroness of spinsters. Young women used to make merry together upon her day, or go "Cath'arning," as they called it. The custom is still in vogue in distant parts of England where old rustic fashions remain. Camden intimates that in Ireland the girls used to keep St. Catherine's Day that they might get good husbands, and the women that they might get better ones. Hence it may be inferred that though St. Catherine was a spinster saint, and patroness of spinsters, she was not considered as a pattern saint. The window of West Wickham Church, Kent, contains a fine representation of St. Catherine in stained glass. Engravings of her and pictures are also numerous.

Thanksgiving-day occurs this year in the State of New York upon the 26th of November, or the last Thursday of the month. Formerly this was a day set apart by the authorities of the respective States; but now it has become also a national day, and is appointed by the Executive of the nation. This is very well, for it insures a harmony throughout the Union with regard to its proper observation. The festival of annual thanksgiving for the fruits of the earth seems to have existed for all time. It existed among the pagans of every nation, and among the Jews. We trace it in the East, on the banks of the Nile, and in the sacrifices to Ceres and Pomona. We find it among the Saxons, Britons, and Northmen. We discover it in the wave-offerings of the Jews, and in their feast of ingathering. The Christian Church doubtless adopted it from the latter. The Church for a long time had her Rogation-days and fasts of the four seasons, or Ember-days, and finally added what we call Thanksgiving-day. There is a regular service in the Prayer-Book for the due celebration of this festival, which provides that it shall be read upon the first Thursday in November, unless some other day shall be appointed by the civil authority. It is a day now recognized throughout the country, and has obtained a fast hold

upon the habits, feelings, and affections of the people. The Romanists are the only denomination of Christians which disregards it, and appears unwilling to unite in the general custom of returning thanks to Providence for the blessings of the year and the fruits of the earth. The features of Thanksgiving-day are so familiar to our readers that it would be superfluous to say any thing about them.

The 29th of November is Advent-Sunday, the first day of another ecclesiastical year. The Trinity season ends upon the 28th.

We now close the series of articles, in the course of which we have carried our readers through the entire circle of an ecclesiastical year—from Advent to its recurrence. We have necessarily been concise, and have left much unsaid that might be said upon so fruitful a topic. Something might be written about every day in the year. Our labor has been to prune our material. Yet in taking leave of our readers we venture to indulge a hope that our brief notices of times and seasons, of fasts and festivals, of days that bear their own names, have revived in their minds agreeable memories and associations, and have yielded them a measure of profit and pleasure.

A REPORT OF OUTRAGES.

By J. W. DE FOREST.

AT the close of every month a Bureau officer makes out a report of "outrages committed by whites against freedmen," and another of "outrages committed by freedmen against whites." As each of these papers must be in triplicate—one copy for the Assistant Commissioner of the State, one for the military commandant of the district, and one for retention—it follows that during my fifteen months of duty as Sub-Assistant Commissioner in Greenville, South Carolina, I ruled, and filled out, and certified to just ninety documents of this nature. In this period there were, if I remember aright, seven outrages, which makes very nearly one-thirteenth of an outrage to each paper. For the more convenient information of the public I will consolidate my ninety reports into one.

THE CASE OF CATO ALLUMS.

The first morning after my predecessor had turned over to me his records and left me alone in my South Carolina pashalic—yes, at six o'clock on that morning of new responsibilities and untried power, a timorous yet persistent rap roused me from bed. Hastening to the door in such drapery as could be secured at once, I set it ajar and looked out upon a negro of about thirty-five, medium in height, but singularly muscular in build, whose eager face and somewhat crouching carriage indicated strong anxiety for protection.

"Good-morning, Sir," he said, in better English than is common to our manumitted slaves. "I wants very much to see you, Sir, right away."

"Wait till I have dressed," I answered. "I will be out in ten minutes."

"But it's mighty pressin', Boss," he insisted. "It's something that's following me up mighty sharp. I wants to speak to you now."

"Go on," I assented, and letting him into the room, proceeded to dress in his presence.

"Did you ever hear of me—Cato Allums?" he asked. "Cap'n Bray was a mighty good friend to me, and helped me powerful. If you've got his papers, I reckon you'll find my name on 'em. I'm the man that was robbed by a gang from old Jimmy Johnson's house last year; robbed of two thousan' poun's of meat and a heap of other things. Cap'n Bray took up for me—the Lord A'mighty bless him for his friendship to me! I wish he was here now. That was some of old Jimmy Johnson's mischief. But I won't talk about that ar. I've got a worse trial on hand. It's been a bad night for me, Boss—I don't know what your title is. I'll tell you how it happened. Last night, after we was all in bed—me and my brother-in-law and his wife and children—comes a rap at the door. Well, ye see I've been so hunted and robbed by these yere bushwhackers that I wasn't gwine to let nobody in without knowing who 'twas; and so says I, 'Who's thar?' I couldn' make out much what they said, though they said something—kind o' muttered, like they didn' want to show who they was. Then I gets up and goes to the door with my revolver in my hand: Cap'n Bray give me the revolver; he did, Boss, and told me to shoot any man, white or black, that attacked me; he said he'd see me out in it. 'Who's thar?' says I. They kep knocking, and didn' speak. Then I looked out of the cracks in the logs, and made out by the moon that thar was five or six of 'em. Says I, 'You can't come in yere unless I know who you be.' Then they begun to drive at the do' with a log, and jest as it give in I heard one of 'em say, 'Break it down and shoot every boogar of 'em.' Well, Boss, when the do' come down I jumped out to run; I reckoned they was the same men that had robbed me befo', and had come now to kill me; for many and many has said to me, 'Cato, they'll bushwhack you yet for following 'em up so.' Jest as I jumped out, one of 'em fired and missed me. Then I saw another aiming at me, with his pistol resting on his arm. Boss, I" (here his face quivered, and he looked at me with indescribable anxiety)—"I shot him."

"You did?" I answered. "It's my belief that you served him perfectly right."

He drew a long breath, sat down in a chair to which I had previously signed him, seemed to rest his jaded soul for a moment, and then continued his story:

"Boss, you don' know how I felt that minute; I never shot a man befo'. But I couldn' stop to think about it. I run with all my might for the road, they a-shooting after me, and one bullet hitting the fence as I jumped it; and in a minute or two I was in the woods and out of

sight. I don' know whether the man is dead; all I knows is that he fell over when I shot; I don' know who he was—don' know any of 'em."

"Where did this happen?" I inquired.

"Over in the edge of Pickens District, about ten miles from yere, and two miles from old Jimmy Johnson's settlement; and that's whar all my troubles has started from, Boss; that old Jimmy Johnson has been a sore neighbor for me."

An hour later, seated in my office, I made a further investigation into the case of Cato Allums. I found a file of papers, signed by one of my predecessors, showing that Cato had indeed been robbed about a year previous, and that the efforts of the military authorities had not been able to discover the malefactors, although "old Jimmy Johnson," the supposed instigator of the mischief, had been arrested and confined for a season in Castle Pinckney at Charleston. While I was studying into these by-gone matters Cato stepped out in search of an acquaintance to vouch for his character. He returned with one of those devil-may-care, dissipated-looking youths whom one so frequently meets at the South, and who have the air of being a cross between the Plug-Ugly, the fine gentleman, and the professional gambler.

"Major, this boy is sound," asseverated the stranger, with many oaths. "He's a square, decent, sensible, polite nigger. I've known Cato ever since I was a baby, and I never had but one thing against him. He's just as civil a nigger as need be. No gentleman ever had cause to quarrel with him in no way, shape, nor manner. Wherever Cato goes, if he meets a gentleman, he offs hat and say good-morning; and if he sees a gentleman coming across the fields he puts down the bars for him; just as polite, decent a nigger, Major, as you can find! I'll allow that Cato is sharp on a trade; if you go to swapping horses with him you've got to keep your eye skinned; he an't agoing to make money for you out of his own pocket."

"Well, I s'pose a man has a right to look out for himself," suggested the negro, apologetically.

"That's so, Cato," assented the youngster. "I han't got a word to say against you on that account. If ever you trade horses with me you are welcome to cheat me, if you can. I tell you, Major, I've only one thing against Cato. They do say he kept a white woman for his wife or something. I don't know how it is, whether it's so or not; only I do say that if he did that he did wrong. Yes, Cato, if you did that you did wrong, and I can't uphold you in it."

"They said so," admitted Cato, who had looked monstrously uneasy under this charge. "But when the woman had a baby a while ago it was just as white and pretty a baby as ever you saw. It wa'n't no nigger's baby."

"Well, if that's so, it's all right. I an't down on you, Cato, about it, if it an't as they say 'tis. As for killing this man last night I don't know any thing about it, in no way, shape, nor man-

ner. I don't know who the man is, nor what he was thar for. But I'll bet ten dollars, Major, that Cato served him right in shooting him. I'll swap horses even with Cato on that. I say, Cato, whenever you want to trade your sorrel mare, let me know."

Meanwhile I was pondering as to what I should do with my homicide. A few months later I should have suspended my judgment with regard to the truth of his story until after I had heard the other side, and examined somewhat into the evidence. But in my present state of inexperience I believed Cato Allums; believed that his house had been broken open by men who might be assassins, and were unquestionably burglars; believed that he was a worthy applicant for such protection and counsel as lay in the Freedmen's Bureau. But it was a dubious and critical matter to handle. On the one hand I wanted to make sure that this man should not fall a victim to any burst of popular fury, and that the bushwhackers who had outraged him should be brought to condign punishment. On the other hand I so interpreted my orders as to believe that my first and great duty lay in raising the blacks and restoring the whites of my district to a confidence in civil law, and thus fitting both as rapidly as possible to assume the duties of citizenship. If the military power were to rule them forever—if it were to settle all their difficulties without demanding of them any exercise of judgment or self-control, how could they ever be, in any profound and lasting sense, "reconstructed?" If there were to be any beginning in this essential work, it might as well come at once. Leaving Cato locked up in my office, I called on the leading lawyer of the Greenville bar, well known throughout the country as Governor Perry, but not then noted as an opponent of the Congressional plan of reconstruction; and after relating to him the case of Cato Allums, asked him if the civil authorities could be trusted to manage it with firmness and justice.

"They can," he assured me. "If the magistrate of this man's neighborhood is not fit for his post, you can refer it to the solicitor of the district court, Mr. Jacob Reed, of Anderson. You may be sure that he will do the same justice by a negro as by a white man."

Returning to Cato, I told him that he must go home, apply to his magistrate as an injured and innocent man, make a formal complaint against the persons who had molested him, and demand an investigation. He looked exceedingly gloomy, and answered, "But, Boss, what if they should arrest *me*?"

"You must let yourself be arrested, if they do it according to the forms of law. Killing a man is serious business, and can not be passed over without grave notice."

"Oh, if you knew how many men had been shot up our way, and nothing said! Jest shot down, Master, right in thar own do's, and no law about it! I tell you, Boss, I don't like to be tried. They'd make believe try me, and

they'd jest hang me. I tell you, it's mighty resky."

"We must see," I replied. "I could protect you now, no doubt; but my protection would not last for long; in a year or two the Bureau and the garrisons will go. If your case is not brought to a settlement now, it will be then. Settle it at once, while the Yankees are here to see that you have justice. Don't put yourself in the position of an outlaw, subject to be hunted for life."

After a long discussion he consented to return home and report himself to the nearest magistrate. I gave him a letter to the official, in which I stated the matter as it appeared to me, representing it as an attack of burglars upon the house of a peaceful citizen, and demanding that the gang should be traced, arrested, and punished.

"The point now is to reach your magistrate before any further bloodshed takes place," I said to him as he rose to leave. "Can you get home safely?"

"Oh yes!" he laughed. "I knows every road and cross-cut. It would be mighty hard to trap me, Boss. And if any man does git a holt on me," he added, pointing to his revolver, "he'll let go agin in a hurry."

During the next three days I had many fears for Cato Allums. Pickens District is a vast region of hills and mountains, wild in its landscape, and hardly less wild in the character of many of its inhabitants, always noted for displays of individual pugnacity, and stained since the advent of secession with the blood of several Unionists. I feared that I had sent this man to sure destruction at the hands of the bushwhackers who then infested South Carolina, or of a mob of citizens roused to fury by the spectacle of a white slain by a negro. On the fourth day my anxiety was somewhat relieved by the appearance of a Pickens farmer, in homespun, who delivered a letter from James Parsons, the magistrate of the "beat" in which Cato lived. From the letter and the messenger I gleaned the following facts with regard to the outrage. The gang which attacked Cato's house consisted of five "mean whites" from Anderson District, who, with the usual disregard of their caste for Poor Richard's axiom that time is money, had ridden no less than twenty-four miles to effect their picayune stroke of business. Of course they had their side of the story to tell; they had gone to Cato's place, they said, to recover a pistol which he had stolen from one of their number; they had knocked civilly at his door, and had only broken it in when he threatened to shoot them.

The letter added that Jack Williams, the injured man, had received a ball through the intestines, and was lying at the house of a neighbor of Parsons, in great agony and near to death. He had made his affidavit that he meant no harm to Cato Allums, and that, so far from aiming a pistol, he was endeavoring to escape when overtaken by the fatal bullet.

"It's a tough lot, I reckon," commented the messenger. "Willums's wife has come up to see him, an' she told him it served him right for meddlin' with a nigger."

The letter went on to state that, as soon as Williams should die, a coroner's jury would be empaneled, and that, according to the civil law, the verdict of the jury would decide whether Cato should or should not be prosecuted as a criminal.

"What is the feeling in your district with regard to this affair?" I asked the messenger.

"Well, we think the nigger ought to be tried. Shootin' a white man an't no joke. If they get a notion that they can do it whenever they think they ought to, they'll think they ought to oftener than will be comfortable."

"Do you mean to give him a fair trial? Or will you get up a mob and lynch him?"

"We're bound to give him as fair a trial as a white man would have," he replied, somewhat indignantly. "We han't no use for lynching. We're a law-abiding people, Major."

Somewhat doubting this last assertion, I nevertheless resolved to continue my experiment, knowing that, if it ended well, it would be the best ending possible.

"See that you do give him a fair trial," I exhorted, somewhat authoritatively. "Obey precisely the instructions of your magistrate, who seems to be a judicious and conscientious man. Do the thing justly, and you shall be sustained in it. Tell your neighbors that; tell them that the United States Government wants nothing but justice; tell them that I am here simply to see justice carried out."

I wrote another letter to Parsons, approving of his course, directing him to call on the military for assistance if necessary to prevent a mob, and urging him not to neglect using the law against the whites if they should prove to be burglars, as well as against the black if he should prove to be an assassin. In a day or two a reply came, stating that Williams was dead, and that the coroner's jury had charged Cato Allums with willful murder.

"Under the circumstances I must issue a warrant for his arrest," added the magistrate. "I do not see how else I can carry out even the appearance of civil law. I trust that you will make no objection. And if you meet up with him I hope you will be so good as tell him not to make resistance. He has not yet been to see me. He sent me your first letter, instead of bringing it to me; and I hear that he is lying out, and says he won't be tried."

The next morning Cato arrived on his sorrel mare, revolver in belt.

"Well, Master, they're boun' to be the death of me," he said. "They've brought me in guilty without tryin' me. And now, if they kin ketch me, they'll hang me up to the first tree. That's the way courts is for niggers."

So I was obliged to explain the mystery of law to this man who had never lived under the

law, and who knew little more of it than if he were a native of the Marquesas. It was hard work to make a fellow whose neck was in danger understand the deliberate wisdom of that sequence of the coroner's jury, the grand jury, and the criminal jury; and Cato had more objections to the safety and sagacity of the process than I can now remember; but the substance of them was that he did not believe in the good faith of Southern jurors.

"Ef they once git me in Pickens Court House jail, I'm a gone nigger," said he. "I'll go in jail yere, with this garrison close by and a big village full of 'spectable people. But Pickens Court House is no place at all. It's jest a few houses. The bushwhackers will come in and take me out o' jail and hang me."

"If you are injured unlawfully I will see that those who do it are severely punished," I replied. "But you must take the risk, if there is any. I should demand that of a white man. Look here, Cato, can you fairly ask any thing more than a white man's chance?"

"No, Master, I can't," he replied, after a moment of reflection. "I'd scorn to ask more'n a white man's chance. Well, Master, I'll do what you say; I'll go back to Mars Parsons and give myself up."

He had scarcely been gone twenty minutes before Parsons's constable arrived in search of him, accompanied by two assistants, all armed with revolvers.

"Cato has gone to surrender himself," I assured them. "I am surprised that you did not meet him."

"Gone to surrender himself!" exclaimed the constable, with some indignation at the absurdity of the story. "You won't catch him doing that without a fight. He's a bad, hard nigger, Sir. He's gone to Tennessee, most likely. Which road did he take, Sir?"

"The road to Pickens, as I believe. If you want to find him, go back to Mr. Parsons; that is the best advice that I can give you."

The men looked at each other doubtfully; they were perfectly respectful, but they did not trust me. Noting the hard, pugnacious expression of their faces, an expression very common in the wilder districts of the South, I thought it best to advise them against violence.

"If you meet him, treat him gently," I said. "Make no threats or threatening gestures, and I will be bound that he will offer no resistance."

"We won't hurt him unless he tries to fight or escape," they answered. "If he sets in for any thing of that sort we must do our sworn duty. I hope you wouldn't ask any thing less of us, Major."

A day or two later Mr. Parsons paid me a visit, bringing the information that Cato had surrendered himself and was in Pickens Court House jail.

"Now, then," said I, "let us see if the whites of your district are worthy of living in the same region with this negro. He has shot a man, as he believes, justifiably and in his own defense;

yet he surrenders himself to trial, as becomes a good citizen. Do you show that you can protect him in your jail and try him justly before your courts. The Northern people doubt whether you can give a negro a white man's chance. Show that you can do it. It will be a great triumph for you; it will disprove a grave suspicion. You can not take a surer step toward recovering your rights as citizens."

My magistrate was a farmer, a plain and apparently a poor man, dressed in homespun, mild and grave in manner, and, as I judged, thoroughly honorable in his intentions.

"I understand the importance of doing this matter justly and according to the forms of law," he said. "I am very much obliged to you for trusting me with it, instead of managing it by means of the garrison. I believe we can show you that we mean to be as fair to a nigger as we know how to be to a white man. There is some excitement among us now; there are some fellows who are right mad at the idea of a nigger shooting a white man; and I told Cato that it was best for him to go to jail for that reason. You see, if he was not sent to jail, people would say niggers have a better chance than white folks, and would get madder than they are now, and perhaps lynch him. Yes, I allow there's some excitement; but it will blow over before long. Some folks are mighty pleased with Cato already for surrendering himself."

"But what have you done about the bushwhackers?" I asked. "Have you tried to arrest them?"

"They have put back to Anderson, where they belong, and that is out of my jurisdiction. I have sent on a statement of the case to the magistrate of their settlement, and asked him to take action in it. I can't do more."

"But don't you think your coroner's jury was a little severe on Cato?" I continued. "Don't you think Cato would have been cleared at once, if he had been white and Williams black?"

"No, Major, I don't think so," he answered, firmly. "Killing a man is severe business, any how, and ought to be thoroughly looked into. At any rate, the process has all been according to law, and even a nigger can't ask more, nor less."

This being clearly irrefutable, I could only express my commendation of Mr. Parsons's course, and urge him to be energetic in keeping the affair within the legal channel. Meantime I had forwarded a statement of Cato Allums's case to Major-General Scott, the Assistant Commissioner of South Carolina, and had received a reply approving my action. A month or so later the Circuit Court of Special Sessions and Common Pleas convened at Pickens Court House. There had been an inflammatory paragraph or two from those veteran blowhards and professional mischief-makers, the "sound Southern editors;" the manly act of Cato Allums in shooting a burglar had been described as the unprovoked murder of a worthy citizen

by a black ruffian; but the men of Pickens District had shown themselves to be a law-abiding race, and the prisoner had not been lynched.

The case waited; the State solicitor was anxious to get it off the docket; but where were the witnesses for the prosecution? No one had been present at the tragedy but the five friends of the dead man and Cato Allums's own relatives; and from the nature of the circumstances, as well as from the ties of blood and race, these last would undoubtedly testify in favor of the prisoner. The five gentlemen from Anderson had been duly summoned, and in vain; a bench-warrant was issued for their apprehension—still in the character of witnesses. But Mr. Jack Williams's nocturnal comrades were that kind of men who, to use a Southern country-phrase, "have no use for a court-house." The more they were called on to "come to court," the further and faster they went from it. The constable dispatched to find them returned to say that they were "lying out in the swamps;" and presently it was reported that they had "done gone out of the country."

This fact turned public opinion at once; the tale of the stolen pistol was dismissed from popular credence, and Cato Allums was decided to have done the duty of a good citizen in shooting a scoundrel. As Pickens District had shown itself law-abiding, so did it show itself amenable to reason and considerate in sentiment; many of the men who had insisted upon the prosecution now besieged the court to have the prisoner dismissed from further action; and among the most urgent of these was the magistrate who had committed him—Squire Parsons.

"I can not throw the case out at once," replied the solicitor. "It is my duty to hold it over till the next sessions, and see if these witnesses can not be made to appear. But the man shall be admitted to bail. I will advise that any bail be accepted which he can give."

So Cato Allums was bailed out for the low amount of one thousand dollars, on the security of his brother-in-law, a mulatto, who probably was not worth half that money. This was substantially the end of the matter, for Jack Williams's friends persisted in keeping themselves retired from the public gaze, and at the next sessions Cato was informed that he need not trouble himself further about coming to court. Somewhat disgusted at having been imprisoned and put to various costs in his own defense, he removed to East Tennessee; but, having farmed it there during one season, he got homesick for his native "settlement," and came back to live among his old neighbors.

"How are you treated?" I asked him, when he called upon me after his return.

"I han't nothing to complain of," he answered. "Every body is friendly, and the men that wanted me tried is the friendliest of all. But, Master, I never was treated like most niggers was. Mighty few white men has tried to ride over Cato."

He was a fine, stalwart, vigorous fellow, as strong as a mule physically, and with plenty of moral muscle, all qualities which command the respect of the general Southerner. Even his sharpness in trading horses was calculated to win him the admiration of the chaffering farmers of Pickens District. After telling me, with some triumph, of certain of his successful dickers, he added: "But I don't always get the best of it; I was mightily come up with last spring when I was gwine to Tennessee. Ye see, I sent over part of my traps by my brother-in-law and a friend of his'n. They begged me to lend um my gun and one of my revolvers, and hung to it so that I had to say yes, though I was feared they wouldn't know how to take care of um. Well, the fust night they camped out a man in Yankee clothes came into the camp and wanted to see their shootin' irons. Then says he, 'It's contrary to the law for you to carry these, an' I mus' take um.' And the big fools jes let him carry um off. If I'd been thar, Master, he wouldn't have got um, not if he'd had on all the soger clothes in the world. Of course he wasn't a Yankee; he was some mighty smart reb."

Then he had a couple of complaints to make: one about a horse which had been stolen from him by bushwhackers, with the connivance of a citizen of Abbeville; the other about a little farm which a Pickens man had sought to swindle him out of, on pretense of some old, uncompleted trade in Confederate money. As General Sickles had authorized civil law in South Carolina I advised him to try the courts, but to wait until the stay-order then in force was annulled, so as to be able to collect immediately on getting judgment. After some further talk about the still mysterious robbery of his two thousand pounds of bacon, and certain threats of legal vengeance against "old Jimmy Johnson," whom he held to be somehow responsible for it, he departed, and I saw him no more.

Such is the history of Cato Allums, as nearly as I am able to state it from memory. So far as concerns the homicide I considered the result a triumph of justice, public conscience, and public sense. It had been decided, with the consent of Southern law and Southern public opinion, that a negro has precisely the same right of self-defense as a white man; and thenceforward every ruffian and bushwhacker in the region would understand that in trespassing on the property or threatening the life of a black he did it at his peril. The great point gained was, that the Southerners had of their own accord come to this decision. It was far better than if the release of Cato Allums and the expatriation of his assailants had been attained by military interference.

LARGENT AND JOLY, BUSHWHACKERS.

In consequence of the complaints of Cato Allums I made inquiries about "old Jimmy Johnson" (not his true name), and learned the secret of his evil reputation. From the time

of the surrender down to a little before my arrival in Greenville, this northwestern portion of South Carolina had been disturbed by the misdemeanors of two noted bushwhackers or desperadoes named Largent and Joly, ex-soldiers of the Confederate army. Joly, a native of Spartanburg District, South Carolina, and a farmer by occupation, had lost a brother in the war, and had avenged his death by taking a hand in the murder of some straggling Union soldiers after the proclamation of peace. Largent had been, it was reported, a Baltimore Plug-Ugly; but when I inquired about him of a fighting gentleman who had formerly known that city well, he could not recollect such a person. "He must be," he said, humorously, "one of the latter-day saints; he must have come on after I left."

As is usually the case with desperate characters, both these men were under thirty years of age. This fact, that violent crime is generally youthful, seems, by-the-way, to be unknown to novelists; they paint their bloody-minded villains as men of mature development, fearfully grizzled and haggard with a long life of wickedness. Although Largent's motive in his murders and maraudings was apparently nothing but a love of mischief, he was much the most troublesome and formidable of the two. Small, agile, muscular, ready with his weapons, as full of stratagems as a fox, and as audacious as a wolf, he for months defied the pursuit of the garrisons of the region and made himself the terror of Union men and negroes. He sent threatening messages to the former, bullied the latter with cocked revolver, and plundered both. Certain citizens were called to their doors of dark nights; there would be a pistol shot and the fall of a corpse; then a clatter of hoofs through the night; then silence. Some of these atrocities were imputed to Largent and others to Joly, although there was no proof. The two scoundrels lived on the farmers of the region, sometimes remaining several weeks in one lurking-place, sometimes changing their den every night. The inhabitants gave them shelter, partly from admiration of their defiance of the Yankees, and partly from fear of their vindictiveness. One of their favorite resorts was the house of the above mentioned Jimmy Johnson; and hence Cato Allums's charge that the old man connived at the robbery of his two thousand pounds of bacon.

Some of Largent's escapes from the soldiery were remarkable. Overtaken by a squad of volunteers, he fell down as if intoxicated, lay perfectly still until his pursuers were close upon him, then shot two or three men in a breath, leaped to his feet, and got away unhurt. On another occasion a company surrounded him by night in old Jimmy Johnson's house, and several were already in the veranda, blocking up his exit, when Largent rushed out with a pistol in each hand, firing right and left, and disappeared in the darkness. Twenty cartridges or more were burned in this curious

mêlée, and yet neither pursuers nor pursued were injured.

Tired at last of being hunted, and finding that the farmers no longer received them joyfully as the redeemers of the South, the two reprobates vanished. Their departure from the district happened before my arrival, and I tell their story as I heard it, without vouching for its correctness in particulars.

TEXAS BROWN AND HIS GANG.

A more impudent, pertinacious, and ferocious desperado was one Brown, called, on account of his supposed birth-place, Texas Brown, and believed to be a deserter from Wheeler's cavalry. Before I reached Greenville it was reported that a cantankerous old farmer named Ezra French, furious at two of his former slaves for quitting his employment immediately on their emancipation, had hired Brown to murder them for the consideration of two hundred dollars. Aided by two or three mean whites of the rougher sort, the Texan caught his victims, took them into a swamp, tied them to saplings, prepared and ate his supper in their presence, and then deliberately shot one of them. The other, inspired with maniacal strength by this spectacle, broke his bonds, rushed through the thickets unharmed by the bullets which were sent after him, told his tale to a terrified friend who for long kept it secret, and immediately fled from the State. This adventure led to a quarrel between Brown and his employer; for as the former had but one corpse to exhibit, the latter refused to pay more than one hundred dollars for the job; and in the constant bickerings between the two worthies the atrocity became public.

Like Joly and Largent, this scoundrel considered the world his oyster, and opened it without scruple. If he saw any article that he wanted in a cross-roads grocery, he took it, merely saying to the proprietor, "This suits me." If he needed lodging, he entered the house of a farmer, told his awe-inspiring name, and was entertained. If he fancied a horse, he traded for it pretty much on his own terms, or he stole it. If he met a negro with a bundle or a cart, he appropriated therefrom whatever he fancied, made the poor scared darkey take off his hat or get on his knees, and then dismissed him with perhaps a kicking. He had a kind of ferocious humor in his composition, and delighted as much in terrifying people as in harming them. For instance, seeing three negroes engaged in mending the roof of a barn, he amused himself with firing balls by their heads to make them dodge. Meeting a negro with a new hat, he forced him to toss it in the air, and sent a shot through it; then ordered him to drop it in the mud and to dance upon it; then departed, saying, "Next time make a bow."

Incomprehensible and almost incredible was the imbecility, indeed I hardly know how to call it less than cowardice, with which the inhabit-

ants, white and black, submitted to the insults and extortions of this blackguard. For months he resided in a considerable hamlet of Abbeville District, called Cokesbury, without any molestation except from an occasional and always unsuccessful raid of the neighboring garrisons of Aiken and Anderson. What with a small minority which admired him, and a vast majority which feared him, there were always men to warn him of the approach of the blue-coats, and other men, dark-minded farmers of one secluded locality or another, who would receive him into their houses until the search was over. He rode through the country with impunity; he even came into Greenville, where there was a garrison of a full company; indeed, it is my belief now that I have seen him there. Brown was described to me as twenty-three or twenty-five years of age, of medium height, slender, sinewy, and agile, with a dark complexion, piercing black eyes, a jaw disfigured by a pistol shot, and an expression of brutal ferocity. Such a man, dressed in gray homespun, his trowsers tucked into long boots, a blanket hanging from his shoulders, and a broad-brimmed black hat slouched over his ill-favored countenance, met me one winter morning in the main street of the village, eyed me with such a savage and steady glare that I turned to look at him, gave me one searching backward glance as if to see what purpose I had, and then passed on with a swagger. At the time I knew nothing of Brown's personal appearance, and was not aware that he was in the habit of making such bold ventures. I simply paused to face this individual because his demeanor was offensively defiant. After all, he may not have been the Texan desperado, but some bomb-proof hero who would not have fought a mouse.

Brown's shot in the face was the result of an "unpleasantness" with a person named Foster, against whom he had some grudge of an unknown nature, and whom he invited out on a ride, with the intent, as was supposed, of assassination. Not an innocent lamb himself, the selected victim had suspicions of danger, and kept on his guard. Arriving at a narrow path which entered a forest, Brown told his companion to take the lead.

"Go ahead yourself," replied Foster, reining up his horse. The Texan dashed on thirty yards, leaped from his saddle, and ambuscaded himself behind a tree, at the same time drawing one of his revolvers. Foster fired as the other ruffian peeped from behind his cover, and Brown fell with a ball through his head, apparently lifeless. The lucky marksman put himself to the superfluous trouble of getting out of the country, as if Southern justice were at that time likely to notice such a trifle as the homicide of an outlaw. Brown recovered his senses, crawled to the house of a neighboring farmer, and was as carefully nursed back to health as if he were a benefactor to the human race.

The most curious of this ruffian's adventures occurred in a "store" at Cokesbury, and was related to me by an eye-witness. While Brown was in the sale-room, conversing on equal terms with two or three respectable citizens, among whom was a clergyman whom I shall venture to style the Rev. P. V. Nasby, a negro named Lewis entered to make some trifling purchase. Not knowing the desperado by sight, or not being aware of the deferential respect which would be exacted by him, Lewis approached the group of colloquists without offering any profound salutation.

"Take off your hat," shouted Brown. The negro stared, but lifted his hat. "Now get on your knees," ordered the Texan, at the same time advancing with a threatening air. Instead of obeying, Lewis sprang forward, seized the wrists of this menacing instructor in deportment, and held them in a grasp of iron. Brown struggled violently to free himself, pouring out a torrent of oaths, calling on the store-keeper to hand him a pistol, and threatening murder. The reverend Nasby, driven by his cloth and his conscience to interfere, patted the outlawed scoundrel on the shoulder, and said, in a meek voice, "Don't, Mr. Brown! Mr. Brown, I beg you, don't! I know this boy Lewis. He is a good, quiet, decent-behaved nigger. He has always been civil to white men. I haven't the least idea that he meant to be disrespectful. I beg that you won't hurt him."

"I will!" screamed the Texan, still struggling. "By ——! I'll kill him. I'll cut his d—d throat."

"Well," answered the heroic Nasby, "I am a minister of the Gospel, and if there is to be murder done here I am not going to stay and see it."

With which sublime words, worthy to be engraven on his face with a pen of iron, he picked up his hat and left this scene of ungodly strife.

What followed? The citizens of Cokesbury wanted to get rid of Brown; only a few days later they secretly petitioned for a garrison to drive him out; here they had him bound in two fists as firm as fetters; what did they do? Doctor Vance, one of the proprietors of the store, whose name deserves and shall have wide publicity, mustered up all his heroism, and said: "Mr. Brown, if you will pledge your word as a gentleman that you won't harm Lewis I will make him let go of you."

After a long scuffle, after finding that he had not strength to free himself, this hired murderer of negroes gave the required promise—on his word of honor, be it understood—and obtained his release. It was confidently predicted that he "would find some chance to kill the nigger;" but either from fear of so muscular an antagonist, or because other matters occupied his valuable time, he never tried it.

Sullivan and Birkett, two young Southerners of respectable connections, one of them the son of a leading lawyer in Laurens District, were so captivated by Brown's exploits in bullying ne-

groes and defying the Yankees (and doubtless also by that wonderful horsemanship and marksmanship which could strike a sapling with a pistol-ball at full gallop) that they became his open adherents, and joined him in his villainous knight-errandries. These three youths, the eldest twenty-five and the others barely twenty, were an incubus upon four large districts, containing a population of near a hundred thousand souls. Not a citizen dared to arrest them, or scarcely to give information about them. Men who had a complaint to make against Brown's gang came to me in private, and whispered their story under strenuous injunctions of secrecy. Sullivan called on a certain high civil official, boasted of his affiliation with the Texan bushwhacker, and was suffered to depart with a fatherly remonstrance. Birkett was to the last countenanced and protected by his relations, as merely a wild boy whose only fault was a passion for reckless feats, more or less pardonable in a youth of spirit. The general imbecility of public opinion with regard to these ruffians was inexplicable, unless it can be attributed to a secret sympathy with them as exponents of Southern independence, or to a languor of feeling resulting from the exhaustion produced by the war. Sullivan's father, I must state, was a noble exception to this despicable feebleness, disinheriting his unworthy offspring and driving him from his house.

The story of the gang was hurried to a *dénouement* by a circumstance which resulted from the murder of Ezra French's negro. It will be remembered that French had promised Brown two hundred dollars for two assassinations, and that, only one having been accomplished, he refused to pay more than half the price of blood. To punish the old farmer for his niggardliness, and also by way of collecting interest on the debt, Sullivan called at the house of the defaulter, put a pistol to his head, and forced him to sign a note for five hundred dollars. French advertised the note in the papers, forbade any one to pay it, and fled to Mississippi. As he left secretly, not even confiding his departure to his family, it was generally supposed that he had been murdered; and now at last Governor Orr took official notice of this series of outrages, offering a reward of three hundred dollars each for the apprehension of Brown, Sullivan, and Birkett. A few days later Birkett rode into the village of Anderson with the avowed intention of killing Lieutenant Loeche of the garrison, whom he suspected, very justly, of an attempt to entrap him. Trotting up to the head-quarters of the post, and seeing an officer in full uniform mounting a horse, he asked a negro, "Is that Lieutenant Loeche?"

"No," said the man. "That is Colonel Smith, the commandant."

"He will do just as well," observed Birkett, coolly; and resting his revolver on his left arm, fired at the Colonel, narrowly missing him. Smith dashed toward him, but the desperado

had the swiftest horse, and, after a short chase, disappeared in the forests near the village. Then followed a successful raid upon one of his haunts, and he was sent in irons to Castle Pinckney in Charleston Harbor, there to be tried by a military commission and sentenced to hard labor upon the fortifications of Tortugas. It will scarcely be believed that one of this rogue's cousins had the impudence to ask Colonel Smith to join in a petition for his release. The pretense was that the youngster was insane; the Colonel's reply was, that there was too much method in his madness.

Alarmed by this arrest, and by a certain show of activity which the Governor's reward had aroused among the civil authorities, Birkett's comrades left Cokesbury and sought shelter in Greenville District, at the house of a drunken farmer whom I shall christen John Jones. Brown was as boastful as ever; he offered to kill any man, white or black, for five dollars; he robbed negroes, made them take off their hats, and get on their knees. Hearing of these outrages, I reported them to Major M'Clary, commandant of the infantry garrison at Greenville; and a corporal was sent with four men, mounted on quarter-master animals, to arrest the bushwhackers. Reaching John Jones's house at sunrise and meeting the proprietor at his gate, they asked him if he had seen any strangers.

"You want Brown and Sullivan, I s'pose," said he. "I don't mind telling you all about them. I'm tired of them, by —! They've just left here. They ain't more than a mile off at this minute. But you can't catch 'em—with your creeturs; they've got the best horses around here. And if you do catch 'em they're too many for you; they've got two revolvers apiece, and that's twenty shots to your five. If you go for 'em, I advise you to begin firing as soon as you lay eyes on 'em. At long range you have the advantage, but at short range they'll have it."

Having given this advice, in the spirit of a man who didn't care much which whipped, John Jones walked away to his bottoms and left the result to Providence. To his great disappointment, doubtless, the detail did not come up with the bushwhackers, and nobody was killed. Brown and Sullivan reached North Carolina; remained there until they supposed that the excitement against them had abated; returned in some mysterious manner, probably by long night marches, to Cokesbury; then, finding that they were still unpopular, vanished for good.

A HARBORER OF BUSHWHACKERS.

Shortly after the fruitless expedition to John Jones's house that gentleman held with me a dialogue which is curiously illustrative of the ideas of honor and gentility prevalent among many of our Southern brethren. Clad in homespun, loutish and yet fearless in carriage, red in the face with forty years of whisky, his breath

profusely scented with that vigorous fluid, his expression indicative of nothing worse than drunken good-humor, he stalked into my office, took a chair, and observed, "Major, I hear you haven't a high opinion of John Jones."

"You have been harboring Texas Brown," I replied, "and I sent a detail to your house to arrest him there. We may as well be frank in this matter. I knew where he was; I knew precisely where John Jones could be found; I gave the corporal full instructions about his road; I told him the number of your milestone."

For a moment he was silent, utterly disconcerted, and probably fearful of arrest. "Well, Major, I'll tell you how it is," he said at last. "John Jones is a gentleman. He never refused a man the use of his roof. A gentleman comes along and says, Give me a lodging for the night. What can I do? I can't shut my door on him. I take him in, let him eat what's on the table, and charge him a dollar in the morning. That's my way. I never refused any man a night's lodging or a meal of victuals. If he can pay for it, well and good; if he can't, he's welcome. That's John Jones, Major. If you'll come to his house you shall have the best he can furnish, and not a dollar to pay."

"But this Brown is an outlaw and a scoundrel; he has no claim on the hospitality of a good citizen."

"Major, I know it; that is, I know it now. I used to think a good deal of Brown; I thought he was a lively, smart, wild fellow who would settle down some day; I allow I thought a good deal of Brown. But he's no account, Major. I tell you, Brown has ruined himself—as a gentleman."

Was there ever any thing more deliciously absurd than this intoxicated farmer declaring that this vagrant cut-throat had "ruined himself as a gentleman?" It was inexpressibly refreshing to hear him, and I let him go on with his boosy maunderings.

"John Jones has done with Brown," he continued. "He has no use for him. I've no use for any body that won't work, Major; I don't want 'em round my place; I told Brown so. He didn't stay at my house when you thought he did; he staid at another house that I can't tell you of. But he come over to me at daybreak and wanted to buy my best horse. I sold it, Major, because I knew that if I didn't he would steal it. That's the reason I knowed your men couldn't catch him; I knowed he was astraddle of the best stock in this district. Yes, I sold Brown a horse and got my money. But that was all—that time; I didn't lodge him nor feed him. I don't want to set eyes on him again. Major, you mustn't do injustice to John Jones; he an't of the same sort with Texas Brown in no way, shape, nor manner; nor he an't of the same sort with some other folks. John Jones is a gentleman. If he wants to kill you, Major"—here he rose and laid his hand impressively on my shoulder—

"if he wants to put you out of his way, he won't hire another man to take you into the woods and murder you in cold blood—you know what I mean? John Jones won't do that. He'll take a crack at you with his own pistol, and, if he misses you, you shall have your crack."

With this magnanimous declaration, and with a further warm invitation to partake of his hospitality ("No dollar in the morning, Major"), he departed. Numberless, and for the most part ludicrous, were John Jones's oddities. While the volunteers garrisoned Greenville his favorite amusement was to ride up to the camp, defy the "d—d Yankees" to fight, and, when they came out after him, gallop away laughing. It seems incredible, but nevertheless it is a fact, that this curious being was kind and generous to negroes, as is proved by the circumstance that his slaves did not desert him on the emancipation, and are still laboring contentedly on his plantation. His last visit to me was for the purpose of getting a teacher for a freedmen's school, which he had resolved, he said, to set up on his place at his own expense. What came of it I can not say, for I left Greenville shortly after.

After the bushwhacking gangs of Largent and Texas Brown had disappeared from my pashalic the outrages which I had to report dwindled into petty squabbles, in which the negroes were quite as often the aggressors as the whites. There would be a seizing of guns, a picking up of bludgeons, a deal of loud threatening, and occasionally a blow. The civil law generally took these affairs in hand, and they are not worth inserting in a "report of outrages."

THE WITCHES OF HAZELCOPSE.

I.

EVERY village is a little world. It has in itself all the elements which its residents deem necessary to its completeness. The traveler who passes through, and even the visitor who sojourns for a brief time, can have but as imperfect knowledge of this little world as we have of the moon, when we look at that world through a telescope. We see the man in the moon, but we don't know any thing about him.

All who passed through the small town of Hazelcapse saw Aunt Crane. If they but rode through in the stage only, they must inevitably see her. Her dilapidated cottage was on the main, indeed the only, street in the village. No man in vehicle, no horseman, or pedestrian passed her window that she did not bring upon him the searching glance of her sharp black eyes. She was looking for somebody. She had been looking all her days, and had never seen him yet! She was looking, and, if she is not dead, is looking still, for the man who is her "affinity." Not that Aunt Crane had ever heard any of the talk of modern speculators in "biology." But she had in her life the phenomena which these learned people pretend to classify. A precious mess they make of it too!

You saw Aunt Crane. But, at a glance, you could make no more of her than of the man in the moon. You saw simply an aged person, not very prepossessing, who wore so very large a pair of spectacles, with round glasses, that she seemed to be hiding herself behind them, while she peeped out at the world. The weird face would perhaps dwell in your memory, if you are curious about faces. If not, you would forget Aunt Crane in the next person or thing by which your attention was attracted. But if there were any village authority near you would be told that Aunt Crane was a character. She was one of those useful persons, skillful at a poultice or a pie. She could compound wonderful salves for obstinate felons, and appetizing dishes for invalids. She could cull and arrange simples and herbs, or deck a marriage feast. She could dress very young babies in their first costume, or compose the limbs of the dead in their last. Her fingers were deft alike in putting together christening dresses or shrouds. She could welcome the first cry of untried lungs, or watch for the last breath of those who had finished their work. She could marshal the bashful parties at a country wedding, or arrange the mourners at a funeral with decent solemnity. She was a character; always in request; "Figaro here! Figaro there!"

People said she was a witch. I do not think she was. To be sure she was old; but we shall all be that, if we live long enough. She was poor; but in the chances and changes of the world any woman may become poor; and that through no fault of her own, if she puts any confidence in man. For the male animal of the human species is very apt to leave any woman in the lurch who trusts to him. Poor withered Aunt Crane was any thing but handsome. Age and want had told upon her, and left their impress upon her features. So they may tell upon yours, my dear young Miss, if you live as long and endure as much of this world's hardships as she did. No—Aunt Crane was not a witch.

People did *not* say that Carrie Drew was a witch. But I think she was. And I dare say that if I had been one of the youth of Hazelcapse, of an impressible temperament, that I should have been able to record as experience what I now give as fancy. There was enchantment in her face, witchery in her smiles, glamour in her eyes; and wherever she moved she cast a spell over the lords of creation. The ladies liked her too. They could not help it, though they said she was a coquette. Perhaps they were right. The ladies like coquettes, as soldiers like and envy the skill of the sharpshooters who are good against the common enemy.

Some modern wiseacre has written an essay in which he says (it must be *he*) that all flirts and coquettes are little women. That is nonsense. Coquetry has nothing to do with altitude or circumference. I have known most desperate flirts who were stately and majestic.

Women of noble size and strength are always most efficient. Your pretty, petite flyaway amuses her dangles; but they have some chance of escape. But your big beauty holds them like a vice, until she is tired of them; and then gives them such a toss that they seldom come back, unless she beckons for them. And then they return as obedient and repentant as if their dismissal had been entirely their own fault, and quite deserved.

Carrie Drew *was* a witch; no weazened, ugly, stooping, poor old creature; no little flirt, but a magnificent woman, sure of her power, and serene and rejoicing in her beauty. She had a right to rejoice in it. There is no handsome woman who is not aware of the flattering fact; and whatever pretensions a lady has to attractiveness she is fully sensible of. And why not? Knowledge, they say, is power. Not even beauty could get on without the consciousness of beauty. The only thing necessary is to conceal your self-satisfaction; not by too palpable pretense and hypocrisy of humility. To overdo the thing is to defeat yourself.

People fancied that Carrie Drew cared for no man alive except her brothers, her cousins, and a very young boy or two, to whom she could be civil, and no harm ensue. Of course all other young gentlemen were afraid of her, as men are apt to be afraid of women worth their attention. And so Carrie was in danger of passing into ancient maidenhood, simply because the men dared not seriously attempt to win her good graces. Some foolish fellows had tried, and made a miss, where they had thought to win one. Their folly, however, was not in appreciating her, but in overestimating themselves. The lady knew her own value, and was not to be won by any person save one to whom she might honorably surrender. There *was* one gentleman to whom, if they could have changed sexes, she would most seriously have paid court. Women can't do that, and more's the pity. If the privilege of choice could be a little more equally divided, there would be more happy marriages. But "woman must wait," and the right men do not always find the right women. As the world now stands, the ladies who are wise do not too severely repel at first the men they intend to take at last. Neither must they too readily welcome those whom they hope to secure. It is a delicate matter to finesse in, after all. Would not a little simple honesty be better?

If Aunt Crane could be really supposed to love any young person it was Carrie Drew. She had her own reasons for that. It was certainly not because Carrie showed any particular attention to her. I think the young lady was rather afraid of the old woman. And if she had known why Aunt Crane took so much interest in her she would have been mortified a little, probably, as well as afraid. It is well to have every body's friendship, but there are some friendships one can not be proud of.

Aunt Crane had been a belle once—long be-

fore Carrie was born. She knew, when she was young, whom she would prefer; but in the mingled folly of prudishness and coquetry she gave him no chance. All men are not repelled so easily. If they were, there would have been no need of a Malthus to paint the dangers of too rapid an increase of population. Aunt Crane—she was a Miss then—failed to secure the man she desired, and accepted somebody else. It was a dear acceptance. He led her a wretched life while he lived; and when he died she had, in decency, to pretend to be sorry. But she did not make any unreasonable ado. Indeed, she was scarcely up to the regulation mourning in such cases. Those who knew her said that she had no regrets for him. The public judged that she was an unfeeling old creature, who cared for nobody but herself—and never had cared.

But she did care for one. And that was Carrie Drew. And she had cared for another. That was Carrie's father. Flirtations are soon forgotten, even by the same generation with the flirts. And the next may never hear of them. The secret of Mrs. Crane's heart was never so much as known to the object of it; and though some of the old people could remember that there was once, for a little while, a very strong current of village talk on the subject, nobody thought any more of it than of the fashions of the last century.

We have said that Aunt Crane's vocation, or one of her vocations, was to nurse the sick. She did not offer to comfort Mr. Drew. She could not have closed *his* eyes. His wife performed that last office for him; and Mr. Drew was one of the very few in Hazelcops to whose last hours old Mrs. Crane did not minister. She had a passion for such things. The world was weary and sad to her. Had she lived in any but a Protestant community she would have taken the veil. As she had not that refuge from herself, like many another, she found relief for her own care and secret sorrow in following the vocation of a Sister of Charity, without the vows.

You who carelessly or uncharitably think there are people in the world devoid of feeling, be assured that you do them injustice. The very coldness and sternness of the exterior may veil a bleeding heart. No mourner round the coffin of Carrie's father was in deeper grief than the poor old woman—witch they called her—whose trembling fingers gave the last touch to his hair, and the last plait to his shroud. She would have thrown herself upon the body, and wailed out her grief; but too many witnesses were by, and she dared not. Only she reverently stooped, as many did, and printed one kiss—her first and last—upon his brow. There was given the first actual, unconstrained demonstration she had ever made of her affection. She was withered and aged. He was dead. But that kiss was the life-delayed salutation of her youth and love. The dead form was not more unconscious of the

secret of her heart than the man had been all his life. Wonderful revelations will the "secrets of all hearts" be, when the judgment brings them to light. And *One* only will know them till that day.

II.

Life's lessons teach wisdom. To those who have not gone through the course, the wisdom of the old seems folly. The aged, who look on the movements of youth, know more about their hearts and desires and motives than they know themselves; particularly when, as Carrie Drew was to old Mrs. Crane, the young happen to be objects of especial attention and close watching. Indeed the old lady, in her heart, considered it only an accident that Carrie was not her own daughter. Was she not *his* child, the living image of him whom she had loved all her life?

She had been married to another. Uncomplaining she had borne his cruel neglect and more cruel notice, but never betrayed her secret, or failed in respect and duty. Fortunately she had borne no children. They would have seemed to her but step-sons and daughters compared with Carrie Drew. They would have been less than step-children. For a woman dearly loves the children of the man she loves, though they are not her own. But Mrs. Crane, with the cruel disappointment at her heart, the withering secret there, and with the little affection which she had for her husband, or he for her, would have regarded his children as unwelcome strangers, even though she herself had borne them.

There are many things which seem strange and cruel and wretched in the world. Perhaps they are so. Perhaps it is chiefly the way in which we view them. But there is only one way of helping the matter. And that is to correct as much of the evil that is in the world as lies within our power. And this was what Aunt Crane resolved to attempt in regard to Carrie Drew.

People of character have their own way of doing things. Aunt Crane was a character. Those who have no individuality follow other people's customs, make the same blunders, with the same results, and are accounted wise. Such as have a mode of their own have at least the satisfaction of their own approval. Mrs. Crane was resolved that Carrie Drew should not waste her life, either in solitude or in company which is worse—that of a husband taken as a makeshift.

Ordinary match-makers mar more matches than they make. Many a young couple have been surfeited by injudicious praise, and caused to separate by the very methods which foolish meddlers have taken to unite them to each other. Declare to a young woman that to accept a young man is just the properest thing she can do, and ten to one she will not do it. Help a young man on with a young woman, and the chances are that you will help him off. Of all fools lovers are the most foolish.

Hazelcopsce was all alive with a new sensation. It was positively declared that Willie Sharp and Carrie Drew were affianced. Every body said that it was precisely the best and happiest thing that could be. Willie blushed, and Carrie pouted. They did not quite like—who does?—to be thus hurriedly disposed of; inspected, devoted, ticketed, and put out of the market. Congratulations became odious to them, and felicitations unendurable. And when the climax was reached by Rev. Mr. Lovematch, with an eye to his fee and fingers itching for his wedding-gloves, Carrie Drew was furious. The reverend gentleman, with that malapropos adroitness with which too many of the sacred profession are gifted, congratulated the lady before a roomful. Carrie could not be impolite to the parson in the primitive village of Hazelcopsce. So she revenged herself upon her lover, and snubbed him emphatically upon the first opportunity. Willie was highly indignant at an insult of which he could not conceive the cause, and fell off from his incipient attachment, taking refuge in a flirtation with another young lady, who was only too glad to welcome him.

The old witch heard what the young witch had done, and anticipated the danger. She forthwith determined, like the witch in the play, "I'll do, and I'll do, and I'll do!" What she did nobody could tell, or even be sure that she did it. For witches have a secret, dark, and midnight mode of accomplishing their purposes. All that was apparent was that the young folks were undone, whoever might have done their undoing.

The village of Hazelcopsce suddenly reversed its mind, and came to the conclusion that such a match could not be, and ought not to be. Aunt Crane was as busy and as invisible as the patron of witches in a gale of wind, and through her agency the prospering breeze which had set toward matrimony became an adverse tempest. All the women counseled Carrie, and maligned her faithless swain. All the men advised Willie, and abused the changeful flirt. When Carrie, hearing overmuch, ventured a word of remonstrance and defense in Willie's behalf, the women told her she was very forward and indelicate. When he, for her, offered to throw down the gage and do battle, the men gave but a smile of pity. The two young folk were fairly persecuted with advice adverse, as they had been nauseated with encouragement. They were talked into silence. Rev. Mr. Lovematch offered Carrie condolence in as bad time and taste as his congratulation had been, and assured her that she was "providentially" saved from an unsuitable alliance. Carrie took her revenge a second time.

Every body in Hazelcopsce was quiet on a certain summer morning. The Sharp-Drew matter, after nine days' wonder, had ceased to be an excitement. The village had returned to its normal condition of somnolent repose. The flies droned in and out of Aunt Crane's

windows, and her wheel droned in her "keeping-room," for she adhered to the old time tradition of a spinning-wheel. We have said that every body was quiet. Aunt Crane was an exception. Her very spectacles seemed to sparkle with a strange excitement; and her step to and fro as she span had an elasticity at which her demure cat looked up with feline wonder and some alarm. The old lady had evidently "done, and done, and done" whatever she had intended, and not even her cat was in the secret.

The mail-stage—there were, as yet, no railway tracks through Hazelcopse—stopped at the village inn. Still, there was no bustle. It was midsummer, and no election was pending. The hostler lazily brought the water for the horses. The driver lazily descended from his perch. The inn-keeper yawned as he took the bundle of copies of the county newspaper from the driver; and the postmaster yawned in response as he slowly cut the packing-twine, and very deliberately tore off the wrapper. The schoolmaster slowly dragged out the broken arm-chair, slowly and carefully deposited himself upon it, and very indolently opened and shook out the folds from the still damp paper. After a tedious process of wiping and polishing he adjusted his spectacles on his nose, and applied himself to read.

Suddenly he sprang from his chair as if something had stung him. The postmaster dropped the half dozen letters he was sorting to hear the news. The blacksmith opposite, noticing the commotion, dropped his sledge and ran over. Ditto the village tailor his shears. Ditto the shop-keeper, who fared worst of the three, since he marred a half dozen of eggs which he was receiving "on account." The doctor stopped in his sulky, and leaned forward to hear. The Reverend Mr. Lovematch moved up with as much haste as his dignity would permit. All Hazelcopse was assembled around the post-office.

All but Aunt Crane. Her window commanded a diagonal view of the tavern and the post-office. She stopped her wheel, and peeped out over her spectacles. She did not join the group, but seemed to understand the situation at once. For she took off her cap and waved it over her head, and while her white locks fell over her shoulders, danced around her little room with a lightness of step remarkable to see. The cat, astonished, rose from her mat, hunched her back like a camel, exasperated her tail to the hirsute size of three tails, spat and hissed at her old friend, and flew out at the window.

The paragraph which had excited all this commotion, from the schoolmaster to the cat, including the parson, was a brief one, and read as follows:

"MARRIED—in New York, by the Rev. Mr. CREAM-CHEESE, WILLIAM SHARP, Esq., to CAROLINE, daughter of the late SAMUEL DREW, Esq., of Hazelcopse."

The party had run away from Hazelcopse to avoid the publication of the bans, and to escape the further interference of good-natured friends

(good-natured with an adjective, for which consult Sir Fretful Plagiary). The Reverend Mr. Lovematch was wronged out of his fee, thanks to his congratulations; but the bridegroom was magnanimous, and remembered him at Thanksgiving time.

Hazelcopse was propitiated at the "home-coming" and the reception; which was upon the most liberal and comprehensive scale. Aunt Crane was the happy directress of details on that occasion, and wore a new cap, and a new countenance, mysterious still, yet satisfied. Hers was an original mode of match-making, and she deserved credit for it; though all the people to this day have not fairly taken it in. They think she was a dreadful old witch to set such stories going about the young people, and to try to break up the match. She says nothing in her own defense, knowing well that Carrie understands her.

Aunt Crane's best pin-cushion, a present of long ago, has a pin-o-graph legend on it—"Welcome to"—the rest to be supplied as the case may require. And her wheel drones placidly; and the cat, with recovered serenity, purs quietly; and Aunt Crane peeps curiously out at the world from behind her spectacles, ready for the next young event, which it requires no witch to predict.

CONSTITUTIONALITY OF THE LEGAL-TENDER ACT.

AFTER an experience of the benefits of this Act in war, second only in importance to that derived from the action of the public forces, the country is startled by objections to its constitutionality in the public press and in the platform of Democratical Conventions. They owe their origin to the hope that the Supreme Court of the United States, which is expected to decide this question at its winter term, may be influenced to suppose that popular opinion is strongly adverse to the measure. The cases which are up for decision are understood to be of three descriptions:

Firstly, Those relating to contracts made before the passage of the Act, payable in what then constituted the lawful money of the United States. *Secondly*, Those made since which by their terms are payable in gold. *Thirdly*, Those of the ordinary description.

If its retroactive character is maintained, the decision will include all contracts made since the law took effect which do not specify that they are payable in gold. As those made payable in that medium since February, 1862, stand upon special grounds, and their payment with legal-tenders at their nominal value would indicate a fraudulent intent, it is not necessary to examine these grounds in considering the main question, whether, when the nation is engaged in a war which threatens its existence, it is within the power of the General Government, when all other means fail, to resort to a forced circulation of its securities. The ques-

tion, as it involves the financial action of the people for a series of years, is the most important ever raised for decision.

Before proceeding to show that modern nations, the most opulent, engaged in war have been compelled to adopt this policy, and have thus proved that it is "necessary and proper" for those which are less opulent, the question may be usefully examined whether the collection of debts at such a time in a better medium than the paper which the Government is compelled to use for the manifold purposes of the war would exercise a counteracting influence upon the issue of the contest.

We have been so accustomed to the undisturbed operation of the laws for the collection of debts, that we forget that their enforcement is an exertion of the public power which may involve important consequences. One of the rebellions known to our early history arose from an attempt, through the ordinary legal tribunals, to collect debts in gold and silver after our colonial finances had been debauched by issues of paper. Captain Shays, in December, 1786, marched at the head of a rebellious force consisting of about 2000 men, of which he was leader, to Springfield and Worcester, in Massachusetts, and prevented the holding of the courts in those places. This force was subsequently dispersed by the militia under General Shepherd.

In our own times it became necessary for the State to interfere between John Jacob Astor and the occupants of land in Putnam County, the title of which he claimed, and the State was obliged to pay him half a million of dollars to quiet the disturbance of the public peace, which was threatened and likely to arise if the officers of the law should attempt to follow up the decision in favor of Mr. Astor by placing him in actual possession.

The most recent instance of trouble was that which arose between Stephen Van Rensselaer and other manorial proprietors and their tenants in Rensselaer, Albany, Delaware, and other counties of this State, growing out of attempts of the owners to collect their rents through proceedings at law. Secret associations were formed to prevent the arrest of tenants; the Sheriff of Delaware County was killed, and during Governor Wright's term that county was declared to be in a state of insurrection. The village of Delhi became a military encampment. The excitement, owing to an amendment of the Constitution favorable to the interests of the tenants, and to a disinclination on the part of local courts and juries to favor the landlords, has died away; but the effort to collect the rents by lawful proceedings came near involving the State in a serious and costly conflict.

The ground set up by Judge Denio in his dissenting opinion in the case of Meyer against Roosevelt and the Metropolitan Bank against Van Dyck (27th New York Reports, p. 400), in which the validity of the Legal-tender Act was maintained in the Court of Appeals of this

State by Judges Davies, Wright, Emott, Rosekrans, Balcom, and Marvin, against Judges Denio and Selden, is this in effect: that the States of this Union may proceed during war, in defiance of the action of the General Government, to collect the debts of their citizens in their State tribunals against any debtor in gold and silver; and that they may, in case the proceedings for this purpose are impeded by riotous demonstrations of magnitude, require of the General Government, under its stipulation to protect each State against domestic violence, a force to put down the obstructing array and enable the State to fulfill this duty at its pleasure. How far this counteracting influence might operate upon the fate of the national war would depend upon the frequency and the force of such demonstrations; but we submit that the subject is one comprised in those measures of safety, preparation, and counteraction, which bear upon the issues of war; and if such a power is lodged with the States—as Judge Denio in effect claims—it is founded on a principle that would enable the States to counteract the efforts of the Nation to wage successful war.

It is hardly to be supposed that the citizens of the Northern and Western States—six or seven tenths of whom belonged to the debtor class—would have tolerated the collection of debts in gold and silver during the recent war. Their debts had been contracted under the State bank-paper system; gold had been expelled as the consequence of it, and what had not been taken from the channels of trade by the army was expelled as a consequence of the war. If debts had been generally enforced at such a time in gold and silver, universal ruin would have ensued.

In war, it is said, every citizen on one side is bound to be a party against every citizen on the other side. There is no exception or limit to the rule but in the discretion of each belligerent. The combined forces of one power are arrayed and thrown against the combined forces of the other. The largest creditor and the humblest debtor may be required to stand side by side in the army of the country, exposed to be destroyed for the safety of the national life; but yet the creditor may at such a time pursue his remedies, and in case of domestic violence, as the fruit of the proceedings, require the withdrawal of a sufficient portion of the public force in the direction of his interests, and in the opposite direction from the public interests. Such, in effect, is Judge Denio's doctrine. Instead of the Union being supreme in such a juncture, it would be the creditor interest, or at least the State tribunals in support of that interest.

The ground that the States may thus in war restrain the General Government from making its paper a tender for private debts is founded by Judge Denio upon the supposed unlimited control of the States over the manner in which contracts may be made and discharged. The subject of tender, he claims, lies within the do-

main of State legislation, except so far as the States are specially restricted by the clause that nothing but gold and silver shall be made by them a tender for debts—that this restriction goes to the subject-matter, and hence restricts, by implication, the General Government. There is a striking inconsistency with this view at page 544 of the opinion. “The word money,” says Judge Denio, “as used in the Constitution, *ex vi termini*, implies all that is expressed in the words legal tender; and without the use of these words in the acts of Congress, the coins struck at the national mint, and the foreign coins, the value of which has been regulated by Congress, could be used in forced payments in all cases.”

The acts of Congress thus referred to are the numerous acts passed during the first administration and nearly all succeeding administrations, prescribing that our gold and silver coins, and certain foreign coins, “shall be a legal tender for all debts and demands.” These frequent acts of Congress, and the fact that no State had ever passed any act declaring what shall be the subject of a tender, raised very strongly the inference that the General and not the State governments was the true depository of this power. But Judge Denio, in attempting to disturb this inference, attributes to the word “money” in the clause of the Constitution authorizing Congress “to coin money and regulate its value,” a meaning or quality altogether inconsistent with his general doctrine. If the word “money” implies the creation of a thing tenderable for debts, then it is clear, as Congress alone possesses the power of coinage, that it alone possesses the power to provide a tender. The accuracy of this interpretation can not be denied. Indeed it is unanswerable.

This interpretation is not nearly as strained as that applied by Congress and the Supreme Court to the clause that Congress shall have power “to establish post-offices and post-roads.” These naked words have been held to amount to a complete investment in the General Government of entire power over the mail to the exclusion of all other authority. The view of Judge Denio that the word “money” implies the creation of what is tenderable for debts is a much more reasonable, as it is unquestionably a true interpretation of the Constitution. If the States were invested with this power to prescribe what shall be a tender, restricted only by the clause that they shall make nothing but gold and silver such tender, a certain amount might be prescribed in one State and another and different in other States. Restrictions are construed strictly, and if the power to prescribe a tender were thus lodged with the States, and it were thus exercised, their own courts would have authority to adjudicate upon the question without appeal to the national tribunal. If the right of appeal exists to the national tribunal the General Government has jurisdiction and the States have not. One of the great objects of union would be frustrated if the States could

make different arrangements on this subject; whereas, if it is a power appertaining to the national authority, there would be the same uniformity with respect to what money is tenderable for debts as there is throughout all the States as to the standard of weights and measures. Congress alone has authority to “fix” the standard, a word implying less freedom in change; whereas, in the same clause the word “regulate” is used, as applied to the value of money, showing that its value may be regulated by Congress according to public exigencies, as they from time to time arise.

Judge Denio’s ground, that the restriction upon the States against their making any thing but gold and silver a tender for debts applies to the General Government, derives no support from established rules of construction. The framers of the Constitution might have restricted, in terms, the General Government equally with the States, and the omission to do so directly is to be taken as implying that they did not intend to do so indirectly. The whole clause, of which the restriction in question is a part, shows beyond a doubt that Judge Denio’s enlargement of it so as to embrace the General Government proceeds upon an erroneous principle. The clause is as follows:

“No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts; or grant any title of nobility.”

If the ground that one of these restrictions—that relating to tender—applies as well to Congress as to the States is correct, it would be a necessary inference that others of them, and particularly the restriction against impairing the obligation of contracts, also applied; whereas the General Government can enter into a treaty or alliance; grant letters of marque and reprisal; emit bills of credit; and pass laws impairing the obligation of contracts. The restriction as to *ex post facto* laws, held to relate wholly to criminal proceedings, was specially applied to Congress in another clause. The rule contended for by Judge Denio, which extends one of these restrictions by construction so as to embrace the General Government, might do infinite mischief; for the General Government is obliged, in order to maintain its existence, to avail itself of many of the powers thus forbidden to the States. In laying the embargo which preceded the declaration of war against Great Britain it was compelled to annul, and did annul, all contracts, though made before its adoption, which conflicted with the measure, and this was the case also during that war and the one in which we were lately engaged. In establishing a uniform system of bankruptcy Congress, as a part of the measure of relief which the power is supposed to imply, discharges debtors from their contracts, which perhaps it might not do if the restriction on the States against their impairing the obligation of con-

tracts were extended by Judge Denio's rule so as to embrace control over the action of Congress. In the exercise of the coining power it is competent for Congress to improve or debase the standard, and thus affect directly the relations between debtor and creditor. This also would be impossible if the General Government had no authority to impair the obligation of contracts.

Judge Denio, in order to carry out his theory to its just conclusion, insists that in exercising the coining power Congress is bound to require that the coins fabricated under its authority shall have ever the relative proportions of gold or silver respectively, and of the respective alloys with which they are mixed, that ordinary coins had at the time of the adoption of the Constitution. The right to change them in an important degree is denied. This doctrine is not due to any restriction in terms on the power of the General Government, and must consequently grow out of the language of the clause which declares that "Congress shall have power to coin money and regulate its value."

Nearly every European nation has, from time to time, altered its standard. The silver in the ruble of Russia was reduced from 312.1 grains in the time of Peter the Great to 273 in the time of Alexander in 1802. The livre of France from the time of Charlemagne to that of the Revolution was reduced immensely. Jacob says that the coins of Germany were in a constant state of change. The silver pound sterling of England, which, in the time of Edward III., consisted of eleven ounces and a fraction, was reduced in successive reigns until it became debased to about four ounces. In 1694 a sagacious Scotchman suggested that in lieu of this policy, which enabled the Government and all private debtors to pay off their debts in pounds of lighter weight than they were when the debt was contracted, it would be better to mix paper with the currency, and out of this suggestion grew the creation of the Bank of England. By the act of Parliament, passed during the reign of William IV., the bills of the Bank are made a legal tender over the United Kingdom, except at the counter of the Bank or of its branches. If the degradation of the coins and money of the world shall continue, will it not be in the power of the United States to adopt countervailing regulations? But for the discovery of the gold mines of California and Australia it is probable that a debasement of the coins would have taken place, for Jacob, who wrote his work on the precious metals under the auspices of Mr. Huskisson, then British Minister, informs us that the habit of the great commercial nations to treat paper, issued in inordinate amounts, as money, had lowered the production of the precious metals in important mines and produced a dangerous disproportion between the large amount of paper promises and the small amount of those metals that could be called upon for their redemption.

As our Government was established to endure for all time, the various vicissitudes that may arise in the experience of the world were taken into view and provided for as far as human wisdom was competent for the task, and it is idle to suppose that the men who framed our Constitution intended so to fetter the law-making power that they could not regulate our coinage to meet whatever emergencies might arise. The language of the power that Congress might "regulate its value" conferred this authority in the fullest manner. It conveys discretionary authority, and excludes all other authority. The assumption of Judge Denio that "the subject of private contracts, embracing the manner in which they may be made and in which they may be discharged, lies within the domain of State legislation" is not, in respect to the matter in question, correct; on the contrary, the States of this Union have no power over what constitutes one of the ordinary subjects of a contract, which is money; they have not prescribed and can not prescribe against the legislation of Congress what shall be tenderable for debts; nor can they either in insolvent proceedings or in any way impair or discharge any lawful contracts, but power over these subjects appertains more fully to the national authority. Instead of the General Government being restricted, it appears that the framers of the Constitution had the subject under consideration and determined to restrict only the States.

Although the Government is thus wholly unrestricted in these respects by the terms of the Constitution, it is conceded that as the General Government is one of limited powers in many respects, the power to bestow on the representative of money, which Judge Denio concedes may be issued, the function of being tenderable for debts must be affirmatively shown. The language of his opinion at page 528 is this: "The right to issue the obligations of the Government for money borrowed, or for property or services furnished for national purposes, is not and can not be questioned. The form and denomination of such securities are matters which belong to the discretion of the Government making them; and if an issue could be raised upon the intent to have them circulate as the *representative of money*, I should still think that it was legally unobjectionable so to accommodate them to the business wants of the community as to make it the interest of successive holders to continue them in circulation, and thus benefit the treasury by deferring the time of their presentment for payment."

Judge Denio, at page 534, is thus inconsistent with what is contained in the preceding quotation: "Pecuniary means gained by the circulation of paper not bearing interest are the profits which bankers acquire by their peculiar business. It is a well-known pursuit, in which individuals may engage, by government license, when that is required by law, and without it when it is not exacted by some legal requirement. I think that so far as the immediate

question is concerned, the Government has an equal right to authorize the national treasury to embark in any other of the pursuits of business by which money is acquired as in this of making profits by the forced circulation of its notes under this legal-tender clause." As the business of a banker does not embrace the forced circulation of his notes, what is said in the former quotation more appropriately describes the business of a banker than the latter, and yet he affirms that the former is lawful and hurtless, and that the latter, as it would imply authority to enter into banking, is unlawful. The inconsistency can scarcely be reconciled.

But, assuming that Judge Denio did not intend to impair the force of his admission that the General Government may at its pleasure issue its promises to pay, in the shape of the *representative of money*—a right clearly appurtenant to the specific power "to borrow money on the credit of the United States"—the question ought to be considered whether this representative is not calculated to add to public and private embarrassment, if in case of war, when it is freely issued, it do not have imparted to it the chief quality of money—that of being tenderable for debts. Without its possessing that function what would be its actual character? The State bank paper issued from before the adoption of the Constitution purported, as do some of the Treasury-notes, to be payable on demand, and they were generally so paid; but in a time of panic they were of no value in the payment of debts, and hence it was that, when in undoubted credit and great abundance, they tempted individuals throughout the length and breadth of the land to enter into contracts extensively, who afterward awakened to the danger that these bills did not answer the purpose of performance when money was most wanted. It was this defect which imparted to the panic of 1836-37—long to be remembered—its extreme malignancy. Thousands of our noblest merchants were destroyed. Their destruction was due to the organic defect of our banking system, which allowed the issue of money to an extent that influenced the most sagacious men to enter heavily into contracts, which money did not answer the purpose of enabling them to perform their contracts at maturity. It did not constitute a tender for debts. It was a mere sham. Judge Denio admits that the General Government may entrap its citizens by issuing the representative, but denies the power to confer on it the attribute which will save the community from destruction. It thus appears that the extreme State right doctrine now being combated would, in truth, produce an impracticable government for purposes of war: capable of going far enough to involve the unwary in pecuniary ruin, but incapable of extricating its finances from the danger which issuing the *representative of money* is sure to produce, if not endowed with the capacity which prevents its rejection by the community.

We come now to the question whether to

impart this quality is one of the powers which the Constitution has, for purposes of war, conferred on the General Government. That to give to the Treasury-notes this quality will prevent their depreciation, and impart to them an additional value, and cause them to circulate more freely and generally, can not be denied. Their issue is always due to the want of sufficient quantities of gold for the purposes of war, and they have unquestionably the effect which Judge Denio attributes to them, whether made a tender or not, to expel what remains of the gold from circulation. The situation of debtors would, if they were not tenderable for debts, be this: that there would be an entire want and absence of the debt-paying medium. This would be entirely subversive of business and credits, and cause serious ruin to the community. An interest would thus be created, too deep to be viewed without anxiety, in favor of the immediate cessation of hostilities, however necessary their prosecution might be to the honor of the country. Whereas by making the bills a legal tender, as they were made by the act in question, debtors were enabled to meet their obligations, which otherwise would have been impossible; and the trade and industry of the country, which otherwise would have been languishing, were stimulated to a degree highly favorable to the prosecution of war. It is not too much to say that the long campaign of General Grant on the Appomattox, and which terminated in the surrender of General Lee, would not have been endured if the people of the Northern and Western States had been subjected to the commercial disasters which began to be felt at the time of the passage of the bill in question, and by means of which they were soon arrested. The British, says Bowen, in his able work, could not have taken Waterloo but for the influence of the commercial activity which prevailed in England. It was due to the act of 1797 which relieved the Bank of England of the necessity to redeem its bills in specie, and saved debtors from arrest who made these bills a tender for any debt.

The power to conduct war, devolved upon the General Government, involves always the raising and expenditure of pecuniary means; but Judge Denio insists that but three modes of raising them are permitted by the Constitution—by taxation, by sale of the public lands, or by borrowing. The position that no other means exists is not founded on any express provision to that effect of the Constitution, but is his own deduction from the general structure of that instrument. He supposes that imparting to the representative of money in war the quality which appropriately belongs to money—its debt-paying quality—is not one of the measures which Congress may then resort to for raising pecuniary means, and this, notwithstanding that the terrible pressure of hostilities will not enable it to wait for the slow process of taxation; notwithstanding that there are no lenders within the precincts of the Government

who have the requisite means, and that those outside are unwilling to lend; and notwithstanding that the public lands are not in demand during the turmoil and difficulties of war.

The States which formed the old Confederation, both before and after that event, had made their own bills of credit a tender for debts, and it was clearly in the power of the Convention, which had immediately before it this example of what may be done by the legislative power in great emergencies, to have restricted the General Government from doing so equally with the States; but the same reason for allowing latitude to the General Government with respect to what might be tenderable for debts in war—as it allowed with respect to contracts which we have seen may be annulled in war—undoubtedly influenced the Convention to waive the restriction as to the nation in both cases, and to leave to Congress the right to resort to this means of raising money in case of war, if no other were left. “I concede,” says Judge Denio, “that it is not incumbent upon those who argue for the validity of the legal-tender clause to select any one express power, and to maintain that the provision is a legitimate execution of that power. They may group together any number of these grants of legislative authority, and if the right to enact that provision is fairly deducible from any or all of them—their position is established.”.....“The problem to be determined is, whether the relation of means and ends exists between them.” It must also be not repugnant to the Constitution.

We have seen that the Parliament of Great Britain, in 1797, relieved the Bank of England from the obligation to pay specie for its bills, and in the same act relieved from arrest all debtors who should tender its irredeemable bills for debts. Mr. Pitt, in supporting the original act, declared that it was not the intention of the Government to make the bills a legal tender; but they were so in effect, though the act did not apply to proceedings of distraint. In 1811, Lord King having given notice to his tenants that he would no longer accept bank-notes at their nominal and reduced value, Lord Stanhope introduced a resolution declaring it illegal to receive or give more than 21s. for a guinea, or less than 20s. for a one-pound note, and a bill was passed which enacts “that the taking of gold coin for more than its value, or bank-notes for less, shall be deemed a misdemeanor.” Lord Eldon, in supporting this bill, remarked that

“So long as it should be expedient to continue the Cash Suspension Act of 1797 this present bill must become a part of it, for otherwise there would be no equality in the situation of different contracting parties, nor would equal justice be dealt out to those who had an equal claim to it, as there could be no justice in leaving the tenant who had tendered bank-notes exposed to be distrained upon by his landlord, while the debtor in other cases who had tendered bank-notes was exempt from arrest. I am peculiarly situ-

ated with respect to this question, having the official care of twenty-five millions of the property of his Majesty's subjects, and *without the means of enforcing the payment of any part except in bank-notes.*”

Lord Eldon was at this time Lord Chancellor, in the very height of power. Lord Brougham remarked of him that he did three-fourths of the governing of the country for a whole generation, and hence it can not be doubted that his observations as to the effect of the act of 1797 are accurate.

It is unnecessary to refer very particularly to the example with respect to the forced circulation of *assignats* by the revolutionary government of France, and the issue of paper-money during wars by other European governments, inasmuch as the example of the most opulent nation of the world in 1797—the nation from which the spirit and tone of our institutions are most derived—is sufficient to show that it is a policy which in war can not always be avoided.

The events which preceded this act in English history, and those which preceded our act of February, 1862, were of like description. The measure in Great Britain was preceded by the shipment of coin to the Continent, and by attempts on the part of Napoleon to cripple the pecuniary resources of his great adversary. At a most gloomy period a meeting of the Privy Council was held, which took place on Sunday; and it is claimed that the only occasion on which his Majesty George III. violated the Sabbath was this important one. He attended the meeting in person. The high officers of the bank were also present, and the Council, on the strength of their representations, resolved that it was “indispensably necessary for the public service that the Directors of the Bank of England should forbear issuing any cash in payment until the sense of Parliament can be taken.” On the meeting of Parliament immediately after Mr. Pitt carried his act to sustain this proceeding, and relieve debtors from arrest, against the opposition of Fox and Sheridan, and carried it by a large majority.

The expulsion of coin from the United States had also happened, but yet Mr. Chase had been able to negotiate loans, chiefly through the banks in this city, until at last it seemed impossible to raise any funds for our armies then in the field. A meeting of bank directors was held in New York to consider the situation, when one of their number delivered a speech, of which the following is an extract:

“We” (the banks) “are now loaded down with Government securities which we can not sell. Banks, as I have already stated, can act only as agents in great national loans. When our capitals are absorbed, *as they now are*, we can no longer aid the Government. The Government *must suspend specie payments or we must*, and it is only a question of a few more days' time as to who suspends first, and who shall hold the specie in our vaults. If we hold it, the people and the Government will be alike benefited. If the Government takes it, the whole will be expended and *hoarded by a few people.*”

It is difficult to conceive of a crisis more imposing. The Secretary of the Treasury now

found that the principal of the only measures which Judge Denio says may be resorted to for maintaining our forces in the field had failed. There had not been sufficient time to develop a system of taxation; the public lands were not then salable; and borrowing on the usual system had come to a sudden and certain end. According to this distinguished Judge, it would seem that there was but one policy left—the withdrawal of our forces and submission to the demands of rebellion. But Mr. Chase wisely determined that, as Congress was wholly unrestricted as to the choice of means conducive to the great end of saving the Union, and as the powers of the General Government in war were equal to those of Great Britain, and rose with the occasion to a level with whatever exigency existed—that, indeed, they were supreme within the sphere of its action—determined to cast aside the strait-jacket of extreme State Rights, and follow the spirit of the English example.

The power of Parliament is described by a bold figure as being omnipotent, and it is insisted upon that the powers which can be predicated of such a legislative body have no existence in ours. If Great Britain finds, as she conceived she did, great advantage from her policy of an irredeemable currency made in effect receivable for debts, and it amounts to a supreme necessity in a great war, we should be hopelessly exposed if, in an important conflict, we could not resort to the same means. If she found it to be a “necessary and proper” means for conducting her war, it may unquestionably be considered a “necessary and proper” means for us. The bills made irredeemable by that power for over twenty years were those of a bank, and although, to use the language of Mr. Pitt, it is a great engine of state, its bills do not equal in dignity those issued by the Government of the United States itself, and hence there is greater reason for making the latter an actual legal tender than there was for imparting this quality in effect to the bills of the Bank of England. It may be laid down as an axiom, that a people whose commercial dealings in peace are based mainly on the use of the ordinary *representative of money*, have no choice in a war of magnitude but to continue, and with all their power maintain, the circulation of paper promises.

Although in some respects the powers of Congress are inferior to those of Parliament, yet, in respect to war and the regulation of commerce on a war basis, the powers of Congress are, in the main, as full and complete as are those of any legislative body of any nation. There are no important limitations upon the powers of Congress in this respect, either express or implied. If this were not so we should be compelled to leave the arena of nations and sink down into a condition of inferiority. The Government would constitute “a splendid bauble.” The great Generals and great men who formed the Convention knew full well that the

Government, in some imminent crises when immense obligations were to be incurred, would need to be armed with all the power required to combine and array its forces against those of the enemy, and instead of fettering Congress with limited powers in this respect they bestowed them on a sufficient scale to effect the great objects of a firm national government.

The problem to be determined, says Judge Denio, is whether the relation of *means and ends* exists between them; that is to say, between the means employed and the end authorized to be accomplished. Does not the example of England show that this is one of the *means* resorted to in war to accomplish success. If a resort to this measure was compulsory on the proud aristocracy of England, who in part represent a rich and powerful nation, the most so of modern history—she had not then reached her culmination—is it a stretch of reasoning to say that a nation less opulent, which had habitually expelled the precious metals as the fruit of an injudicious system; which had none to lend gold and silver within its borders, and no friends of that description in other countries; which could not raise funds in time from taxation or from the sale of its lands—that such a nation, suddenly confronted with a force that arrested the wonder of foreign people and led them to think division inevitable, is fully justified, in order to defend and perpetuate the national existence, in a resort to the means which enabled England to succeed against the First Napoleon?

ENGLISH PHOTOGRAPHS BY AN AMERICAN.

No. VI.—WOMAN IN ENGLAND AND AMERICA.

WOMEN are worse treated in Great Britain than in any other civilized country. High or low, rich or poor, married or single, none of them escape from some of the disabilities, prejudices, and injustices from which their sex suffers. They are obliged to endure not only all the pains and penalties inflicted upon the women of other nations, but also certain special injuries and annoyances invented and practiced by Englishmen alone. Perhaps an American notices this state of affairs more quickly than other observers, because he comes from a country in which, according to the judgment of foreign critics, the women are treated too well. But the Americans do not believe that it is possible to be too kind to women. They hold that, while men may have been created “a little lower than the angels,” women were formed upon a perfect equality with the celestial personages. Nor is this a mere sentimental belief, as immaterial as French politeness; it is carried into practical effect in a thousand ways, and to a great extent it modifies and mollifies the habits, customs, and manners of the people. The result is, as our critics tell us, that the American women are spoiled. But in En-

gland the case is even worse; for here the men are spoiled.

In this age of vast educational experiments it would be an excellent plan to ship a few thousand Englishmen to the United States and marry them to American women, and bring a few thousand Americans here and marry them to Englishwomen. The experiment would probably be very beneficial to both countries; but it would certainly teach the bold Britons many facts in regard to women's rights and wrongs of which they are now in happy, unconscious, and selfish ignorance. They would discover that in America marriage is not simply a partnership to which the woman brings the most cash-capital, in which she does the hardest work, and from which she derives the least advantages, as is the case in England. In the United States the husband is the person who is expected to possess the money, or to earn it; and the wife is considered so precious and sufficient a treasure as to require no dowry but her own charms, and to deserve the life-long labors, sacrifices, and protection of her spouse without giving him any other return than her existence, and as much as she may see fit of her companionship. Every where, in public or private, the inexorable rule is, *Place aux dames*. The only institution in which men are still supreme is politics; but women are not yet allowed to vote because the great majority of them do not wish to vote. If they did wish it there would be no party in the United States rash enough to deny them the suffrage.

The inferior position of Englishwomen is first apparent to a foreigner in a variety of little details. Returning from an early-morning ride, he notices the cottages of the working-people by the road-side. The women are up and about, making the fires, carrying the coals, opening the house, while the men are still snoring soundly. I should like to see an American husband wait for his wife, or an American son for his mother, to perform these matutinal functions. If he were not speedily bewigged by his own better-half, a more serious punishment would be adjudged him by a vigilance committee of neighboring housewives. Or breakfast is being prepared, and you notice the women buttering the bread so as to save their lords and masters the slightest unnecessary exertion. An American husband might eat dry bread forever if he were unwilling to butter it himself. Then you catch sight of a woman on her knees lacing or unlacing a man's boots. So menial a service would scandalize the best American wives. If an Englishman want a pipe, it is the woman who fills it and hands him the light; if his pot need replenishing, it is the woman who procures and pours out the ale; if there be an errand to be done, it is the woman who trots off while the man loafs or rests at home. In short, Englishwomen belonging to what are called the lower classes are evidently the servants of the men, while in America the men are as evidently the servants of the women, only that this latter serv-

ice being that of the stronger to the weaker, never seems like servitude, even in the humblest families, but takes the nobler forms of politeness, solicitude, and duty.

But this sketch has darker tints. These lower-class women not only perform menial services, but they are treated far worse than any other servants in the world. Many of them are married only in name. From various causes, but mainly from lack of education, the marriage-rites are lightly esteemed by these poor women—or rather not by the women, who would give almost their lives for honest marriage-lines, but by their fathers and the fathers of their children. As among the negroes of the South before emancipation, a man and woman agree to live together; their relatives, friends, and neighbors acknowledge the implied relationship by calling the woman "Mrs.," and the upper classes care nothing about it, since it does not immediately concern them, and is pretty sure to provide another generation of laborers for the work of the future. In the South emancipation had to be attended by the solemnization of thousands of marriages, which might have been made in heaven years before, but had not been legally ratified on earth; and so in England, any genuine reform among the lower orders will have to be commenced by a joint crusade of clergymen and teachers—the former for the parents, the latter for the children. At present, all concerned accept the situation; the unmarried couples congratulate themselves upon having saved the parson's fees, and spend more than the fees in drink to celebrate their economy; and the women, having lost their virtue, often find themselves linked with brutes who had no virtue of their own to lose, and who soon deprive them of every comfort in life.

Even when things turn out better than this, the man never treats his mistress quite so well as he would his wife. He feels that she has no hold upon him, while he has every hold upon her. The language he uses to her is colored with this conscious superiority. If she offend him he knocks her down or beats her, and she has no redress, fearing to go to the magistrate lest she should thereby lose a home. If she be his wife her tongue is tied quite as tightly; for then she is obliged to go home to him to suffer fresh brutalities. I do not say that all the laboring class of Englishmen are drunkards, but the most of them drink too much, and they drink a poison of which the women feel the dire effects. The women drink also, and society countenances them in this vice. To see an English ale-house or gin-palace, with the women standing up at the counter and behind the counter, is a positive shock to a stranger. Nowhere else can you meet so disgusting a sight, so brutalizing a custom. On the Continent women are to be seen sitting in *cafés* or *bier-gartens*, and sharing their light wine, coffee, or chocolate with male friends; but nowhere on the Continent is there such a licensed Pande-

monium as an English bar. In America the drinking-saloons are countless; but in none of them would a woman be permitted to enter and call for a drink. There is no express law against the admittance of women, but there is the unwritten law of public opinion that would punish, not only the woman who infringed it, but the proprietor of the bar-room in which such an outrage upon decency occurred. A drunken woman is a rarity in every other country; but in England this woeful spectacle is as common as the rain.

Custom may blind the eyes and deafen the ears of Englishmen to the sights and sounds of vice among women that startle the foreigner at every turn; but this monster, Custom, is a part of the ill-treatment of Englishwomen. No man has a right to accustom himself to crime. Custom permits women to drink gin at public houses in the most frequented streets. Custom admits women, unattended, to the upper galleries of all the theatres. Custom permits prostitutes to take entire possession of the Haymarket and its vicinity after ten o'clock at night. Custom opens dance-houses and promenade concerts for the express accommodation of prostitutes, although the authorities who license them know that they are simply places of assignation. Custom sets apart certain districts of London for the residences of lewd women. Custom keeps open night-houses, in order that prostitutes may be able to get drunk after the regular taverns have closed at midnight. Custom is responsible for all this; but Englishmen are responsible for the custom. The police and the magistrates are powerless to suppress many acknowledged haunts of vice in England, because there is no public opinion to sustain them. Nay, as public opinion can not be neutral, it tacitly declares itself in favor of vice, and forces the police and the magistrates to aid and abet the very institutions they were created to annihilate. In other countries crime hides itself from the eyes of the policeman and trembles at the very name of a magistrate. In England it puts itself under the protection of the law, and transforms the law's officials into its own agents and instruments. The police mount guard in order that nobody may interfere with the criminal, and the magistrates actually assist him to collect his infamous dues from his victims.

In Leicester Square there is a place called the Judge and Jury Club. The authorities can not be ignorant of its existence, for there Finlen, the agitator, used to be employed, and this fact has been mentioned both in Parliament and the press. Besides, a policeman politely pointed it out to me when I was seeing the sights of London. The authorities know also that this is a model-artist exhibition, for the fact is advertised liberally. The Judge and Jury part of the business is a burlesque of an English trial, in which the judge, lawyers, and witnesses endeavor to surpass each other in verbal filth and physical vulgarity; but the

real attractions of the Club to its frequenters are the display of almost nude women in groups upon the stage, and the orgies behind the scenes after the performance. Yet this den, which would not be allowed to exist in any other city, is regularly licensed for the sale of liquors and as a place of amusement. This is an English custom. In a prominent part of Holborn, and in a street at the head of the Haymarket, are two dancing-saloons, called respectively the Assembly Rooms and the Argyle Rooms. A few silly people are sometimes to be seen dancing in these rooms; but the object of their existence is to afford a rendezvous for the courtesans of London and their admirers, who flock there every evening, from ten o'clock to twelve. Yet these places are regularly licensed, and policemen, who know every woman in the rooms to be a courtesan and a vagrant, are stationed there to protect the premises and the proprietors. This is another English custom, based, however, upon Continental models. In various side-streets about Leicester Square are little shops, with grated openings in the doors and porters standing without. To these the courtesans resort after their other haunts are shut, and there they can obtain a drink, a supper, a customer, and, if necessary, a bed. These foul nests are also regularly licensed, and, indeed, have a special license authorizing them to keep open an hour later than the taverns—a privilege which they contrive to extend to any hour they like. The police are as well acquainted with Rose's and Coney's as with their own station-houses; they fully understand what is going on inside, and sometimes they make domiciliary visits; but their approach is announced by a watchful sentinel, and they conveniently argue that if they see nobody there can be nobody to be seen; although half-emptied glasses adorn the tables, hats, shawls, and coats are strewn about the floor, and scarcely whispered conversations are audible from behind the opposite doors. This is another English custom; and if a new or overzealous officer does any thing to disturb it, the magistrate rebukes him the next morning by discharging the offended offender on his own recognizances.

If, as is universally admitted, prostitution is the worst fate that can befall a woman, then those who not only allow but practically legalize prostitution are women's worst enemies. The English are guilty of this sin. They are more guilty, and guilty in a more brutal manner, than any other civilized people. In France, it is true, prostitutes are licensed; but they are numbered, classified, and regulated, like convicts; they are restricted to certain houses, streets, and hours; they are made to feel that they are odious. In Italy, Spain, Germany, America—in every country, alas!—prostitution exists; but it is under the rose, it is an outcast, it is hunted down whenever it shows itself too conspicuously. But the English present the prostitutes with the freedom of the city, as if they were honored guests. Respectable peo-

ple are crowded off the streets that room may be found for the abandoned. The tax-payers contribute heavily and knowingly to the support and protection of the women of the town. Vestries license dance-rooms, cafés, and other resorts for the sole accommodation of the vicious, and householders who call themselves decent gladly come forward and sign the applications for such licenses. Not to London alone, but to almost all the cities and large towns in Great Britain, these sentences apply. Where any repression is attempted, it is so partial as to be quite ineffectual. But in a capital like London the nuisance could be abated in a week if the opinion of the people demanded its abatement. I remember the time when Broadway, New York, was infested by courtesans to about one-tenth of the extent that the Haymarket is at present—that is to say, it was intolerable. The police determined to clear the street, and they proceeded to arrest as a vagrant every woman whom they knew to be a prostitute, or found soliciting gentlemen. In a week the prisons were full, and the pavements respectable; and since then Broadway has never been so badly afflicted with this pest. There were certain streets in New York, such as Greene and Mercer, almost entirely occupied by the satanic sisterhood. The houses were watched by the police, and green-horns were warned off; but so soon as the nests were thought to be filled with unclean birds, a descent was made, and the whole party, male and female, caged in the Tombs. The police of London could deal with the same evil in the same way. Draw a cordon around the vicinity of the Haymarket at eleven o'clock any night, except Sunday, and four-fifths of the courtesans of London would be in custody before daylight. Of course no such measures—and, in the present state of human nature, no measures whatever—would completely suppress prostitution; but they would prevent it from flaunting in the face of the law, and they would acquit the English public from the charge of conniving at its offenses.

It was my good fortune to meet at Seville a very learned and intelligent physician, who had traveled over the world, visiting professionally all the houses of ill-fame, in order to write a work upon the subject. The doctor assured me that the number of American women whom he had found in such houses was so inconsiderable as not to be worth mentioning. Sometimes, he said, women would pretend to be Americans; but upon examination confessed that they were English, or had been born on the Continent and emigrated to the United States. The stories he had to tell of the outrages practiced upon emigrant ships were, however, most horrible. In America, then, prostitution lacks one most cruel phase which at once arrests attention in England. In the United States the fallen women are almost all foreigners; here they are the natives of the country, the lost sisters of the very women whom you meet in society. This is a terrible truth,

the causes and consequences of which demand careful consideration. Most of the city courtesans come, of course, from the country. If you have the heart to inquire as to their antecedents, you will discover that many incidents of rural life described by Fielding are not yet obsolete. The most of the poor women have been seduced by the sons of well-to-do people in the rural districts—young squires and lordlings; boys home from college; officers of the army, and the like. Next among the dangerous classes rank the British soldiers, whose uniforms have an irresistible charm for servant-girls. Singularly enough, the young squires and lordlings grown older, the boys out of college and studying law, medicine, or literature, and the officers of the army on town leave are the most reliable and liberal supporters of the seduced girls when they have become courtesans. These facts offer no good omen to English homes. There is a proverb that reformed rakes make the best husbands; but it is exceedingly difficult to meet with your reformed rake. Generally he becomes more rakish the longer he lives. He begins by injuring innocent women, and he ends by associating with the most depraved. You may see him in his old age at the lowest haunts of London, the butt of the women who were once his victims, or, worse still, he may be rich enough to maintain such a seraglio as that pointed out to foreigners in the Regent's Park, or that in which a certain nobleman lives in the country—harems that would disgrace Turkey, where prostitution wears the mask of polygamy, or Utah, where it calls itself religion. And, since I have mentioned Mormondom, let me recall the fact that Brigham Young's satellites draw their supplies of spiritual wives from Great Britain, and that the authorities here offer no opposition to his system of organized prostitution, although they are fully aware of the destination of the Mormon emigrants. The United States and England must share the blame of Mormondom between them—the former for permitting, the latter for sustaining, its existence. But there are Mormon churches in England, while there are none outside of Utah in America. Brigham Young would soon be without a bride to "seal" if he depended upon American women alone for his followers.

Were it not that the vices of prostitution and adultery underlie all grades of English life, and crop up unmistakably in all phases of English society, I might be excused from devoting so much space to the subject, for there are numerous other wrongs of women which beseech attention. Englishmen have made the path straight and smooth from the cottages of the lower classes to the pavements of the towns and the dark waters below Waterloo Bridge, and at every stage of the journey they have placed publicans to dull conscience and excite passions, and officials to keep the track clear and plain; but that is not the sum of their offenses against women. Here are England,

Ireland, and Scotland, constituting one country, and yet in each of these provinces the laws of marriage are practically different; so that a woman may be a wife in one province and a mistress in the others; and a child may be legitimate or illegitimate as it happens to be born on this or that side of an imaginary boundary line. Is there any other civilized nation that would tolerate such an outrageous condition of things? The House of Lords have had the whole subject before them recently in the Yelverton and other suits, and in every case they have decided according to law, but contrary to justice. They are not to be blamed for obeying the law; but they are not to be pardoned for declining to amend it. In Scotland the parents of a bastard can legitimize their child by marrying after its birth; in England they can not. Yet England and Scotland are said to be parts of one empire! A simple declaration of marriage is binding in one part of the country, but not in another. Is that national consistency? The cure for such contradictions is so excessively simple that it is impossible not to wonder why it is withheld. In some of the border States of America, where settlers had preceded clergymen and magistrates, the ceremony of marriage once consisted in the couple taking each other by the hand and jumping over a broomstick. That was equivalent to the old Gretna Green and present Scottish rite. When these States were organized and the government legally formed, the question in regard to such marriages came before the Legislatures, and was dealt with very sensibly. Acts were adopted legalizing all informal marriages up to a certain date after the passage of the laws, and there was a satisfactory end of the matter. Parliament has only to vote a bill of the same character, with a clause setting forth the legal mode of marriage hereafter, and this whole problem, which has vexed so many minds, will be summarily settled upon a backwoods precedent. Whatever touches her marriage and her children must always touch most keenly the heart of a woman, and so long as these anomalies in the laws exist, and so long as the law of primogeniture benefits the eldest son at the expense of his brothers, sisters, and mother, so long will Englishmen be open to the charge of deliberate legislative cruelty toward women.

Of grosser kinds of cruelty, such as wife-beating, wife-kicking, and wife-murder, Englishmen appear to have almost the monopoly. It is sickening to read in the police reports of the daily papers the records of those crimes against the persons of women which disfigure the current annals of England. Taking a paper at random from the file before me, I find that the reports open with three attempts at picking pockets; then comes a rape case; then a woman robbed with violence; then a woman thrown out of a window; then a woman beaten to death; then a woman poisoned. Better all the stabbing and shooting affrays between men in the United States than these continual as-

saults upon women in a country where every common man professes to know how to use his fists—but prefers his teeth or his boots—and every ruffian displays his knowledge of “the manly art” by hitting some defenseless woman with a club or an axe. Englishmen are conscious of their superiority over “the fiery Frenchmen, the stupid Germans, the assassinating Italians, the dumfounded Spaniards, and the rowdy Americans,” to use Mr. Roebuck’s elegant adjectives; but if any of these barbarians heard a woman’s voice exclaiming, “Don’t kick me any more, please, Bill! I’ll do all you want if you won’t kick me any more!” I would not insure Bill’s life for a farthing. But in civilized England a crowd recently heard these cries, and waited patiently outside till Bill had kicked his woman into eternity. Still, as I have before hinted, there are injuries which torture women more crucially than black eyes or slit throats. Like the old Christians, they care less for wounds which kill the body than for those which kill the soul. I am often surprised, however, that they bear physical wrongs so patiently. Elsewhere women sometimes kill or horsewhip their seducers; in England they quietly go upon the town, and send their children to “baby-farmers” to be starved. At Milwaukie recently an English laborer attempted to beat his sick wife one Sunday afternoon. He had an easy antagonist by his own fireside; but suddenly the door was burst open, and in walked a dozen Irish viragos, who thumped him with mops and pokers until he cried for mercy and swore that he would never molest his wife again. In America, too, women have coolly sacked the grog-shop that was ruining their husbands, pouring the liquors into the streets and threatening the landlord with tar and feathers if he complained. Are Englishwomen less brave at home than across the seas? Is there no heroism in the breasts that have suckled so many heroes? One good example of extemporè justice, with only Judge Lynch on the bench, would be worth a dozen tardy convictions and merciful sentences before the stipendiary magistrates.

More real progress in what is termed the woman’s rights movement has been made in England than in America, although the agitation commenced in the United States, and has been very strenuously pressed upon public attention for several years by a small body of women and two or three fanatical men. Nothing approaching the very close vote in the House of Commons last session upon the question of giving women the suffrage has ever been achieved in America, nor have American women ever succeeded in getting their names placed on the registry subject to the revision of the lists, nor has any American body so learned and influential as the British Association ever permitted a woman to read such a paper as that with which Miss Becker has just caused so decided a sensation in England. If Miss Becker—who has a happy knack of substituting words for argu-

ments—would only convince the women that they desire the suffrage, she would be doing more practical work than in endeavoring to convince the men that women ought to have the right to vote. To give Englishwomen the suffrage would only increase their responsibilities, and they have enough responsibilities already. What they urgently require is some profit from their present toils, some protection against their present lords. Miss Becker wishes them to jump up to the summit of their rights, and then come down the legislative ladder step by step. Is it not better to climb up the ladder? The bill to grant married women the right to hold and dispose of their own property and earnings is vastly more important to women than the right of suffrage. Such a law has been passed in America and in France; it operates admirably; there is no trouble whatever about it, and there is no reason why it should not be adopted in England. Many English wives are the bread-winners; they support their husbands instead of being supported; they have independent incomes which, if put into the savings-bank, would furnish them with a fund for old age or for the education of their children; but earnings, income, and savings are all at the mercy of drunken, dissolute, spendthrift, or thoughtless husbands. How would the right to vote remedy that? Would the women return Members of Parliament pledged to vote for the necessary bill? Well, they can do that now. They take a more active interest in the elections than the women of any other nation; and that their influence is feared is evident from the readiness of politicians to declare in favor of woman suffrage. Instead of this impractical question, let the ladies catechise the candidates in relation to a Woman's Property Bill, and something substantial will be secured. Thousands of women, from the wives of small tradesmen—who are really the active partners, while their husbands are only the sleeping partners, in the business—to the wives of aristocrats of the bluest blood—who have brought their husbands the money with which to sustain meaningless titles—would be deeply interested in such a canvass, profoundly indifferent as they now are to Mr. Mill's chop-logic and Miss Becker's sophistical paraphrases. If the women of England or America were polled today, not one in a thousand would be in favor of woman suffrage. Let the reader think over the list of his female acquaintances. If he know one who wants to vote for a Member of Parliament, unless some of her relatives be candidates, he is fortunate in strong-minded friends. True women entertain no ambition to become half-and-half men—political mermaids, social hermaphrodites, an anomalous variety of "the sex called man." I intend no discourtesy to Miss Becker; but had she been Mrs. Becker it is doubtful whether the British Association would have been favored with her curious theories upon women's rights.

Finally, I am compelled to reprobate the loose manner in which Englishmen think of and speak about women. They have a bad habit of telling gross stories over their wine, and often sully a reputation by an innuendo or destroy it by an apt monosyllable. With all their faults of morals the French are more merciful, the Americans more just. A Frenchman damns a woman's reputation upon a syllogism. He says, "All women are bad; this person is a woman; therefore she must be bad;" but that kind of wholesale scandal passes as a skeptical joke, hurts nobody, and lets its object escape. An American says, "I believe what I saw;" and his judgment, although decisive, harms only those whom he has detected. An Englishman says, "They tell me that So-and-so is queer;" or, "I have it from Smith that," etc. These are the slanders that damage women. What a picture could the artist of the *Saturday Review* paint if he would hang the "Man of the Period" alongside of his "Girl of the Period!" I was fairly amazed at some of the English comments upon the remarkable article whose title I have just quoted. It was as if every man whose tongue had been loudest against women rushed into print to declare his indignation that another person should write what he had himself often said. Writers who were avowedly more familiar with the cottages of St. John's Wood than with their own lodgings shuddered with an apparently holy horror that the name of that locality should be printed. Persons from whose lips I had often heard the broadest blasphemies against the fair sex suddenly sallied forth as the self-appointed champions of woman, and slashed away so vehemently that I at first believed they were in earnest. Men who had repeatedly boasted of their *amours* with veiled but hitherto virtuous ladies of the aristocracy hoarsely declared that the purity of the maidens of the period was unimpeachable, and frantically denounced as a foul slanderer the "titled lady" who had contributed that disgraceful article to the *Saturday Review*. Amidst the chorus of honest indignation—sincere, doubtless, and perfectly natural under the circumstances—these discordant notes jarred most inharmoniously. Soon after my arrival in England, at a table where all the company were gentlemen by rank or position, there were constant references to and jokes about "Mrs. Brown." Confounding her with Arthur Sketchley's heroine in *Fun*, I lost the point of all the witty sayings, and should have remained in blissful ignorance throughout the dinner had not my host kindly informed me that "Mrs. Brown" was an English synonym for the Queen. Then came out all the stupid scandal about her Majesty's Highland servant—scandal which gave one leading comic paper the materials for a travesty of the *Court Circular*, which furnished another comic paper with the subject for a cartoon that decided its success, and which has now been worn threadbare by repeated handling in all sorts of circles. I have been told

that the Queen was not allowed to hold a review in Hyde Park, because Lord Derby and the Duke of Cambridge objected to John Brown's presence; that the Prince of Wales took a special train for Osborne to remonstrate with his royal mother when the *Tomahawk's* "Brown Study" was published; that the Queen was insane, and John Brown was her keeper; that the Queen was a spiritualist, and John Brown was her medium—in a word, a hundred stories, each more absurd than the other, and all vouched for by men of considerable station and authority, who ought to have known better than to mystify a poor foreigner upon such a subject. Take this one illustrious instance of Englishmen's careless slanders, in lieu of scores of others, not so public, which might be adduced to substantiate my text. There are so many dinner-parties in England that new subjects of conversation are exceedingly scarce and in great demand; but this is no excuse for laying a woman's reputation on the table, to be hacked and marred by amateur dissectors, so soon as the ladies leave the room. In this respect a social reformation is sadly needed; but when Englishmen do not scruple to sully the fair fame of their Queen, which is considered perfectly stainless in every foreign land, they can scarcely be expected to spare that of any other woman.

THE CONFESSIONS OF A REFORMED PLANCHETTIST.

I AM not wicked; at the worst I am but weak.

Never have I deceived others for my own profit, nor lent myself, even constructively, to a fraud, however specious, which by any peradventure might turn to my material account. The only cheats which I remember to have practiced previous to my Planchettism were done for amusement's sake alone, when friends insisted on being tricked, and refused to be comforted if they were not. Under this category of innocent impostures I place the swallowing of a carving-knife, and drawing it forth thereafter with much flourish from your left ear; putting a penny on the crown of your head and driving it by a smart blow down and through your body into one of your boots; pretending to be pleased with a story or a casual caller when really you are bored; and the like. In similar manner each of us may confess to have told great lies; for the delectation of little children, for instance, inventing tales of giants and good men that never lived; building up on such chimerical foundations gorgeous superstructures of heroism and happiness which never had place in this world. There you have an inkling of my shortest comings and most flagrant tergiversations until the time that I fledged out as a Planchettist.

I thus premise because I have no desire to dispute the bad pre-eminence of wickedness with any of my fellow-creatures, no ambition to be made the objective point of a special mis-

sion in my now state of health. Fully conscious of the obliquity to which I weakly became committed, I am willing to atone, so far as in me lies, by the following frank confessions. But, while content, even glad, to serve as a beacon (or deacon) light to others, I can not consent to be made an exhibition of.

"How did I become a Planchettist?" How does a man become committed to any evil career? Insensibly and by degrees, of course. No man clothes himself at once with the full measure of guilt, as he would put on a ready-made garment. There are gentle gradations in all iniquity. Is it probable that Mr. Tupper contemplated eructation in volumes when first he began to platitudinize, or that Nero had the conflagration of Rome in his mind's eye when he purchased a Cremona and learned to fiddle? Certainly when first I laid confiding and caressing hands on the smooth and shining back of Planchette, I had no idea of the dark path of deception on which that three-legged monster would drag me, of the depths of turpitude into which I thereby pledged myself to plunge.

But perhaps if I begin at the beginning I shall the sooner get through. Therefore let me take up the thread of events as first revealed (or raveled), and follow it out to its natural culmination in crime and confusion.

Having occasion for some alterations in the model of an astronomical invention I was perfecting, I betook myself to the shop of a maker of mathematical instruments (and tinker generally); who had already failed to work out several brilliant ideas of mine—a fellow possessed of much talent in that way.

"Fritz," quoth I, "I want these wheels cut down to half their present size and renumbered; that spring taken out, shortened, and given a different bearing; and the discs, or outer plates, and wood-work, silvered, gilded, and varnished. I'm in a hurry, and must have it in an hour."

I always am in a hurry in cases of the kind, for it is the height of indiscretion to confess to the ingenious mechanic that no special dispatch is required, permitting him to do things "in his own time." What is "time" to him may be eternity to you.

"Not in a week," he made answer.

This was unexpected. Usually this nimble artisan was not overdriven with work, and the smallest jobs were thankfully received. Now he was full of business, independent, and of course disposed to be curt and rather impertinent. A week was out of the question. What would become of the sun, moon, and planets all that while? So I replied that such a delay was not to be thought of—the solar system could not be trifled with—and that I should be compelled to trust myself and it to the hands of some workman, less skillful, perhaps, but more mindful of the interests of early benefactors. It is always well to take high moral ground on such occasions. But I had the curiosity to ask what he was making that busied him so.

"Pentagraph wheels," he said.

Well, I left his shop and went on a voyage of discovery among artificers in brass and workers in wood; but with the most indifferent success. Very few could comprehend the machine at all; to the beautiful intricacies of its wheels and revolving discs most of them were blind as owls to the sun. One to whom I applied said he did nothing in the circular-saw business; another informed me that I'd find a maker and mender of music-boxes somewhere in Maiden Lane. The few who could make head or tail of the machine mentioned in the outset that a cash deposit on work was always expected of strangers, and this of course cut off further conversation. So at the end of the week I again sought Fritz.

But he now could not work me the desired alterations inside of a month; he was still making pentagraph wheels.

It seemed strange to me that there should be so sudden demand for such wheels, the instrument itself being not extensively used; and I asked what they were for.

"To put on a writing-machine," he said; "something newly invented."

Ah, thought I, a writing-machine; here, then, is an invention nearly as important as mine, and more adapted, perhaps, to the popular need. Horace Greeley will want one; Sam Bowles must be supplied; and I called to mind a host of other eminent caligraphists whose pleasure in the invention would only be equaled by that of the miserable creatures who are obliged to read their manuscripts. I inquired where the machines were to be seen, and very soon thereafter was on my way to the store of a well-known and urbane dealer in stationery, writing-desks, and other portable property.

On entering I inquired for a writing-machine.

"A what, Sir?"

I explained, and gave my authority for supposing there was such a thing extant and there for sale.

"Oh, Planchette; yes, yes, Sir. Please step this way;" and I was ushered to the back part of the store.

There I found Planchette lying in wait for whom he might devour. He was a brown-looking little familiar, made of wood, and mounted on two pentagraph wheels, a lead-pencil forming his third leg; he looked as if he might bite, and had an uncanny air about him generally. Inquiring, What is this mystery? I was informed that on two persons placing their hands upon the fellow's back, and a question being asked, he would soon begin to wriggle about (like a crab in the sand), and write an intelligible if not an intelligent answer with his plumbaginous tail.

In response to my look of incredulity came an invitation to put my hands on with the young man of the store. I did so, and asked the time of day.

"Five minutes past four," was written. This, however, did not much surprise me, as there

was a clock on the wall, visible to my fellow-operator as well as to Planchette.

Other persons—mostly ladies—came in to purchase Planchettes. (There was an immense rush for them, and I understood how the whole town came to be making pentagraph wheels.) While they were being waited on I amused myself by reading a descriptive pamphlet, republished from an article in some English periodical. This related so many marvels of the thing that my curiosity became excited to experiment with one at my leisure; but still so incredulous was I of the powers imputed to it that I scarcely felt like purchasing one out and out. However, a compromise was finally reached by my making a deposit of the price, with the proviso that if it failed to write things my money should be returned.

A label on Planchette's belly set forth the most favorable conditions of getting its back up to the work ahead. It was advised that the operators be "of opposite sexes, if possible, and of different complexions." Not deeming it impossible to find an opposite in sex to aid in the investigations, I started off with Planchette under my arm. I must confess that I was not altogether at my ease while carrying him thus, for if all the pamphlet set forth were true, there certainly was something impish, if not demoniacal, about the fellow. I fancied that he squirmed in my embrace, and I knew not but that in another moment he might be tearing with teeth and claws at my vitals. I thought of the Spartan boy and his fox. But I bore him bravely on, and once at home took care to guard against his escape or any untoward demonstration by locking him securely into an oaken clothes-press.

That evening I went out to call, taking Planchette with me. It was a lady exactly my opposite, not only in complexion, but (I regret to say) in disposition, whom we went to see; and I said to myself that now, if ever, some remarkably quick stepping would be done by this fantastic courser. The lady at first thought I had brought her a new-fangled cribbage-board; but I explained, and with some fear and trembling (she had read the pamphlet meanwhile) we placed our hands as directed, and waited events. For a full hour we sat, but beyond a few false starts and convulsive wriggles, caused by our nervous tremors, there was no movement on its part. Questions the easiest of solution we asked, but no answer came. Did it rain? (it was raining); what time was it? (there stood the clock); we asked it every thing, except, perhaps, would saltpetre explode; but it stood still, obstinate as a mule. Others came in presently—of opposite sexes and complexions—and they tried their hands, with equal powerlessness to produce any satisfactory result. In short, owing to the refractory behavior of Planchette, we spent a very stupid evening, staring and blinking into each other's eyes over his back; and when I packed him off home that evening it was with a full resolve to never again introduce him into good society.

Next morning on my way down town I dropped in at the Planchette dépôt, and reported the failure of my experiment, by way of preparing the proprietor to receive an addition of one to his stock. That gentleman, however, assured me that I would yet find some one for whom Planchette would write; that he would return the money (and he did, there and then), but he really wished I would keep the board, and see what came of it. This was fair enough, no extraordinary risk was involved, and I accepted the terms.

That evening I was out visiting again, and happened to mention Planchette. The ladies present became so much interested (in what the pamphlet said of him; I denounced him unmeasuredly), and expressed so much faith in his good behavior in proper hands, that I sent for him to be brought into the presence, willing to give him a chance of redeeming his reputation.

He was brought and planted on the table, with a large sheet of paper to make it easy for his feet. Scarcely had their hands touched him when off he started like a mud-turtle (of which he was the mild simulacrum) with a coal of fire on its back. He raced round like a quarter-horse, describing the most eccentric curves and angles, writing names, and occasionally lashing out with his legs as though he had just found them. Fresh from pasture, he evidently for the first time felt his oats. So comical was it all that for the life of me I could not forbear laughing, which rather provoked one of the ladies, who inclined to take the thing in quite serious part.

At first starting off it scribbled scriptural texts glibly; but when asked what influence moved it, wrote "Humbug." This flippant answer was attributed to the malign inspiration of my mirth, and I was soundly rated therefor; but while the chiding was going on it got an idea of its own, and wrote "Nonsense." Thereupon my attention was called to the fact that I was visibly reprov'd by some unseen disciplinarian, to which suggestion I replied that it was not quite clear to my mind that I was the person admonished, and counseled that the question be put to Planchette.

Asked who was talking nonsense, the sensible board (or Faculty) at once wrote the name of the lady who was taking me to task.

Asked who was the most nonsensical person in the room, it wrote the name of a little girl asleep in the adjoining apartment—who, however, so far from being sillier than any person in the room, would really have merited being written down as the brightest of all, had she been present. Probably she was "picked upon" because absent and asleep. This trait and similar ones show conclusively that Planchette's is the feminine gender; I treat it indifferently as masculine and neuter for convenience's sake.

A note was brought me relative to the postponement of a little party which was on the tapis. I put it in my pocket. Planchette was

asked what M. Toile d'Araignée had in his pocket. The wretch wrote, "A love-letter," which necessitated my reading the message aloud, in order to clear myself from a base and unworthy suspicion.

And so on the evening through, by no accident hitting the truth in any answer, until, when breaking-up time came, the question was asked: "Now, Planchette, after all this frippery, what serious, earnest message have you for us to retire on?"

"Do not believe in this," it wrote, smoothly as could one of those chaps who hang round hotels doing your name in fine Italian characters on visiting-cards for a living.

I was staggered in my disbelief—nay, more, I was all but convinced. The answers given, though wide of the truth, were in all cases the very replies which one would suppose the operators would not write if they had their way about it. I was the one to be rapped over the knuckles and reprimanded for nonsense if "larks" was the game; and "Don't believe in this" was scarcely the message that would be chosen to convince a skeptic—at least it so seemed at first thought.

I didn't feel quite easy at having Planchette for a room-fellow that night. I started several times, expecting to find him scratching about and endeavoring to climb into bed with me. I would rather have taken up with a bug.

Should a man share his bed with his board, after making it a point all his life to never take the two together?

The mania spread, and the air became full of Planchettes. Wherever you went a board was brought out as soon as the lamps were lit; the soft blandishments of music gave place to its presence, and conversation ceased. The baleful dissipation became universal. Strangely enough, however, though the thing would write for others, it would not for the lady to whom I first introduced it and me. It seemed as though it owed me a grudge for taking it out on that occasion in the rain. With one or two of her acquaintance she would put her hands on, and it walked the table like a thing of life; but for me it wouldn't stir a peg. Though we sat dumbly for hours, mutely, almost prayerfully, invoking the mesmeric influences, until our arms were nearly paralyzed by the inaction, never a line would the pencil trace. This puzzled me, for it was my strong impression that we had about as much snap and spirituality about us as most folks. As for me individually, if I put hands on with another it would either not move at all, or else in a disgustingly feeble manner, suggestive of weak joints. At last I declined to make any further attempts (feeling rather mortified at my frequent failures, if the truth must be told). One evening, however, a distinguished Planchettist being present, under whose hands the board was galloping about like mad, I thought I saw a key to the situation. For experiment's sake I requested the lady who was seated with him to

let me make one final trial. She assented, and gave me her place. The other party seemed not overdelighted at the change (not unnatural perhaps), but made no objections. Planchette was dumb under the infliction for a moment, but at length began weakly to discourse. My hands are not as light as a lady's, and I was determined that if physical force were used I would compel the exertion of sufficient to be visible. Before the first sentence was written I was satisfied—the thing had written its own sentence, in my mind, so far as any claim upon the credulity of mankind was concerned. The working of the digital muscles was palpable, and it was plainly to be seen that, instead of endeavoring to get away from under the operator's fingers, as would have been the case were the motion in the board, it simply followed their guidance, or took the line in which it was driven. Planchette stood revealed to me as a very tame monster after all.

Theretofores in discussions with a few unbelievers of my acquaintance, who scouted my credulity in believing that any thing else than trickery underlaid the Planchettic cipher, I waxed quite wroth, and denounced them as idiots. Evening after evening I had sat (like a bump on a log) while the fiery, untamed steed, manipulated by others, went careering on its three legs over realms of thought and reams of paper, furnishing a fund of amusement for whole households. On those occasions I was not openly upbraided for my impotency, but I knew that secretly I was looked upon as a noodle of too fleshly and earthly a nature to evoke and control the subtler essences which abound in wood and such things, and the knowledge was not pleasant.

Is it necessary for me to anticipate by declaring here that at the next sitting to which I was bid I suddenly developed stupendous powers, and stood revealed as the Planchettist of the Period?

It is now that my confessions properly begin, but the prelude was not uncalled for, inasmuch as I wished to illustrate how a man is occasionally driven into crime in self-defense.

My career from this time forth was an eminently successful one. In my hands Planchette, when he failed to answer truthfully, told such outrageous lies that it was at once seen that some evil spirit was behind him. There were no half-statements, no hamstrung declarations concerning any thing past, present, or to come; he hesitated at nothing. Sometimes, indeed, he would skate around and draw maps of unknown continents, but once started to write, and it was certain the questioner would get all and more than he wanted to know, and as for my fingers being seen to move—trust me for that. From Planchetting one might turn to pocket-picking easily, and with no other preliminary practice.

We generally satisfied our audiences—Planchette and I did. First I practiced on the friend of mine already mentioned; when it

became evident that she, knowing my previous powerlessness to move the board, received my sudden development with faith, and did not suspect me, it seemed clear that no one would, and in the wickedness of my heart I went forth conquering and to conquer.

Did I have no shame, no compunctions of conscience? you will ask. No, not a compunction; once mounted on Planchette and one will gallop headlong whither a beggar on horseback is reputed to ride; you care as little for who or what you ride over as a witch on her broomstick. Contact with him acts like the touch of an enchanter's wand, transforming honest men into tricksters, and turning them loose in society prepared to practice, if need be, on their own mothers.

You doubt the latter statement, but of that anon.

I improved on the tactics of the general run of Planchettists. They were always eager to perform; I affected reluctance. They would decipher scrawls which no one else could read, making out a complete sentence where it was utterly impossible to distinguish a single letter, and wondering at persons' obtuseness. I, on the contrary, was the last to unravel the communication, and insisted on Planchette's rewriting it even after all others were confident that they had the right interpretation. I discovered, too, that it was easy to write upside down, or from right to left, so that a looking-glass was necessary to enable one to read the message. In fact, I evidenced a capacity for guile which at this distance surprises me, and certainly the possession of any latent talent of the kind was before unsuspected in me by others.

As an instance of how we did things—Planchette and I—one Sunday afternoon, at the house of a friend, the board was brought out. Would I put my hands on it? No, I had rather not, it took all the magnetism out of me, and the weather in itself was sufficiently prostrating. But there was no escape, and at last I reluctantly consented, a lady assisting.

Addressing ourselves to the inhospitable board, it forthwith began to circle about and gyrate as if possessed. Asked what power was present, it promptly wrote "the devil."

"But has not Mr. A——" (a lawyer for whose edification the board was brought out) "any friends here?"

"Yes."

"Who?"

"I."

"Why are you a friend of Mr. A——?"

"Because he is one of mine."

"Has he ever served you?"

"Yes."

"What in?"

"In law."

"Have you ever served him?"

"Yes."

"What in?"

"In law."

"Were you at church this morning?"

"Yes."
 "At whose?"
 "Mr. F——'s."
 "How did you like him?"
 "First-rate."
 "Has Mr. A—— no other friends here?"
 "Yes."
 "Who?"
 "Theodore."
 "King of Abyssinia?"
 "No; Parker."
 "Did he go to church this morning?"
 "Ask him. I'm going away now."

And the board went to skating again. As soon as it became comparatively composed the question was asked:

"Did you go to church this morning, Mr. Parker?"

"Yes."

"Whose?"

"Mr. F——'s."

"How did you like him?"

"Not altogether."

"What fault do you find with him? What hint would you like to give for him to act upon?"

"He is too bold, too outspoken."

"But you used to be pretty bold and outspoken yourself, Mr. Parker. Why do you complain of him?"

"I'm wiser now."

"Should not the truth be spoken openly and boldly?"

"Not at all times, and not to all people."

"To whom should the truth not be spoken?"

"The ignorant—the many."

"What are you doing up there?"

"Improving."

"Will you tell us how to improve here?"

"No; I must go."

"Where must you go?"

"To hell."

"What are you going there for?"

"To preach."

"Do you always hold services there on Sundays?"

"Of afternoons."

"Where do you preach in the forenoon?"

"At Yarmouth."

(The expert Planchettist will always have certain stock words and phrases to fall back upon when hurried or puzzled. Thus, when asked who was writing, I found it always safe to quote Beelzebub—he being fair game for every body. When at a loss for an answer to a question, I wrote, "We never, never tell;" and the name of a place being hurriedly required, gave them "Yarmouth," as about the unlikeliest town for any thing but a bloater to come from.)

I reproduce these questions and answers merely to show how absurd the latter seem on paper. But as written for the eager inquirers who conducted the investigation the answers were a success, evoking running comments of "How like Theodore Parker," etc.

It is strange, indeed, how accident will often come to the aid of imposition. As instance in

point: One evening a lady, who was scarcely satisfied with the answers she had received, said she would like to apply another test, and requested that Planchette would write the word she had then in her mind.

With scarcely a moment's pause he dashed off "Sorosis."

"Well, that is wonderful," she cried. "I didn't believe much in it before, but that is convincing!" And it was rather a staggerer, if I do say it who shouldn't; but there was nothing very wonderful about it, after all. Something had been said about that remarkable club a few moments before; and I observed that the lady knitted her brows as though the knotty word took hold of her sharply, and it occurred to me that her mind might be dwelling on it then.

Another case in point—but an explanation first. My mother happened to be visiting in Brooklyn; she had heard of Planchette, and of my proficiency thereat, and was desirous of seeing it write. Now what was I to do? I certainly did not wish to upset the dear old lady's preconceived notion of things, scatter her faith to the winds, to the detriment of Moses and the prophets, and turn her adrift on a sea of speculation as to the relations between mind and matter, with neither compass nor rudder; but, on the other hand, it wouldn't do to confess that I—her first-born and her best-beloved—was a cheating juggler. So I temporized, and put the exhibition off. This was quite as bad, however; she came down to the city to see what was going on, and my backwardness laid me open to a charge of unkindness in thus hiding my spiritual candle under a metaphorical bushel. So one evening Planchette and I crossed the ferry.

My good mother put on her spectacles, the big-bowed ones (when she mounts those she means business), and prepared to catechise. No theological abstractions did she propound, no trivial questions put she, but practical ones—concerning things about which she really wished to know, and by which her movements in a measure were to be governed. A granddaughter had appointed to meet her at an interior town during one of the summer months, and she inquired whether the young lady would be there.

A very large and distinct "No."

"Why, Planchette, that can not be; I have a letter from her in my pocket, and she promises to meet me in July."

"She won't," reiterated Planchette, and refused all further explanation on that head.

The next inquiry was when a younger son would be on from the West.

"On the 22d" was written.

"He is coming on the 15th, I know, for he wrote me so. Will I go West with him?"

"No."

"Well," said the old lady, as she wiped her spectacles and carefully put them away, "my opinion, Planchette, is that you are a great humbug. But we shall see."

Sure enough we did see. Next day, if I remember rightly, came a letter from the young lady regretting that she could not meet her grandmamma at the time and place proposed, and making an appointment for a meeting elsewhere later in the summer. My brother arrived on the 22d; and the old lady did not return with him to Kansas. All came true as a book. But 'twas simply because of shrewd guessing. On general principles I assumed that—setting aside in this instance that feminine fidelity to engagements which has passed into a proverb—a young lady enjoying the cool delights of a Canadian borough would scarcely feel like traveling several hundred miles by rail to an unattractive village in the dog-days. I knew my brother had written that he would be East on the 15th, but as he was generally a week behindhand I thought it safe to average him down to that and record it. As for the good lady's traveling through Kansas with the Indian war-whoop sounding from its borders to our distant doors, I argued that if she made herself party to such a pleasure-trip at her time of life she would display a want of sagacity incompatible with the fact of her being the mother of Charles Henry.

But the case immediately in point, referred to as illustrating how accident singularly comes at times to bolster up imposture, is this: After the family exhibition just mentioned, nothing would do but that Planchette and myself should perform for the proselytism of an old gentleman at whose house my mother was visiting—a confirmed and avowed disbeliever in Planchettism, notwithstanding the stubborn facts she narrated. Hopeless as the task seemed, I undertook it with a determination worthy of a better cause, and, with Planchette under my arm (some on the boat thought I was carrying a patent life-preserver), again I made the perilous passage to Brooklyn.

On inquiring for Mr. R—we were told he was up stairs, writing, but would be down presently. So Planchette and I passed the interim pleasantly in writing stupendous fictions for the children. (I carried no confederate with me; all were gudgeons that came to my net; in all instances the assistant was innocent.) By-and-by Mr. R—made his appearance, and taking his turn at questioning, inquired what he had been doing. We replied, "Writing letters."

"What kind of letters; to whom?"

Unable to hit any where near the truth, we set out to come the old dodge, and write a whopper, something monstrously and funnily (all circumstances considered) improbable.

We wrote "Love-letters;" plainly enough, it seemed to me. Mr. R—bent over to look, and we expected a snort of indignation at the barefaced impudence of the answer. To our surprise, on the contrary, his face flushed, and he said, seriously, "Well, that is very strange, indeed; it has written the name of my correspondent in Brazil, and I do not think any body present but myself knew it."

Certainly I did not, nor do I to this day, but I simply said to the three-legged, steady, old fellow, and thought what a good thing it is that a sweet little cherub sits up aloft to watch o'er the fate of Planchette! Was there not conclusive proof in this of its supernatural powers? One of the beauties of the game, let me remark, is the fact that the chirography generally is so illegible that a large margin is offered for speculation, and the questioner, seeing some slight resemblance in what is written to the proper answer, takes it for granted that it has been written, and is satisfied and surprised.

When persons want to be humbugged it is very easy to please them. I remember one evening Planchette was asked the name of the young lady with whom a young man around the board was in love. We started to write something immediately, on the theory that those who hesitate are lost; but the big-fisted fellow who had hands on with me bore so hardly that we could make no headway at all, and beyond a few feeble kicks and struggles could not get without exciting unpleasant suspicions. The paper showed a cramped tracery which looked like the pattern of a lace collar quite as much as any thing else, but it was at once unanimously declared that the funny monster had drawn the profile of John's Dulcinea!

One of the strangest things about it all is that the operator after a while comes to half believe in the honesty of the performance himself, and gets really angry at having the genuineness of his messages questioned. Several times have I got up from the table in an indignation which was by no means altogether feigned, on being suspected or too closely pressed with questions as to my agency in the matter of writing. I had a way, however, of making the seat of the scornful so warm for him that he did not care to occupy it long, and rarely giped a second time. 'Tis mournful, however, when one becomes insensible to his own wickedness, and assumes an air of injured innocence when good missionaries, in gros grain and watered silks, remonstrate with him. What the end would have been, where I would have eventually brought up, had I not been arrested in my evil career, I do not know, and can hardly bear to contemplate. I might now be a long-haired spiritualist, coaxing weak raps out of my shuddering knee-pans, or throwing tables, chairs, and spittoons about the room in the name of loved ones "not lost but gone before."

It was the frequent necessity of practicing upon near and dear friends that first aroused my slumbering conscience and prompted me to reformation. My good mother, for instance, was so pleased with Planchette that she requested me to buy her one, that she might have it ever ready to her elbow as guide, counselor, and friend. From that dilemma, though, I extricated myself rather ingeniously by leading her to ask what or who moved the board, and writing in answer, in big, staring letters, "THE DEVIL!"

"Why the Wicked Thing! I declare! Take it away, Charles!" and she raised her hands before her face to shut out the sight of so hateful a monster. Never afterward did she want a Planchette, nor could I persuade her to consult it even in secret. "To think of its swearing!" she said.

But there were others less timorous; one lady in particular, a valued friend of mine, who in early life had lost a dear sister. This lady insisted on asking serious questions, and endeavoring to penetrate the veil between the seen and the unseen world. She wished some communication from the dead. It was in vain that I sought to turn the tide of investigation by writing the most absurd things, and announcing the presence and readiness to be questioned of Belial, Brown, or Belisarius. With a persistency not to be baffled she would return to the original inquiry, blaming my light behavior and frivolous interpolations for the mocking character of the manifestations. As there seemed no way out of it, and I secretly felt somewhat provoked that so clever a lady should insist on being bamboozled, I one evening determined to gratify her, and the following is a near reproduction of the Planchetting—enough, at least, to give an idea of the tenor of the whole:

"Will not H—— communicate with me?"

"I am here."

"Why did you never come before?"

"Because of the presence of others."

"What had their presence to do with it?"

"I wished to see you alone."

"Ah, now we have it" (to me); "this is real good. Be serious, please, and don't laugh and cut up; if you do we shall not get any more sensible answers." (To Planchette:) "Can you not visit me?"

"I am with you often."

"When?"

"Always. Every where."

"When is your presence most felt?"

"In dreams."

"What are dreams?"

"Voices and echoes."

"Whose voices and echoes?"

"No one's."

"No one's? that is a strange answer."

I suggested that perhaps the question was not rightly put; that there was no reason to assume that persons were meant. So the question was amended:

"Voices and echoes of what?"

"Every thing in nature."

(I rather pride myself on that; it was pretty, and I question whether many mediums could improve on it with as little practice as I had.)

And so the evening passed—a little to my amusement, but more to my sorrow when I came to think it over. All manner of ghostly things were inquired into, and there I sat writing down the first vague, mystical answer which came into my head. And speedy punishment followed, for thereafter I was kept at the Plan-

chette board, like the musical young woman of the season at a piano, whole evenings through. The fame of me went abroad into the land, and I was invited out, with a postscript requesting me to bring my Planchette, just as Frenchmen are asked to dine and come with their horns and flutes. There was an end of all conversation or any of the old time amusements; no more "slight flirtation by the light of a chandelier;" I had to seat myself and ride the three-legged till midnight, and then home to a nightmare. This was in itself almost enough to tempt me to confession and a reformation, but the main impelling power was the seriousness which the subject was assuming, and the sacredness (to me) of the things which it became necessary to trifle with.

So one day I split the mahogany monster down the chine with a carving-knife, hacked his two halves into shavings, and gave them to the flames; taking early occasion to acknowledge boldly my former wickedness and declare my resolve to reform. More, I avowed my intention of writing out my confessions for the benefit of those yet in the bonds.

Against this I was cautioned; it being hinted to me that though I might be stupid and bad enough to practice such a senseless cheat, others were honest in their dealings with Planchette, and that it really told some very marvelous things in cases where deception was impossible. For instance (I demanded an instance), a gentleman in the northern part of New York, whose wife was traveling in Europe, asked Planchette (operated by two ladies, strangers to both him and his family) where his wife then was, and the name of the place was accurately written.

I must confess that this shook me a little, for I knew the gentleman well, knew how incredulous he was in articles of faith more established than these latter-day miracles, and owned to myself that if he was convinced there might be something in Planchette despite my experience.

It happened, however, that during my summer ramblings, soon after, I "towered" through that stretch of country, and spent some days in the vicinity. At a dinner one day I met a lady who chanced in the afternoon to become my partner at croquet. During the intervals of the game our conversation turned on Planchette, and I frankly confessed the rôle I had acted. She said she never had hands on Planchette but once, and that then she displayed a power which surprised herself and others. I fancied a slight smile on her face, and mentioned the astonishing revelation which had been described to me as occurring in that part of the country. The smile deepened into a laugh as she remarked that she could tell me all about it, having been one of the performers.

"Now tell me truly," said I, "*sub rosa*, you know—did or did you not manufacture that message yourself?"

She owned that she did, but declared that really she couldn't help it; that she sat until she was tired, and there wasn't much fun in

that; so when Mr. P—— asked where his wife was she wrote "Ems," just to see what they'd say.

"But you were a stranger to her, and had never met him before?"

"Yes."

"Then how did you know she was at Ems?"

"Why, he told me so himself, not five minutes before. I expected when I wrote it that he would say so at once, but he didn't remember telling me—on the contrary declaring that no one in the room but himself knew his wife's whereabouts; so I thought I'd let it go."

There you see what a wonderful fellow Planchette is, when you come to sift him!

A friend the other day was telling me of his investigations. Planchette was manipulated by two young ladies, ex-officio professors of the art, and he had been asking questions, but got such silly and untrue answers that he was about to give up in disgust, convinced that they were making game of him.

But a thought struck him, and he resolved to give the thing one more trial. A copy of *Le Journal pour Rire*, which he had just received from Paris, lay on the table; the name of its editor is printed in very small letters at the bottom of the last page.

"Here," said he, "tell me the name of the editor of this journal."

They wrote "Philipon."

"By George!" cried he, starting up, "there is something strange and almost unaccountable about that. I know that neither of these young ladies knew the name of the editor!"

"Oh yes, I did," exclaimed one of them, leaning breathlessly forward; "I noticed it this morning, and wondered what they printed it way down there for."

The ruling feminine passion asserted itself there. Rather than admit that there was *one* thing she didn't know, she lost the convert she was endeavoring to make. Of course he saw nothing strange and unaccountable in the writing of the name (misspelt at that) in the light of her admission.

Here is another instance of how easily persons are deceived when they have their mouths made up for the wonderful:

A lady residing in New York was spending the summer at a mountain village in New Hampshire. Her husband undertook to send her all the news. When Elliott the painter died he telegraphed to her, "Elliott—artist—dead." The dispatch came in the afternoon, and she did not make it public.

That evening Planchette was on the table—all were immensely interested in that gay deceiver up there. A gentleman, a great friend of Mr. Elliott, was present. Having an idea that she could surprise them a little, the lady, when her turn came to put hands on the board, wrote "Elliott," "Elliott," repeating the name several times.

The gentleman wondered if any thing was wrong with his friend. When he last saw him

the artist was in very poor health; and at last he asked, "Has Mr. Elliott any thing to say to me?"

She then wrote the telegram she had received, word for word, "Elliott—artist—dead!"

Of course all present were very much astonished, and the gentleman was not a little distressed—observing that certainly this was very strange; 'twould be remarkable indeed if Elliott were really dead; in any event they would know to-morrow.

If astonished that evening, judge of the sensation next day, when news came through public channels that the artist was indeed deceased. Could any doubt be entertained of the mysterious power of Planchette after that?

It will be seen that this instance illustrates not only how easy it is to deceive people, but also how naturally the best disposed persons will drift into deception when such tempting opportunities present themselves. There is a pleasure in mystifying others, and when successfully accomplished the delight is too dear to sacrifice it all by confessing how the effect was produced. The incident just narrated was told to me at the very moment of this writing. I find that now that I am at the confessional very many others ease their consciences by "owning up." Sinners love company as much as misery does.

I have little more to say, and surely nothing further to confess. I have truthfully given my experience, and if it be of use to any of my fellows, that knowledge is guerdon sufficient. A reformed Planchettist, I eat better, drink better, and sleep better than when pursuing my evil practices. My conscience is more at rest, and I no longer have troubled dreams. Let this encourage those who are still under the dominion of the Destroyer to emancipate themselves.

It is useless to tell me that there is any thing in Planchette, or that by its aid every man may become his own medium; I've been there. When you can pat a terrapin on the back and get him to respond in Coptic with his tail, 'twill be time to persuade me that a block of wood can be "charged" sufficiently to write sentences. Mine was charged (it stands charged against me, I believe, to this day), but it would only write when I moved it, and then it wrote precisely what I dictated. That persons write "unconsciously" I do not believe. As well tell me that a man might pick pockets without knowing it. Nor am I at all prepared to believe the assertions of those who declare that "they do not move the board." I know what operators will do in such cases; I know the distortion, the disregard of truth, which association with this immoral board superinduces. I have seen charming young ladies, whose word I would take on any thing else in life (even if they protested they were not engaged), who would not fib if you asked them if their curls were false or if the red of their lips was natural, sit up with both hands on Planchette—fortified

in falsehood by the contact—and lie like lawyers. Bring me any two professors of the art—young ladies, for men are not to be believed under any circumstances—not too far gone to be sensible to some moral compunction, who will put one hand on Planchette and the other on the Bible—establishing a sort of galvanic connection between the negative and positive poles of truth, so to speak—and swear (as Elia says the custom of resorting to an oath in extreme cases has introduced into the laxer sort of minds the notion of two kinds of truth) that they do not write the messages they promulgate, and I will discuss whether they do or not seriously. Until then I do not recant one single expression, but stand firm by these confessions.

P.S.—Since writing the above I have been told by a gentleman of accurate information that the article descriptive of “Planchette,” already referred to as republished in this country from an English periodical, was purely imaginative throughout; that the writer never saw, and indeed never heard of such a thing; ’twas fabricated out of his own head. It will be remembered that he spoke of it as originating in the United States, and being in frequent use here. This was manifestly wrong—not to say absurd—inasmuch as a Planchette was never known in this country until put in the market by a shrewd stationer who contrived to manufacture it from the Englishman’s description. We are a gullible people, as well as a vast—that’s beyond a doubt!

THE NEW TIMOTHY.

Part Seventh.

I.

“A MOST manifest Providence!” exclaims Mr. Wall, the uncle, and the very moment he hears it read.

For his nephew has just had a letter from the great city of all that region inviting him to visit its greatest church with view to a settlement therein, “if the way be clear,” and this letter the nephew has brought direct from the post-office to his uncle’s study for his advice thereon. And here beginneth a lesson in human nature if we only had time to study it. This noble old clergyman would have shrunk from such a charge had it been pressed upon him in his early ministry—though actually filling two or three fully as important afterward; yet he regards the modest reluctance of his nephew as commendable and—morbid. He doubted his own ability for such a position then, yet has not the least doubt on that point in reference to this nephew.

The solemn fact is, Eli tolerated things in his sons that he would have died rather than do in his own youth. Samuel bore his awful message to Eli, yet played the same foolish father over again in reference to his thoroughly worthless sons, every one of them. David, too, actually petted in Absalom what he would

have deemed himself possessed of Saul’s evil spirit if he had even dreamed of doing in his own youth. So of Solomon in reference to Rehoboam, and of every father in reference to every son up to date; except, dear friend, *your* father.

It is astonishing. In his youthful days Mr. Wall senior would as soon have prayed for pestilence upon him as riches, for this he had not the faintest desire then; no, nor since. But for his nephew he does desire at least a handsome supply of the good things of this life; never thinks for a moment that riches might be as disastrous in their influence upon said nephew as he was positively certain they would be in his own case. He has reference in his present decision to the ample salary his nephew will receive if pastor of the city church as a reason he should accept, though with him it would have been a strong motive for declining. Perfectly willing to suffer himself the martyrdom of poverty forever, but very unwilling this nephew of his should have a joint racked or a hair singed.

Let the whole truth be told, and so he reasons and so he feels in another matter—Louisiana Mills! In his own fervently pious youth he would as soon have yearned for the hand of the Paphian Venus as for that of Louisiana, dull of mind and keen of appetite, utterly earthly and unspiritual in every sense—given to riches, and dress, and indolence. Yet all along, without a whisper of it to himself, much less to his own wife, he has set his heart upon his nephew being married to this lady of all the world. One of his first thoughts is that it will *now* be quite possible for this alliance to be consummated! Let us frankly acknowledge, and neither deny nor quarrel at the eternal laws of the human heart. Noble, white-haired old Barzillai asked David nothing for himself whatever, but for Chimham every thing! That morning, weeks ago, when his nephew, after a night of sleepless thinking, had announced to his uncle his intention of mounting his horse and riding out in search of a field of labor farther out upon the frontier! Hard work the uncle had to dissuade him from his plan. He was weary even of the short period of comparative idleness under his uncle’s roof. After long years of training and arming he was ready, and yearned for the Fight. Mr. Wall senior had sent him out to General Likens partly to keep him occupied until the Something arrived, he hardly knew what. A dim something that the uncle expected confidently, and therefore prayed for fervently. That unknown something he found in the letter the instant he read it.

“Yes, Charles, your way is clear to visit this church,” was his decision, all his noble face glowing with pride in his nephew, and cordial assurance of his future career, his eyes not unmoistened with emotion as he spoke. “I’ll tell you,” he continued, “we will call a family council upon the spot. See if all do not agree with me.”

And so Mrs. Wall had to come in with her

knitting, and Laura must be instantly sent for at the neighbor's with whose sick child she had been sitting up all night. John was deeply engaged, in a check apron and rolled-up sleeves, in some mystery of flour and eggs and sugar in the pantry, but come in she must. It was a critical point in the mystery, too; but whether it "fell" or "rose" or exploded was one to him—come in she must, on the spot.

"Do let the child stay, Mr. Wall," said the wife, as she accompanied her impetuous husband to his study in the yard.

"No, Mary," he says, in his loud, strong tones. "We can't do without John. I do believe she has got more clear, strong sense than any of us!"

He did not intend that young lady to hear this remark, but he did not care particularly if she did. He never said any thing which he would be unwilling for the world to hear. And John *did* hear him as she scraped the paste from her fingers in the pantry. She had a vague feeling of any thing rather than pleasure in regard to the subject to be decided in the family council—an almost sickening feeling she could not account for. She regretted that she happened to be at home. But there was no help for it now. She would say as little as possible upon the matter, whatever it was. And so the family assembled in the little study. Mrs. Wall wished to stand. "It will take but a moment, I suppose. What is it?" she said.

"No, sit down, Mary," the husband insisted.

"What is it, Charles?" inquired his aunt, seating herself on the edge of the lounge, and knitting for dear life.

"No, not till Laura comes," says the husband, anxious for a full and solemn council—not a bit the less so because the decision of that council was already fully made up in his own mind. John looks over the books in the case, her sense of something unpleasant growing rapidly upon her.

At last Laura appears, and in a hurry.

"Dear me!" she says, at the door of the study. "What is it? Any one sick? Have the calves been in the garden last night? Don't tell me any thing has been at my dahlias!"

Her father leads her in, shuts the door, requests attention, reads the letter, explains all the circumstances of the case. But long before he comes to a close, and to get the opinion of his council, he has given his own most decidedly that it is a very desirable position in every respect—that there can be no possible objection to Charles accepting the invitation.

"But let us have your opinion," he says, at last. "Mary, my dear, you first."

"I can not see how it is possible to get Charles's things ready in time," says that lady, knitting thoughtfully as she runs over his wardrobe in her mind.

"Very well," says her husband, cheerfully.

"Now, Laura, your opinion. What is it?"

"Oh, of course," she replies, and, "Oh, Charles, while I think of it, don't forget to send

me a good assortment of bulbous roots. Pack them in moss, and they can come by mail. You could find some cuttings, too, if you were to inquire in the city, only you are certain to forget it."

"Very well," says Mr. Wall senior, still more cheerfully. "Now, John, what is your notion? Out with it, child!"

"Please excuse me this time, Mr. Wall. I know so little about such things—"

"No; speak out what you *do* know, child," he says.

"I am sorry," she says, hesitating a little. "You wish me to speak plainly. I don't *know* any thing. I can only tell you what I *feel* about it. But I can't tell you *why* I feel as I do. So what I would say is not worth hearing."

"But what is it, John?" says Mr. Wall, not quite so cheerfully, while Charles listens as if to the voice of something rather within him than without him. "Tell us what you feel, child. We'll let it go just for what it is worth."

In the moment all the very much Mrs. General Likens had told her in reference to that part of Mr. Merkes's experience flashed upon her.

"You know, child," Mrs. General Likens had said, "he's had an awful time of it a candidating; visiting churches an' preachin' before them, to let them see how they like him or don't like him. In my opinion it's as bad as standing a hand up on a block for sale. How they like his voice, an' his gestures, an' his manner of prayin' and readin'; whether he's too flowery for the old or too dry for the young, an' all that. Of course he couldn't do his best preachin' under these circumstances—could you? An' he imaginin' all along he saw contempt in one face in the congregation, an' laughin' at some mistake he'd made in another. Him a meetin' half a dozen other candidates on the spot, an' all preachin' against each other for dear life, perhaps. An' the bein' heard, an' criticised, an' rejected; and that over an' over again. It's enough to kill his very heart like, cheapen him in his own esteem, cripple him for life. I know it's the custom in all the churches; that the best preachers in the land all do it; an' I don't know any way preachers are to be settled but that; yet I know one thing mighty well, an' that is, my James should have died first! It was my prayer from his birth he might be a preacher. If he had been, an' it had been the Lord's will, I would have given him up for a missionary to go to Siam-Pooter, or whatever it is, willingly; but not to go 'round with a pair of saddle-bags a candidating! Too much study and too little exercise at the seminary there in preparin' for the ministry, steady starvation after enterin' it, is enough to sour Mr. Merkes. Araminty Allen can't make that allowance for him that I can, but when you come to add to all that his trials and troubles candidating 'round among the churches, I don't blame him a bit if he *is* as cross and bitter an' gloomy an' cold as—between us—goodness knows he certainly is. What that man has gone through with would

have ruined the temper of the Beloved Disciple, even if it is wicked to say so!"

But John whispers no syllable of all this.

"Well, Mr. Wall," says John, looking up with her clear calm eyes and truthful brow, "I have a feeling that he ought not to go—at least, had better not settle there."

"But *why*, child?" asks Mr. Wall the elder, swiftly.

"My opinion is not worth much," she continues, more firmly and seriously; "but I was in favor of his taking that school he once spoke of; and when that was abandoned, I was so anxious he should go on that missionary trip west, I suppose it prejudices me against this plan. You know, Mr. Wall," she says, a little archly, "you did not call a council about those other plans."

While she is speaking one of the family is dimly conscious, as he looks upon her, of the stirring within him of a singular emotion, not entirely new in his bosom, but never so well defined as now—not perfectly defined as yet—far from it. "Singularly lovely," he murmurs to himself; "but so different from Louisiana!"

"What a curious girl you are, John!" says the caller of the council; but he is aware also of a curious echo, too, to what she has said in his own bosom.

"I got it from you," says John, more boldly. "That day you were talking to Mr. Bowles in the parlor, you told him a young minister ought to spend several years in a comparatively obscure position before occupying a larger. You explained how he would thus get a practical knowledge of religion and men, which would make a substantial and lasting pastor of him afterward. You told him it would be a good thing for him to spend a few years, even, in teaching—it would deepen and enlarge his mind. That the eight or ten years you had spent in an obscure country charge before you took a city church was of great benefit to you. And then, I remember, you told him of promising young ministers who had gone from the seminary into city pulpits who had failed to sustain themselves, and had to sink back at last into a lower position doubly bitter to them. And you mentioned two or three you knew who had ruined their health entirely in their effort to do so. Did not Mr. Merkes begin his career with a city pulpit?" asks John, in a lower voice.

"Yes," says Mr. Wall the elder, not at all as cheerful as a few moments before; "I believe so. But, John, we hope Charles is neither a Mr. Bowles nor a Mr. Merkes," he continues, with a smile.

"May it not be because you see him with your loving eyes?" says John to herself. Yes, to a greater degree than even John knew did the noble and affectionate uncle see every thing relating to those he loved through a wrong medium, because a rosy medium. Of himself he had an humble opinion, whenever he thought of himself at all, which was rarely enough. All his life his own wonderful success in his minis-

try had been to him a cause of unceasing astonishment—the more because his beginning was of the smallest and least promising in many respects. This astonishment was satisfied to him only by his as unceasing remembrance that it *must* be—*was*—God himself, the Cause of it all! And so his amazement changed and increased, and glowed more warmly, into a thankfulness and confidence in Him which bore him up as upon wings.

"But he's last man I know to find out from about other folks," Mrs. General Likens remarked one day, speaking of him. "When it's made his duty to speak out—that church trial we had out here, you remember, General—he says *every thing* plain, I tell you. Other times he talks easy enough about *things*, but he won't about people. You never hear any half hints about folks, any chilly-like running down of other people, any sly questions about somebody which will oblige you to say something bad of them in reply from *his* lips. I'd jest as soon expect Apostle Paul to sit an' babble an' spit an' gossip an' whittle as *him* to do any thing small an' mean. Something *awful* about that man—must be his pure goodness—like an angel. Only fault I know is he thinks too highly of other folks, specially those he's most with. I suppose it is the shining of his hope an' love on them colors them like to his eyes. One thing, it makes people on a strain to be what they know he thinks them to be—anywise, while they are any where about *him*."

Mrs. General Likens was correct. Mr. Wall senior loved Charles as if he had been his own son. He estimates him by the ample measure of his own heart, rather than by the smaller and colder and exacter measure of common-sense. He really thinks more of him—is a thousand times more confident in the success of his nephew than he ever was of himself. And now John's unwilling opinion comes upon him, and upon the rest of the council, like a cool but entirely bracing and wholesome breeze. But, you see, John had a Yankee father—a man of clear, strong, straightforward, almost cold sense—Yankee that far. Well for her that her mother was the very soul of womanly sweetness and softness. Thus it was, let us theorize, she is the consummate result of the two.

"Louisiana! John!" rings the chime in the heart of Burleson. To have one girl in a man's mind is bother enough, but two at the same time it is awful, as more than Captain Macheath have found out. And such a contrary two! With Burleson it is the conflict in his choice as between moonlight and sunshine. Sunshine is coldly clear; but oh! the moonlight is so soft and intoxicating. Sunshine is too wakeful—a man must stand up on his feet and think and act strong and straight out under it; but under the yellow glory of the moon it is so dreamy through all the golden night one can lie at length and drift like a bubble down the slow, eddying flow of whatever befalls. "I could be happy with Louisiana Mills, say, if I

had never met with John," he thinks; "but I have met with her, and she is to me a something of priceless value—infinite—I can not compute it. I dare not give her up from my possession forever! But here is this Louisiana, so artless and beautiful and charming to the eye. I wish to goodness she had run off with her father's overseer or something before I got back from college," he says. "I would be at peace then to get up on my feet like a man, and brace myself somehow, and have purpose in life and do noble deeds, and perhaps get to heaven at last. Oh bother!"

One singular fact lay in this, that Burleson thought a vast deal the most of John in the mornings—made his calls upon her then, terribly to the derangement of her domestic duties sometimes. But, as John rose upon him with the morning sun, so she subsided in him with its setting. With the coming on of evening Louisiana rose, moon-like, above the horizon in all her glory; it was after day was done that his calls upon her were made, save one, and that was a failure, perhaps for that very reason. It is the conflict between this sunshine and moonlight within him which makes such uneasy and uncertain twilight there. However, all this in a parenthesis.

And so all is tangle again in the council. It is hard to reason against stern Fact—eternal, undeniable Reason.

"But it is a plain Providence," says Laura.

"Yes, but Providence sometimes opens a wide gate before us expressly that we may *not* enter it—to try us," says the elder Mr. Wall, thoughtfully. "I passed just one such when I entered the ministry; was glad ever after. And more than once."

And I, thinks Mrs. Wall over her knitting, when I came so very near marrying that rich, dissipated young St. Clair. Dear me, how long ago it was!

When Mr. Merkes made me that offer, thinks Laura, but angry at herself for thinking of it as an opening of any kind at all.

In the buggy that afternoon, coming back from General Likens, thinks John to herself, and blushes, as if he had certainly read her thought, as she lifts her eyes and sees that the nephew is looking at her.

"I will tell you what I have determined," says Charles Wall at last. "My mind is clear. I will go. But I will go to the city without the least hope, expectation, or desire to be called as pastor, or to accept the invitation if I am. I want to see as much of all sorts of life as I well can before settling down to work. I have seen the Likens neighborhood a little; let me see city life a little, too. I want to know, chiefly, a little more about myself. I haven't the faintest idea," he added, with a laugh, "of what I am, except that I have awful forebodings!"

II.

Why is it that the young minister assumes from the very outset the relation he does to

this Jacob Langdon? He is aware of it, he remonstrates with himself about it, he struggles manfully against it, but for the soul of him he can not help it! The quicksilver in the tube might as well resist the cold that sinks it toward zero. Unlike the mercury, he does not indicate it in any way, but none the less does he feel from the first that wretched sense of personal inferiority to Jacob Langdon. And why? in the name of logic and common-sense. Why? Jacob Langdon is a man who never got beyond a common-school education, and Wall is a thoroughly educated gentleman. Jacob Langdon is a moral man, perhaps, but Wall is much whiter from all stain than he. Jacob Langdon is a professor of religion, but he, in comparison to the young minister, has effected a standing, off the earth, only upon the first step leading into the temple, while the younger but more devoted Christian of the two has pressed his way long ago up those steps, and through the vestibule, and far on his way within the temple toward its Holy of Holies. The only two things in which Jacob Langdon is superior to him is practical knowledge of life, and—wealth; for it is Jacob Langdon of the well-known and immensely wealthy firm of Langdon, Burke, and Co.

If there be a rich man whose handsome carriage drives by your door so often, and you, a poor man, be on the point of denying the fact of feeling inferior to said rich man, do not do it! The feeling is wrong, but your denial of it, dear friend, is worse. You are positively certain of the man's great inferiority to yourself in very many respects. But at last, in spite of yourself, especially if he be very rich and you be quite poor, you have the general sense of his being, upon the whole, your superior. If you be poet or artist or minister yourself, and young, that which exalts him most above you is your sense of his unlimited superiority to yourself in practical intellect. Whatever else you do know, banking, prices, stocks, commerce—in a word, the science of making money—is to you a vast knowledge, with the very alphabet of which you are unacquainted. In the art of spending money you feel yourself to be vastly before him—know infinitely better than he exactly what things to buy with his thousands, if you had them; but as to accumulating those thousands you are a very babe at his feet.

It was with a singular sense of being quite small and very young that Charles Wall enters the counting-house of Langdon, Burke, and Co., in the city. Mr. Langdon being the officer of the city church who wrote the letter of invitation.

"Mr. Langdon has stepped out; take a seat; the morning paper," says the clerk on the high stool at the long mahogany desk behind the railing, hardly lifting his eyes from a heap of invoices before him.

"He knew by my letter that I would be in the city, and to see him about this hour, and yet he is out!" was the thought of Wall, as it would have been of Mr. Merkes in his place.

Only Mr. Merkes would have nursed the thought with indignation, whereas Wall throttles and casts it out as soon as it is born. He seats himself with a "Thank you" in the black cushion of the nearest office-chair, and takes the crisp morning paper that he may glance over the top of it around him.

It is a noble office, twenty by forty feet at least; the floor covered with cocoa-nut matting, the walls hung round with port-folios bearing in large letters upon their sides the names of all the leading ports of America and Europe. There are handsome paintings too of the celebrated clippers and steamships of the day. The three huge doors standing open upon the busy street; the library of journals and ledgers, each two feet long; the glimpse of several lengthy tables in an inner room covered with different samples of cotton in brown paper parcels; the vast iron house rather than safe in one corner; the stout negro porter, apron on, coming in and going out; the constant ingress of clerks with long, thin books in their breast-pockets, who hold brief and cabalistic conversation with the clerk, who never even nods to them in coming or recognized their leaving, but writes steadily on through it all; every thing impresses the young minister with the fact that this office is quite a different place from his quiet apartment in the third story of the Seminary, so very high and dry above the bustling world. And he enjoys it wonderfully from force of reaction, and has a deep respect for the clerk writing away at his desk. From the moment he had read the letter of invitation Hoppleton had dwindled into a much smaller place, and his uncle's home had seemed rather dull than not. The instant he had stepped, valise in hand, on the train, at the end of the stage part of his trip from Hoppleton, he had caught the contagion of enterprise and energy. He respected the conductor collecting tickets, had a lurking admiration for the dirty stoker, considered the engineer a hero, rather underrated himself, in fact, in comparison with all the pushing throng. In strong contrast with the eddy in which he has lain, there is a grandeur in the torrent of practical life which exaggerates itself to him by the very contrast.

And now this tall, thin, hazel-eyed man who comes in with such a swift step must be Mr. Jacob Langdon. He is rather disappointed. He had imagined him portly, white-haired, and with an overflow of gold watch-chain over a white waistcoat—never mind. He rises to greet and be greeted, but Mr. Langdon regards him just at that instant no more than the spittoon at his feet.

"Say twenty thousand two fifty, and I'll do it," he says, as he comes rapidly in without looking over his shoulder at the weazen, little, dried-up old man who follows upon his footsteps like his shadow.

"Suppose you would! No. Twenty thousand five hundred," replies that individual, in sharp, quick tones.

"Can't do any thing with you, Ellis," says Mr. Langdon, who has now reached the railed space, and, with hand thrust through the rails, is working the impatient fingers thereof under the nose of the clerk. "Check, Jones, twenty thousand five hundred!"

"Would endow a professor's chair!" says Wall to himself, with a rising respect for both the gentlemen.

Mr. Ellis has the check, and without a word is gone. Mr. Langdon is hurrying out after him, when Mr. Wall rises and bows and catches his quick eye.

"Ah, yes!" says the broker, understanding immediately. "How are you? Pleasant weather!" Mr. Wall shakes his extended hand.

"Cotton is it? or railway?" asks the broker, with a business smile.

"Something as interesting to you as either, I hope," says the young minister, returning his smile, but feeling exceedingly uncertain whether his business will be really and truly as interesting to his new friend. Church and gospel and preacher seem things so unreal and out of place in that busy spot.

"Very glad indeed to see you!" says the broker, becoming on the spot the church officer, when his visitor has explained who he is. And there is a Sabbath change in his tones as he learns of his visitor exactly when he arrived, at what hotel he stopped, how he left his uncle—still standing, however, and in a rapid manner.

"Now," says the cotton broker, at last, "it's just twelve—we dine at four. Here are the papers, or look around the city a little. Only be here, if you please, say at twenty minutes to four, and I'll show you the way out. Good-morning!" and he is gone into the maelstrom that circles past his front-door.

Mr. Merkes would have been greatly aggrieved at so curt a disposal of himself. Wall is conscious of a rising tendency in him of that kind, but crushes it on the spot in a new admiration of the energetic business man. He has a strong disposition himself to plunge into the current of commerce, would like exceedingly some pressing call along the wharves and into the warehouses. After years of seclusion there is a romance, a fascination in the rapid footsteps, and quick speech, and talk of dollars, with a sense, too, of being himself quite an idler, altogether a child.

It is a compliment to Wall, however, that Mr. Jones, the clerk, comes at this juncture from inside his cage, introduces himself, and shakes hands. Mr. Jones has a quill of blue ink behind one ear, a quill of red ink behind the other, another of black ink in his mouth. He removes this from his lips to say:

"Very glad to make your acquaintance, Sir. You look much younger than I expected to see. I knew your uncle well. Many a time have I heard (there's the gun of the New York steamer coming in—hurry down, Peter) him preach. I don't belong to the First church myself. No;

some of us went out from it a year or so ago to begin a little enterprise in one of the neglected districts. Sunday-school in the upper room of an engine-house, you know; preaching there at ten and at night. Take a seat, Captain Buff; ready to sail? Papers all right." And Mr. Jones has to go into his den again to serve the last arrival. But Mr. Wall has had opportunity to observe that Mr. Jones is not only a clerk, but a gentleman.

He feels reassured, and with a word of adieu, which Mr. Jones had not the time to observe, he sallies forth into the tide without, until he finds himself near his hotel.

"Bill already settled, luggage carried off," says the clerk at the hotel bar in answer to an inquiry. "On an order from Jacob Langdon," is the explanation.

And so he guesses his way to the office of Langdon, Burke, and Co. again. Arrived there, he finds a somewhat shabby-looking gentleman standing at the desk in subdued conversation with Mr. Jones, who is writing steadily on none the less.

A moment or two after Mr. Langdon comes in with a rapid step, and a "Ah, Mr. Wall, how are you by this time?" In obedience, however, to a "Mr. Langdon, a moment if you please!" from his clerk, Mr. Langdon retires with that clerk into the room with the long unpainted cotton tables. The clerk seems to have a good deal to say, and his principal only listens and nods. As they come out the clerk introduces his employer to the gentleman in somewhat shabby clothes, who looks thin and nervous. There is a rapid conversation between these last, of which the young minister only catches the words, "Wife and children—any thing on earth—great obligations—roll up my sleeves—any thing, Sir, any thing!"

"Ah, well! at your service now, Mr. Wall. Suppose we go," says Mr. Langdon at last, and they leave the office, the cotton broker keeping up a fragmentary conversation with the shabby gentleman, who accompanies them. In course of time they arrive at the doorway of a huge warehouse-like establishment.

"Be so kind as to wait for me a moment," says the broker to his guest, and disappears with his other companion inside.

"Had to take you out of your way," says Mr. Langdon, emerging, as he hurries along with Mr. Wall. "Jones has always something of the sort on hand. You'd hardly believe it, that person who came with us was president of a railroad once—not so long ago either. Broken to pieces. Came out here to find business. Places? 'I am willing to do any thing,' he says, 'to feed my family: if it's only employment for a few days; it is better than none at all.' I had no place for him, so I brought him here. He'll have to work hard enough from dawn till dark. But he'll get his bread."

"Did you find any difficulty in securing him a place?" asks the young minister, as they hurry along, deeply interested.

"A great deal, only the head of that establishment couldn't refuse, under the circumstances. It is not three years ago *he* came to me in a worse fix than this man. I got him in there then. Of course, he is willing to help any other poor fellow."

"I must say, Mr. Langdon," says his companion, after a pause, "I envy you the opportunity you have of doing such a deed."

"Yes; it is more Jones than myself. People can do any thing with *him*, and he can do any thing he pleases with me. But here we are; walk in."

The young minister looks up and sees that they are in front of a noble mansion with cast iron veranda for both stories, handsome plot in front with tessellated pavement leading from the gate, bordered with conch shells and stone vases. The master of the house rang at the gate as he entered, and now the front-door opens at his touch.

"Mistress in?" he inquires of the white-aproned colored-man that opens the door.

"Just in, Sir," is the reply.

"Dinner, then, soon as you please," says Mr. Langdon, showing his guest into the parlor and himself passing on up stairs to wash and tell his wife.

Dinner comes. It is all a dinner could be, and Mr. Wall partakes of it with a feeling of ease and enjoyment, as if he had been out on a camping excursion during the last few years, but had got home again. Mr. Merkes would have been estimating the cost, and blaming the extravagance, and adding another room to his overcrowded house from the proceeds of the superb caster before him. His prevailing feeling would have been, "There is an awful wrong somewhere that you have all these things and I don't. Never mind. You must have a bitter sorrow somewhere. Perhaps you have a drunken son down town, or an idiot child up stairs, or something. Perhaps you'll break yet—it often happens." And so would Mr. Merkes console himself as he murmured steadily on—like a rivulet worried to death with perpetual pebbles in its path—against God.

Not so with Wall; he acknowledged to himself a keen enjoyment of the wealth of his host—but it is as if it is all his own. He feels entirely at home, and therefore seems so. He has a pleasant word for the children and a happy reply for his host, and, what a woman values more than diamonds or cashmeres, a deferential attention to every syllable of Mrs. Langdon. And he says very little himself at last, and is entirely at his ease.

"We will be glad if you will make out your list of hymns for to-morrow this afternoon," says Mr. Langdon, as he shows his guest up stairs into his room.

In looking forward to the service the young minister expected to be quite nervous on that eventful Sabbath morning; he had even hoped that it would prove a rainy Sabbath. Yet he was only glad when he awoke the next morn-

ing and found the day up before him bright and glad. He had anticipated having all the mixed and miserable feelings of one about making his appearance in the pulpit as a candidate on exhibition, bothered to put on the best manner there. But even his fears of being nervous were all forgotten as he dressed and sat down at the window to his morning devotions. He is not there as a candidate for any thing whatever; merely there in Heaven's Providence to preach, as he had been on his visit to Mr. Merkes. All he aims at is simply to preach. All he prays for is that he may do this to the profit of those that may hear, few or many. John's opinion at the family council had been as a soft, cool hand laid upon a fevered brow. He felt quietly ready for the morning service even by breakfast. So much so that, with his sermon safely in his head and heart instead of his breast-pocket, he requested to accompany Mr. Langdon to the Sabbath-school. There was a simple nature in the young minister, a perfect ease of manner, that would have put Mr. Langdon out a little. "Going to preach in *our* pulpit, and so cool about it!" he would have thought, with some displeasure at his young guest, if that guest had not seemed so entirely yet quietly at home. Was it intellect and culture beginning to weigh its own against wealth? Or was it, rather, simple piety getting the mastery of circumstances, as it inherently will, though those circumstances towered at first like Alps against it? Not that he is in the least superior to any body else. Only he has, somehow, become aware of all the much that is wrong in him, and has for the moment got his heel upon that worse self!

And the Sabbath-school prepared him to preach. He is beginning of late to find a deal of interest in the clear eyes of little children, a grace in the motion of their hands and a wisdom in their prattle he never remarked before. His attention has been drawn toward them by what he has heard of Mr. Merkes's entire neglect of them, and his association with John has in some mysterious way ripened his heart toward the young as well as toward every thing else. They wish him to deliver an address to the children; but he pleasantly declines, and *talks* to the children instead, imparting to them all the profit and twenty times the pleasure during the ten minutes he holds their bright eyes in his than during the formal delivery of an hour's set address. And then their singing too! Sweeter music this world knows not of than the voices of children.

When he at last finds himself in the pulpit—itself almost as large as Mr. Merkes's church—he is glad that he had selected for the occasion the sermon he had. Every minister prepares two sorts of sermons. One kind is of the genus commonly known as "a splendid discourse." This is a sermon based on some striking text, filled with apt quotations from the poets, adorned with vivid illustrations, beautified with rhetorical curves and flourishes. The aim of such

a sermon is to astonish the audience with some quaint interpretation of Scripture never before dreamed of by mortal man; or to thrill by its sublime flight; or to move and melt by its pathos; or to convince by its irresistible reasoning; or to delight by its very audacity. The object of this genus of sermon, in a word, is effect, immediate effect, and the success of the same is measured by the degree of its effect. To this end the sermon is rewritten with a polishing of the marble worthy of Isocrates, who spent thirty-six years of steady rewriting upon his one oration. It is such a venture that no experienced minister launches himself from his pulpit cushion upon a splendid discourse unless he be very certain that the size of his congregation, the state of the weather, and his own exact measure of health and mood will warrant the attempt. Even then it is a risk. A bird flying in at the church window, a sudden shower or storm coming up, a dog yelping in the aisle, a child crying in a pew, will ruin the success of the most effective of this style of sermon.

Now Mr. Wall, too, had more than one splendid discourse among his sermons. They were the gems of his collection to him when he first arrived in Hoppleton. Somehow he had distrusted them since. And it is not a splendid discourse he now has determined to preach. It is one of the other genus of sermons, the faithful exposition of a text; poetry, vivid illustration, rhetoric, novelty, sublimity, pathos, logic, audacity, all Corinthianism of the sort left out, or breaking their way in by sheer force, and the discourse depending upon its plain, direct meaning for its effect.

The sumptuous church holds a still more sumptuous congregation; the organ peals in full tone; the choir have not one common-metre hymn to drag them down to the people in the pews below, and sing with free voices skyward. The young preacher preaches his sermon without let or hindrance, informing the hearers, to the best of his ability and with all his heart, of the meaning of God their Saviour in the text. A prayer, a hymn, the benediction, and this candidate for the vacant pulpit has settled his fate as far as that church is concerned forever.

EUSTACIE'S STORY.

JULIETTE came down the garden with that grand air of hers as if the world were made for Juliette. She held a letter in one hand, bearing a bold superscription, and she paused just before Eustacie, who was filling Louis's apron with the sweet June roses.

"For me?" asked Eustacie, putting out her hand, and blushing up like any rose herself; but a look on Juliette's face caused her to falter and draw back.

"Give us joy," said this one then, without appearing to notice Eustacie's motion. "Cyril is going to marry; but I must away to grand-

mamma's with the news;" and she passed out the garden gate.

Eustacie had not wished them joy; she stood, with startled eyes, quite motionless, growing paler and paler with every breath.

"There's more roses," said Louis, in his childish prattle. "Can't you reach 'em? Mr. Trenholm can."

"We will see," said that gentleman, picking up the scissors Eustacie had let fall; then, as if the action recalled her:

"Oh no, Mr. Trenholm, you will get thorned to death; Miss Juliette didn't see you, I think," in her own manner.

"One may as well die by the sword as the famine," in answer to her first sentence. "By-the-way, Miss Eustacie, I thought that Cyril—"

"Cyril is going to marry," repeating Juliette's words.

"Where is he going?" asked Louis. "Can't I go too?"

"Some day, perhaps," said Trenholm, laughing. "See, there is your mother looking for you, Louis. Go and ask her, and take these roses."

"Miss Eustacie," he began again, "you have perhaps wondered why I come here so often; will you let me tell you?"

"I am attentive," said Eustacie, quietly. "I thought—"

"It is because I hoped you would see how much you were to me—the mere sight, the indifferent touch of your fingers, the everyday greetings, in the hope that you might grow accustomed to me; that so when I said, 'I love you,' as I say to-day, you would not find yourself amazed."

"But I do find myself amazed, Mr. Trenholm."

"So much the worse for me, since in that case you have not thought of me as a lover, and can give me nothing in return."

He spoke so sadly, so half-interrogatively, as if he were loth to be thus assured, but had felt it must be so all along, that Eustacie looked up at him with returning color, and put out her hand:

"Indeed, indeed, I can give you much—" and there hesitated.

"But you can not love me?" he said.

"I—I do not know. I had not thought of it. If you love me—"

"If I love you!"

"If you love me—they say it makes all the difference in the world—I don't know—I might try, if you would like to have me."

Thus, half an hour later, Juliette found them still lingering in the neighborhood of the rose-bushes.

"Oh, Mr. Trenholm, are you there?" she said. "When did you arrive?"

"I was here when you passed down with the news about Cyril. I thank you for it; it gave me impetus to follow his example. Eustacie has consented to let me love her."

"Indeed! That is very gracious of her. I

wish you the joy which she forgot to wish Cyril." And my lady moved away with a heart that burned and leaped in her bosom, and eyes like javelins, that would have slain Eustacie, if eyes could slay.

While Miss Juliette imagined she was ordering affairs after her own mind, Fate had quietly assumed the dictatorship, and arranged for a somewhat different result than that which she had anticipated.

Each one said to her neighbor, "Did you know what a fine thing Mrs. Thornton's governess has done for herself?"

"Secured Mr. Trenholm, eh?"

"These governesses are *so* designing!"

"Well, I hope it will turn out well," which, considering the previous remarks, was as much as to say she should be disappointed if it did.

"When will they be married?"

"Oh, immediately of course; a bird in the hand, you know," and they nodded an understanding to each other, and swept apart.

Poor Eustacie, leaning over the balcony at Mrs. Oxford's, waiting for Louis, heard something of this, and it made her exceedingly uncomfortable. Was she designing? She could hardly decide. It is true that she was sorry for Trenholm; but then she was not sorry for Juliette, at least not yet; perhaps she would be when she came to love him very much—if that ever happened; but she had designed nothing concerning him, except to do her best as his wife; she had never tried to attract him; he had come to her of his own accord, and so had Cyril; the difference was that this one had left her, while the other stepped into the breach, and a few tears fell to illustrate the case. Was it designing in a harmless, friendless governess, with only a pittance in the bank, to accept a golden gift from fortune, because—because—in truth she found it very hard to say *why* she had accepted it. Perhaps it was merely because it had come in her path, and she wanted the courage to turn her back upon it; perhaps because a great deal of love on one side only was better than none any where had a value for her; perhaps because struggling up from a great blow, she was prone to catch at any support and comfort. Still leaning there with her sad, perplexed face framed with the climbing roses that showered her with perfumed leaves at every rough breeze, she suffered what all must suffer who snatch at fortune from mere weariness rather than wait till events shall resolve themselves into the harmony that is sure to result sooner or later, here or there. Some one passing in the square below paused to gaze up at her and divine her thoughts, it may be. But she did not heed him. She was looking back through the long vista of days, each one of which had been lighted by looks of love and words

"A thought too tender
For the commonplaces spoken;"

through the days she had once believed would last forever; and suddenly a cloud had arisen;

the staff she leaned upon had fallen. What was this she clung to now? Would it last? Would any thing last?

The twilight was dropping down, the old town growing hushed under the evening sky, the wind turning east; it was time they were at home. She called to Louis. Some one below in the street answered with a sweet old air which Cyril had once sung to her sitting under the white lilac-trees, with these words, half reproach, half consolation:

"If in any spring-sweet weather
Suddenly should come to you
Happiness and fear together,
Bid them both adieu.

"If in any garden blowing,
Summer suns should bring to you
Roses, lilies, for the sowing,
And perhaps a little rue;

"Will the last annul the sweetness
Of the roses rare and red?
Blind you to the white completeness
Of the lilies in their bed?

"Every day shall have its sun, love;
Every night its smiling star;
Though thick clouds obscure the one, love,
And the other smiles afar."

The tune recalled her wandering thoughts. All this time she was forgetting Louis. He had asked her to wait while he went round the corner to buy a toy canoe, and he had not yet returned. She was growing tired of waiting, the air was chilly—it made her shiver. In raising herself she chanced to look toward the shore, where the tide was rolling in in angry undulations; then naturally her eyes found out the line of rocks along which at ebb-tide they often skipped far out on the shining flats, in search of strange shells, jelly-fishes for Louis's museum, and beautiful sea-mosses; the very rocks where she and Cyril had sat by hours sunning themselves when the treacherous tide was out, the tide which covered them at flood and left no hint. But just now there was something strange in their appearance. The water had risen about them more than half-way; but what was it disturbed the outline of the farther point? What was it that wavered and reached toward shore? At first she watched it curiously, thinking it but a sea-bird flapping its wings in defiance of the gathering gale; wondering how it must seem to be out there all alone in the growing night amidst the pitiless waters; then, presently, she shook from head to foot with vague terror; a thousand pangs thrilled along her pulses. "It is Louis!" she cried, and went bounding toward him. It was indeed Louis, who, sailing his canoe from the point, had been cut off by a strip of water too broad for his little feet to cross, too deep to ford. There was no one in sight, no one but herself to hear his terrified cry.

"Save me, Eustacie! Save me!"

She looked where the slender arms were stretched to her appealingly—how like the voice was to Cyril's! And what if she should slip herself? What then? Why, after that, rest.

No more strife, love coming unsought, departing never; no more dreary lessons, no more distracted endeavors to do rightly and forever going wrong. But while thinking thus, she was already there, separated from him only by one broad reach, across which their hands failed to meet.

"How are you going to contrive, Eustacie?" he asked, reassured by her presence. "Make haste; my shoes are full of water; I shall catch my death o' cold."

She glanced down at his feet, where, true enough, the water crept ever higher and higher; it would float him off soon; she could not leave him so, yet staying did no service. A pleasure-boat skimmed past in the distance; she shrieked for help, but the wind blew her voice down her throat; she tore off her crimson scarf, and waved it for a signal, but they made no answering sign; only across the brooding expanse came a trickle of laughter, a snatch of song:

"Swiftly we glide toward the happy shore,
Feather the oar, feather the oar;
Lightly we rock on the swelling tide,
Each other beside, each other beside.
Oh, what so sweet when suns have set,
When those who long and love have met,
To fly and follow the bending shore
And feather the oar, and feather the oar?"

Oh, how could they sing, and she in mortal agony? Her silken scarf was long and stout; she threw one end across the gulf to Louis.

"Tie it round your waist, Louis," she said; "tie it in that hard knot Cyril taught you; then take firm hold, and I will pull you across to me."

"But I'm afraid, Eustacie."

"Don't think of fear; it is necessary. Think of mamma and Juliette, and—and Cyril. Think you are doing it for them."

"And you and Mr. Trenholm?"

"Yes, dear."

"Well, I am ready. Oh, but the water is cold, Eustacie, and dark, so dark—if I hadn't come out here! Would you say a little prayer first?"

"I think I would."

"Now, Tacie—oh, quick!" But, instead of pulling him toward her, his foot caught in the crevice of a rock, and the weight of his body struggling at the end of the scarf caused Eustacie to lose her balance and plunge into the terrible crystal darkness that foamed below. The cold, cruel waters held her in a grasp of steel; shut out the tender twilight shadows dropping down upon the sea, the murmur of oar in row-lock, the echo of happy-hearted choristers. Oh, life! that had looked so barren but an hour ago—how full and jocund and inviting it now appeared, beckoning to her across a little span, with infinite possibilities folded in the long years, like the radiant, perfumed flower hidden, undreamed of, in the tiny seed. Was it only through dying that she should come to know its worth, its beauty, its sweetness? And this was death? This slackening pulse, this sink-

ing, falling through blind abysses; this mad carnival of color that made creation one vast prism; these forgotten faces shaping themselves out of horror and darkness; these familiar scenes and events growing out of nothing and resolving into nothing; these eyes so tender, so imploring, where had she seen them—æons before? Death was a breath; but this, oh, this was an eternity!

A long sunbeam struggled in through the Venetian blinds, dodged the crimson curtains, and fell across a pale, upturned face upon the pillow there, as much as to say, "Wake up, little woman, the world is all before you where to choose."

Presently two gray eyes opened and met two other gray eyes that bent above and watched there with the sunbeam.

"I was almost gone, wasn't I?" said Eustacie. "Oh! why didn't they let me go? The bitterness was passing."

"From you to me. Is it so hard for you to stay?"

"No, no; life is sweet—how sweet!" She was gazing into space as she spoke, and he was painfully aware that his mere presence made nothing of this sweetness to her, but something intrinsic in life itself, the exhilaration of the combat, the intoxication of the game, perhaps; and the gray eyes darkened and grew stern.

"But *you* saved us," she said, after a pause.

"God saved you, Eustacie."

"For you. I am your property, Mr. Trenholm; what are you going to do with me?"

"I am going to love you with all my heart."

"And you will not be angry if I can not love you with *all my* heart? You will only expect salvage?"

"I shall hold fast what you give me and catch what I can. Now go to sleep, little girl, and forget all about it." And she obeyed, and dreamed herself a great white cloud, that, dissolving into a shower, broke a long drought and filled a world with fragrance and blossom. Yes, she did indeed belong to Mr. Trenholm, who had put out a hand and drawn her out of the Valley of Shadows, and Louis with her. He used to say afterward that our most apparently trivial actions, our insignificant goings and comings, are but great and important events seen through the wrong end of the telescope.

Eustacie was a long time recovering from the shock after this; her nerves had suffered a fearful strain, it would seem. The daylight was painful to her, every noise appalled, every excitement weakened her. It would appear as if death, having been rudely repulsed, was now revenging himself by repeated approaches and withdrawals, trusting to wear out the enemy and come off victoriously in the end. But Mr. Trenholm often questioned if he were not himself in a measure responsible for this listless indifference that had usurped her usual joyousness of temperament; but he was not a man to weakly resign what might be won by long-enduring effort on his part, or on that of another.

If you have a desire, he reasoned, you must put your whole heart and strength into your endeavor, and work for it early and late, grudging nothing. By-and-by this languor would pass, this weakness would disappear in strength, this suffering drown in delight; by so much as she had struggled for the mastery, by so much would love, when it came, be deeper, purer—a thing of the spirit that remains everlastingly, of essential being, rather than that of the senses that disappears. If this was a narrow, sophistical selfishness on his part, it was the ordeal which he would not have hesitated to undergo himself, which, holding her in most tender regard, he deemed fitting and wise she also should survive.

But the summer days wore on, sultry and sad, and brought no change. He would wheel her into the garden in the blush of morning, but the heavy odors made her faint; he would take her out on the lovely river, but the water singing round the keel sickened her with a shuddering horror; he would read to her from the choicest spirits of the age, only to find her eyes fixed and her attention floating; he would bring his flageolet, in the still summer evenings, in order that the shadow of sweet sounds might lull her into forgetful sleep, but each time he found it moved her beyond the pitch of slumber, that it filled her with wild fancies of passing bells, cries of shipwrecked crews, and the mysterious whispers of rising gales. It needed something yet to rouse her into her old self, to bring again the bloom to the wan cheek, the light to the dull eye, the elasticity to the heavy step.

"I am such a trouble to you," she said one day.

"I have no other to care for," he answered her; "if this is a trouble then trouble is my life."

Why was it that never any tender word of his moved her, as a glance, however indifferent, from Cyril could once have done?

Juliette was singing in the drawing-room; she listened to the words that rose and fell with the emotions of the singer:

"Love, art thou sweet? Then bitter death must be.
Love, art thou bitter? Then sweet is death to me."

Then all at once her heart stood still, there was a well-known voice ringing out below, a step on the stair, a shadow darkening the doorway. This was the moment for which she had waited, the test-moment, the touch-stone of her future life, when some one took her hands from off her face and laughed at the flushed and beautiful creature they disclosed. It was Cyril.

"And this is what it is to be ill?" he said, letting his glance linger there. "This is what it is to be snatched from the sea-foam, Aphrodite? Why, they told me I should find Eustacie's ghost here, and it is rather her glorified body."

Trenholm sat near with that frown which had grown habitual of late.

"We did not expect you so soon, Cyril," he said.

"No? I like to take people by surprise; it does them good; it starts the blood. What have you been about, Trenholm? It's you that's the ghost!"

"I never was happier."

"Ah! you must have been a miserable sinner: you look as if you had been put to the torture!"

"Mr. Trenholm has been wearing himself out in my service," said Eustacie; and Trenholm noted how clear and strong her voice had suddenly become, as if a burden had been lifted from the spirit. Perhaps there *was* something in a surprise, after all. She was able to sit up that night and listen to Cyril's recital of the life he had been leading, of the despairs and successes attending his art. All at once she seemed to have forgotten her nerves; the gentle notes of the flageolet, which he seized upon in the pauses of his talk, no longer stirred her soul to lively terrors, but appeared rather to soothe her into a pensive content, till she fell asleep among her cushions with a smile upon her lip.

"Eustacie has gone to sleep," said Juliette.

"Is that any thing amazing?" asked Cyril.

"It's because we were so stupid."

"We have been stupid all summer, if that could produce the desired effect. I have often observed, however, that satisfaction has a sleep-compelling influence," pursued Juliette, with a touch of malice and a glance at Trenholm. But he did not heed her; he was lost in the consideration of the problem before him; if Eustacie no longer cared for Cyril—if her heart was growing toward himself, insensibly, as the flower toward the sun—how did it happen that this one had been able, by his mere presence, to awaken the smiles upon her face, which long patient weeks of earnest regard on his own part had proved powerless to stir? He did not reproach her; he felt rather an infinite sympathy and compassion for her, as if she were far dearer to him than his own happiness, which could only meet disaster as disaster overtook her. He said to himself that they had both been passing the summer in a sort of warfare; he in order to possess himself of love, she to dispossess herself; and neither had triumphed. It had been time thrown away, and yet it had had its pleasures, its raptures. He would not have been without its memory.

Cyril soon announced the intention of remaining through the autumn.

"I shall be able to make so many studies," he said, by way of excuse; "and I shall have fewer interruptions. Besides, I mean to paint Eustacie!"

"It is going to be the same old story over again, I fear," said Juliette, as she watched them together one morning; saw the clear eyes of Eustacie bent on Cyril, as if the clouds had swept away from before them and disclosed—well, heaven, perhaps; saw Cyril forget his cunning in comprehending the gaze, till Juliette would call out with malicious mischief,

"And you are to have your picture ready for the Exhibition?"

No one could help observing the difference in Eustacie, not that she was ever as gay and glowing as Trenholm had once known her, but there had come a change upon her. She no longer reclined in uneasy languors, nor passed long feverish nights of sleeplessness. She was no longer a pallid ghost, with wandering eye and mute lips, but a creature of impulses and blushes, of random flashes of merriment, with eyes that told "Hope's eloquent story" over and again, as day after day lingered by. Trenholm could but ponder on the cause of an effect so apparent; a thousand pains and distractions of his had not sufficed to bring it about. Neither had her own strength of will given the battle to her hand. He began to feel as if he possessed something that did by no means belong to him, but was inestimably dear and essential to his happiness. Still one can live without being happy; one day he would try it, perhaps; but a little longer to believe her his in spite of all; a little longer, till he should be quite certain it was indeed a fable.

They were going one day to picnic in the country, and there was some discussion as to whether Eustacie should occupy the carriage with the children, and who should hold the reins, as she was not yet strong enough to be trusted in that capacity.

"Let's toss up," said Louis; "Cyril or Mr. Trenholm."

"Oh no," said Eustacie, quickly; "they prefer their saddles."

"That argues well for our previous course of gallantry," said Cyril.

"Come, Eustacie," called Juliette, "don't keep us waiting. Choose the one—"

"Choose the one that you love best:
Suit yourself, you'll suit the rest,"

sang out Louis.

"I think Louis and I can manage old Bess," she answered, springing into the carriage, but Cyril sprang in after her, while Trenholm stooped to arrange the girth of Juliette's prancer; and they were whirling out of sight in a cloud of dust before he had looked about him.

"You don't like the trouble of making a choice?" asked Cyril.

"No; I like rather to take things as they come, without looking about me to see if there's any thing I might prefer. What is one's own, you know, is always worth more than what is one's neighbor's."

"It's a pity we can't all think so," he returned, looking unutterable things; "as for me, Eustacie, I have nothing to call my own."

"Why, you have—that is—I mean— Oh, do you see that hawk? What a flight he has; it seems as if flying were no greater effort than breathing."

"A hawk is a good omen, because he never eats the hearts of doves. Do you remember

the Sunday nights, Eustacie, when we used to make the school-room ring with

"Oh, that I had wings; oh, that I had wings,
Had wings like a dove?"

"Yes."

"Those were happy days, Eustacie. I believe we thought we had the wings. I only know I was lighter-hearted in those times."

"There was once a man who made himself wings, you know," interrupted Louis; "what was his name, Tacie? You were reading to us about it one day, and—and the sun—you see, he went too near, I mean his son did; and it melted them—they were made of wax, like Sis's doll, I guess—and he fell into the sea. I was rightly sorry!"

"Apropos," said Cyril, "I always felt a great sympathy with Icarus. Yes, it is not wise to go too near the sun, my boy; it's only another version of the scorched miller, eh, Eustacie?"

"But you know there was Dædalus who preserved the happy medium, and carried himself through danger safely," she replied.

"We can't all be endowed with such far-seeing wisdom as the example indicates. Eustacie, you will never forgive me for having once swerved from my true orbit, if ever so little, and against my will?"

Eustacie did not answer; she sat looking forward to where Juliette and Trenholm had reined up and awaited them, Trenholm bending from the saddle to reach a blossoming twig for Juliette. He seemed well enough pleased with his companion, she fancied. What a world it was, when that which one had most desired hung within reach, and one looked on, unable to put out a hand and gather in!

"They are waiting for us," she said, at last. "I think they mean to take another route."

"Let them wait," he returned, allowing Bess to continue the snail's pace at which she had been going for the last mile, and quoting, musingly, half under his breath,

"What if a king, whose state had flown,
Should pluck apart his regal crown?"

That's what I did. Fool!"

"Don't call yourself hard names, Cyril. You forget the sequel:

"For kingly hearts no fate can frown;
They rule forever o'er their own."

"If I thought that were possible, after all," he began, "'to rule forever o'er my own.' If—"

Oh! it was the same voice, the same glance, speaking to her as of old, but with what a difference! The same tender intonations he had used once before, the words yet more earnest; but did they mean any thing? And if they did, what should it signify to her? She belonged—oh, where did she indeed belong? How confused things were growing, how sensations jostled each other and crossed and rebounded and dropped into dull ashes at last!

Did any one really care for her? There sat Trenholm, calm and unconcerned, as if *he* were secure whatever befell, as if nothing of her doing or undoing could move him from his stern indifference. And here was Cyril beside her, with that languid, assured air of his, as if he were merely rehearsing the terms of surrender, without much doubt or concern as to the result. Words that were falling on stony places; oh, had they come to her but a little while before, how rich and fertile they would have made life appear! Spring had arrived so late that all the buds were dead and dying, and no summer warmth could bid them blow into full flower again.

"For violets plucked, the sweetest showers
Can ne'er make grow again."

Trenholm wheeled his horse about as they drew up, and came to the side of the carriage. He was very pale, Eustacie observed, with great shadows beneath his eyes.

"My man, Tracy, has just overtaken me with a telegram requiring my immediate presence at Osborne; so, good people, I shall have the grief of bidding you good-by, and losing a day's pleasure," and he gave his hand to Eustacie, looking in her face. But she neither blanched nor crimsoned; she merely said,

"What has happened?"

"Something that may separate us forever," he answered, in her ear. "Should you much care, Eustacie?"

If things were going forward as he feared, it were perhaps best she shouldn't.

"Care, Mr. Trenholm? When you have been so kind to me? When you saved my life?"

Only that! Nothing but gratitude. And he must go and leave her with Cyril. Perhaps when he was gone she would regret him; if ever so little, he felt as if he should be keenly conscious of. He could not quite allow that he had built on sand even yet. He possessed the patience that perfects endeavor.

"Good-by," he said, tightening his grasp upon her hand. "Oh, did I hurt you?" as she winced. "I'm afraid I have hurt you often. If you find it so hard to love me, dear child, do not try any longer."

Two great tears gathered into her eyes and fell upon his hand. What should she answer him? Confess that the conflict was ended, when she more than half believed he regretted the beginning? Let him go without a word? Cyril had alighted just before to gather her some way-side flowers, and he now returned in season to relieve her of embarrassment.

"You will not be long absent, Trenholm?" he said.

"That depends. I think, however, you will be able to endure existence without me, eh, Cyril?" And after that he put spurs to his horse, and went flying into the distance.

"There's something wrong with Trenholm," said Cyril. "He never used to have these moods and tenses."

He was away a fortnight; during that time Cyril worked at his pictures and Eustacie returned to the school-room. It was their custom, every afternoon when lessons were over, to walk till dinner-time, and Cyril was very sure to meet them, either in the skirts of the woods or along the shore; and once met, he was not to be left behind with a formal smile and nod, but immediately attached himself to the party and led them whither he would. Now he had some picture to exhibit to them from the summit of a steep hill, with the outlying town like a beautiful mirage shaping itself out of blue, misty distances; now it was some fragrant recess of the woods, where the ripened leaves made one almost believe in Danaë showers; and sometimes Eustacie even consented to be rowed across the river into a land flowing with milk and honey, of which generous faring they partook sitting upon a green terrace, under broad maples that burned in the setting sun, till Louis half fancied they had traveled into that fairy-land where the trees bear rubies and topazes.

But one afternoon as it grew late Cyril sent the children home in one of the farm-wagons which they had overtaken returning from the market-town, and carried Eustacie off with him, to hang among the marshes in his little float, and watch the purple exhalations drift up and weave into their webs all the tints of sunset and the falling day. So long they lingered there, while the moon parted the clouds and dropped a splendor on all the darkening currents, it seemed to Eustacie that Cyril would never become sated with the weird phantasm wrought by the spirit of the marsh-lands. It was, moreover, so like the old days of Cyril's early fascination, that but for one little circumstance Eustacie would have found it hard to believe any interval of sorrow and doubt had intervened. But then that little circumstance made all the difference in the world to her: the changing tints of the scene, the countless threads of water groping their hushed way among the sedges, the tender twitter of reed-birds rocking serenely over death and destruction, the gathering magic of the night and repose, were still delightful to her nature, and would have been had Cyril been absent; he no longer added that other sweeter emotion, which she could no more feel but only remember. She had escaped from under Cyril's power. He still possessed the divining-rod, but it swung purposeless in his hand and discovered no treasure.

They came home at last, weary and somewhat silent, and paused half-way up the garden-path to listen to the echo of some distant vesper-bell.

"If I were only a nun," said Eustacie then.

"Sister Eustacie; and nobody's sweet wife?"

"One is so safe there," she continued; "and then one is never disappointed nor unhappy."

"Are *you* unhappy, Eustacie?"

"I? What folly! Am I not young and healthy and well-employed, and—"

"And beloved," he added. They had withdrawn a little from the path, and stood just under the tall lindens; but before she had time to reply to this last it seemed as if some one who had been sitting near in the dewy shadows rose from a garden-seat and sauntered down the southern path, disappearing among the shrubbery.

"Who was that?" she asked, startled.

"Some satyr, perhaps. Do not be frightened, love," and, leaning there against the bole of the linden, he indolently inclined his lofty head and kissed her on the forehead.

"A kiss on the forehead is for regard," she said. "I forgive you for *that*," and moved away, but he caught her arm.

"I did not mean it for regard, simply; but since it is so, here is one for love too," and he bent to her lips. She pushed him angrily aside.

"You have no right, Cyril—you have no right!" she cried.

"No right to kiss the woman I love?"

"No right to kiss or to love *me*."

"It used to be quite different, Eustacie."

"You did not much care then. My heart was my own then to do as I pleased with; now—I mean—"

"It is Trenholm's?" She did not answer; only a bird stirred overhead among the branches; a great moth swung itself about her shoulder as if she were some bright flame.

"Let me go, Cyril," she said, after a little; "I do not wish to stay here with you any longer!"

"Is it because I love you?"

"Because you persist in telling me so, and I have no right to listen."

"Then it is not true what you said just now, or rather what I said for you. You do not care for *him*; you were going to sacrifice yourself. You love—"

"*I do not love you, Cyril.*" He was silent for an instant, and let go his grasp as if collecting himself for a final *coup*. Then—

"But perhaps you are not aware that Trenholm had an audience with my mother this morning, as your recognized guardian, and therein resigned all right and title to your affections! You are now at liberty to dispose of them as you please."

"I do not see the connection," she returned, so calmly as to leave him in doubt as to whether she were not already aware of events. "I am going in now," she continued, in the same even tone.

She went in, and stumbled over Juliette in the dark.

"Mr. Trenholm has been here," said this one; "or rather, he who *was* Mr. Trenholm. He desired to see you. This is what you lose by scouring the country with that headstrong Cyril;" and Eustacie detected even here a strong taint of malicious triumph in her accents.

"He will come again, I suppose," with the air of one submissive to whatever fate, since there was no longer strength for contention.

"I don't know. He has met with a great misfortune, poor man!"

Eustacie, supposing she intended to signify that his choice of her constituted this misfortune, forbore to reply, and went away to her own room.

"He had resigned all right or title to her affections."

Resign—that meant to give up, to submit patiently to the loss of, to be able to live without—her affection! What had changed him? A little time ago and he had loved her so truly, and she had cared so little about it. Was it just *that*? That fate meant to rebuke her for dealing false measure? But was she to blame? He had been willing to accept what trifle she had to give; and, like the treasure in the fairy-tale, it had grown with the giving and waxed mighty. Let her learn to forget him and he would perhaps remember *her*—that seemed the way of the world; but would there be any bliss in *that*? Besides, she could *not* forget him; the thought was annihilation itself. As well might she strive to forget herself, the sun that shone about her, death and judgment. She recalled that day in the garden when Juliette brought word of Cyril's faithlessness, and when Trenholm had surprised her with his regard. How long ago and far away it seemed, like something just remembered and hardly believed in, some dream "divine and tender!" How carelessly she had accepted the love for which to-night she would have bartered her life! But now it had ceased from his soul, and they were to live apart for ever and ever. She recalled, too, all the generous care he had lavished upon her during that tedious illness of hers, and with what inadequate reward! how he had waited and longed for the words she never uttered! the bright day when Cyril returned and her eyes were opened! The sunshine of Trenholm's blue eyes, the smile that always answered hers, the gentle pressure of his hand—these things belonged no more to her in all the world. Oh bitter life, that stole every possession grown dear! She turned on her pillow to sleep; but in all the land of sleep and quiet dreams there was no niche for her, tossed to and fro with pained emotions. The rich strains that reached her from a band of music serenading some victorious candidate in the neighborhood seemed rather to aggravate her distress, as if she heard in it the tender praises he had given her unregarded, now bestowed elsewhere. His voice sounded through it, but no longer entreating, earnest, but remote, and indifferent, and forgetful.

Morning broke at last—morning with its eternal youth and loveliness—its clamor to life, its rustle of breeze and leaf, its unutterable fragrances. Oh, that interminable day, of which every moment was an hour, when the sun traversed the school-room floor like some lovely, lonesome apparition, and disappeared through the western windows into the garden and across the further hills, when every shadow

that intercepted it sent a thousand tremors through her soul, and every step upon the gravel might be that of fate! What dreary problems in Colburn's were these, while the one great problem of her life waited outside for solution; what inexorable moods and tenses; what long columns of words for definition, when some things in her experience were growing so terribly obscure!

But every thing has an end; and she was left alone, at last, in the dull school-room, out of which the children bounded with merry cheer and chirrup. She sat there, her head bowed upon her hand, long after they had deserted, after the dinner-bell had rung, after the house had fallen into the quiet of serene twilight. She had positively not heard a murmur since the books were closed and put away; she was absorbed and lost in the sad entanglements of circumstances.

In the dusk there some one opened the school-room door and crossed the floor; she neither spoke nor moved, she was as totally unconscious of the presence of another as though blind and deaf. But this shadow stole ever nearer and nearer, it laid a hand upon hers, it spoke in under-tone to her. She stood up then and lighted the gas. "Mr. Trenholm," she said, "you—I—that is—I did not hear you enter."

"You were dreaming, happy child," turning down the gas to a blue spark.

"No, I was realizing. And I'm not a happy child."

"But I have come to make you one."

"To make me one?"

"Yes. But first I have a little story with which to amuse you; will you care to hear?"

"Certainly."

"We will begin after the style of those old fairy-tales that so delighted our childhood:

"Once upon a time there lived in a certain place a gentleman of fortune, bearing an ancient name—let us say Trenholm—which he was especially anxious should descend with the estates. But year after year went by and no children came to hand it forward through the generations of the earth. Disappointed and perplexed, he at length set off on a long journey in order to dissipate his grief. They were absent some years, and, on returning to the ancestral home, his wife surprised her friends by presenting to them a little boy of two summers.

"'He has your blue eyes, Madame,' observed one.

"'And the Trenholm aquiline nose to perfection,' declared another; while the parents exchanged satisfied glances and answered:

"'It is well.'

"For, after all, there was no Trenholm blood in the blue veins that trembled across the child's forehead, since one day in passing the grounds of a foundling hospital, where the nurses wheeled their charges up and down the long lawns in the fresh morning, one little creature looked up as Mrs. Trenholm lingered and held out its arms to her, which embrace she could in nowise re-

fuse, neither refuse to keep him as her own who had chosen her thus spontaneously. So he grew to be a man in utter ignorance of his birth, and his foster-parents dying suddenly intestate, the immense estates and the old time-honored name devolved upon him. It was about this date that he fell in love with a lady as beautiful as yourself, Eustacie; he used to sit, hour by hour, in his grand wainscoted rooms, beneath the gloomy groined ceiling, and picture what it would be like should she consent to dower them with her presence. But he had no hope in those days, because she loved another."

Eustacie's lips moved as if she would speak.

"You were going to say something?" he asked.

"Nothing; go on, please."

"But one morning he chose to speak to her of his love, and if she did not respond as he could have desired, neither did she forbid it, as he deserved. And they became engaged, Eustacie. But by-and-by he began to fear that he had been too selfish and hasty—that she suffered from a divided will—her heart drew her toward his rival, while her pride and honor kept her bound to himself. His own course was plain; but he endured a thousand tortures, suspenses, delays, before he could summon courage to resign her. Events, however, conspired to his assistance. In default of a legitimate heir, the Trenholm estates would have passed to a distant cousin, who had married late in life and had never ceased to deplore the existence of their possessor. But strange to say, her husband had spent many years of his life in travel, and had chanced, as fate would have it, to meet the Trenholms at the very time when they were preparing to take the child from the hospital. There are some who assert that this gentleman, having run through with two fortunes of his own, conceived the original idea of hunting up the next heir-at-law of the Trenholms and turning to his own advantage the fact which it was in his power to disclose. Consequently, he presented himself on the scene of action, found affairs more to his mind than he had anticipated, discovered that Mr. Trenholm had left no will, that the present proprietor had been born abroad, made love to the cousin-heiress, married, and carried a suit for the recovery of the estates.

"Last week the Mr. Trenholm 'that was not to be,' relinquished his claim to his foster-father's name and lands, and to-night he has come to relinquish that which is far dearer to him—the hand of the woman he loves; because—because when she gave her promise he had every thing to offer her—because he is persuaded she will be happier—that she has found it impossible to love him—"

"Mr. — Trenholm," interrupted Eustacie, holding her fan before her face, "what if you should ask her first?"

"I am afraid she would be more generous than just; if I had been certain, quite certain that she loved me, Eustacie—"

"Could any thing convince you?"

"Only one thing. If she should say, 'I love you.'"

"But—how can she say it unless you—ask her?"

"After all, Eustacie? Are you in earnest? Do you, indeed, love me at last—at last?"

"At last, but forever." And just then those provoking children came trooping in for a fairy-story, and I think she could hardly have done better than to tell them the one that had just transpired, in which Love was the godmother!

THE MAN WHOM EVERY BODY SNUBBED.

LAST year, as every body will recollect, New England was visited with a terrible snow-storm, which not only suspended travel for the time being, but put an embargo upon business in general. Railroad trains were snowed up at out-of-the-way stations; and travelers, with private conveyances, were detained for days at lonely farm-houses.

Business called me across the northern part of Connecticut; and as the public conveyances could not be made to subserve my convenience, I was traveling with my own horse and sleigh. The storm overtook me while on the road between Windsor and Putnam. I awoke in the morning to learn that it had not only been snowing for several hours, but that the light, feathery flakes still filled the air, while a fierce wind from the southeast was fast driving the volatile element here and there into huge drifts. Having but little fear for the results of a New England snow, however, I determined to press on, hoping to reach my destination by dark at all events.

With each additional mile the snow became deeper and more drifted; but I had a good horse, and resolved not to halt until I was obliged to. Early in the afternoon I overtook a lone pedestrian, slowly plodding along the almost forsaken highway. I stopped and offered him a seat in my sleigh. He gladly accepted it, stating that he had engaged a livery team to convey him to Putnam, but becoming discouraged after going a few miles, the driver had set him down in the road and retraced his steps. The stranger was trying to reach the town on foot, although greatly fatigued.

When within about ten miles of my destination the drifts became so formidable that I could urge my wearied beast no farther. Night was coming on apace; and I remarked to my companion that we must get out and lead the creature to the next dwelling, in hopes of securing shelter until morning. Fortunately a glance down the highway revealed the outline of what I took to be a farm-house, near the road-side. Jumping from the sleigh, we managed to urge the horse to the gate, and up the short side-lane toward the house.

As we neared the dwelling, however, I discovered in its surroundings the appearances of wealth, if not of aristocracy; and, making a

feint to turn my horse about, I involuntarily exclaimed:

"There is too great a show of worldliness here to warrant hospitality to such as we are, my friend. I'd rather brave the snow-drifts again than seek it."

Before my companion could reply the wide side-door was thrown open, and a well-dressed man of forty made his appearance. He bade us "good-evening" in a cheery tone, anticipated our misfortunes by a considerate reference to the unforeseen contingencies of so rare a storm, condoled with us over the annoyance of being hindered in our journey, and begged us to accept the hospitality of his home until the weather would permit us to travel.

We thanked him, and gladly accepted his invitation. I gave up my horse to a boy, and we followed our host into the hall. After removing our over-coats and brushing the snow from our boots, we were led into the warm, well-furnished parlor.

Lights were ordered, and soon brought in. My attention was drawn to my traveling companion, who all at once seemed rather ill at ease; he fixed his eyes firmly upon our host for a moment; then quickly dropping them to the floor, a shadow passed over his face.

"What may I call your name?" the host asked him, taking a seat beside us, evidently with the intention of entering into conversation.

He answered in a low tone, but I understood him to say "Benton."

"And yours?" to me.

"Thomas," I replied.

"Thank you both. My name is Wilkinson. It is well to know names, even if we remain strangers still. Besides, I shall want to introduce you to my family."

When the host pronounced his name Benton gave another quick, nervous look; and he remained quiet while Mr. Wilkinson and I proceeded to compare notes.

Our host said that he was born in Western New York, where he also married, but had removed to his present home. Here he engaged in manufacturing, and had been very successful.

Manifesting as he did such confidence in us, and such candor in reference to his own affairs, I made known my business to him. Advances so frank on his part proved that he was to be regarded as a friend rather than a stranger. Even the seemingly taciturn Benton was drawn out, and was soon conversing with Mr. Wilkinson with all the familiarity of an old acquaintance. Indeed, long before supper was announced I was ready to pronounce him one of the most genial men I had ever met; and, notwithstanding the fact that I had been thrown upon his hospitality by the force of circumstances, I felt as much at home as if we had been schoolmates.

Ere long Mrs. Wilkinson came in. She was rather above the medium height. She possessed a calm blue eye and well-cut features; but she

was lovely rather than beautiful. By the easy grace of her manners, and the cordial seconding of her husband's welcome, I saw that she was as much a lady as he was a gentleman.

Just as tea was announced a servant entered, saying there was a stranger at the door who wished to see the gentleman of the house. We had stepped out into the hall to pass to the supper-room, when the host left us standing, begging us to excuse him for a moment.

"Good-evening," said a figure, closely wrapt in a fur cap and over-coat. "Can you tell me how far it is to a public house?"

"It is a good two miles, Sir. Impossible for you to reach there to-night. The snow is drifted terribly in that direction. Will you walk in?" And Mr. Wilkinson stepped aside and waved his hand invitingly toward the light and warmth within.

"Thank you. But I have a horse down here in the road. He can wallow through, I guess," replied the stranger, pulling his coat closer around him, and, with a bow, turning to go away.

"The going, Sir, is worse for beast than for man, and I advise you to proceed no farther to-night. Indeed, I should not feel easy to have you go away from my door under the circumstances. There are two travelers here already who have just accepted quarters for the night; and, if you come in, you and they may sympathize with and console each other in your kindred misfortunes." And the host turned toward Benton and myself, and gave utterance to a complacent laugh.

"Thank you—thank you, Sir. Your welcome is not to be slighted. I will lead up my horse, and then accept a corner in your dwelling;" and the traveler was about to descend the steps.

"Stop, Sir; my man will take care of your horse. Walk in."

The stranger was almost dragged into the hall by the sanguine host, who assisted him in removing his outside coat and over-shoes. He was then led to the blazing fire in the parlor. In a moment he declared himself perfectly comfortable.

"Now for supper," said the host.

"I find myself in Connecticut to-day for the first time in my life, Sir," added the stranger, touching Mr. Wilkinson significantly upon the shoulder; "and if this is a sample of the hospitality that grows out of your blue-laws and steady-habits, I shall hereafter regard the State as a Paradise for snowed-up, benighted travelers."

A laugh all round was the only response this sally called forth.

My fellow-travelers and myself were now seated with the family (two small children besides the parents) at the bountifully-spread supper-table, where we were at once made to feel perfectly at home.

The new-comer proved to be a young lawyer from the West, and, like myself, was only a few

miles from his destination. His name, he told us, was Gates.

Supper over, our host led us into his library, and placing cigars before us, said:

"Now, gentlemen, I wish you to make yourselves at home. Let neither of you entertain the slightest feeling of embarrassment because you are to-night the guest of a stranger against your will. Perhaps I'd better say (for it may lead you indirectly to become more reconciled to your fate) that my two boys started this morning to return to their school at Hartford, but at noon I received a telegram from them stating that the train was blocked up at Plainfield, and they probably would have to remain at the station all night. An agent of mine left here last night on important business in Providence, but this afternoon I was notified by telegraph that he is quartered in a private family at Quidnic, unable to proceed farther. Another agent, also on pressing business, is blocked up at Worcester; and I verily believe that not a single railroad train in this part of New England has gone its full route to-day."

"You offer these facts, I presume, as evidence of your faith in the truth of the old adage, 'Misery loves company?'" said Gates, with a smile.

"Yes, yes," gayly returned Mr. Wilkinson; "and for fear that may not be effectual in setting you wholly at ease, I am disposed to add a little philosophy. Some men seem to be snow-bound all their lives. No sooner do they embark upon an enterprise than something turns up to frustrate their plans. However hopeful and energetic they may be, they never attain success."

"That is so," continued Gates. "There is a man in our section who never met with a real success, however insignificant, dependent upon his own efforts, in his life. More than that, nobody ever shows him any respect. There is something in his very mien that repels all veneration, and every body takes the liberty to snub him when opportunity occurs. Although he is rich (his property was all inherited), and can buy out half a dozen of his wealthiest neighbors, there's not a laborer in the township who ever speaks of or to him in any other than a tone of contempt."

"His history must be remarkable. Let us hear it," said our host.

"Certainly; the narrative probably will help us to forget our anxieties, and serve to while away this long winter evening," I ventured to say.

Gates lighted a fresh cigar and commenced:

The story I am about to tell is a kind of bar-room and country-grocery tradition, as the principal events occurred some twenty years since. I never have seen any of the parties excepting the hero, although I believe they are all still living, as well as he and his wife. I am indebted to a brother lawyer, living in the immediate vicinity, for the narrative.

Hugh Winterblossom, of Crossville, moved

into Blanktown years ago, bought an estate, and settled down to enjoy life. He possessed a large property inherited from his father, but he never engaged in any stated business from first to last. His neighbors frequently said he knew only enough to cling to what wealth he owned, and the more spiteful of them sometimes declared he was only a few removes from a natural fool. Marrying a woman almost as weak-minded as himself, supposing her to be wealthy, he was sorely disappointed to learn, after the knot was tied, that he had made a sad mistake—she hadn't a dollar.

Old Winterblossom, as he is generally called, is a singular specimen of humanity, both physically and mentally. Physically, he might be classed with the *genus* "stubby;" for he is short and thick-set in the whole and in all his parts. His head is large, but short and deficient in brain. With a short, stout body, and limbs of like proportions, one can not help thinking that Nature was arrested in her work while moulding him, and failed to draw and finish his frame so elaborately as she at first designed. His shaggy brows, covered with long gray hair, project over and shadow his stern, stony-looking eyes; his nose is large and broad at the base, with wide nostrils; his long upper lip bulges out and laps over the lower one, giving his large mouth any thing but a prepossessing appearance; and his square, half-shaven chin is short, maintaining its uniformity with his other features. With such rugged lineaments a physiognomist undoubtedly would give him a character of the most indomitable determination and fixedness of purpose; but, in reality, he is an ignorant, vacillating, pusillanimous rider of hobbies—a victim of the most errant whims. Having no respect for the rights and feelings of others, every body by common consent seems to regard him as a kind of traveling Absalom's Pillar, at which they may unhesitatingly throw the stones of their contempt for all that is odious in human propensities. Indeed, Nature appears to have violated her usual rules in his formation; she generally stamps a person's character on his exterior, but Winterblossom's destiny was put in lieu thereof. He was *snu*bbed by Nature, and in consequence was doomed to be *snu*bbed by all with whom he came in contact.

Old Winterblossom's first exploit after he settled in Blanktown was a cheese speculation. A farmer became indebted to him for a small amount, and, being short of cash, offered to turn over to the old man a lot of cheese—about three hundred pounds. Rather than run any risk by waiting, Winterblossom took the cheese. But it was valueless unless he could get it to market, the nearest one being Buffalo—twenty miles away. One morning his neighbor, James Wilson, was passing, on his way to the city with a small lot of butter. Hailing him, Hugh asked what he would charge to carry three hundred pounds of cheese to Buffalo.

"How many poun's did you say?" returned Wilson.

"Three hundred."

"Wa'al, about a cent a poun' will be the fair thing, I guess," deliberated the farmer, dallying with his whip across the back of his well-fed horse.

"Too much. That 'll 'mount to three dollars; and you're going right there."

"That's so; but that shouldn't make no difference. Yeou couldn't git Sheriff Pullet to hang you for any thin' less 'n his reg'lar fee, even ef he used the same gallers on which he was goin' to hang me at the same time; an' yeou couldn't hire a man to go a-purpose to carr' that cheese for twice that 'mount. However, neighbor Winterblossom, I'll tell yeou what I'll do; I'll carr' them cheeses on the follerin' terms, *to wit*, as the lawyers say: yeou pay me one mill for the fust mile, two mills for the secon', four mills for the third, an' so on, doublin' on each mile up to twenty."

"Yaas, I'll do that," returned Winterblossom, without the least hesitation, chuckling in his sleeve at the prospect of "shaving" Wilson, and getting his cheese to market for a very trifling sum.

It is very obvious from this transaction that Winterblossom knew but little of the rudiments even of mathematics, to say nothing of Arithmetical Progression. His accounts were always submitted to a niece of his living with him, and at this time attending the district school. So, as she arose from the dinner-table that day, he stated the cheese bargain to her, and asked how much would be due Wilson on his return. Taking her slate, she in a few minutes answered,

"One thousand and forty-eight dollars fifty-seven and a half cents."

"The d—ogs! Must have made a mistake," exclaimed Winterblossom.

"No, uncle; that is impossible; for it is a very simple problem. Look here, and I'll show you how it is done."

"Thunder and Mars! Don't care how it's done. Will be jest like Wilson to stick out for the thousand odd dollars; but I've one 'vantage over him—thar wa'n't no witnesses to the barg'in."

When this story leaked out "cheese" was on every body's tongue, and for months afterward it rang in old Hugh's ears continually.

Winterblossom's nearest neighbor is Daniel Thornton. Born in the town, he has grown up into an honest, upright citizen, and enjoys the respect and confidence of every person in the county. A practical farmer, a thorough mechanic, and capable of turning his hand to almost any ordinary pursuit, his opinion is regarded as conclusive in all matters of local economy and utility. But he is much given to recreation. No man in the neighborhood can beat him at hunting, fishing, trapping wild pigeons, and gathering wild honey.

Having no business to occupy his hands, and being of a disposition that demanded some hobby on which to air his semi-stagnant ideas, old Winterblossom began to ape Thornton in

his various recreative pursuits. Every body praised the skill and accomplishments of Daniel, and to be able to outvie him seemed to be the height of Hugh's ambition.

During the first spring of his residence in Blanktown he closely watched Daniel's manœuvres for trapping pigeons, declaring repeatedly that he could catch birds as well as Thornton. Winterblossom passed the whole summer in boring his neighbor about how it was done, and in getting his nets ready.

At length, when spring and the pigeons came again, he prepared for extensive operations. One day the air was filled with birds. Thornton quietly adjusted his apparatus, while his rival took up his quarters in the next field, having every advantage of situation. A large flock were *toled* down by Winterblossom's decoys; he sprang his traps, and captured half a dozen birds. Daniel then called the flock in his direction, and in a very few minutes secured over four thousand birds. Hugh was maddened with chagrin; and, after repeated efforts, he gave up in despair, spitefully declaring that Dan Thornton had bewitched all the pigeons in the county.

For months afterward this exploit of Winterblossom's was tauntingly thrown into his face by man, woman, and child. It was no uncommon thing for a ragged laborer to stop him in the road and crack a joke at the expense of some of the old man's foibles; and it was the boast of many a dirty-faced urchin that, from the retreat of some stone-wall or hedge, he had "asked old Winterposey how the pigeon bis'ness was."

During the summer Thornton frequently interspersed his seasons of toil in field and workshop (for he was a wheel-wright as well as farmer) with a day's sport along the trout-brook with hook and line, or through the forest with rifle. And he always met with good success—not through luck, as his still persistent imitator affirmed, but because he was a careful student of the habits of the game he sought. He always returned with a well-filled bag, while his splenetic rival's oft-repeated tramps only resulted in weariness and disappointment.

After the autumn harvests Thornton commenced operating for wild-honey. His manner of procedure was that usually pursued by bee-hunters: he would bait a fugitive bee with honey, note the line he took in returning to his hive, and then follow him up. One day, after reconnoitring for a few hours, he succeeded in finding five nests, from which, on the following day, he took upward of a hundred and fifty pounds of honey.

When Winterblossom heard of this his eyes opened with astonishment, and he determined to watch Thornton's movements and learn the knack of hunting bees.

It was Daniel's custom to devote his leisure hours to bee-hunting, and when he had found a number of nests, take a day for felling the trees and securing the spoils. It is a rule

among hunters, when a "bee-tree" is identified, for the finder to score it with his initials, and this mark is considered a sacred title to the honey by all honest men.

Finding a nest, one day, on his own land, but provokingly near Winterblossom's line, Daniel hesitated about marking it. It was in plain sight of his neighbor's chamber windows, and he feared that the old sinner was not only watching his movements, but that he would take the first opportunity to pilfer the honey. However, Thornton finally decided to mark it, and keep a keen eye on his neighbor's manœuvres.

Having no children, Winterblossom had adopted a niece (already referred to), whose parents were poor and living in a distant town. His design was to make her his sole heiress, providing she never disregarded his wishes. But, unknown to him, an intimacy had existed between the niece and a young man living near her former home. When the fact eventually came to her uncle's knowledge he declared he would put a stop to their intercourse, at the same time forbidding her ever to allow the youth to visit her. However, he was growing up into a promising young man, and Janette could not well forget her first love; so a clandestine correspondence was maintained by them, each hoping that the old man would eventually give his consent to their union.

But they were doomed to disappointment in that respect. As old Winterblossom dabbled in every thing, it is not strange that he should try his clumsy hand at match-making. For a long time he had had his eye upon a young man in the town where he formerly resided, whom he designed Janette should marry; and when she had reached a suitable age Julius Bentley was invited by Hugh to make him a visit for the purpose of becoming acquainted with his niece. The young man was wealthy, and this fact fully satisfied old Winterblossom. Although there was nothing objectionable in his appearance or character, the girl could regard him only with common politeness and courtesy, because her love was given to another.

[Just at this moment Mrs. Wilkinson entered the library for a book. But the young lawyer was so wrapped up with his story that he did not notice, what I could not help remarking, that she was confused to a greater degree than could have been occasioned by the mere conviction that she was causing a momentary interruption in the narrative; nor did he see the peculiar glances she and her husband exchanged. Benton's conduct, too, arrested my attention; for he had partly turned his back upon Gates, and seemed intent on reading the titles of the volumes on the shelves near him; and so the lawyer went on with his story:]

It was about this time (while Winterblossom was operating for honey) that Julius Bentley visited Blanktown. The old man received him

with marked attention, and entertained him like a lord.

Hugh proved to be a very exacting host. He compelled his guest to accompany him on all his excursions, and made him a confidant in all the little hobbies and whims of his dwarfish brain. Of course Winterblossom's society and confidences must have been in the main detestable to a young man of Julius's make; but it was evident that he liked the appearance of Janette, and endeavored to tolerate her uncle for the time being in hopes of winning her in the end. For at least twenty times a day the old curmudgeon would slap his guest on the shoulder, and, with a conceited chuckle, exclaim:

"Yaas, yaas, Julius; she's a leetle offish now, 'cause she's young; but you jest keep up a good heart, my boy, and you'll come out all right by-'n'-by. I'll warrant that."

As Thornton feared, Winterblossom was not long in seeking out his last bee-tree. Regarding the half-decayed oak with covetous eyes for a moment or two, Hugh remarked to Bentley, who had accompanied him:

"Pretty close to my line, Julius. Not much chance for old Thornton to make a fuss if I chop it down; but guess we'll take it some day when he's away from home."

Such an opportunity occurred that very afternoon. Daniel passed on his way to mill with several sacks of grain. To ascertain how long he probably would be gone, old Hugh resorted to a little strategy. He hailed his neighbor with,

"Hallo, Thornton! take a grist for me?"

"Certainly," Daniel returned, reining up.

"'Spect to wait for your grists?"

"Yes, for we're nearly out of both flour and meal."

"Wa'al, do as you please 'bout waiting for mine," he added, as the hired man threw a couple of sacks into the farmer's wagon. "John can go for it to-morrow, if you don't bring it."

Reaching the mill, Daniel found the stones all taken up and the miller and his assistants engaged in picking them. So he left his load and returned immediately. As he neared the house he discovered a heavy smoke in the direction of his timber. Thinking all was not right, he stopped his horse and cut across lots in a great hurry.

Winterblossom and his hired man were engaged in burning a clearing adjoining Daniel's timber, and the wind was fast driving the flames toward his bee-tree. At a glance the farmer saw it was the old scamp's design to let the fire reach the trunk, burn it down (which would have been an inevitable result, as it was quite dry), and then he could secure the honey and leave the flames to complete their work. The affair would then have the appearance of an accident, while Thornton would have no positive proof that the saccharine contents of the old oak had been pilfered.

Thornton restrained his anger, and without

uttering a single word to his crafty neighbor, at once proceeded to head off the advancing element. This accomplished, he hastened to the house and soon returned with an axe and two pails. Felling the tree, he very leisurely gathered up the honey. Old Hugh approached and looked on with envious eyes while his neighbor skirmished with the bees.

"Quite a haul, friend Thornton," said the old sinner.

"Yes," Daniel returned, in a sarcastic tone; "but I shouldn't have been so much in a hurry about gathering it if I'd had honest neighbors. Bees will work for two weeks yet."

"If my fire had got into that tree 'twould 'a made quick work with your honey;" and the old fellow tried to look very funny.

Daniel had to bite his lips to keep from boiling over; but having already decided upon a plan for revenge, he resolved to have no altercation with the unreasonable man. So, after a pause, he said:

"Mr. Winterblossom, I found another tree yesterday, and from the appearance of things I should judge there was a hundred-weight of *stuff* in it."

"A hundred-weight o' honey in one tree! I declare, you do have the luck of it!" Hugh exclaimed in astonishment. "But where is it?"

"Oh, you want to let your fire run that way, don't you? But it's in the direction of the huckleberry swamp; and if you find it you're smarter than I take you to be."

Daniel carried his honey to the house, and then glided down toward the swamp. Winterblossom's eyes were upon him. Approaching a big, sound hemlock, upward of six feet in diameter, which stood on the land of a neighbor, the farmer pulled out his jack-knife and cut his initials on the trunk. Turning to retrace his steps, he caught a glimpse of Hugh dodging into a thicket. This was just what Daniel wanted. He was now satisfied that his tormentor would bite the bait set for him.

The next morning Daniel arose at five o'clock, and sat down to study on some machinery he was contriving, when he heard the sound of an axe on the still air of dawn. Listening, he heard it again and again. The sound came from the direction of the big hemlock. Giving utterance to a loud laugh, he seized his hat and hastened toward the spot. Crawling up as near as he could without being observed, he concealed himself behind the trunk of a tree, and recognized old Winterblossom and Julius Bentley, stripped to their shirts and pants, chopping away on the big hemlock as if for dear life. It was as much as Daniel could do to keep from laughing outright. They paused in their work, and our listening friend heard the following:

"Few more blows will fetch her, Julius; but it's been an all-night job with us, my boy;" and Winterblossom pulled out his old watch and scanned it by the advancing daylight. "Why, it's half past five—we've been at work over eight hours."

"It will be a dear job, too, if Wilson should prosecute us for felling this fine tree," was Bentley's reply.

"Prosecute us! Why, ain't old Thornton's name on it? and won't that be the strongest kind of evidence ag'inst him?"

Chip! chip! chip! went the axes again, and in a few minutes the tree fell with a fearful crash. But the choppers were so far from any house that they feared no disturbance at that early hour.

"Now for the honey!" said Winterblossom, in a triumphant tone, walking up the prostrate trunk to look for the supposed hollow that should contain the sweet compound.

A fifteen-minutes' closest scrutiny of all parts of the trunk and boughs proved the tree to be perfectly sound, affording not the slightest retreat for bees. It was then that Daniel realized the truth of the old adage, "Listeners hear no good of themselves," for curses both loud and deep fell upon his head alike from the lips of old Hugh and his victimized companion. For full five minutes they stormed away, until the surrounding trees seemed to bow their heads in horror. Then picking up their axes and the vessels designed to contain the honey, these amateur bee-hunters walked quickly away, for the east was already streaked with coming sunlight.

"Shall I help you carry your honey, Mr. Winterblossom?" asked Daniel, in a tone of the bitterest sarcasm, crossing their path and retreating toward his house.

Another volley of curses was all the response old Hugh made. Bentley's countenance fell.

"Now this 'll be known all over the neighborhood before night," muttered the chagrined Julius, who wished from the bottom of his heart he never had seen old Winterblossom.

"Let him tell it! There are two of us, and our words 'll go as fur in court or community as his'n, I guess. Let him tell it if he dare!"

As Winterblossom neared his mansion his sleepy eyes fell upon the figure of his spouse, standing upon the door-step with disheveled locks and troubled air. Evidently she was very much excited.

"Where've you been all night, you old fool? A pretty husband you are to steal off in this way!" she vehemently exclaimed, as soon as the old man came within hearing. "That poor Hoptown good-for-nothing has been here, and Janette's gone off with him to be married, I 'spect—and not a soul here to hender."

"Thunder and Mars!" vociferated Winterblossom, dropping axe and pail. "Where's John?"

"He wouldn't do a thing. Might have locked the sneaking scamp into the barn; but he said 'twas none of his affairs."

"The dog! I'll discharge him at once."

Winterblossom turned to appeal to his young companion for counsel, but he had suddenly disappeared. Bentley evidently thought his presence would prove any thing but agreeable

to his now troubled host and hostess, and wisely took himself away.

The honey affair, in connection with the elopement of Janette, soon leaked out, and before the lapse of a week the story was current all over town. Every body—from select-man down to the veriest ragged urchin—was rallying Winterblossom on the superiority of hemlock honey. Every body, also, was glad that his niece had run away, thereby defeating his plans; for her home with him had been any thing but a pleasant one.

I never learned the name of the young man with whom she eloped; but he was reported to have been in every way worthy of her. Although poor, he was a greater fortune to a loving, faithful girl like Janette than all the wealth of old Winterblossom. It was rumored that the conscientious Janette so far repented as to write her uncle, begging his forgiveness; but the old fellow was inexorable, declaring she never should enter his house again, nor receive a penny of his property.

The host, who throughout this recital had listened apparently with no deeper interest than myself, laughing immoderately now and then at the misfortunes of the hero, here jumped up and commenced pacing the room, while he gave way to frequent outbursts of humor that must have seriously threatened his sides and buttons. At length, fixing his twinkling eyes upon Gates, he, between half-suppressed cachinnations, said:

"The principal part of your narrative—especially the fun—is all new to me, although I previously had an inkling of the old man's character; but you will admit that I know more of the niece than yourself when I tell you *I am the 'Hoptown good-for-nothing' who married her!*"

"Heavens!" exclaimed the lawyer, coloring. "I beg your pardon, Sir—indeed I do. Why didn't you tell me I was assailing your own history, and perhaps doing violence to the feelings of your wife?"

"No apology, Sir—no apology whatever," Wilkinson replied, with another ringing laugh that put Gates entirely at his ease. "I never allow a good story to be spoiled for relations' sake; besides, I dare say, under the circumstances, I have enjoyed it even better than your fellow-travelers."

"Yes," interposed Benton, rising and squarely facing the lawyer the first time for the last half hour, while his countenance gave evidence of long-suppressed mirth; "you probably will be satisfied on that score when I tell you *I am Julius Bentley!* That is the name I gave when asked; but our host evidently misunderstood me, and thinking it immaterial, I did not correct him."

"Worse and worse!" said Gates, with a look of mock despair. "I never shall dare to tell another story until I learn the antecedents of my auditors."

"Oh, Sir, I assure you it has been no annoyance whatever to listen to this story—a treat,

rather, for I've told it so many times myself that the version of another improves it decidedly—to my ears at least. I did feel a little uncomfortable when I recognized in our host (as I did as soon as the lights were brought in) my whilom and successful rival; but I now heartily give him my kindest congratulations. Besides, I have learned to despise old Hugh Winterblossom as deeply as any of his neighbors. I hope neither of you will think my feelings have been, in the least degree, assailed by any thing said to-night;" and Benton arose and warmly grasped first the hand of Wilkinson and then that of the lawyer.

"And, friend Gates," interposed our host, "that you may not take to yourself the credit of touching off all the fire-works to-night, I will add that I, perhaps, have given Mr. Winterblossom a worse snubbing than he ever received from any one else. Soon after I married his niece she indeed did feel a little conscience-stricken because she had left him so abruptly. Mind, she didn't care an iota for his gold, but she wanted to be reconciled to her uncle and aunt, because she was indebted to them for her education. So Janette, prompted by a sentiment of gratitude alone, wrote her uncle a letter; but it was quickly returned, simply indorsed with a few words of the bitterest comment. We then removed to this vicinity; fortune favored us, and now we have a competency.

"After a lapse of some eighteen or twenty years Mr. and Mrs. Winterblossom happened to hear how prosperous we had been—in fact, it was last summer, and we then were living in a smaller house near town. They came with honeyed words and made us a long visit. Of course we both treated them with the same hospitality and kindness that we should had nothing unpleasant ever occurred. Not a word was said in allusion to the past.

"The day before they were to leave us a town cart drove up to our gate with a complete outfit for a parlor and two bedchambers.

"What does this mean?" I asked, as the teamer began to unload the goods and deposit them according to the directions of Winterblossom.

"Oh, this is a present from us to your wife," was the old man's reply, in a very obsequious tone. "We didn't, 'cording to custom, make her any present when she was married, and we've decided to do it now—"better late 'n never," you know."

"Not in this case, Mr. Winterblossom," I responded, decidedly—my wife was standing in the door beside me, looking fully as indignant as I felt. "We can not accept those articles. I know our furniture is worn, but we can readily replace it whenever we choose. You are welcome to stay under our roof as long as you please, and you both shall be well treated; but not one cent's worth of any thing can you leave here. A gift of one-quarter the value of this would have been gratefully received once; but we do not wish it now."

"So the furniture was at once returned to the dealers; and without any show of ill-nature (old Hugh has been snubbed so many times his pachydermatous sensibilities are proof against all ordinary manifestations of spite) the old couple bade us good-by the next day. We expect another visit from them next summer."

We had a mirthful time at the breakfast-table the next morning, in which Mrs. Wilkinson took as cheerful a part as any of us, referring, with much good-nature, to her visit to the li-

brary while the lawyer was so lost in his story, and humorously dwelling upon the difficulty she had to refrain from laughing outright at his unconscious allusions to herself.

The roads were now broken, and we travelers proceeded on our respective journeys; but I never shall forget that snow-storm, nor the remarkable circumstances which brought together, after a lapse of years, persons once so singularly related, to hear from the lips of a stranger a story concerning their own experiences.

TO AN EARLY SWALLOW.

My little bird of the air,
If thou dost know, then tell me the sweet reason
Thou comest alway, duly in thy season,
To build and pair!
For still we hear thee twittering round the eaves
Ere yet the attentive cloud of April lowers
Up from their darkened hearth to call the flowers,
Where all the rough, hard weather
They kept together
Under their low, brown roof of withered leaves.

And for a moment still
Thy ever tuneful bill,
And tell me, and I pray thee tell me true,
If any cruel care thy bosom frets
The while thou slittest, plow-like, through the air—
Thy wings so swift and slim,
Turned downward, darkly dim,
Like furrows on a ground of violets.

Nay, tell me not, my swallow,
But have thy pretty way,
And prosperously follow
The leading of the sunshine all the day.
Thy virtuous example
Maketh my foolish questions answer ample—
It is thy large delights keep open wide
Thy little mouth; thou hast no pain to hide:
And when thou leavest all the green-topped woods
Pining below, and with melodious floods
Flatterest the heavy clouds, it is, I know,
Because, my bird, thou canst not choose but go
Higher and ever higher
Into the purple fire
That lights the morning meadows with hearts'-ease,
And sticks the hill-sides full of primroses.

But tell me, my good bird,
If thou canst tune thy tongue to any word
Wherewith to answer—pray thee tell me this:
Where gottest thou thy song,
Still shrilling all day long,
Silvered to fragments by its very bliss!
Not, as I guess,
Of any whistling swain
With cheek as richly russet as the grain

Sown in his furrows; nor, I further guess,
Of any shepherdess,
Whose tender heart did drag
Through the dim hollows of her golden flag
After a faithless love—while far and near
The waterfalls, to hear,
Clung by their white arms to the cold, deaf rocks,
And all the unkept flocks
Strayed idly. Nay, I know,
If ever any love-lorn maid did blow
On such a pitiful pipe, thou didst not yet
In such sad wise thy heart to music set.

So, lower not down to me
From its high home thy ever-busy wing:
I know right well thy song was shaped for thee
By His unwearying power
Who makes the days about the Easter flower
Like gardens round the chamber of a king.

And whether, when the sobering year hath run
His brief course out, and thou away dost hie
To find thy pleasant summer company,
Or whether, my brown darling of the sun,
When first the South, to welcome up the May,
Hangs wide her saffron gate,
And thou, from the uprising of the day
Till eventide in shadow round thee closes,
Pourest thy joyance over field and wood,
As if thy very blood
Were drawn from out the young hearts of the
roses—

'Tis all to celebrate
And all to praise
The careful kindness of His gracious ways
Who builds the golden weather
So tenderly about thy houseless brood—
Thy unfledged, houseless brood, and thee together.

Ah! these are the sweet reasons,
My little swimmer of the seas of air,
Thou comest, goest, duly in thy seasons;
And furthermore, that all men every where
May learn from thy enjoyment
That that which maketh life most good and fair
Is heavenly employment.

ALICE CAREY.

THE RIGHTFUL HEIR.

In Five Acts.

BY EDWARD BULWER, LORD LYTTON.

DRAMATIS PERSONÆ.

SIR GREY BEAUFORT, Son to Lady Montreville.
 SIR GREY DE MALPAS, the poor cousin, distantly connected to Lady Montreville, but next in succession to the earldom, on failure of the direct line.
 WRECKLYFFE, a disinherited and ruined gentleman—who, after a vicious and lawless career on land, has turned pirate.
 SIR GODFREY SEYMOUR, a justice of the peace.
 EYVIAN, the captain of the Dreadnought, a privateer.
 HARDY, EYVIAN's first lieutenant and friend.
 HARDING, EYVIAN's second lieutenant.
 MAIDEN, seneschal to Lady Montreville.
 ALFRED, a village priest.
 A SHIP-OFFICER on board the Dreadnought.
 Servants, Sailors, Clerk, and Halberdiers attendant on Sir Godfrey.

LADY MONTREVILLE, a countess in her own right.
 EYVIANE, her ward—distantly related to her, and betrothed to Vyvyan.

NOTE.—“The Spanish Armada was ready in the beginning of May, but the moment it was preparing to sail the Marquis of Santa Croce, the Admiral, was seized with a fever, of which he soon after died. . . . At that the Spanish fleet, full of hope and alacrity, set sail from Lisbon May 29th, but next day met with a violent tempest, which scattered the ships—sunk some of the smallest, and forced the rest to take shelter in the Groyne, where they waited till they could be re-fitted. When news of this event was carried to England, the Queen concluded that the design of an invasion was disappointed for the summer, and, being always ready to lay hold on every pretence for saving money, she made Walsingham write to the Admiral, directing him to lay up some of the larger ships, and to discharge the seamen. But Lord Effingham, who was not so sanguine in his hopes, used the freedom to disobey these orders, and he begged leave to retain all the ships in service, though it should be at his own expense. . . . Meanwhile, all the damages of the Armada were repaired, and the Spaniards, with fresh hopes, set out again to sea.”—*Hume*.

ACT I.

SCENE 1. In the foreground the house of SIR GREY DE MALPAS, small and decayed, the casements broken, &c. &c. As around, as if the present house were but the remains of some more stately edifice of great antiquity. In the background, a view of the sea. On a height at some little distance, the castle of Montreville, the sun gleams upon its turrets and gilded vanes.

NOTE.—The scene to be so contrived that the grandeur of the castle and the meanness of the ruin be brought into conspicuous contrast.

SIR GREY at work on a patch of neglected garden ground, throws down his spade and advances.

G. I cannot dig! Fie, what a helpless thing is this white hand of well-born poverty! Alas, yet between this squalor and that pomp stand but two lives, a woman's and a boy's—But two frail lives. I may outlive them both.

Enter WRECKLYFFE.

Wreck. Ay, that's the house—the same; the master changed,

But less than I am. Winter creeps on him, Lightning hath stricken me. Good day.

G. Pass on. No spendthrift hospitable fool spreads here the board for strangers. Pass.

Wreck. Have years so dimmed thy once so keen, De Malpas?

G. (after a pause.) Ha! Thy hand. What brings thee hither?

Wreck. ‘Brings me?’ say ‘hurls back.’ Fie, yellow pestilence, whose ghastly wings spread, like the fabled griffin, India's gold;

Unequal battle next; then wolfish famine; At last, storm (rough welcome home to England) Shot decks from stern to stem: to shore was flung A wretched pirate on a battered hulk!

O wretched rots stranded;—you behold the other. G. Penury hath still its crust and roof-tree—share them.

Time has dealt hardly with us both, since first We two made friendship—thou straight-limbed, well-favoured,

Stern-hearted, disinherited dare-devil!

Wreck. And thou?—

Sir G. A stroke paints me. My lord's poor cousin. How strong thou wert, yet I could twist and wind thee

Round these slight hands;—that is the use of brains!

Wreck. Still jokes and stings?

Sir G. Still a poor cousin's weapons.

Wreck. Boast brains, yet starve?

Sir G. Still a poor cousin's fate, sir.

Pardon my brains, since oft thy boasts they pardoned; (Sad change since then), when rufflers aped thy swagger,

And village maidens sighed and, wondering, asked Why heaven made men so wicked—and so comely.

Wreck. 'Sdeath! Wilt thou cease?

Sir G. That scar upon thy front

Bespeaks grim service.

Wreck. In thy cause, de Malpas;

The boy, whom at thine instance I allured On board my bark, left me this brand of Cain.

Sir G. That boy—

Wreck. Is now a man—and on these shores. This morn I peered from yonder rocks that hid me, And saw his face. I whetted then this steel: Need'st thou his death? In me behold Revenge!

Sir G. He lives!—he lives! There is a third between The beggar and the earldom!

Wreck. Steps and voices!

When shall we meet alone? Hush, it is he!

Sir G. He with the plume?

Wreck. Ay.

Sir G. Quick; within.

Wreck. And thou?

Sir G. I dig the earth; see the grave-digger's tool.

[Exit WRECKLYFFE within the house.]

Enter HARDING and Sailors.

Hard. Surely 'twas here the captain bade us meet him

While he went forth for news?

1st Sailor.

He comes.

Enter VVYAN.

Hard. Well, captain,
What tidings of the Spaniards' armament?

Vyv. Bad, for they say the fighting is put off,
And storm in Biscay driven back the Dons.
This is but rumour—we will learn the truth.
Harding, take horse and bear these lines to Drake—
If yet our country needs stout hearts to guard her,
He'll not forget the men on board the Dreadnought.
Thou canst be back ere sunset with his answer,
And find me in yon towers of Montreville.

[Exit HARDING.]

Meanwhile make merry in the hostel, lads,
And drink me out these ducats in this toast:—
"No foes be tall eno' to wade the moat
Which girds the fort whose only walls are men."

[Sailors cheer, and exeunt.]

Vyv. I never hailed reprieve from war till now.
Heaven grant but time to see mine Eveline,
And learn my birth from Alton.

Enter FALKNER.

Falk. Captain.

Vyv. Falkner!
So soon returned? Thy smile seems fresh from home.
All well there?

Falk. Just in time to make all well.
My poor old father!—bailiffs at his door;
He tills another's land, and crops had failed.
I poured mine Indian gold into his lap,
And cried, "O father, wilt thou now forgive
The son who went to sea against thy will?"

Vyv. And he forgave.—Now tell me of thy mother;
I never knew one, but I love to mark
The quiver of a strong man's bearded lip
When his voice lingers on the name of mother.
Thy mother bless'd thee—

Falk. Yes, I—*(Falters and turns aside.)*

Pshaw! methought

Her joy was weeping on my breast again!

Vyv. I envy thee those tears.

Falk. Eno' of me!
Now for thyself. What news? Thy fair betrothed—
The maid we rescued from the turbaned corsair
With her brave father in the Indian seas—
Found and still faithful?

Vyv. Faithful, I will swear it;
But not yet found. Her sire is dead—the stranger
Sits at his hearth—and with her next of kin,
Hard by this spot—yea, in yon sunlit towers,
Mine Eveline dwells.

Falk. Thy foster father, Alton,
Hast thou seen him?

Vyv. Not yet. My Falkner, serve me.
His house is scarce a two hours' journey hence,
The nearest hamlet will afford a guide;
Seek him and break the news of my return,
Say I shall see him ere the day be sped.
And, hearken, friend (good men at home are apt
To judge us sailors harshly), tell him this—
On the far seas his foster son recalled
Prayers taught by age to childhood, and implored
Blessings on that grey head. Farewell! Now, Eveline.

[Exeunt, severally, VVYAN and FALKNER.]

Sir G. (advancing.) Thou seekest those towers—go.
I will meet thee there.

He must not see the priest—the hour is come
Absolving Alton's vow to guard the secret;
Since the boy left, two 'scutcheons moulder o'er
The dust of tombs from which his rights ascend;
He must not see the priest—but how forestall him?—
Within! For there dwells Want, Wit's counsellor,
Harbouring grim Force, which is Ambition's tool.

[Exit SIR GREY.]

SCENE 2. *The gardens of the castle of Montreville, laid out in the formal style of the times. Parterres sunk deep in beds of arabesque design. The gardens are enclosed within an embattled wall, which sinks, here and there, into low ornamented parapets, over which the*

eye catches a glimpse of the sea, which is immediately below. A postern gate in the wall is open, through which descends a flight of steps, hewn out of the cliff.

Enter LADY MONTREVILLE.

Lady M. This were his birthday, were he living still!
But the wide ocean is his winding sheet,
And his grave—here! *(Pressing her hand to her heart.)*

I dreamed of him last night!
Peace! with the dead, died shame and glozing slander;
In the son left me still, I clasp a world
Of blossoming hopes which flower beneath my love,
And take frank beauty from the flattering day.
And—but my Clarence!—in his princely smile
How the air brightens!

Enter LORD BEAUFORT, speaking to MARSDEN.

Lord B. Yes, my gallant roan,
And, stay—be sure the falcon, which my lord
Of Leicester sent me; we will try its metal.

Mars. Your eyes do bless him, madam, so do mine:
A gracious spring; Heaven grant we see its summer!
Forgive, dear lady, your old servant's freedom.

Lady M. Who loves him best, with me ranks highest,
Marsden.

[Exit MARSDEN.]

Clarence, you see me not.

Lord B. Dear mother, welcome.
Why do I miss my soft-eyed cousin here?

Lady M. It doth not please me, son, that thou
should'st haunt
Her steps, and witch with dulcet words her ear.
Eveline is fair, but not the mate for Beaufort.

Lord B. Mate! Awful word! Can youth not gaze
on beauty

Save by the torch of Hymen? To be gallant,
Melt speech in sighs, or murder sense in sonnets;
Veer with each change in Fancy's April skies,
And o'er each sun-shower fling its fleeting rainbow.
All this—

Lady M. (gloomily.) Alas, is love.

Lord B. No! Love's light prologue,
The sportive opening to the serious drama;
The pastime practice of Dan Cupid's bow,
Against that solemn venture at the butts
At which fools make so many random shafts,
And rarely hit the white! Nay, smile, my mother;
How does this plume become me?

Lady M. Foolish boy!
It sweeps too loosely.

Lord B. Now-a-days, man's love
Is worn as loosely as I wear this plume—
A glancing feather stirred with every wind
Into new shadows o'er a giddy brain
Such as your son's. Let the plume play, sweet mother!

Lady M. Would I could chide thee!

Lord B. Hark, I hear my steed
Neighing impatience; and my falcon frets
Noon's lazy air with lively silver bells;
Now, madam, look to it—no smile from me
When next we meet,—no kiss of filial duty,
Unless my fair-faced cousin stand beside you,
Blushing 'Peccavi' for all former sins—
Shy looks, cold words, this last unnatural absence,
And taught how cousins should behave to cousins.

[Exit LORD BEAUFORT.]

Lady M. Trifler! And yet the faults that quicken fear
Make us more fond—we parents love to pardon.

Enter EVELINE, weaving flowers—not seeing LADY MONTREVILLE.

Evel. (Sings)—

Bud from the blossom,
And leaf from the tree,
Guess why in weaving
I sing "Woe is me!"—

'Tis that I weave you
To drift on the sea,
And say, when ye find him,
Who sang "Woe is me!"—

[Casts the flowers, woven into a garland, over the parapet, and advances.]

Lady M. A quaint but mournful rhyme.

Evel. You, madam!—pardon!

Lady M. What tells the song?

Evel. A simple village tale
Of a lost seaman, and a crazed girl,
His plighted bride—good Marsden knew her well,
And oft-times marked her singing on the beach,
Then launch her flowers, and smile upon the sea.
I know not why—both rhyme and tale do haunt
me.

Lady M. Sad thoughts haunt not young hearts, thou
senseless child.

Evel. Is not the child an orphan?

Lady M. In those eyes
Is there no moisture softer than the tears
Which mourn a father? Roves thy glance for Beaufort?
Vain girl, beware! The flattery of the great
Is but the eagle's swoop upon the dove,
And, in descent, destroys.

Evel. Can you speak thus,
Yet bid me grieve not that I am an orphan?

[Retires up the garden.]

Lady M. (to herself.) I have high dreams for Beau-
fort; bright desires!

Son of a race whose lives shine down on Time
From lofty tombs, like beacon-towers o'er ocean,
He stands amidst the darkness of my thought,
Radiant as Hope in some lone captive's cell.
Far from the gloom around, mine eyes, inspired,
Pierce to the future, when these bones are dust,
And see him loftiest of the lordly choirs
Whose swords and coronals blaze around the throne,
The guardian stars of the imperial isle—
Kings shall revere his mother.

Enter SIR GREY, speaking to Servant.

Sir G. What say'st thou?

Servant (insolently.) Sir Grey—ha! ha!—Lord Beau-
fort craves your pardon,
He shot your hound—its bark disturbed the deer.

Sir G. The only voice that welcomed me! A dog—
Grudges he that?

Servant. Oh sir, 'twas done in kindness
To you and him; the dog was wondrous lean, sir!

Sir G. I thank my lord.

[Exit Servant.]

So, my poor Tray is killed
And yet that dog but barked—can this not bite?

[Approaches LADY MONTREVILLE vindictively,
and in a whisper—

He lives!

Lady M. He! who?

Sir G. The heir of Montreville!
Another, and an elder Beaufort, lives!
(Aside.) So—the fang fixes fast—good!

Lady M. Thou saidst
Ten years ago—"Thy first-born is no more—
Died in far seas."

Sir G. So swore my false informant.
But now, the deep that took the harmless boy
Casts from its breast the bold-eyed daring man.

Lady M. Clarence! My poor proud Clarence!

Sir G. Ay, poor Clarence!
True; since his father, by his former nuptials
Had other sons, if you, too, own an elder,
Clarence is poor—as poor as his poor cousin.
Ugh! but the air is keen, and Poverty
Is thinly clad; subject to rheums and agues (shivers),
Asthma and phthisis (coughs), pains in the loins and
limbs,

And leans upon a crutch, like your poor cousin.
If Poverty begs, Law sets it in the stocks;
If it is ill, the doctors mangle it;
If it is dying, the priests scold at it;
And, when 'tis dead, rich kinsmen cry, "Thank
heaven!"

Ah! if the elder prove his rights, dear lady,
Your younger son will know what's poverty!

Lady M. Malignant, peace! why dost thou torture
me?

The priest who shares alone with us the secret
Hath sworn to guard it.

Sir G. Only while thy sire

And second lord survived. Yet, what avails
In law his tale, unbacked by thy confession?

Lady M. All! He hath proofs, clear proofs. Thrice
woe to Clarence!

Sir G. Proofs—written proofs?

Lady M. Of marriage, and the birth!

Sir G. Wherefore so long was this concealed from
me?

Lady M. Thou wert my father's agent, Grey de Mal-
pas,
Not my familiar.

Sir G. Here, then, ends mine errand.

Lady M. Stay, sir—forgive my rash and eager tem-
per;

Stay, stay, and counsel me. What! sullen still?
Need'st thou gold?—befriend, and find me grate-
ful.

Sir G. Lady of Montreville, I once was young,
And pined for gold, to wed the maid I loved:
Your father said, "Poor cousins should not marry,"
And gave that sage advice in lieu of gold.

A few years later, and I grew ambitious,
And longed for wars and fame, and foolish honours:
Then I lacked gold, to join the knights, mine equals,
As might become a Malpas and your kinsman:
Your father said he had need of his poor cousin
At home, to be his huntsman, and his falconer!

Lady M. Forgetful! After my first fatal nuptials
And their sad fruit, count you as naught—

Sir G. My hire!
For service and for silence; not a gift.

Lady M. And spent in riot, waste, and wild debauch!

Sir G. True; in the pauper's grand inebriate wish
To know what wealth is,—tho' but for an hour.

Lady M. But blame you me or mine, if spendthrift
wassail

Run to the dregs? Mine halls stand open to you;
My noble Beaufort hath not spurned your converse;
You have been welcomed—

Sir G. At your second table,
And as the butt of unchastised lackeys;
While your kind son, in pity of my want,
Hath this day killed the faithful dog that shared it.
'Tis well; you need my aid, as did your father,
And tempt, like him, with gold. I take the service;
And, when the task is done, will talk of payment.
Hist! the boughs rustle. Closer space were safer;
Vouchsafe your hand, let us confer within.

Lady M. Well might I dream last night! A fearful
dream.

[Exeunt LADY MONTREVILLE and SIR GREY.]

Re-enter EVELINE.

Evel. O, for some fairy talisman to conjure
Up to these longing eyes the form they pine for!
And yet, in love, there's no such word as absence;
The loved one glides beside our steps for ever;
Its presence gave such beauty to the world,
That all things beautiful its tokens are,
And aught in sound most sweet, to sight most fair,
Breathes with its voice, and haunts us with its aspect.

Enter VYVYAN through the postern gate.

There spoke my fancy, not my heart! Where art
thou,

My unforgotten Vyvyan?

Vyv. At thy feet!
Look up—look up!—these are the arms that sheltered
When the storm howled around; and these the lips
Where, till this hour, the sad and holy kiss
Of parting lingered, as the fragrance left
By angels, when they touch the earth and vanish.
Look up; night never hungered for the sun
As for thine eyes my soul!

Evel. Oh! joy, joy, joy:

Vyv. Yet weeping still, tho' leaning on my breast!
My sailor's bride, hast thou no voice but blushes?
Nay from those drooping roses let me steal
The coy reluctant sweetness!

Evel. And, methought
I had treasured words, 'twould take a life to utter
When we should meet again!

Vyv. Recall them later.

We shall have time eno', when life with life
Blends into one;—why dost thou start and tremble?

Evel. Methought I heard her slow and solemn foot-
fall!

Vyv. *Her!* Why, thou speak'st of woman: the
meek word

Which never chimes with terror.

Evel. You know not
The dame of Montreville.

Vyv. Is she so stern?

Evel. Not stern, but haughty; as if high-born virtue
Swept o'er the earth to scorn the faults it pardoned.

Vyv. Haughty to thee?

Evel. To all, ev'n when the kindest;
Nay, I do wrong her; never to her son;
And when those proud eyes moisten as they hail him,
Hearts lately stung, yearn to a heart so human!
Alas, that parent love! how in its loss
All life seems shelterless!

Vyv. Like thee, perchance,
Looking round earth for that same parent shelter,
I too may find but tombs. So, turn we both,
Orphans, to that lone parent of the lonely,
That doth like Sorrow ever upward gaze
On calm consoling stars—the mother Sea.

Evel. Call not the cruel sea by that mild name.

Vyv. She is not cruel if her breast swell high
Against the winds that thwart her loving aim
To link, by every raft whose course she speeds,
Man's common brotherhood from pole to pole;
Grant she hath danger—danger schools the brave,
And bravery leaves all cruel things to cowards.
Grant that she harden us to fear,—the hearts
Most proof to fear are easiest moved to love,
As on the oak whose roots defy the storm,
All the leaves tremble when the south-wind stirs.
Yet if the sea dismay thee, on the shores
Kissed by her waves, and far, as fairy isles
In poet dreams, from this grey care-worn world,
Blossoms many a bower for the Sea Rover's bride.
I know a land where feathering palm-trees shade
To delicate twilight, suns benign as those
Whose dawning gilded Eden;—Nature, there,
Like a gay spendthrift in his flush of youth,
Flings her whole treasure on the lap of Time.
There, steeped in roseate hues, the lakelike sea
Heaves to an air whose breathing is ambrosia;
And, all the while, bright-winged and warbling birds,
Like happy souls released, melodious float
Thro' blissful light, and teach the ravished earth
How joy finds voice in Heaven. Come, rest we yonder,
And, side by side, forget that we are orphans!

[VYVYAN and EVELINE retire up the stage.]

Enter LADY MONTREVILLE and SIR GREY.

Lady M. Yet still, if Alton sees—

Sir G. Without the proofs,
Why, Alton's story were but idle wind;
The man I send is swift and strong, and ere
This Vyvyan (who would have been here before me
But that I took the shorter path) depart
From your own threshold to the priest's abode,
Our agent gains the solitary dwelling,
And—

Lady M. But no violence!

Sir G. Nay, none but fear—
Fear will suffice to force from trembling age
Your safety, and preserve your Beaufort's birthright.

Lady M. Let me not hear the ignominious means;
Gain thou the end;—quick—quick!

Sir G. And if, meanwhile,
This sailor come, be nerved to meet—a stranger;
And to detain—a guest.

Lady M. My heart is wax,
But my will, iron—go.

Sir G. (aside.) To fear add force—
And this hand closes on the proofs, and welds
That iron to a tool.

[Exit SIR GREY.]

Re-enter VYVYAN and EVELINE.

Evel. Nay, Vyvyan—nay,
Your guess can fathom not how proud her temper.

Vyv. Tut for her pride! a king upon the deck
Is every subject's equal in the hall.

I will advance. (*He uncovers.*)

Lady M. Avenging angels, spare me!

Vyv. Pardon the seeming boldness of my presence.

Evel. Our gallant countryman, of whom my father
So often spake—who from the Algerine
Rescued our lives and freedom.

Lady M. Ah! Your name, sir?

Vyv. The name I bear is Vyvyan, noble lady.

Lady M. Sir, you are welcome. Walk within, and
hold

Our home your hostel, while it lists you.

Vyv. Madam,

I shall be prouder in all after time

For having been your guest.

Lady M. How love and dread

Make tempest here! I pray you follow me.

[Exit LADY MONTREVILLE]

Vyv. A most majestic lady—her fair face
Made my heart tremble, and called back old dreams:
Thou saidst she had a son?

Evel. Ah, yes.

Vyv. In truth

A happy man.

Evel. Yet he might envy thee:

Vyv. Most arch reprove, yes. As kings themselves
Might envy one whose arm entwines his all.

[Exeunt EVELINE and VYVYAN.]

ACT II.

SCENE 1. *A Gothic chamber. On one side a huge hearth, over which an armorial scutcheon and an earl's coronet, boldly carved. The walls covered with old portraits—tall beaufets in recesses filled with goblets and other vessels of silver. An open door admits a view of a cloister, and the alleys in the courtyard without.*

A table spread with fruits and wines, at which are seated LADY MONTREVILLE, VYVYAN, and EVELINE.

Vyv. Ha! ha! In truth we made a scurvy figure
After our shipwreck.

Lady M. You jest merrily

On your misfortunes.

Vyv. 'Tis the way with sailors:

Still in extremes. I can be sad sometimes.

Lady M. That sigh, in truth, speaks sadness. Sir,
if I

In aught could serve you, trust me.

Evel. Trust her, Vyvyan.

Methinks the mournful tale of thy young years

Would raise thee up a friend, wherever pity

Lives in the heart of woman.

Vyv. Gentle lady,

The key of some charmed music in your voice

Unlocks a haunted chamber in my soul;

And—would you listen to an outcast's tale,—

'Tis briefly told. Until my fifteenth year,

Beneath the roof of a poor village priest,

Not far from hence, my childhood wore away;

Then stirred within me restless thoughts and deep;—

Throughout the liberal and harmonious nature

Something seemed absent,—what, I scarcely knew,

Till one calm night, when over slumbering seas

Watched the still heaven, and down on every wave

Looked some soft lulling star—the instinctive want

Learned what it pined for; and I asked the priest

With a quick sigh—"Why I was motherless?"

Lady M. And he?

Vyv. Replied that—I was nobly born,

And that the cloud which dimmed a dawning sun,

Oft but foretold its splendour at the noon.

As thus he spoke, faint memories struggling came—

Faint as the things some former life hath known.

Lady M. Of what?

Vyv. A face sweet with a stately sorrow,

And lips which breathed the words that mothers mur-

mur.

Lady M. (aside.) Back, tell-tale tears!

Vyv. About that time, a stranger

Came to our hamlet; rough, yet, some said, well-born;
Roysterer, and comrade, such as youth delights in.
Sailor he called himself, and nought belied
The sailor's metal ringing in his talk
Of El Dorados, and Enchanted Isles,
Of hardy Raleigh, and of fearless Drake,
And great Columbus with prophetic eyes
Fixed on a dawning world. His legends fired me—
And, from the deep whose billows washed our walls,
The alluring wave called with a Siren's music,
And thus I left my home with that wild seaman.

Lady M. The priest, consenting, still divulged not more?

Vyv. No; nor rebuked mine ardour. "Go," he said,
"The noblest of all nobles are the men
In whom their country feels herself ennobled."

Lady M. (aside.) I breathe again. Well, thus you left these shores—

Vyv. Scarce had the brisker sea-wind filled our sails,
When the false traitor who had lured my trust
Cast me to chains and darkness. Days went by,
At length—one belt of desolate waters round,
And on the decks one scowl of swarthy brows,
(A hideous crew, the refuse of all shores)—
Under the flapping of his raven flag
The pirate stood revealed, and called his captive.
Grimly he heard my boyish loud upbraidings,
And grimly smiled in answering: "I, like thee,
Cast off, and disinherited, and desperate,
Had but one choice, death or the pirate's flag—
Choose *thou*—I am more gracious than thy kindred;
I proffer life; the gold *they* gave me paid
Thy grave in ocean!"

Lady M. Hold! The demon lied!

Vyv. Swift, as I answered so, his blade flashed forth;
But self-defence is swifter still than slaughter;
I plucked a sword from one who stood beside me,
And smote the slanderer to my feet. Then all
That human hell broke loose; oaths rang, steel light-
ened;

When in the death-swoon of the caitiff chief,
The pirate next in rank forced back the swarm,
And—in that superstition of the sea
Which makes the sole religion of its outlaws—
Forbade my doom by bloodshed—griped and bound me
To a slight plank; spread to the winds the sail,
And left me on the waves alone with God.

Evel. Pause. Let my hand take thine—feel its warm
life,
And, shuddering less, thank Him whose eye was o'er
thee.

Vyv. That day, and all that night, upon the seas
Tossed the frail barrier between life and death;
Heaven lulled the gales; and when the stars came
forth,
All looked so bland and gentle that I wept,
Recalled that wretch's words, and murmured, "All,
Ev'n wave and wind, are kinder than my kindred!"
But—nay, sweet lady—

Lady M. Heed me not. Night passed—

Vyv. Day dawned; and, glittering in the sun, behold
A sail—a flag!

Evel. Well—well?

Vyv. Like Hope, it vanished!
Noon glaring came—with noon came thirst and fam-
ine,

And with parched lips I called on death, and sought
To wrench my limbs from the stiff cords that gnawed
Into the flesh, and drop into the deep:
And then—the clear wave trembled, and below
I saw a dark, swift-moving, shapeless thing,
With watchful, glassy eyes;—the ghastly shark
Swam hungering round its prey—then life once more
Grew sweet, and with a strained and horrent gaze
And lifted hair I floated on, till sense
Grew dim, and dimmer; and a terrible sleep
(In which still—still—those livid eyes met mine)
Fell on me—and—

Evel. Quick—quick!

Vyv. I woke, and heard
My native tongue! Kind looks were bent upon me.
I lay on deck—escaped the ravening death—
For God had watched the sleeper.

Evel.

Oh, such memories
Make earth, for ever after, nearer heaven;
And each new hour an altar for thanksgiving.

Lady M. Break not the tale my ear yet strains to
listen.

Vyv. True lion of the ocean was the chief
Of that good ship. Beneath his fostering eyes,
Nor all ungraced by Drake's illustrious praise,
And the frank clasp of Raleigh's kingly hand,
I fought my way to manhood. At his death
The veteran left me a more absolute throne
Than Cæsar filled—his war-ship; for my realm
Add to the ocean, hope—and measure it!
Nameless, I took his name. My tale is done—
And each past sorrow, like a wave on shore,
Dies on this golden hour. (*Turns to EVELINE.*)

Lady M. (observing them.) He loves my ward,
Whom Clarence, too—that thought piles fear on
fear;

Yet, hold—that very rivalry gives safety—
Affords pretext to urge the secret nuptials,
And the prompt parting, ere he meet with Alton.
I—but till Nature sobs itself to peace,
Here's that which chokes all reason. Will ye not
Taste summer air, cooled through yon shadowy alleys?
Anon I'll join you.

[*Exit LADY MONTREVILLE.*]

Vyv. We will wait your leisure.

A most compassionate and courteous lady—
How couldst thou call her proud?

Evel.

Nay, ever henceforth,
For the soft pity she hath shown to thee,
I'll love her as a mother.

Vyv. Thus I thank thee (*kissing her hand*).

[*Exeunt through the cloisters.*]

SCENE 2. *Exterior of the castle. On one side, a terrace, with a low embattled parapet, hangs over the rock on which the castle is built, and admits a glimpse of the scene below. On another side, the ground stretches away into avenues and alleys. The castle thus seen, takes the character of a strong fortified hold.*

N.B. *The scene should present the space within a vast, but irregular embattled wall, large enough to enclose trees and undulating ground. The cloister, with the door leading to LADY MONTREVILLE'S apartment, will form part of the building, and a gate of great strength, with portcullis, &c., should form a side scene. Through this gate, as the principal portal, will enter LORD BEAUFORT, and, towards the end of the act, FALKNER.*

Enter SIR GREY DE MALPAS from the terrace.

Lord B. (speaking without.) A noble falcon! Mars-
den, hood him gently.

Enter LORD BEAUFORT.

Good day, old knight, thou hast a lowering look,
As if still ruffled by some dire affray
With lawless mice, at riot in thy larder.

Sir G. Mice in my house! magnificent dreamer,
mice!

The last was found three years ago last Christmas,
Stretched out beside a bone; so lean and worn
With pious fast—'twas piteous to behold it;
I canonized its corpse in spirits of wine,
And set it in the porch—a solemn warning
To its—poor cousins! (*Aside*) Shall I be avenged?
He killed my dog too.

Enter VYVIAN and EVELINE, lingering in an alley in the background.

Lord B. Knight, look there!—A stranger,
And whispering with my cousin.

Sir G. (aside)

Jealous? Ha!

Something should come of this: Hail, green-eyed
fiend!

(*Aloud*) Let us withdraw—tho' old I have been young;
The whispered talk of lovers should be sacred.

Lord B. Lovers!

Sir G. Ah! true! You know not, in your absence
Your mother hath received a welcome guest
In your fair cousin's wooer. Note him well,
A stalwart comely gallant.

Lord B. Art thou serious?
A wooer to my cousin—quick, his name!
Sir G. His name?—my memory doth begin to fail me—

Your mother will recall it. Seek—ask *her*—

Lord B. (advancing) Whom have we here? Familiar sir, excuse me,

I do not see the golden spurs of knighthood.

Vyv. Alack, we sailors have not so much gold
That we should waste it on our heels! The steeds
We ride to battle need no spurs, Sir Landsman;

Lord B. And overleap all laws; methinks thou art
One of those wild Sea Rovers who—

Vyv. Refuse

To yield to Spain's proud tyranny, her claim
To treat as thieves and pirates all who cross
The line Spain's finger draws across God's ocean.
We, the Sea Rovers, on our wandering decks
Carry our land, its language, laws, and freedom;
We wrest from Spain the sceptre of the seas,
And in the New World build up a new England.
For this high task, if we fulfil it duly,
The Old and New World both shall bless the names
Of Walter Raleigh and his bold Sea Rovers.

Lord B. Of those names thine is—

Vyv. Vyvyan.

Lord B. Master Vyvyan,

Our rank scarce fits us for a fair encounter
With the loud talk of blustering mariners.
We bar you not our hospitality;
Our converse, yes. Go, ask the Seneschal
To lodge you with your equals!

Vyv. Equals, stripling!

Mine equals truly should be bearded men,
Noble with titles carpet lords should bow to—
Memories of dangers dared, and service done,
And scars on bosoms that have bled for England!

Sir G. Nay, coz, he has thee there. (*withholding* *LORD BEAUFORT*.)

Thou shalt not, Clarence.
Strike me. I'm weak and safe—but *he* is dangerous.

Enter LADY MONTREVILLE from the cloister as LORD BEAUFORT breaks from SIR GREY and draws his sword.

Evel. Protect your guest from your rash son.

Lady M. Thy sword
Drawn on thy— Back, boy! I command thee, back!
To you, sir guest, have I in aught so failed,
That in the son you would rebuke the mother?

Vyv. Madam, believe, my sole offence was this,
That rated as a serf, I spoke as man.

Lady M. Wherefore, Lord Beaufort, such unseemly
humours?

Lord B. (drawing her aside) Wherefore?—and while
we speak, his touch profanes her!
Who is this man? Dost thou approve his suit?
Beware!

Lady M. You would not threaten—Oh, my Clarence,
Hear me—you—

Lord B. Learned in childhood from my mother
To brook no rival—and to curb no passion.
Aid'st thou yon scatterling against thy son,
Where most his heart is set?

Lady M. Thy heart, perverse one?
Thou saidst it was not love.

Lord B. That was before
A rival made it love—nay, fear not, mother,
If you dismiss this insolent;—but, mark me,
Dismiss him straight, or, by mine honour, madam,
Blood will be shed.

Lady M. Thrice miserable boy!
Let the heavens hear thee not!

Lord B. (whispering as he passes VYVYAN) Again, and
soon, sir!

[*Exit LORD BEAUFORT.*]

Lady M. (seeing SIR GREY) Villain!—but no, I dare
not yet upbraid—
(*Aloud*) After him, quick! Appease, soothe, humour
him.

Sir G. Ay, madam, trust to your poor cousin.

[*Exit SIR GREY.*]

Lady M. Thou lov'st this Vyvyan?
Evel. Evelyn.

Lady M. Lady—I—he saved
My life and honour.

Lady M. Leave us, gentle child,
I would confer with him. May both be happy!

Evel. (to VYVYAN) Hush! she consents; well mayst
thou bid me love her.

[*Exit EVELINE.*]

Lady M. Sir, if I gather rightly from your speech,
You do not mean long sojourn on these shores?

Vyv. Lady, in sooth, mine errand here was two-fold.

First, to behold, and, if I dare assume
That you will ratify her father's promise,
To claim my long affianced; next, to learn
If Heaven vouchsafe me yet a parent's heart.

I gained these shores to hear of war and danger—
The long-suspended thunderbolt of Spain
Threatened the air. I have despatched an envoy
To mine old leader, Drake, to crave sure tidings;

I wait reply: If England be in peril,
Hers my first service; if, as rumour runs,
The cloud already melts without a storm,
Then, my bride gained, and my birth tracked, I sail
Back to the Indian seas, where wild adventure
Fulfills in life what boyhood dreamed in song.

Lady M. 'Tis frankly spoken—frankly I reply.

First—England's danger: Now, for five slow years
Have Spain's dull trumpets blared their braggart
war,

And Rome's grey monk-craft muttered new crusades;
Well, we live still—and all this deluge dies

In harmless spray on England's scornful cliffs.

And, trust me, sir, if war beleaguer England,
Small need of one man's valour: lacked she soldiers,
Methinks a Mars would strike in childhood's arm,
And woman be Bellona!

Vyv. Stately matron,
So would our mother country speak and look,
Could she take visible image!

Lady M. Claim thy bride

With my assent, and joyous gratulation.

She shall not go undowried to your arms.

Nor deem me wanting to herself and you

If I adjure prompt nuptials and departure.

Beaufort—thou see'st how fiery is his mood—

In my ward's lover would avenge a rival:

Indulge the impatient terrors of a mother,

And quit these shores. Why not this night?

Vyv. This night?

With her—my bride?

Lady M. So from the nuptial altar

Pledge thou thy faith to part—to spread the sail

And put wide seas between my son and thee.

Vyv. This night, with Evelyn!—dream of rapture!

yet—

My birth untracked—

Lady M. Delay not for a doubt

Bliss when assured. And, heed me, I have wealth

To sharpen law, and power to strengthen justice;

I will explore the mazes of this mystery;

I—I will track your parents.

Vyv. Blessed lady;

My parents—find me one with eyes like thine,

And were she lowliest of the hamlet born,

I would not change with monarchs.

Lady M. (aside) Can I bear this?

Your Evelyn well nigh is my daughter; you

Her plighted spouse; pray you this kiss—O, sweet!

[*He sinks on his knee as she kisses his forehead.*]

Vyv. Ah, as I kneel, and as thou bendest o'er me,

Methinks an angel's hand lifts up the veil

Of Time, the great magician, and I see

Above mine infant couch, a face like thine.

Lady M. Mine, stranger!

Vyv. Pardon me; a vain wild thought

I know it is; but on my faith, I think

My mother was like thee.

Lady M. Peace, peace! We talk

And fool grave hours away. Inform thy bride;

Then to thy bark, and bid thy crew prepare;

Meanwhile, I give due orders to my chaplain.

Beside the altar we shall meet once more ;—
And then—and then—Heaven's blessing and farewell !

[Exit LADY MONTREVILLE.]

Vyv. Most feeling heart ! its softness hath contagion,
And melts mine own ! Her aspect wears a charm
That half divides my soul with Eveline's love !
Strange ! while I muse, a chill and ominous awe
Creeps thro' my veins ! Away, ye vague forebodings !
Eveline ! At thy dear name the phantoms vanish,
And the glad future breaks like land on sea,
When rain-mists melt beneath the golden morn.

Enter FALKNER.

Falk. Ha ! Vvyvan !

Vyv. Thou !

Falk. Breathless with speed to reach thee.
I guessee thee lingering here. Thy foster sire
Hath proofs that clear the shadow from thy birth.
Go—he awaits thee where yon cloud-capt rock
Jags air with barbed peaks—St. Kinian's Cliff.

Vyv. My birth ! My parents live ?

Falk. I know no more.

Enter HARDING.

Hard. Captain, the rumour lied. I bring such news
As drums and clarions and resounding anvils
Fashioning the scythes of reapers into swords,
Shall ring from Thames to Tweed.

Vyv. The foeman comes !

Hard. (giving letter.) These lines will tell thee ;
Drake's own hand.

Vyv. (reading.) "The Armada
Has left the Groyne, and we are ranging battle.
Come ! in the van I leave one gap for thee."
Poor Eveline ! Shame on such unworthy weakness !

Falk. (taking him aside.) Time to see her and keep
thy tryst with Alton.

Leave me to call the crews and arm the decks.
Not till the moon rise, in the second hour
After the sunset, will the deepening tide
Float us from harbour—ere that hour be past
Our ship shall wait thee by St. Kinian's Cliff.
Small need to pray thee not to miss the moment
Whose loss would lose thee honour.

Vyv. If I come not
Ere the waves reel to thy third signal gun,
Deem Death alone could so delay from duty,
And step into my post as o'er my corpse.

Falk. Justly, my captain, thou rebuk'st my warning,
And couldst thou fail us, I would hold the signal
As if thy funeral knell—crowd every sail,
And know thy soul—

Vyv. Was with my country still.

[Shouts without.]

Enter Sub-officer, Sailors, Retainers, and Villagers,
confusedly.

Sub-officer (with broadsheet.) Captain, look here. Just
come !

Vyv. The Queen's Address
From her own lips to the armed lines at Tilbury.

Voices. Read it, sir, read it—

Vyv. Hush then (reading). "Loving people,
Let tyrants fear ! I, under Heaven, have placed
In loyal hearts my chiefest strength and safeguard,
Being resolved in the midst and heat of the battle
To live and die amongst you all ; content
To lay down for my God and for my people
My life blood even in the dust : I know
I have the body of a feeble woman,
But a King's heart, a King of England's too ;
And think foul scorn that Parma, Spain, or Europe,
Dare to invade the borders of my realm !
Where England fights—with concord in the camp,
Trust in the chief, and valour in the field,
Swift be her victory over every foe
Threatening her crown, her altars and her people."

The noble Woman King ! These words of fire
Will send warm blood through all the veins of Free-
dom

Till England is a dream ! Uncover, lads !
God and St. George ! Hurrah for England's Queen !

ACT III.

SCENE 1. *St. Kinian's Cliff, a wild and precipitous headland. In front the ground is broken with crags, here and there interspersed with stunted brushwood. The scene to be so contrived as to give some notion of the height of the cliff. Time, a little before sunset.*

ALTON and VYVYAN seated.

Alton. And I believed them when they said "He died
In the far seas." Ten years of desolate sorrow
Passed as one night—Now thy warm hand awakes me.

Vyv. Dear friend, the sun sets fast.

Alton. Alas ! then listen.

There was a page, fair, gentle, brave, but low-born—
And in those years when, to young eyes, the world,
With all the rough disparities of fortune,
Floats level thro' the morning haze of fancy,
He loved the heiress of a lordly house :
She, scarce from childhood, listening, loved again,
And secret nuptials hallowed stolen meetings—
'Till one—I know not whom (perchance a kinsman,
Heir to that house—if childless died its daughter)
Spied—tracked the bridegroom to the bridal bower,
Aroused the sire, and said, "Thy child's dishonoured !"
Snatching his sword, the father sought the chamber ;
Burst the closed portal—but his lifted hand
Escaped the crime. Cold as a fallen statue,
Cast from its blessed pedestal for ever,
The bride lay senseless on the lonely floor
By the oped casement, from whose terrible height
The generous boy, to save her life or honour,
Had plunged into his own sure death below.

Vyv. A happy death, if it saved her he loved !

Alton. A midnight grave concealed the mangled
clay,

And buried the bride's secret. Few nights after,
Darkly as life from him had passed away,
Life dawned on thee—and, from the unconscious
mother,

Stern hands conveyed the pledge of fatal nuptials
To the poor priest, who to thy loftier kindred
Owed the mean roof that sheltered thee.

Vyv. Oh say

I have a mother still !

Alton. Yes, she survived—
Her vows, thy birth, by the blind world unguessed ;
And, after years of woe and vain resistance,
Forced to a lordlier husband's arms.

Vyv. My soul
Oftimes recalls a shadowy Mournfulness,
With woman's patient brow, and saddest tears
Dropped fast from woman's eyes ;—they were my
mother's.

Alton. In stealth a wife—in stealth a mother ! yes,
Then did she love thee, then aspired to own
In coming times, and bade me hoard these proofs
For that blest day. But, ah ! with the new ties
Came new affections—to the second nuptials
A second son was born ; she loved him better,
Better than thee—than her own soul !

Vyv. Poor mother !

Alton. And haughtier thoughts on riper life arose,
And worldly greatness feared the world's dread shame,
And she forsook her visits to thy pillow,
And the sire threatened, and the kinsman prayed,
Till, over-urged by terror for thy safety,
I took reluctant vows to mask the truth
And hush thy rights while lived thy mother's sire,
And he, her second unsuspecting lord.
Thus thy youth, nameless, left my lonely roof.
The sire and husband died while thou wert absent.
Thou liv'st—thou hast returned ; mine oath is freed :
These scrolls attest my tale and prove thy birthright—
Hail, Lord of Beaufort—Heir of Montreville !

Vyv. 'Tis she—'tis she ! At the first glance I loved
her !

And when I told my woes, she wept—she wept !
This is her writing. Look—look where she calls me
"Edmond and child." Old man, how thou hast
wroged her !

Joy—joy ! I fly to claim and find a Mother !

[Exit VYVYAN.]

Alton. Just Power, propitiate Nature to that cry.
And, from the hardened rock, let living streams
Gush as in Horeb! Ah, how faintly flags,
Strained by unwonted action, weary age!
I'll seek the neighbouring hamlet—rest and pray.

[*Exit ALTON.*]

SCENE 2. *The exterior of the castle, as in Sc. 2d, Act II.*
Sunset. The twilight creeps on during the scene.

Enter SIR GREY and WRECKLYFFE.

Sir G. The priest had left his home?

Wreck. The hour I reached it.
Sir G. With but one man? Didst thou not hound
the foot-track?

Wreck. I did.

Sir G. Thou didst—and yet the prey escaped!
I have done. I gave thee thy soul's wish, revenge,
Revenge on Vyvyan—and thou leav'st his way
Clear to a height as high from thy revenge
As is yon watch-tower from a pirate's gibbet.

Wreck. Silence! thou—

Sir G. (haughtily.) Sir!

Wreck. (subdued and cowed.) Along the moors I
track'd them,
But only came in sight and reach of spring
Just as they gained the broad and thronging road,
Aloud with eager strides, and clamorous voices—
A surge of tumult, wave to wave rebooming
How all the might of Parma and of Spain
Hurried its thunders on.

Sir G. Dolt, what to us
Parma and Spain? The beggar has no country!

Wreck. But deeds like that which thou dost urge
me to
Are not risked madly in the populous day.
I come to thy sharp wit for safer orders.

Sir G. My wit is dulled by time, and must be ground
Into an edge by thought. Hist!—the door jars,
She comes. Skulk yonder—hide thee—but in call!
A moment sometimes makes or marreth fortune,
Just as the fiend Occasion springs to hand—
Be thou that fiend!

[*WRECKLYFFE passes among the trees, and exit.*]

Enter LADY MONTREVILLE from the cloister.

Lady M. Look on me! What, nor tremble?
Couldst thou have deemed my father's gold a bribe
For my son's murder? Sold to pirates! Cast
On the wild seas!

Sir G. How! I knew nought of this.
If such the truth, peace to thy father's sins,
For of those sins is this. Let the past sleep,
Meet present ills—the priest hath left his home
With Vyvyan's comrade, and our scheme is foiled.

Lady M. I will, myself, see Alton on the morrow—
Edmond can scarce forestall me; for this night
Fear sails with him to the far Indian main.

Sir G. Let me do homage to thy genius. Sorceress,
What was thy magic?

Lady M. Terror for my Clarence,
And Edmond's love for Eveline.

Sir G. (aside.) I see!
Bribed by the prize of which she robs his rival!—
This night—so soon?—this night—

Lady M. I save my Clarence!
Till then, keep close, close to his side. Thou hast
soothed him?

Sir G. Fear not—these sudden tidings of the foe
With larger fires have paled receding love—
But where is Vyvyan?

Lady M. Doubtless with his crew,
Preparing for departure.

Lord B. (without.) This way, Marsden.

Enter LORD BEAUFORT, with MARSDEN and armed
Attendants.

Lord B. Repair yon broken parapets at dawn;
Yonder the culverins;—delve down more sharply
That bank;—clear out the moat. Those trees—eh,
Marsden,—
Should fall? They'd serve to screen the foe! Ah,
mother,

Make me a scarf to wear above the armour
In which thy father, 'mid the shouts of kings,
Shivered French lances at the Cloth of Gold.

Mars. Nay, my young lord, too vast for you that
armour.

Lord B. No; you forget that the breast swells in
danger,
And honour adds a cubit to the stature.

Lady M. Embrace me, Clarence, I myself will arm
thee.

Look at him, Marsden—yet they say I spoil him!

Sir G. (who has been leaning over the low parapet, advances, draws aside LADY MONTREVILLE and
whispers.)

I mark i' the distance, swift disordered strides,
And the light bound of an impatient spirit;
Vyvyan speeds hither, and the speed seems joy.
He sought his crew—Alton might there await him.

Lady M. His speed is to a bride.

Sir G. Ay, true—old age
Forgets that Love's as eager as Ambition;
Yet hold thyself prepared.

Lady M. (to herself.) And if it were so!
Come, I will sound the depths of Beaufort's heart;
And, as that answers, hush or yield to conscience.
Lead off these men.

[*Exeunt SIR GREY and Attendants.*]

(*To MARSDEN.*) Go, meet my this day's guest,
And see he enter through the garden postern.

[*Exit MARSDEN.*]

Clarence, come back.

Lord B. (peevishly.) What now?

Lady M. Speak kindly, Clarence.
Alas, thou'lt know not till the grave close o'er me,
How I did need thy kindness!

Lord B. Pardon, mother,
My blunt speech now, and froward heat this morning.

Lady M. Be all such follies of the past, as leaves
Shed from the petals of the bursting flower.
Think thy soul slept, till honour's sudden dawn
Flashed, and the soil bloomed with one hero more!
Ah, Clarence, had I, too, an elder-born,
As had thy father by his former nuptials!—
Could thy sword carve out fortune?

Lord B. Ay, my mother!

Lady M. Well the bold answer rushes from thy
lips!

Yet, tell me frankly, dost thou not, in truth,
Prize over much the outward show of things;
And couldst thou—rich with valour, health and
beauty,

And hope—the priceless treasure of the young—
Couldst thou endure descent from that vain height
Where pride builds towers the heart inhabits not;
To live less gorgeously, and curb thy wants
Within the state, not of the heir to earls,
But of a simple gentleman?

Lord B. If reared to it,
Perchance contented so; but now—no, never!
Such as I am, thy lofty self hath made me;
Ambitious, haughty, prodigal; and pomp
A part of my very life. If I could fall
From my high state, it were as Romans fell,
On their swords' point! Why is your cheek so hue-
less?

Why daunt yourself with airiest fantasies?
Who can deprive me of mine heritage—
The titles borne at Palestine and Crecey?
The seignory, ancient as the throne it guards,
That will be mine in trust for sons unborn,
When time—from this day may the date be far!—
Transfers the circlet on thy stately brows
(Forgive the boast!) to no unworthy heir.

Lady M. (aside.) My proud soul speaks in his, and
stills remorse;

I'll know no other son! Now go, Lord Beaufort.

Lord B. So formal—fie!—has Clarence then offended?

Lady M. Offended?—thou! Resume thy noble du-
ties,
'Sole heir of Montreville!

[*Exit LORD BEAUFORT.*]

My choice is made.

As one who holds a fortress for his king,

I guard this heart for Clarence, and I close
Its gates against the stranger. Let him come.

[Exit.

Enter VYVYAN and EVELINE. *Twilight, but still clear;
a few stars come out gradually.*

Evel. I would not bid thee stay, thy country calls
thee—

But thou hast stunned my heart i' the midst of joy
With this dread sudden word—part—part!

Vyv. Live not

In the brief present. Go forth to the future!
Wouldst thou not see me worthier of thy love?

Evel. Thou canst not be so.

Vyv. Sweet one, I am now
Obscure and nameless. What, if at thy feet
I could lay rank and fortune?

Evel. These could give
To me no bliss save as they blest thyself.
Into the life of him she loves, the life
Of woman flows, and nevermore reflects
Sunshine or shadow on a separate wave.
Be his lot great, for his sake she loves greatness;
Humble—a cot with *him* is Arcady!
Thou art ambitious; thou wouldst arm for fame,
Fame then fires me too, and without a tear,
I bid thee go where fame is won—as now:
Win it and I rejoice; but fail to win,
Were it not joy to think I could console?

Vyv. O that I could give vent to this full heart!
Time rushes on, each glimmering star rebukes me—
Is that the Countess yonder? This way—come.

[Retire up the stage.

Enter LORD BEAUFORT and SIR GREY.

Lord B. Leave England, say'st thou—and with her?

Sir G. Thou hast wrung
The secret from me. Mark—I have thy promise
Not to betray me to thy mother.

Lord B. Ah!
Thought she to dupe me with that pomp of words,
And blind ambition while she beggar'd life?
No, by yon heavens, she shall not so befool me!

Sir G. Be patient. Had I guessed how this had
galled,
I had been dumb.

Lord B. Stand from the light! Distraction!
She hangs upon his breast!

[Hurries to VYVYAN, and then uncovering with
an attempt at courtesy, draws him to the front
of the stage.

[WRECKLYFFE, who, at the first entrance of VYV-
YAN, has looked forth and glided after him,
as if not to lose sight of his revenge, now creeps
through the foliage, within hearing.

Lord B. Sir, one word with you.
This day such looks and converse passed between us
As men who wear these vouchers for esteem,
Cancel with deeds.

Vyv. (aside.) The brave boy! How I love him!

Lord B. What saidst thou, sir?

Evel. (approaching.) Oh, Clarence.

Lord B. Fear not, cousin.

I do but make excuses for my rudeness
At noon, to this fair cavalier.

Sir G. If so,
Let us not mar such courteous purpose, lady.

Evel. But—

Sir G. Nay, you are too timid!

[Draws EVELINE away.

Lord B. Be we brief, sir.
You quit these parts to-night. This place besseems
not

The only conference we should hold. I pray you
Name spot and hour in which to meet again,
Unwitnessed save by the broad early moon.

Vyv. Meet thee again—oh yes!

Lord B. There speaks a soldier,
And now I own an equal. Hour and place?

Vyv. Wait here till I have—

Lord B. No, sir, on thy road.
Here we are spied.

Vyv. So be it, on my road.

(Aside.) [There where I learned that heaven had given
a brother,
There the embrace.] Within the hour I pass
St. Kinian's Cliff.

Lord B. Alone?

Vyv. Alone.

Lord B. Farewell!

Sir G. (catching at LORD BEAUFORT as he goes out.)
I heard St. Kinian's Cliff. I'll warn the Countess.

Lord B. Do it, and famish!

Sir G. Well, thy fence is skilful.

Lord B. And my hand firm.

Sir G. But when?

Lord B. Within the hour!

[Exit LORD BEAUFORT.

Evel. I do conjure thee on thine honour, Vyvyan,
Hath he not—

Vyv. What?

Evel. Forced quarrel on thee?

Vyv. Quarrel!

That were beyond his power. Upon mine honour,
No, and thrice no!

Evel. I scarce dare yet believe thee.

Vyv. Why then, I thus defy thee still to tremble.
Away this weapon (throwing down his sword). If I meet
thy cousin,

Both must be safe, for one will be unarmed.

Evel. Mine own frank hero-lover, pardon me;

Yet, need'st thou not—

Vyv. Oh, as against the Spaniard,
There will be swords enow in Vyvyan's war-ship—
But art thou sure his heart is touched so lightly?

Evel. Jealous, and now!

Vyv. No, the fair boy, 'tis pity!

Enter MARSDEN.

Mars. My lady, sir, invites you to her presence;
Pray you, this way.

Evel. Remember—O, remember,
One word again, before we part; but one!

Vyv. One word. Heaven make it joyous.

Evel. Joyous!

Vyv. Soft, let me take that echo from thy lips
As a good omen. How my loud heart beats! (aside).
Friend, to your lady.

[Exit VYVYAN and MARSDEN within the castle.

Evel. Gone! The twilight world
Hath its stars still—but mine! Ah, woe is me!

[Exit EVELINE.

Sir G. Why take the challenge, yet cast off the
weapon?

Perchance, if, gentle, he forbears the boy;
Perchance, if worldly wise, he fears the noble;
Or hath he, in his absence, chanced with Alton?
It matters not. Like some dark necromancer,
I raise the storm, then rule it thro' the fiend!

Where waits this man without a hope?

Wreck. (advancing.) Save vengeance!

Sir G. Wert thou as near when Beaufort spoke with
Vyvyan?

Wreck. Shall I repeat what Vyvyan said to Beaufort?

Sir G. Thou know'st—

Wreck. I know, that to St. Kinian's Cliff
Will come the man whose hand wrote "felon" here.

Sir G. Mark, what I ask is harder than to strike;
'Tis to forbear—but 'tis revenge with safety.

Let Vyvyan first meet Beaufort; watch what pass,
And if the boy, whose hand obeys all passion,
Should slay thy foeman, and forestall thy vengeance,
Upon thy life (thou know'st, of old, Grey Malpas)
Prevent not, nor assist.

Wreck. That boy slay Vyvyan!

Sir G. For Vyvyan is unarmed.

Wreck. Law calls that—murder!

Sir G. Which by thy witness, not unbacked by proof,
Would give the murderer to the headman's axe,
And leave Grey Malpas heir of Montreville,
And thee the richest squire in all his train.

Wreck. I do conceive the scheme. But if the youth
Fail or relent—

Sir G. I balk not thy revenge.

And, if the corpse of Beaufort's rival be
Found on the spot where armed Beaufort met him,

To whom would justice track the death blow?—Beaufort!

Wreck. No further words. Or his, or mine the hand, Count one life less on earth; and weave thy scheme—As doth the worm its coils—around the dead.

Exit WRECKLYFFE.

Sir G. One death avails as three, since for the mother

Conscience and shame were sharper than the steel. So, I o'erleap the gulf, nor gaze below. On this side, desolate ruin; bread begrudged; And ribald scorn on impotent grey hairs; The base poor cousin Boyhood threats with famine—Whose very dog is butchered if it bark:—On that side bended knees and fawning smiles, Ho! ho! there—Room for my lord's knights and pages!

Room at the Court—room there, beside the throne! Ah, the new Earl of Montreville! His lands Cover two shires. Such men should rule the state—A gracious lord—the envious call him old; Not so—the coronet conceals grey hairs. He limp'd, they say, when he wore hose of serge. Tut, the slow march becomes the robes of ermine. Back, Conscience, back! Go scowl on boors and beggars—

Room, smiling flatterers, room for the new Earl!

[Exit SIR GREY.]

ACT IV.

SCENE 1. LADY MONTREVILLE'S apartment as in Sc. 1st, Act II. *Lights.* During the scene the moon rises, seen through the casement. LADY MONTREVILLE seated.

Enter VYVYAN.

Lady M. Thou com'st already to demand thy bride?

Vyv. Alas! such nuptials are deferred. This night The invader summons me—my sole bride, Honour, And my sole altar—England! *(Aside.)* How to break it?

Lady M. My Clarence on the land, and thou on sea, Both for their country armed! Heaven shield ye both!

Vyv. Say you that?—*Both?*—You, who so love your son?

Lady M. Better than life, I love him!

Vyv. (aside.) I must rush Into the thick. Time goads me! *(Aloud.)* Had you not

Another son? A first-born?

Lady M. Sir!

Vyv. A son,

On whom those eyes dwelt first—whose infant cry Broke first on that divine and holiest chord In the deep heart of woman, which awakes All Nature's tenderest music? Turn not from me! I know the mystery of thy mournful life. Will it displease thee—will it—to believe That son is living still?

Lady M. Sir—sir—such license Expels your listener *(rises).*

Vyv. No, thou wilt not leave me? I say, thou wilt not leave me—on my knees I say, thou shalt not leave me!

Lady M. Loose thine hold!

Vyv. I am thy son—thine Edmond—thine own child!

Saved from the steel, the deep, the storm, the battle; Rising from death to thee—the source of life! Flung by kind heaven once more upon thy breast, Kissing thy robe, and clinging to thy knees. Dost thou reject thy son?

Lady M. I have no son, Save Clarence Beaufort.

Vyv. Do not—do not hear her, Thou who, enthroned amid the pomp of stars, Dost take no holier name than that of Father! Thou hast no other son? O, cruel one! Look—look—these letters to the priest who reared him—

See where thou call'st him "Edmond"—"child"—"life's all!"—

Can the words be so fresh on this frail record, Yet fade, obliterate from the undying soul? By these—by these—by all the solemn past, By thy youth's lover—by his secret grave— By every kiss upon thine infant's cheek— By every tear that wept his fancied death— Grieve not that still a first-born calls thee "Mother!"

Lady M. Rise. If these prove that such a son once lived,

Where are your proofs that still he lives in you?

Vyv. There! in thine heart!—thine eyes that dare not face me!

Thy trembling limbs, each power, each pulse of being, That vibrates at my voice! Let pride encase thee With nine-fold adamant, it rends asunder At the great spell of Nature—Nature calls; Parent, come forth!

Lady M. (aside.) Resolve gives way! Lost Clarence!

What! "Fall as Romans fell, on their swords' point?" No, Clarence, no! *(turning fiercely.)* Impostor! If thy craft

Hath, by suborning most unworthy spies, Sought in the ruins of a mourner's life Some base whereon to pile this laboured falsehood, Let law laugh down the fable—Quit my presence.

Vyv. No. I will not.

Lady M. Will not! Ho!

Vyv. Call your hirelings, And let them hear me *(striding to the hearth).* Lo, beneath thy roof,

And on the sacred hearth of sires to both, Under their 'scutcheon, and before their forms Which from the ghostly canvas I invoke To hail their son—I take my dauntless stand, Armed with my rights; now bid your menials thrust From his own hearth the heir of Montreville!

Enter Servants.

Lady M. Seize on— *(Clasping her hands before her face.)*

Out—out! His father stands before me In the son's image. No, I dare not!

Servant. Madam,

Did you not summon us?

Vyv. They wait your mandate,

Lady of Montreville.

Lady M. I called not. Go!

[Exeunt Servants.]

Art thou my son? If so, have mercy, Edmond!

Let Heaven attest with what remorseful soul

I yielded to my ruthless father's will, And with cold lips profaned a second vow.

I had a child—I was a parent, true; But exiled from the parent's paradise, Not mine the frank joy in the face of day, The pride, the boast, the triumph, and the rapture; Thy couch was sought as with a felon's step, And whispering nature shuddered at detection. Oh, couldst thou guess what hell to loftier minds It is to live in one eternal lie!

Yet, spite of all, how dear thou wert!

Vyv. I was?

Is the time past for ever? What my sin?

Lady M. I loved thee till another son was born, A blossom 'mid the snows. Thou wert afar, Seen rarely—alien—on a stranger's breast Leaning for life. But this thrice-bless'd one Smiled in mine eyes, took being from my breast, Slept in mine arms; here love asked no concealment— Here the tear shamed not—here the kiss was glory— Here I put on my royalty of woman— The guardian, the protector; food, health, life— It clung to me for all. Mother and child, Each was the all to each.

Vyv. O, prodigal,

Such wealth to him, yet nought to spare to me!

Lady M. My boy grew up, my Clarence. Looking on him

Men prized his mother more—so fair and stately, And the world deemed to such high state the heir! Years went; they told me that by Nature's death Thou hadst in boyhood passed away to heaven.

I wept thy fate; and long ere tears were dried,
The thought that danger, too, expired for Clarence,
Did make thy memory gentle.

Vyv. Do you wish
That I were still what once you wept to deem me?

Lady M. I did rejoice when my lip kissed thy brow;
I did rejoice to give thy heart its bride;
I would have drained my coffers for her dowry;
But wouldst thou ask me if I can rejoice
That a life rises from the grave abrupt
To doom the life I cradled, reared, and wrapt
From every breeze, to desolation?—No!

Vyv. What would you have me do?

Lady M. Accept the dowry,
And, blest with Eveline's love, renounce thy mother.

Vyv. Renounce thee! No—these lips belie not
Nature!

Never!

Lady M. Eno!—I can be mean no more,
Ev'n in the prayer that asked his life. Go, slay it.

Vyv. Why must my life slay his?

Lady M. Since his was shaped
To soar to power—not grovel to dependence—
And I do seal his death-writ when I say,
"Down to the dust, Usurper; bow the knee
And sue for alms to the true Lord of Beaufort."
Those words shall not be said—I'll find some nobler.
Thy rights are clear. The law might long defer them—
I do forestall the law. These lands be thine.
Wait not my death to lord it in my hall:
Thus I say not to Clarence, "Be dependent"—
But I can say, "Share poverty with me."
I go to seek him; at his side depart;
He spurns thine alms: I wronged thee—take thy
vengeance!

Vyv. Merciless—hold, and hear me—I—alms!—
vengeance!

True—true, this heart a mother never cradled,
Or she had known it better.

Lady M. Edmond!

Vyv. Hush!
Call me that name no more—it dies for ever!
Nay, I renounce thee not, for that were treason
On the child's lip. Parent, renounce thy child!
As for these nothings (*giving the papers*), take them;
if you dread
To find words, once too fond, they're blurr'd already—
You'll see but tears: tears of such sweetness, madam.
I did not think of lands and halls, pale Countess,
I did but think—these arms shall clasp a mother.
Now they are worthless—take them. Never guess
How covetous I was—how hearts, cast off,
Pine for their rights—rights not of parchment, lady.
Part we, then, thus? No, put thine arms around
me;

Let me remember in the years to come,
That I have lived to say, a mother blessed me!

Lady M. Oh, Edmond, Edmond, thou hast conquered,
Edmond!

Thy father's voice!—his eyes! Look down from
heaven,
Bridegroom, and pardon me; I bless thy child!

Vyv. Hark! she has blessed her son! It mounts to
heaven,

The blessing of the mother on her child!
Mother, and mother;—how the word thrills thro'
me!

Mother, again dear mother! Place thy hand
Here—on my heart. Now thou hast felt it beat,
Wilt thou misjudge it more? Recoil'st thou still?

Lady M. (*breaking from him.*) What have I done?—
betrayed, condemned my Clarence!

Vyv. Condemned thy Clarence! By thy blessing,
No!

That blessing was my birthright. I have won
That which I claimed. Give Clarence all the rest.
Silent, as sacred, be the memory
Of this atoning hour. Look, evermore (*kissing her*)
Thus—thus I seal the secret of thy first-born!
Now, only Clarence lives! Heaven guard thy Clare-
ence!

Now deem me dead to thee. Farewell, farewell!

[*Exit VYVYAN.*]

Lady M. (*rushing after him.*) Hold, hold—too gen-
erous, hold! Come back, my son!

[*Exit LADY MONTEVILLE.*]

SCENE 2. *St. Kinian's Cliff. The ship on the sea.*
WRECKLYFFE standing in the shadow of a broken
rock.

Enter LORD BEAUFORT.

Lord B. And still not here! The hour has long since
passed.

I'll climb yon tallest peak, and strain mine eyes
Down the sole path between the cliff and ocean.

[*Exit LORD BEAUFORT.*]

Wreck. (*advancing.*) The boors first grinned, then
paled, and crept away;
The tavern-keeper slunk, and muttered "Hangdog!"
And the she-drudge whose rough hand served the
drink,
Stifed her shriek, and let the tankard fall!
It was not so in the old merry days:
Then the scarred hangdog was "fair gentleman."
And—but the reckoning waits. Why tarries he?

[*Signal gun from the ship.*]

A signal! Ha!

Vyv. (*without.*) I come! I come!

Wreck. (*grasping his knife, but receding as he sees*
BEAUFORT, who appears above.) Hot lordling!
I had well nigh forestalled thee. Patience!

[*Creeps under the shadow of the rock, and thence*
steals out of sight in the background.]

Enter LORD BEAUFORT.

Lord B. Good!
From crag to crag he bounds—my doubts belied him;
His haste is eager as my own.

Enter VYVYAN.

Sir, welcome.

Vyv. Stay me not, stay me not! Thou hast all else
But honour—rob me not of that! Unhand me!

Lord B. Unhand thee? yes—to take thy ground and
draw.

Vyv. Thou know'st not what thou sayest. Let me
go!

Lord B. Thyself didst name the place and hour:

Vyv. For here
I thought to clasp—(*aside*) I have no brother now!

Lord B. He thought to clasp his Eveline. Death and
madness!

Vyv. Eveline! Thou lov'st not Eveline. Be con-
soled.

Thou hast not known affliction—hast not stood
Without the porch of the sweet home of men;
Thou hast leaned upon no reed that pierced the heart;
Thou hast not known what it is, when in the desert
The hopeless find the fountain: happy boy,
Thou hast not loved. Leave love to man and sorrow!

Lord B. Dost thou presume upon my years? Dull
scoffer!

The brave is man betimes—the coward never.

Boy if I be, my playmates have been veterans;

My toy a sword, and my first lesson valour.

And, had I taken challenge as thou hast,

And on the ground replied to bold defiance

With random words implying dastard taunts,

With folded arms, pale lip, and haggard brow,

I'd never live to call myself a man.

Thus says the boy, since manhood is so sluggard,

Soldier and captain. Do not let me strike thee!

Vyv. Do it,—and tell thy mother, when thy hand

Outraged my cheek, I pardoned thee, and pitied.

Lord B. Measureless insult! Pitied!

[*Second gun.*]

Vyv. There, again!

And still so far! Out of my path, insane one!

Were there nought else, thy youth, thy mother's love

Should make thee sacred to a warrior's arm—

Out of my path. Thus, then (*suddenly lifts, and puts*
him aside)

Oh, England—England!

Do not reject me too!—I come! I come!

[*Exit up the cliff.*]

Lord B. Thrust from his pathway—every vein runs fire!
Thou shalt not thus escape me—Stand or die! (*rushes after him.*)

[VYVYAN retreats to the edge of the cliff, and grasps for support at the bough of a tree.]

Vyv. Forbear, forbear!

Lord B. Thy blood on thine own head!

[*Third gun.*]

[As BEAUFORT lifts his sword and strikes, VYVYAN retreats—the bough breaks, and VYVYAN falls down the precipice.]

Wreck. (*who has followed part of the way, peering down the precipice.*)

Is the deed done? If not, this steel completes it.

[*Descends the cliff, and disappears.*]

[LORD BEAUFORT sinks on his knee in horror. The ship sails on as the scene closes slowly.]

ACT V.

SCENE 1. *St. Kinian's Cliff. A year is supposed to have passed since the date of Act IV.*

Enter SIR GREY DE MALPAS.

Sir G. A year—and Wrecklyffe still is mute and absent,

Even as Vyvyan is! Most clear! He saw,
And haply shared, the murderous deed of Beaufort;
And Beaufort's wealth hath bribed him to desert
Penury and me. That Clarence slew his brother
I cannot doubt. He shuts me from his presence;
But I have watched him, wandering, lone, yet haunted—

Marked the white lip and glassy eyes of one
For whom the grave has ghosts, and silence, horror.
His mother, on vague pretext of mistrust
That I did sell her first-born to the pirate,
Excludes me from her sight, but sends me alms
Lest the world cry, "See, her poor cousin starves!"
Can she guess Beaufort's guilt? Nay! For she lives!
I know that deed, which, told unto the world,
Would make me heir of Montreville. O, mockery!
For how proceed?—no proof! How charge?—no witness!

How cry, "Lo! murder!" yet produce no corpse!

Enter ALTON.

Alton. Sir Grey de Malpas! I was on my way
To your own house.

Sir G. Good Alton—can I serve you?

Alton. The boy I took from thee, returned a man
Twelve months ago: mine oath absolved.

Sir G. 'Tis true.

Alton. Here did I hail the rightful lord of Montreville,
And from these arms he rushed to claim his birthright.

Sir G. (*aside*) She never told me this.

Alton. That night, his war-ship
Sailed to our fleet. I deemed him with the battle.
Time went; Heaven's breath had scattered the Armada.
I sate at my porch to welcome him—he came not.
I said, "His mother has abjured her offspring,
And law detains him while he arms for justice."
Hope sustained patience till to-day.

Sir G. To-day?

Alton. The very friend who had led me to his breast
Returns, and—

Sir G. (*soothingly.*) Well?

Alton. He fought not with his country.

Sir G. And this cold friend lets question sleep a year?

Alton. His bark too rashly chased the flying foe;
Was wrecked on hostile shores; and he a prisoner.

Sir G. Lean on my arm, thou'rt faint.

Alton. Oh, Grey de Malpas,
Can men so vanish—save in murderous graves?
You turn away.

Sir G. What murder without motive?
And who had motive here?

Alton. Unnatural kindred.

Sir G. Kindred! Ensnare me not! Mine, too, that
kindred.

Old man, beware how thou asperse Lord Beaufort!

Alton. Beaufort! Oh, horror! How the instinctive
truth

Starts from thy lips!

Sir G. From mine—priest!

Alton. Not of man

Ask pardon, if accomplice—

Sir G. I accomplice!

Nay, since 'tis my good name thou sulliest now—

This is mine answer: Probe; examine; search;

And call on justice to belie thy slander.

Go, seek the aid of stout Sir Godfrey Seymour;

A dauntless magistrate; strict, upright, honest:

(*Aside.*) At heart a Puritan, and hates a Lord,

With other slides that fit into my grooves.

Alton. He bears with all the righteous name thou
giv'st him,

Thy zeal acquits thyself.

Sir G. And charges none.

Alton. Heaven reads the heart. Man can but track
the deed.

My task is stern.

[*Exit ALTON.*]

Sir G. Scent lies—suspicion dogs—

And with hot breath pants on the flight of conscience.

Ah! who comes here? Sharp wit, round all occasion!

Enter FALKNER with Sailors.

Falk. Learn all you can—when latest seen, and
where—

Meanwhile I seek yon towers.

[*Exeunt Sailors.*]

Sir G. Doubtless, fair sir,

I speak to Vyvyan's friend. My name is Malpas—

Can it be true, as Alton doth inform me,

That you suspect your comrade died by murder?

Falk. Murder!

Sir G. And by a rival's hand? Amazed!

Yet surely so I did conceive the priest.

Falk. Murder!—a rival!—true, he loved a maiden!

Sir G. In yonder halls!

Falk. Despair! Am I too late

For all but vengeance! Speak, sir—who this rival?

Sir G. Vengeance!—fie—seek those towers, and

learn compassion.

Sad change indeed, since here, at silent night,

Your Vyvyan met the challenge of Lord Beaufort.

Falk. A challenge?—here?—at night?

Sir G. Yes, this the place.

How sheer the edge! crag, cave, and chasm below!

If the foot slipped,—nay, let us think slipped heed-
less,—

Or some weak wounded man were headlong plunged,
What burial place more secret?

Falk. Hither, look!

Look where, far down the horrible descent,
Through some fresh cleft rush subterranean waves,

How wheel and circle ghastly swooping wings!

Sir G. The sea-gulls ere a storm.

Falk. No! Heaven is clear!

The storm they tell, speeds lightning towards the
guilty.

So have I seen the foul birds in lone creeks
Sporting around the shipwrecked seaman's bones.

Guide me, ye spectral harbingers!

[*Descends the cliff.*]

Sir G. From bough

To bough he swings—from peak to slippery peak
I see him dwindling down;—the loose stones rattle;

He falls—he falls—but 'lights on yonder ledge,

And from the glaring sun turns stedfast eyes

Where still the sea-gulls wheel; now crawls, now
leaps;

Crag close around him—not a glimpse nor sound!

O, diver for the dead,—bring up but bones,

And round the skull I'll wreath my coronet.

[*Scene closes on SIR GREY seated.*]

SCENE 2. *A room in the castle of Montreville—with case-
ment opening on a balcony that overhangs the sea.*

Enter LADY MONTEVILLE and MARSDEN.

Lady M. Will he nor hunt nor hawk? This constant
gloom!

Canst thou not guess the cause? He *was* so joyous!

Mars. Young plants need air and sun; man's youth the world.

Young men should pine for action. Comfort, madam, The cause is clear, if you recall the date.

Lady M. Thou hast marked the date?

Mars. Since that bold seaman's visit.

Lady M. Thy tongue runs riot, man. How should that stranger,—

I say a stranger, strike dismay in Beaufort?

Mars. Dismay! Not that, but emulation!

Lady M. Ay!

You speak my thoughts, and I have prayed our Queen To rank your young lord with her chivalry; This day mine envoy should return.

Mars. This day?

Let me ride forth and meet him!

Lady M. Go!

[*Exit MARSDEN.*

'Tis true!

Such was the date. Hath Clarence guessed the secret—

Guessed that a first-born lives? I dread to question! Yet sure the wronged was faithful, and the wrong Is my heart's canker-worm and gnaws unseen. Where wanderest thou, sad Edmond? Not one word To say thou liv'st—thy very bride forsaken, As if love, frozen at the parent well-spring, Left every channel dry! What hollow tread, Heavy and weary falls? Is that the step Which touched the mean earth with a lightsome scorn,

As if the air its element?

Enter BEAUFORT—his dress neglected—wrapped in a loose mantle of fur.

Lord B. Cold! cold!

And yet I saw the beggar doff his frieze, Warm in his rags. I shiver under ermine. For me 'tis never summer—never!

Lady M. How fares my precious one?

Lord B. Well;—but so cold.

Ho! there! without!

Enter Servant.

Wine—wine!

[*Exit Servant.*

Alas! alas!

Lady M.

Why, this is fever—thy hand burns.

Lord B.

That hand!

Ay, that hand always burns.

Re-enter Servant with wine, and a goblet of rich workmanship, set in jewels.

Look you—the cup

The wondrous Tuscan jeweller, Cellini,

Made for a king! A king's gift to thy father!

What? Serve such gauds to me!

Lady M. Thyself so ordered

In the proud whims thy light heart made so graceful.

Lord B. Was I proud once? Ha! ha! What's this?

—not wine?

Servant. The Malvoisie your lordship's friends, last year,

Esteemed your rarest.

Lord B. How one little year

Hath soured it into nausea! Faugh—'tis rank.

Lady M. (to servant.) Send for the leech—quick—go.

[*Exit Servant.*

Oh, Clarence! Clarence!

Is this the body's sickness, or the soul's?

Is it life's youngest sorrow, love misplaced?

Thou dost not still love Eveline?

Lord B.

Did I love her?

Lady M. Or one whose birth might more offend my pride?

Well, I am proud. But I would hail as daughter

The meanest maiden from whose smile thy lip

Caught smiles again. Thy smile is day to me.

Lord B. Poor mother, fear not. Never hermit-monk,

Gazing on skulls in lone sepulchral cells,

Had heart as proof to woman's smile as mine.

Lady M. The court—the camp—ambition—

Enter MARSDEN with a letter.

Mars.

From the Queen!

(While the COUNTESS reads, MARSDEN, turning to LORD BEAUFORT,)

My dear young lord, be gay! The noblest knight

In all the land, Lord Essex, on his road

From conquered Cadiz, with the armed suite

That won his laurels, sends before to greet you,

And prays you will receive him in your halls.

Lord B. The flower of England's gentry, spotless

Essex!

Sully him not, old man, bid him pass on.

Lady M. Joy, Beaufort, joy! August Elizabeth

Owens thee her knight, and bids thee wear her colours,

And break thy maiden lance for England's lady.

Lord B. I will not go. Barbed steeds and knightly

banners—

Baubles and gewgaws!

Mars.

Glorious to the young.

Lord B. Ay—to the young! Oh, when did poet-

dreams

Ever shape forth such fairy land as youth!

Gossamer hopes, pearled with the dews of morn,

Gay valour, bounding light on welcome peril,—

Errors themselves, the sparkling overflow,

Of life as headlong, but as pure as streams

That rush from sunniest hill-tops kissing heaven,—

Lo! that is youth. Look on my soul, old man,

Well—is it not more grey than those blanched hairs?

Lady M. He raves—heed not his words. Go, speed

the leech!

[*Exit MARSDEN.*

Lady M. (aside.) I know these signs—by mine own soul I know them;

This is nor love, nor honour's sigh for action,

Nor Nature's milder suffering. This is guilt!

Clarence—now, side by side, I sit with thee!

Put thine arms round me, lean upon my breast—

It is a mother's breast. So, that is well;

Now—whisper low—what is thy crime?

Lord B. (bursting into tears.)

O, mother!

Would thou hadst never borne me!

Lady M.

Ah, ungrateful!

Lord B. No—for thy sake I speak. Thou—justly proud,

For thou art pure; thou, on whose whitest name

Detraction spies no soil—dost thou say "crime"

Unto thy son; and is his answer tears?

Enter EVELINE, weaving flowers as in first act.

Evel.—

Blossoms, I weave ye

To drift on the sea,

Say when ye find him

Who sang "Woe is me!"—

(Approaching BEAUFORT.) Have you no news?

Lord B. Of whom?

Evel.

Of Vyvyan?

Lord B. That name! Her reason wanders; and O, mother,

When that name's uttered—so doth mine—hush, hush it.

[*EVELINE goes to the balcony, and throws the garland into the sea.*

Lady M. Kill me at once—or when I ask again,

What is thy crime?—reply, 'No harm to Vyvyan!'

Lord B. (breaking away.) Unhand me! Let me go!

[*Exit LORD BEAUFORT.*

Lady M.

This pulse beats still!

Nature rejects me!

Evel. (from the balcony.) Come, come—see the gar-

land,

It dances on the waves so merrily.

Enter MARSDEN.

Mars. (drawing aside LADY M.) Forgive this haste.

Amid St. Kinian's cliffs

Where, once an age, on glassy peaks may glide

The shadow of a man, a stranger venturing

Hath found bleached human bones, and to your

hall,

Nearest at hand, and ever famed for justice,

Leads on the crowd, and saith the dead was Vyvyan.

Evel. Ha! who named Vyvyan? Has he then come back?

Mars. Fair mistress, no.

Lady M. If on this terrible earth Pity lives still—lead her away. Be tender.

Evel. (*approaching* *LADY M.*) I promised him to love you as a mother.

Kiss me, and trust in Heaven! He will return!

[*Exeunt* *EVELINE* and *MARSDEN*.]

Lady M. These horrors are unreal.

Enter a Servant.

Servant. Noble mistress, Sir Godfrey Seymour, summoned here in haste, Craves your high presence in the Justice Hall.

Lady M. Mine—Mine? Where goest thou?

Servant. Sir Godfrey bade me seek my young lord.

Lady M. Stir not. My son is ill. Thysself canst witness how the fever—(*hurrying to the side scene*) *Marsden*!

Enter *MARSDEN*.

My stricken Clarence!—In his state, a rumour Of—of what passes here, might blast life—reason: Go, lure him hence—if he resist, use force As to a maniac.—Good old man, thou lov'st him; His innocent childhood played around thy knees—I know I can trust thee—Quick—speak not:—Save!

[*Exit* *MARSDEN*.]

(*to Servant.*) Announce my coming.

[*Exit* *Servant*.]

This day, life to shield
The living son:—Death, with the dead, to-morrow!
[*Exit* *LADY MONTREVILLE*.]

SCENE 3. *A vast feudal hall in the castle. At the extreme end, the carved screen work of later date, supporting the minstrels' gallery (similar to that in Hampton Court). The opening in the screen is made the principal entry on the scene. In another part of the hall a high Gothic casement forms a recess, over which a curtain is drawn aside. In the recess a tressel, serving as a bier for the remains of the dead, which are covered with a cloth. At each side of the screen entry, a halberdier in the service of SIR GODFREY SEYMOUR, officiating as constable. ALTON kneeling before the tressel in the recess.*

In front of the stage, a table, before which *SIR GODFREY SEYMOUR* *seated. A Clerk employed in writing. SIR GREY DE MALPAS standing near* *SIR GODFREY. FALKNER* *a little apart.*

Sir Godf. (*to* *FALKNER*.) Be patient, sir, and give us ampler proof

To deem you undistinguishable bones

The relics of your friend.

Falk. That gentleman Can back my oath, that these, the plume, the gem Which Vyvyan wore—I found them on the cliff.

Sir Godf. Verily, is it so?

Sir Grey. (*with assumed reluctance.*) Sith law compel me—

Yes, I must vouch it.

Enter Servant.

Servant. (*placing a chair of state.*) Sir, my lady comes.

Sir Godf. Let not that sight appal her,

Sir Grey. And her son.

[*Servant draws the curtain round the recess, leaving* *ALTON* *still kneeling within, and exit.*]

Enter *LADY MONTREVILLE*, *and seats herself.*

Sir Godf. You pardon, madam, mine imperious duties,

And know my dismal task—

Lady M. Pray you be brief, sir.

Sir Godf. Was, this time year, the captain of a war-ship,

Vyvyan his name, your guest?

Lady M. But one short day—

To see my ward, whom he had saved from pirates.

Sir Godf. I pray you, madam, in his converse with you

Spoke he of any foe, concealed or open,
Whom he had cause to fear?

Lady M.

Of none!

Sir Godf.

Nor know you

Of any such?

Lady M. (*after a pause.*) I do not.

Sir Godf. (*aside to* *FALKNER*.) Would you farther Question this lady, sir?

Falk.

No, she is woman,

And mother; let her go. I wait Lord Beaufort.

Sir Godf. Madam, no longer will we task your presence.

Enter *LORD BEAUFORT*, *breaking from* *MARSDEN*, *and other Attendants.*

Lord B. Off, dotard, off! Guests in our hall!

Lady M. He is ill.

Sore ill—fierce fever—I will lead him forth.

Come, Clarence; darling, come!

Lord B.

Who is this man?

Falk. The friend of Vyvyan, whose pale bones plead yonder.

Lord B. I—I will go. Let's steal away, my mother.

[*SIR GREY intercepts the retreat of* *BEAUFORT*, *and, with bye play intimating remonstrance and encouragement, urges him forward.*]

Falk. Lost friend, in war, how oft thy word was 'spare.'—

Methinks I hear thee now. (*drawing aside* *LORD BEAUFORT*.)

Young lord, I came

Into these halls, demanding blood for blood—

But thy remorse (this is remorse) disarms me.

Speak; do but say—(look, I am young myself,

And know how hot is youth;) speak—do but say,

After warm words, struck out from jealous frenzy,

Quick swords were drawn: Man's open strife with man—

Passion, not murder: Say this, and may law

Pardon thee, as a soldier does!

Sir Grey (*to* *MARSDEN*.) Call Eveline,

She can attest our young lord's innocence.

[*Exit* *MARSDEN*.]

Falk. He will not speak, sir, let my charge proceed.

Lady M. (*aside.*) Whate'er the truth—of that—of that hereafter,

Now but remember, child, thy birth, thy name;—

Thy mother's heart, it beats beside thee—take

Strength from its pulses.

Lord B. Keep close, and for thy sake

I will not cry—"Twas passion, yet still, murder!"

Sir Godf. (*who has been conversing aside with* *SIR GREY*.)

Then jealous love the motive? Likelier that Than Alton's wilder story.

Enter *EVELINE* and *MARSDEN*.

Sweet young madam,

If I be blunt, forgive me; we are met

On solemn matters which relate to one

Who, it is said, was your betrothed:

Evel.

To Vyvyan!

Sir Godf. 'Tis also said, Lord Beaufort crossed his suit,

And your betrothed resented.

Evel.

No! forgave.

Sir Grey. Yes, when you feared some challenge from Lord Beaufort,

Did Vyvyan not cast down his sword and say,

'Both will be safe, for one will be unarmed?'

(*Great sensation through the hall. FALKNER and* *SIR GODFREY both.*) Unarmed!

Evel.

His very words!

Falk.

Oh, vile assassin!

Sir Godf. Accuser, peace! This is most grave.

Lord Beaufort,

Upon such tokens, with your own strange bearing,

As ask appeal to more august tribunal,

You stand accused of purposed felon murder

On one named Vyvyan, Captain of the *Dreadnought*—

Wouldst thou say aught against this solemn charge?

Evel. Murdered!—he—Vyvyan! Thou his murderer,

Clarence,

In whose rash heat my hero loved frank valour?

Lo! I, to whom his life is as the sun

Is to the world—with my calm trust in Heaven
Mantle thee thus.

Lady M. (aside.) Be firm—deny, and live.

Lord B. (with a vacillating attempt at his former haughtiness.)

You call my bearing “strange”—what marvel, sir?
Stunned by such charges, of a crime so dread.

What proof against me?

Lady M. (whilst LADY M. speaks, SIR GREY steals behind the curtain.) Words deposed by whom?

A man unknown;—a girl's vague fear of quarrel—
His motive what? A jealous anger! Phantoms!

Is not my son mine all?—And yet this maid

I plighted to another. Had I done so

If loved by him, and at the risk of life?

Again, I ask all present what the motive?

Alton. (advancing from the recess with SIR GREY.)

Rank, fortune, birthright. Miserable woman!

Lady M. Whence com'st thou, pale accuser?

Alton. From the dead!

Which of ye two will take the post I leave?

Which of ye two will draw aside that veil,

Look on the bones behind, and cry, “I'm guiltless?”

Hast thou conspired with him to slay thy first-born,

Or knows he not that Vyvyan was his brother?

[LADY MONTREVILLE swoons. Till now EVELINE has held to BEAUFORT—now she rushes to LADY MONTREVILLE.]

Lord B. My brother! No! no! no! (*clutching hold of SIR GREY.*)

Kinsman, he lies!

Sir Grey. Alas!

Lord B. Wake, mother, wake. I ask not speech.

Lift but thy brow—one flash of thy proud eye

Would strike those liars dumb!

Alton. Read but those looks

To learn that thou art—

Lord B. Cain! (*grasping FALKNER.*) Out with thy sword—

Hew off this hand. Thou calledst me “Assassin!”

Too mild—say “Fratricide!” Cain, Cain, thy brother!

[*Falls.*]

Evel. It cannot be so! No. Thou wondrous Mercy,

That, from the pirate's knife, the funeral seas

And all their shapes of death, didst save the lone one,

To prove to earth how vainly man despairs

While God is in the heavens—I cling to thee,

As Faith unto its anchor! (*To SIR GREY.*) Back, false kinsman!

I tell thee Vyvyan lives—the boy is guiltless!

Falk. Poor, noble maid! How my heart bleeds for her!

Lady M. (starting up.) Sentence us both! or, stay,—would law condemn

A child so young, if I had urged him to it?

Sir Godf. Unnatural mother, hush! Sir Grey, to you,

Perchance ere long, by lives too justly forfeit,

Raised to this earldom, I entrust these—prisoners.

[*Motions to the halberdiers, who advance to arrest BEAUFORT and LADY MONTREVILLE.*]

Mars. O, day of woe!

Sir Grey. Woe—yes! Make way for us.
[*Trumpet.*]

Enter Servant.

Servant. My lord of Essex just hath passed the gates;
But an armed knight who rode beside the Earl,
After brief question to the crowd without,
Sprang from his steed, and forces here his way!

Enter KNIGHT in half armour—wrapped in his horseman's cloak, his vizor three parts down.

Knight. Forgiveness of all present!

Sir Godf. Who art thou?

Knight. A soldier, knighted by the hand of Essex
Upon the breach of Cadiz.

Sir Godf. What thy business?

Knight. To speak the truth. Who is the man accused
Of Vyvyan's murder?

Sir Grey. You behold him yonder.

Knight. 'Tis false.

Sir Grey. His own lips have confessed his crime.

Knight. (throwing down his gauntlet.)

This to the man whose crushing lie bows down
Upon the mother's bosom that young head!

Say you “confess'd!” O tender, tender conscience!

Vyvyan, rough sailor, galled him and provoked;

He raised his hand. To the sharp verge of the cliff

Vyvyan recoiled, backed by an outstretched bough.

The bough gave way—he fell, but not to perish;

Saved by a bush-grown ledge that broke his fall;

Long stunned he lay; when opening dizzy eyes,

On a grey crag between him and the abyss

He saw the face of an old pirate foe;

Saw the steel lifted, saw it flash and vanish,

As a dark mass rushed thro' the moonlit air

Dumb into deeps below—the indignant soil

Had slid like glass beneath the murderer's feet,

And his own death-spring whirled him to his doom.

Then Vyvyan rose, and, crawling down the rock,

Stood by the foe, who, stung to late remorse

By hastening death, gasped forth a dread confession.

The bones ye find are those of Murder's agent—

Murder's arch-schemer—Who?—Ho! Grey de Malpas,

Stand forth! Thou art the man!

Sir Grey.

Hemm'd round with toils,

Soul, crouch no more! Base hireling, doff thy mask,

And my sword writes the lie upon thy front.

By Beaufort's hand died Vyvyan—

Knight.

As the spell

Shatters the sorcerer when his fiends desert him,

Let thine own words bring doom upon thyself!

Now face the front on which to write the lie.

[*Casts off his helmet.*]

[*SIR GREY drops his sword and staggers back into the arms of the retainers.*]

Evel. Thou liv'st, thou liv'st—

Vyv. (kneeling to her.) Is life worth something still?

Sir Grey. Air, air—my staff—some chord seems

broken here. [*Pressing his heart.*]

Marsden, your lord shot his poor cousin's dog;

In the dog's grave—mark!—bury the poor cousin.

[*Sinks exhausted, and is borne out.*]

Vyv. Mine all on earth, if I may call thee mine.

Evel. Thine, thine, thro' life, thro' death—one heart,
one grave!

I knew thou wouldst return, for I have lived

In thee so utterly, thou couldst not die

And I live still.—The dial needs the sun;

But love reflects the image of the loved,

Tho' every beam be absent!—Thine, all thine!

Lady M. My place is forfeit on thy breast, not his.

[*Pointing to BEAUFORT.*]

Clarence, embrace thy brother, and my first-born.
His rights are clear—my love for thee suppressed
them—

He may forgive me yet—wilt thou?

Beau.

Forgive thee!

Oh mother, what is rank to him who hath stood

Banished from out the social pale of men,

Bowed like a slave, and trembling as a felon?

Heaven gives me back mine ermine, innocence;

And my lost dignity of manhood, honour.

I miss nought else.—Room there for me, my brother!

Vyv. Mother, come first!—love is as large as heaven!

Falk. But why so long—

Vyv. What! could I face thee, friend,

Or claim my bride, till I had won back honour?

The fleet had sailed—the foeman was defeated—

And on the earth I laid me down to die.

The prince of England's youth, frank-hearted Essex,

Passed by— But later I will tell you how

Pity woke question; soldier felt for soldier.

Essex then, nobly envying Drake's renown,

Conceived a scheme, kept secret till our clarions,

Startling the towers of Spain, told earth and time

How England answers the invader. Clarence,

Look—I have won the golden spurs of knighthood!

For worldly gifts, we'll share them—hush, my brother;

Love me, and thy gift is as large as mine.

Fortune stints gold to some; impartial Nature

Shames her in proffering more than gold to all—

Joy in the sunshine, beauty on the earth,

And love reflected in the glass of conscience;

Are these so mean? Place grief and guilt beside
them,

Decked in a sultan's splendour, and compare!

The world's most royal heritage is his

Who most enjoys, most loves, and most forgives.

Editor's Easy Chair.

IN the very height of the Presidential campaign one bright autumn morning was hailed, in the pleasant town of Ithaca, in New York, with ringing bells and thundering cannon, but for no political celebration whatever. Had the little town, dreaming upon the shore of the lake so long, suddenly resolved that it would justify the classic name with which Surveyor-General De Witt blessed its beginning, and as old Ithaca produced a wise man so the new should produce wise men? The Surveyor who so liberally diffused so Greek and Roman a system of names through the hapless wilderness of Central New York half a century ago, would have smiled with delight to see the town decorated through all its broad and cheerful streets with the yellow and red of autumn, and ringing its bells of joy because a university was to open its gates that day. But old Paris, Salamanca and Bologna, Salerno and Padua, Göttingen and Oxford and Cambridge would surely have failed to recognize a sister could they have looked into Ithaca. Indeed they would have felt plucked by the beard, and yet they would have seen only their fair, legitimate descendant.

The hotels and the streets and the private houses were evidently full of strangers. Around the solid brick building, over the entrance of which was written "The Cornell Library," there was a moving crowd, and a throng of young men poured in and out at the door, and loitered, vaguely expectant, upon the steps. By ten o'clock in the morning there were two or three hundred young men answering to a roll-call at a side door, and the hall above was filled with the citizens. Presently the young men pressed in, and a procession entered the hall and ascended the platform. Prayer and music followed, and then a tall man, spare, yet of a rugged frame and slightly stooping, his whole aspect marking an indomitable will, stood up and read a brief, simple, clear, and noble address. It said modestly that this was but the beginning of an institution of learning for those upon whom fortune had omitted to smile; an institution in which any person could acquire any instruction in any branch of knowledge, and in which every branch should be equally honorable. Every word hit the mark, and the long and sincere applause that followed the close of the little speech showed how fully every word had been weighed and how truly interpreted. But the face and voice of the speaker were unchanged throughout. Those who best knew what he had done and what he was doing, knew with what sublime but wholly silent enthusiasm he had devoted his life and all his powers to the work. But the stranger saw only a sad, reserved earnestness, and gazed with interest at a man whose story will long be told with gratitude and admiration.

After a graceful and felicitous speech from the Lieutenant-Governor of the State, an ex-officio trustee, the President of the new university arose to deliver his inaugural address. Of a most winning presence, modest, candid, refined, he proceeded to sketch the whole design and hope of the University with an intelligence and fervor that were captivating. It was the discourse of a practical thinker, of a man remarkably gifted for

his responsible and difficult duty, who plainly saw the demand of the country and of the time in education, and who with sincere reverence for the fathers was still wise enough to know that wisdom did not die with them. But when he came to speak to the man who had begun the work and who had just spoken, when he paused to deny the false charges that had been busily and widely made, the pause was long, the heart could not stay for the measured delay of words, and the eloquent emotion consumed the slander as a white heat touches a withered leaf. It was a noble culmination to a noble discourse; and again those who were most familiar with the men and the facts, knew best how peculiarly fitted to each other and to their common work the two men were.

Ithaca had devoted this day to the opening festival of her University, and after dinner, through a warm and boisterous southerly gale, the whole town seemed to pour out and climb the bold high hill that overhangs it. The autumn haze was so thick that nothing distant could be seen. Only the edge of the lake was visible, and the houses and brilliant trees in the streets. Upon the hill there is one large building, and another rapidly rising. At a little distance from the finished building was a temporary tower, against which a platform was built. In front of the platform was gathered a great multitude, and in the tower hung a chime of bells. The wild wind blew, but the presiding officer made a pleasant speech of welcome, and then the chime of bells was presented to the University in an address of great beauty and fitness. After a few words of reception from the Lieutenant-Governor, the chimes rang out Old Hundred far over the silent lake and among the autumn hills. For the first time that strange and exquisite music was heard by the little town, "Ring out wild bells to the wild sky," and the heavy gale caught the sound and whirled it away. "Ring in the valiant man and free," and the wind was whist, and the heart of the multitude unconsciously responded Amen. Then Professor Agassiz—Louis, the well-beloved—fresh from the Rocky Mountains, magnetized the crowd with his presence and his wise and hearty words; and with two or three more addresses, and another peal of the chimes, the Cornell University was formally dedicated. The sun was sinking, a fire-ball in the haze, as the people dispersed. The hour and the occasion were alike solemn; and with meditative feet, his fancy peering into the future, the latest loiterer descended.

Mr. Cornell gives five hundred thousand dollars, a farm, libraries, and museums; he takes the nine hundred and ninety thousand acres of land granted by Congress to the State of New York at a fixed price; he devotes all his sagacity, experience, business skill, and enthusiasm to making the largest profit upon his purchase—and all for the University. Already its books and apparatus and models are worthy of the best schools, and the last experiment in science of London or Paris may be verified at Ithaca. Its chief is a man of ten thousand, and his body of professors are young men the most approved in their departments, with their names to make,

and with the intention, the opportunity, and the ability to make them. The seat of the University is secluded and beautiful. At the head of Cayuga Lake, Ithaca is but thirty miles from Owego, and is reached from the Erie Railroad at that point by connecting trains, or by steamer across the lake from the Central Railroad at Cayuga Bridge. It lies in an interval between the lake and the circling hills, and is but six or eight miles north of the water-shed. From a little spring at the side of the railroad the water runs north into the sea by the St. Lawrence, and south by the Susquehanna. As you go toward Ithaca you reach the top of the hill-range, and far below lies the happy town. Is that also a spring among the hills long hidden, and now about to flow with the living water of knowledge both toward the north and the south?

EVEN the quietest observer must be interested in the spectacle which the country has offered for the last few weeks. It has been thoroughly aroused and excited by the Presidential canvass, and the circumstances were such that even more than excitement was apprehended. But there have been many more "rousing campaigns" than this, and its interest for an Easy Chair is the illustration it affords of the national character and the vindication of our general system.

Here, for instance, is a question of indescribable importance submitted to a vote of millions of people. The arguments upon both sides for many weeks are the most forcible and kindling that can be presented. The country fairly rocks with the blast and counter-blast. Liberty itself is declared by all sides to hang upon the issue. The hour of peaceful decision arrives. It is made and accepted without convulsion. The victory is inconceivably greater than that of a party, for it is a triumph of the instinct of order, which is the indispensable element of civilization. There is nothing so assuring to faith in a steady progress and development of human society as the spectacle of millions of people submitting to a test which they have imposed upon themselves. Hundreds of thousands of votes are cast, and the decision of a majority of a few thousands or of a few hundreds is respected so sincerely that there is no more apprehension of trouble than if the result had been ten to one.

This is the rule, and the great exception of eight years ago merely served to show that great as political progress had been something was yet wanting. But the result of that exception will make the operation of the rule still more universal. Indeed all the conditions of our national life are adverse to disorder. There is plenty of elbow-room upon the continent; the climate is temperate, the temperament of the people is that of what is called the Anglo-Saxon; there is a very general education and intelligence; there is the long habit of order, and there is a constantly increasing perception of the truth of the old sailor's observation that God has somehow so fixed the world that a man can afford to do about right.

All this may be allowed without extravagant expectations of the Millennium at the end of next week. Ambition and passion here are what they are every where. An American citizen or an American party will, as we have seen, upon occasion weigh the chances of the last resort. We are not speaking of the perfect fruit; we are

merely remarking the growth of the tree. Indeed some of the most curious blunders have arisen from confounding the blossom with the fruit. Thus, on the 22d of February, 1861, as Senator Seward was walking along Pennsylvania Avenue toward the Capitol, he saw the flag flying from a hundred houses, and that sight, with the long habit of a life associating profound peace with the national standard, acting upon the hopeful temperament of a doctrinaire, caused him to say to his companion, "Look there! How extraordinary that any body should believe there is any serious hostility to the Union, when even here the flag is unrolled in the old, hearty, patriotic manner. There may be discontent, but there is no disaffection." In the speech which he delivered in the Senate a few weeks later the same inability to believe that there can be any thing so un-American as forcible resistance to the Union reappears. It was the incredulity of an optimist. Yet how general this feeling was! How hard it was to believe that the tradition of order was to be rudely broken! How black the cloud that settled upon the future when it was broken!

Now that the disorder has passed it is not likely to be immediately renewed. Events show that whatever may be the dreams of some, the heart of the whole is fixed upon order and the peaceful solution of all difficulties. Indeed, the ideal of a popular government is that every body shall freely urge his view and vote without fear. Then the decision really represents not only the will of the people, but the power to enforce it. Every body who honestly believes in such a government, therefore, favors in every way both the free argument and the unbiased vote. Whoever opposes or confuses either is the deadly foe of free government and betrays his neighbors.

These are truths which an Easy Chair can fairly assert, because they belong to patriotism, and not to party. And there is one other which concerns party, yet which may be fairly urged here. It is that parties represent tendencies and principles, and not policies merely; the policies spring from the principles. Party leaders may often see that their party is doomed to defeat, and yet be powerless to help it. The watcher on the mountain-top sees that the sun is risen, but the multitude in the valley do not see it nor believe it. The watcher is powerless, and the multitude follow their own faith. The attempt suddenly and radically to change the policy of a great party is impracticable. A popular leader may do it in an assembly, but no leader nor body of leaders can do it in a country. A few gentlemen in a parlor may see that it is the condition of success; but that condition is itself conditioned upon what they can not effect. In England Mr. Disraeli imposes upon the Tory party in Parliament a Liberal measure, but the Tory party is not a Liberal party; and when the surprise and confusion are passed the party will resume its ancient course.

In choosing a party, therefore, men must look at tendencies and necessities much more than at men or the special measure of to-day. When Mr. Clay was the Whig candidate for President, and Mr. Polk the Democratic candidate, the tariff was an important element in the struggle, and Pennsylvania, as usual, a most important State! But it was supposed that Pennsylvania must of

necessity be a tariff State, and counting upon a certain slowness of apprehension among the Dutch citizens of the remoter districts, the opponents of Mr. Clay raised the cry of "Polk, Dallas, and the tariff of 1842," which was a Whig measure. The State voted against Mr. Clay, but whether the Dutchmen obtained a continuation of the tariff of '42 they discovered before many months. But if a perplexed voter who wished to vote for a protective policy and for Mr. Polk had asked himself, "Do the principles and measures and tendency of Mr. Polk's party lead to a good rousing tariff or to free trade?" and had then satisfied himself by investigation, he would have seen that he must choose between Mr. Polk and the tariff, and that it was impossible both to eat his cake and have it.

A great party can not change front in the face of the enemy, although theoretically it is the only method of success. The attempt can only disorganize the line and ruin it. Let no man, therefore, expect that the party of his choice will outwit the other. If its tendencies and principles seem to him noble, and wise, and humane, let him act with it, and try to make all its measures conform. Blind obedience is never necessary. If a party nominates improper candidates, don't vote for them. For when that is the habit of a party, its tendency is to corruption and decay, whatever its argument may originally have been. Of course, pushed to the wall, we must all choose between evils. But practically that is seldom the case. We may be pushed upon a certain candidate—in which case, brethren, scratch him! But when the character of the candidates is no security for the principles they profess, how can those principles gain by the candidates coming into power?

A FRIEND was lately kind enough to urge the Easy Chair to protest against the increasing extravagance of life and manners in this pretty Babylon. "You remember the days of your youth," quoth the kind friend, "when you were a neat little stool, and the straight high-backed chairs of our ancestors, which, if they were not the identical chairs that came over in the *Mayflower*, were their legitimate descendants, had not yet disappeared. But I assure you they are now wholly gone. The last one was destroyed—and it was the chief curiosity—in the burning of Barnum's Museum. Possibly in some remote and secluded vale among the country hills an arm or a leg of some of the old chairs survives, but the race has wholly perished. There is nothing left but luxurious lounges and grotesque seats of inconceivable costliness. We are all gone off in a whirlpool and a whirlwind of stupid and reckless and perilous extravagance."

The tone was lamentable. The Easy Chair, however, perceived that under this remarkable metaphor of old-fashioned straight-backed chairs and modern soft seats, the kind friend alluded to the enormous extravagance which is now the grave consideration "to those about to marry." And while the words were still warm from the warm heart of the speaker the Easy Chair proceeded upon its daily meditative stroll up Broadway to behold Babylon with eyes anointed by that urgent entreaty. And indeed it was immediately evident that those straight-backed chairs were indeed gone. The first female figure could

certainly not be described by the epithet straight-backed. No venerable piece of furniture, indeed, like this can undertake to say what the figure was or was not, what it had on or had not on. There was a mass of festooned furbelows, and broad knots, and flyers, and fringes, and bulges, and bands; a general impression of a frame tortured by corsets and hanging helplessly forward, with hands and arms superfluous, and pawing or patting the air—of a vast and awkwardly concealed load behind, and of feet cruelly set in shoes of heels so high that there could be no secure stepping. This was the cruel and confusing spectacle. Chinese women are lovely by contrast, and graceful and winning. Patter, patter, patter, went these figures along the pavement, and "the superior sex" turned and smiled as the more extraordinary specimens passed, and perhaps respected the "gentler sex" more highly—and perhaps not.

To the loitering pedestrian taking his pleasure in Babylon it is all a pretty spectacle. And he says to any sober friend who would fain moralize a little: "Fudge! don't generalize from the fools. These women are not so bad as they seem, and all women are not like these. Let us look at the entertainment provided, my dear Easy Chair, and enjoy ourselves and rest and be thankful."

If the Easy Chair ventures to suggest that certain traces show the existence of gold and certain symptoms reveal disease, and that a wise parent may be alarmed by the lustre of his daughter's eye or the deep hue of her cheek, the pedestrian who is enjoying the entertainment changes his seat or his companion that he may be in a pleasanter neighborhood. But is it not still true, and worth thinking about? When we were all bidden the other day to that prodigious feast, and sat down to the wilderness of the rarest flowers and the most dazzling golden service; when even the stoutest and most experienced of us in such matters was fairly confounded by the splendid extravagance, it was not indeed a rule, but was it not a symptom? Little Eins drives only a single bay in his wagon, while Zwanzig urges a four-in-hand. But a quart is practically as much too much for a pint pot as a gallon. It is more ruinous for little Eins to drive his bay than for Zwanzig to urge forty instead of four-in-hand.

Besides, all this gold and glass and porcelain was wholly undigested; not that the Easy Chair is so venerable that it seriously expects to eat the plates and dishes, but that it likes to see some kind of due relation and proportion between men and things. We all flock to Zwanzig's superb feasts, for instance, but we might as well flock into the coin vault of a bank. Zwanzig has, indeed, changed or digested a certain amount of coin into table service and house furniture such as Marie Antoinette might have sighed for, and over which her *garde* might well have sung, "O, Richard! O, mon roi!" But the process has stopped there. Is it any pleasure to drink Lagrima Christi out of old Murano glass with a man who talks bad grammar or utters bad sentiments, or is merely passively vulgar? Is there no "keeping" in human life? Fine things imply fine people. If the host is essentially vulgar and the guests are of the same kind, the magnificent service merely emphasizes the fact. When

we go into a cellar in Fulton Street or elsewhere and partake of lager, cheese, and bread with Zwanzig, it is not exactly pleasant, for he is not a pleasant personage; but it is not out of keeping. But when we meet him over engraved glass and golden spoon, it is, at least, bewildering.

Protest a little, quoth the kind friend. Well, there has been a pretty steady protest for many a year and in many a country, and it shall be continued. But there is no tyranny so inexorable, no slavery so abject as that of this kind of extravagance. What seems easier than to spend only two thousand dollars a year if you have but two thousand a year? But what is actually harder? Little Eins says that he is as good as any body; that he has Zero blood in his veins; that his associates are of a certain kind; that he can not be at home with certain other people; that he must live in a certain quarter and in a certain way. There is no end to the certainties which little Eins enumerates. Let us grant it all, and then what? If you can not live "in a certain way" without ending in disgrace and the State prison, wouldn't it suit the Zero blood better to live in a certain other way? Wouldn't Mrs. Eins's friends come to see her if she and her husband lived within their means? And if not, dear Eins, couldn't you spare their visits?

Don't misunderstand. It is *not* pleasant to be poor; but, if you *are* poor, the best thing is to make the best of it. There are fifty clerks in the city of Babylon who will read these lines and who are living beyond their incomes, eking them out by money not their own, which they mean fully to replace, of whose use nobody is ever to know, and which they would die rather than steal. That is the way it seems to you, for instance, Mr. Jones, who are already beyond your depth. You are as infatuated as the drunkard who is going to leave off drinking day after to-morrow. There is one way for him and one for you—stop now. If Zwanzig won't recognize you when you live in a second-rate boarding-house, what will he do when you live at Sing Sing?

But Jones's situation, and his fearful skimming along that thin ice which is sure to break presently, merely shows, brethren, what we said in the opening of our discourse; it shows that this extravagance is a symptom. If it ended with Zwanzig—if only those who could afford to pay the bill indulged in this delirious orgy—it would not be so bad. But their motion makes a vortex, and it sucks in all the lighter craft and the waifs of every kind. Poor Eins! Poor Jones! They can not help themselves; can we do any thing to help them? There is a very pat proverb which you may quote, that the gods only help those who help themselves. But we are not the gods, we are only pedestrians and Easy Chairs. And if we only showed such Einses and Joneses as we know that, although we do happen to have lots of money, we don't make it the test of our society; and, although we are not only rich as Croesus, but have nothing but the bluest blood coursing through our veins, yet that we like ladies and gentlemen in second-rate boarding-houses more than we like Zwanzig and Company with all their gold services and magnificent upholstery, then we should protest to some purpose.

The dollar is almighty upon one condition only

—that we permit it to be so. Jones! square up those accounts at once. Eins! sell that ridiculous bay. Don't put Zwanzig's ring through your nose, and he will treat you like a man, not like a toady. It was a pleasant old book that we used to read, "Philosophy in Common Things;" and why should we not study a little the value of heroism in little things? How many men, for instance, are brave enough to be truthful in all the details of life? Mrs. Opie tilted at White Lies. How many did the charming lady tell herself? Indeed where is that vanishing line where truth ends and white lying begins? Did those straight-backed *Mayflower* chairs themselves swerve a little? If they did, let us be all the more careful that we do not.

THE interest in polar adventure is inexhaustible. We read the accounts in the papers to-day as we used to read the stories of Parry long ago. It is indeed a fascination of terror, for it is impossible not to shudder as the simple narrative proceeds. Dr. Kane described the Arctic silence as sometimes almost dreadful. And one day after dinner when he was fresh from his travels and was telling his adventures to a party of friends, Thackeray, who was of the company and sat quietly smoking, said to the host when Kane had finished, "Do you think he would let me kiss his boots?" The genuine heroism of the traveler impressed Thackeray's imagination, and when Kane said that one day, in the coldest and sharpest season, he saw a sailor intent upon a book, and going up and looking over his shoulder saw that it was "Pendennis"—when he said this, Thackeray's bluff face was suffused with the softest emotion, and he did not try to speak but quietly smoked and looked at Kane like a lover.

Captain Hall is likely to have "good fame" among the arctic explorers. His book, published a few years since, is one of the most graphic and interesting of its kind, and a kind of invincible simplicity of character seems to promise for his efforts the best results. The theory of his exploration is undoubtedly the true one; but it is only to be put into practice by an arctic fanatic. Captain Hall thinks that if any thing is to be ascertained of previous explorers, and of the best methods of exploration, there must be some kind of intelligent relation established with the natives. They know something of their own country, and they have traditions and reports when they do not know; and familiarity with them will teach the explorer what he could not otherwise learn. This is the plan which Captain Hall has pursued. He has domesticated himself among the polar bears and seals and the other natives, and is quietly waiting to go to the open Polar Sea in the swiftest and most comfortable manner.

The last news from him is in August, 1867. He was then at Repulse Bay, and had obtained several relics of the survivors of Franklin's party, which the gentleman who brings the news had himself seen. Captain Hall had heard of Captain Crozier, one of Franklin's officers, and indeed the relics which he has were Crozier's; but the poor Captain has disappeared, and Hall says that "the opinion most entertained is that the natives killed him." Hall hears of a cairn, or rude vault of stones, built by the last six survivors

of the Franklin Expedition, in which they had deposited documents and relics. This cairn is described as about four hundred and fifty miles northward from Repulse Bay, in the country of a certain King William, with whom the people of Repulse Bay are not upon friendly terms. Last February or March Captain Hall intended to start to find this cairn. His party was to consist of five Caucasians besides himself, and a force of King Alfred's men of Repulse Bay. King William's army is two hundred strong, and can all be assembled in a month's time. If this formidable host should attempt to oppose Captain Hall, he will raise the battle-cry of "Alfred, the documents, and victory!"

It is pleasant to know that Joe and Hannah will accompany the Captain. They are the Es-

quimaux who were in this country with him, and were educated here. They are now his interpreters, and being faithfully attached to him, their service is inestimable. The expedition was to proceed by dogs and sleds; and if it were successful, and the forces of King William remained merely an army of observation, Captain Hall hoped and meant to push on to the open sea, and return, perhaps, by Behring Strait. If, however, he were delayed, he expected to return in September of this year, and winter again at Repulse Bay. Where is he now? Has he met and routed King William? Is he sailing upon the open Polar Sea? Has he joined Franklin and Crozier? Let us hope the best for the brave explorer, and look speedily to welcome him heartily home!

Editor's Book Table.

THE book-receiver is like the ancient gate-keeper of the city, against whom, for his want of faith, the prophet denounced the penalty that he should with his eyes behold the plenty of the land but not partake of it. Our table groans beneath the superincumbent weight of the autumn fruits. And yet, though when this page meets the reader's eye the season will be far advanced, now, as we are penning it, only the early fruits of the summer's ripening have fallen, and the boughs hang full above our heads with others, that in a few weeks will drop from the publishers' shelves into our emptied autumn baskets. Of these fruits of the mind, like those of the orchard, there are various sorts. Some books there are which, however valuable in their day, are as evanescent as the daily paper. They are good only when fresh. Others are winter fruit and live a season. A few will bear preserving, and go to stock the libraries of the future, outliving the generation which called them forth. We rarely have occasion to notice in these pages other than the latter two classes. Some books are like autumn leaves—brilliant indeed, but sure to perish speedily—and we are too busy with the living to pronounce even a panegyric over dead books.

NOVELS.

ONE can not altogether divest himself of a certain feeling of gallantry in approaching, even with a critic's pen, such a book as Miss DICKINSON'S *What Answer?** The authoress is an old acquaintance. She has been deservedly admired, not less for her courage and patriotism than her pleasing voice and her often powerful sentences. A certain romantic interest has surrounded her, like that with which we delight to invest the heroines of history, Joan of Arc, or Florence Nightingale. By assuming a public position she subjects herself, it is true, to public criticism. But one would, notwithstanding, treat a lady with courtesy, no less on the platform than in the parlor. This feeling is intensified by the conviction that in "What Answer?" Miss Dickinson has exhibited the same moral qualities

which have given her her prestige as a lecturer. It is, we are told, a *brave* book. But so was Don Quixote's attack upon the wind-mill a brave act. The avowed object of her novel is to break down the prejudice between the white and black. Its plot turns upon love between an Anglo-Saxon hero and a quadroon heroine. But the story is only a shepherd's sling to cast a stone at the giant whom she thinks to be defying the armies of Israel. One honors the bravery of the young David, and we all the more regret that her shot is so ineffective; but it is quite clear she has never practiced with this weapon, and that she shares the very common but very egregious error of supposing that any one who can tell a story to an audience in a speech can construct a novel that shall secure a place in literature. It will take a much more skillful aim to bring this Goliath down—if, indeed, he be a Goliath at all. For, warmly as we sympathize with this honest endeavor to break down the inveterate prejudice which has been so sedulously fomented against the negro, we are heretical enough to doubt the conclusion to which she would conduct us—the intermarriage of white and black. We are quite sure, at all events, that it is not such advocacy of which the negro is now most in need. Liberty in fact as well as in name, the rights and prerogatives of citizenship, open avenues to all avocations, fair remuneration for work done, an open field and no favors—this the African has a right to claim; less than this a republic founded on the equality of all men before the law can not consistently or justly award. This awarded, the marriage question may be left to solve itself. If legal barriers be broken down man will not be able to keep apart hearts that God marries. If, on the other hand, that almost universal sentiment of aversion which tends to restrain the intermarriage of different races be a law of nature, no romance will be able to weaken its power.

"ONLY a love story" is thought to be the most contemptuous condemnation of a novel. Pray why? What experience is more sublime than that of love? He who can write the story of a heart has done far more than he who writes the story of a life. A true novel is truer than a his-

* *What Answer?* By ANNA E. DICKINSON. Boston: Ticknor and Fields.

tory. And he who has taught the heart how truly, wisely, and well to love has taught it the best of all lessons. *Mildred** and *The Woman's Kingdom†* are both love stories, though of a very different sort. The former is a sensational novel. No one can doubt its power. It is a book of great fascination. But we can not think it healthful. The strong passion which it portrays is not the best and highest form of love. It may be a real experience; we are sure it is not a healthful one. A well-born gambler, over whom is thrown a glamour of romance, a high-spirited, noble-hearted, but headstrong young lady, and a weak old father, constitute the main figures in this drama of life. Our sympathies are all with the maiden; but, after all, our judgment is with the father. However it may be in romance, in real life professional gamblers are not desirable matches for maidens, even though they possess some noble characteristics; and it is never safe to marry a doubtful character in the hope of reforming him.

Woman's Kingdom is a very different sort of book. Two twin sisters—Letty and Edna Kenderdine—schoolmistresses, and of course not rich, meet "by chance, the usual way," two brothers—William and Julius Stedman—at a watering-place, whither sickness has brought both parties, out of the season. William, the doctor, is drawn to Edna by her noble heart, and yields himself willingly to a love which, strong though it be, is always self-restrained. Julius, warm-hearted but fitful of purpose, captivated by the fair face of Letty, who has all the beauty of the family, is carried captive away by an uncontrollable passion. Edna returns the doctor's love, marries him, and shares with him the quiet of his poor and unpretending home. Letty, flattered, vain, her heart spoiled by many flirtations and deepened by no true love, replies coquettishly to Julius's suit. She will have him only when he has acquired a competence to give to her. He abandons his profession—Art—enters mercantile life, and finally accepts a mission to India, not really for the purpose of acquiring a fortune, save as it enables him to acquire her. And this first act of the drama closes with Letty starting out on an East India merchantman to join her intended.

Fifteen years pass away. Letty's strong ambition has conquered her weak love. She has accepted a wealthier lover on her journey out, and has returned to England with her husband and her only child, a daughter about twelve years old; followed, though she does not know it, by the wreck of her former lover, ruined by her falsity to him. He haunts her like a ghost; pursues her wherever she goes as her own shadow; contrives furtive interviews with her daughter, Gertrude; tells the daughter the story of his wrong without disclosing his name; awakens her indignation against the unknown woman who has ruined him; gradually arouses the suspicions of the mother as to his true character; taken sick, is discovered by his brother William through the interposition of Gertrude, despite the efforts of the mother; and finally is taken to his brother's

home, where the book leaves him, recovering in body, but never to recover the real health of a strong soul again; while Mrs. Vanderdecken "still lives at Holywell Hall in great honor and undiminished wealth, flourishing like a green bay-tree, except that—poor woman!—she can not fairly be likened to the wicked. She is not wicked, only weak."

The story is very simple. There is no intricate plot to be unraveled. There is but one hair-breadth escape. There are no passages in which you turn the pages in haste to see what new catastrophe will follow next. It is a quiet story of heart life, but a story of great power. With marvelous art-touches Miss Mulock (by which name the literary world still best knows her) has preserved the characteristics yet noted the changes in her characters. You see the hair grow gray. Letty Kenderdine and Mrs. Vanderdecken, Julius the young impetuous lover, Julius the old broken-down soldier—the same, yet how different! Beneath these disguises of the outer you read the life of the inner. You see for yourself their identity. The moral of the story is as simple as its plot, but, like that of real life, inwrought into the fibre of the story, it is not easy to be separated therefrom. The book is one worthy to be put into every young woman's hands; sure to enkindle in all true hearts a noble womanly ambition. It is a better sermon than any mere didactic one could be; its moral, more powerful because it imbues the story, is not appended to it. *Woman's Kingdom* is love. Her noblest ambition is a queenly supremacy in the heart. She who abdicates this true throne to grasp at any other sceptre dethrones herself. It is better to love and suffer than not to love and be happy—if an unloving heart can ever be called happy. For love is the highest life. This is the meaning of this last and perhaps best story from the pen of one who combines a careful study of life with a rare genius in depicting its real experiences, and who renders charming even a very simple story of actual life by the glow of a warm and loving heart with which she transfuses it.

THE remaining stories that lie on our table must make room for new books with no other word than a mere mention. SOL SMITH'S *Reminiscences** do not occupy a very exalted place in literature. But he who provokes a hearty laugh does humanity real good; and no one can read these *disjecta membra* without a good many hearty laughs.

EDWARD EVERETT HALE† is, it is hardly too much to say, one of the best short story writers in America. His *Exaggerations* are told with such a charming naïveté, and his *Impossibilities* are so exceedingly natural, and he utters, in a word, the most absurd fictions with so grave a face, that it is no wonder he deceives the very elect. Since De Foe's famous *Plague of London* there has been no fiction which has secured such universal credence as his "Man without a Country."

* *Mildred*. A Novel. By GEORGINA M. CRAIK. New York: Harper and Brothers.

† *The Woman's Kingdom*. A Love Story. By the Author of JOHN HALIFAX, etc. New York: Harper and Brothers.

* *Theatrical Management in the West and South for Thirty Years*. Interspersed with anecdotal Sketches. Autobiographically given by SOL SMITH, retired Actor. New York: Harper and Brothers.

† *Of, Yes, and Perhaps*. Four Possibilities and Six Exaggerations, with some Bits of Fact. By EDWARD E. HALE. Boston: Ticknor and Fields.

POETRY.

WHILE Mr. Longfellow is enjoying himself among the mountains of Switzerland, or in the excitements of Paris life, his latest poem* is simultaneously published in London, Leipsic, Paris, and Boston—a curious illustration of the unity of the Republic of Letters and its superiority to all national lines. To our fancy Mr. Longfellow's Pegasus drives best out of harness. His power is that of reading the subtle likeness of things to common eyes unlike, and that of a heart which knows how to utter the subtlest and deepest experiences. But he has never developed remarkable genius in the analysis of character, or the portrayal of those great struggles which run the plow-share through the community roughly and turn up its roots. In selecting, therefore, New England life in the days of the Pilgrims he has chosen a theme not peculiarly adapted to his genius, though his genius renders attractive any theme. We doubt whether he understands either the furnace heats in which these men of steel were tempered, or the war that made it necessary that the blade should be so unyielding and so keen. The characteristic of the Puritan was conscience. His defects—and they were great—were those of a conscience untempered by love. The key-note to Mr. Longfellow's character as a poet is a refined taste, and a tender and sympathizing heart that revolts against the roughness and the cruelty of rough and cruel times. His imagination, too, is restive under the restraints of such a theme. It will not, indeed, be restrained; and puts into the mouths of John Endicott and old Simon Kempthorne and Edith the Quakeress similes which are all the more incongruous for their very beauty. It is as if he should put pearls upon the Quaker's bosom and a diamond ring upon the Puritan's finger. And yet we read the book with a consciousness that he has attired both much more plainly than his luxuriant imagination would choose to do. We can not think, on the whole, that he has really lifted the veil that hides the past, or let us into the secrets of Puritan life, or disclosed by a poet's sympathy its true experiences. This work he is not the one to do. But, if he has not done this, he has made his simple story a thread for the utterance of thoughts as healthful as they are beautiful; and as a testimony to the worth of mercy and of love, in contrast with mere conscience, we welcome this book to a high place in Christian literature.

HISTORY AND BIOGRAPHY.

HISTORY is in these latter days made so fast that it is quite impossible to keep pace with it. The invasion of the Crimea† has been erased from the public mind by events of so much greater moment that it has already been almost forgotten. The noise of this far-off battle on the shores of the Black Sea is drowned by the cannon of Magenta and Solferino, and they in turn by the fiercer conflicts of our own civil war. The history of such a campaign can not, however, be truly written while it rages. The muddy waters

must be allowed to settle before the truth can be discerned, reflected upon their face. Mr. KINGLAKE has undertaken to incorporate in a standard and permanent history the events of the Crimean War, heretofore to be obtained only from evanescent literature and in unreliable forms. Whoever desires to understand modern European politics must know something of this campaign; and prior to this book his search for knowledge would have been conducted, it must be confessed, under serious difficulties.

HISTORY trenches on biography, and it is never easy to draw the line between them. ABBOTT'S *Life of Napoleon III.** is in reality a history of Europe for the last quarter century. For, whatever may be thought of the nephew of his uncle, there is no doubt that he is by far the most prominent if not the most influential man in European politics; and there is scarcely a single problem on the political chess-board during the present era that he has not aided either to solve or to complicate. Mr. Abbott is a Frenchman—not by blood, but by nature. He is a man of warm sympathies, of ardent impulses, capable of intense admiration and of intense loathing. For years he has made French history and French character his peculiar study. He has twice visited France during the last sixteen years, and personally examined the workings of the French Government. His previous *Life of Napoleon I.* gave him an admirable introduction to Napoleon III., and the reception which was awarded to him intensified his already intense admiration of the family. The result is a thoroughly Frenchman's history of the Emperor. The author joins heartily in the cry, *Vive l'Empereur!* Doubtless there are spots on the sun, but he is not concerned in observing them. On the whole he is assured that "the empire is peace;" that it is the Napoleons who have given France her stability and prosperity; that the overthrow of the Emperor would reinstate anarchy; and that, whatever minor defects of administration may exist, France possesses on the whole an admirable government, not exactly republican indeed, but one far better fitted to the character and condition of her people. To the advocacy of this view he brings all the results of twenty-five years' acquaintance with French history and literature, and four years of special investigation of the career of Napoleon III., fused and magnetized by one of the most eloquent pens which any American historian wields. No man can doubt the eloquence, the ability, the power, or the honesty of the advocate. He will materially modify, we fancy, the judgment of the impartial reader concerning the subject of his biography. But he will not secure the judgment for which he pleads.

THEODORE IRVING† and ARTHUR HELPS‡ cover somewhat the same period of history.

* The History of Napoleon III., Emperor of the French. Including a brief Narrative of all the most important Events which have occurred in Europe since the Fall of Napoleon I. to the present Time. By JOHN S. C. ABBOTT. Boston: B. B. Russell.

† The Conquest of Florida by Hernando de Soto. By THEODORE IRVING. New York: George P. Putnam and Son.

‡ The Spanish Conquest in America, and its Relation to the History of Slavery and to the Government of Colonies. By ARTHUR HELPS. New York: Harper and Brothers.

* The New England Tragedies. By HENRY WADSWORTH LONGFELLOW. Boston: Ticknor and Fields.

† The Invasion of the Crimea. Its Origin and an Account of its Progress Down to the Death of Lord Raglan. By ALEXANDER WILLIAM KINGLAKE. Vols. I. and II. New York: Harper and Brothers.

The latter, in the fourth volume, now before us, finishes what must be regarded as the standard history of an era of which hitherto little or nothing has been known. The contrast between the civilization of North and South America, between the Republic of the United States and that of Mexico, can only be understood by him who traces their history back to the days of their founders. The strong purpose to be impartial has led Mr. Helps to dignify some very bad men and some very infamous deeds with very honorable titles. But the temptation to excess in the other direction was very strong, and was very wisely resisted.

MANY circumstances have conspired to invest the life of General Grant with peculiar interest: the romance of his career who from so humble a birth has risen to so exalted a station; the personal enthusiasm which a naturally military nation feels for its great military chieftain; the peculiar affection which an immense though now disbanded army feels for the leader who gave to it its victories; the patriotic regard which Americans possess for one whom they esteem in some measure the restorer of the Republic; and the general desire of every man to know something of the silent actor who is to be the Republic's Chief Executive for the next four years, and to whom so many look in hope for a policy that shall heal the wounds of war, already kept open too long; all these considerations conspire to whet the public appetite for lives of General Grant. From the score or so of biographies which have been issued in compliance with the universal demand we select two as likely to be measurably permanent, and as valuable because they represent two different phases of his life and character.

BADEAU'S *Life** is, as its title indicates, a purely *military* history. In this aspect it is not only the best, it may be almost said to be the only one. The author, the aid-de-camp of General Grant, and his constant companion, having free access not only to all his official reports, but also to much of his private correspondence; knowing, by the necessity of his position, the nature of the General's plans and purposes more intimately than any other person; generally witnessing with his own eye the movements which he has described; and subsequently obtaining, through the War Department, free access to the Confederate reports; has not only enjoyed remarkable facilities for his work, but appears to have faithfully availed himself of them. His *Life* introduces General Grant a brigadier-general. It drops the curtain, or proposes so to do, at the surrender of General Lee at Appomattox Court House. It thus affords what is not a complete, but is by far the most authoritative, history of the rebellion in its military aspects. The book is finely issued, and the maps and plans are of immeasurably greater value for a real understanding of the military movements than the absurd melange of soldiers, cannon, and horses, in all manner of inconceivable melodramatic attitudes, which usually disfigure, under the poor pretense of illustrating, military biographies.

* *Military History of Ulysses S. Grant.* From April, 1861, to April, 1865. By ADAM BADEAU, Colonel and Aid-de-Camp to the General-in-Chief. Vol. I. New York: D. Appleton and Co.

BUT the life of General Grant is more than the record of a military career. It is a magnificent illustration of the power and worth of the substantial but unshowy qualities of earnest purpose, decision, and independence of character, and patient and invincible perseverance. Impetuous Americans need such a lesson. Young men, anxious to leap into success without earning it, grumbling at a world that does not appreciate them, dazzled by the show of a false and quickly fading greatness, can not read the life of this quiet doer of great deeds without feeling the inspiration of a new and a nobler ambition. It is the most healthful of stories to read; the best possible antidote to the miserable spirit of romancing which sets the young to searching for some Aladdin's lamp that shall raise them a palace in a night, instead of stimulating them to dig with their own hands its foundations and rear with patient and persevering labor its walls. This aspect of General Grant's life has been seized and well presented by Mr. RICHARDSON,* the war correspondent of the New York *Tribune*; much of the time with General Grant, more on the look-out for incidents and anecdotes, which are always read with avidity, than for great plans and policies, which, if known, could not be disclosed. Mr. Richardson, by the vividness of his descriptions, takes us with him into the campaign and permits us to share the hospitalities of his hero's tent. He does something toward lifting the veil that hides every public man from the real knowledge of the public, and if he gives us little new information concerning Grant's campaigns, gives us a good deal that is new concerning Grant himself. His book, written in the easy but not always elegant style of a newspaper correspondent, is always readable, though rarely eloquent. He rightly terms it a personal history, and well maintains his right to the title. Those who wish to know accurately what General Grant has done will do well to obtain Badeau's *Military History*. Those who desire to know what General Grant *is* will find an admirable portraiture in that of Mr. Richardson's.

THEOLOGICAL AND RELIGIOUS.

THE year 1868 opens almost a new era in American history. In certain quarters an outcry against the increasing immigration to our shores has been popular. Men forget that our multiplied railroads are largely due to the Irish, and a considerable proportion of our cultivated Western farms to the German. Hitherto, however, it must be confessed that immigration has added chiefly to our material resources. Yet ever since the advent of Jenny Lind America has been permitted to welcome the ablest musical artists of the Old World, and it now begins to receive accretions to its literary circles. One of the most popular preachers of New York city is an Irish immigrant from Dublin—Dr. John Hall. The lecturer-elect on history in the Cornell University is an English immigrant from Oxford—Professor Goldwin Smith. And the newly-installed President of Princeton College is a freshly-arrived immigrant from Belfast. His coming is fittingly accompanied by a new

* *A Personal History of Ulysses S. Grant.* Illustrated. With a Portrait and Sketch of Schuyler Colfax. By ALBERT D. RICHARDSON. Hartford: American Publishing Company.

American edition of his works.* Themselves the fruit of hard study and intense thought, they require intense thought and hard study to master them. But they are well worth it. They form an admirable introduction to America of one whom we are rejoiced to welcome as henceforth an American; while we return to the mother country our hearty thanks for sending us in him one of the ablest modern representatives of the so-called evangelical school of philosophic theology.

THE growing controversy between Protestant and Roman Catholic lends peculiar interest to MOEHLER'S *Symbolism*.† To the reader unversed in theological lore it may be necessary to say that Symbol is the theologic phrase for creed or confession of faith, and Moehler's *Symbolism* is neither a treatise on Ritualism nor on Scripture types, but by far the ablest, as it is by far the fairest, Roman Catholic exposition of the doctrinal differences between these two great Churches. Those who will be least ready to accept his conclusions will be most ready to acknowledge the value of his contribution to theological literature, and to honor the Christian spirit in which he has written.

MR. ALBERT BARNES‡ is, if not the most scholarly, certainly the most successful commentator on the Scriptures. There is no man of ancient or modern times who has done so much to interpret the Scriptures to the popular mind. His own mental characteristics fit him peculiarly for this which has been his life-work. His moderate views in theology give offense to none but extremists; and his interpretations of Scripture, free for the most part from party prejudice or from pet theories of his own, may be aptly characterized by the term common-sense. No man has rivaled him in his peculiar department. And to those who esteem the Bible the Word of God the elucidation and practical application to daily life of its meaning will appear to be one of the best services which a Christian scholar can render to his fellow-men. It is said that already half a million of volumes of his commentaries have been issued in this country, and as many more in Great Britain; while portions of them have been translated into Welsh, French, Chinese, and the languages of India. We hope for this work—the first volume of which only is yet issued—a success as marked and a welcome as warm as that which has been accorded to its predecessors.

There can be no question that HENRY WARD BEECHER is the greatest of living American orators.§ For over twenty years his church in

Brooklyn has been crowded to excess every Sabbath. His prayer-meeting audiences would awaken the envy of any ordinary clergyman. His sermons have been eagerly caught up and repeated by the daily press. His services are always in demand on the platform. Henry Ward Beecher is "a card" that always draws. His political utterances are looked for with an interest only second to that which attaches to his speech on ethical subjects. His power is cosmopolitan. His orations in Great Britain did more than any other one thing to revolutionize public sentiment there. His pen is only less powerful than his voice. For a few months, assuming editorial charge of a politico-religious newspaper, his editorials proved him a giant in the editorial as in the ministerial desk. His humorous dashes in the *New York Ledger* run the round of the daily press. He writes a novel, and all America watches curious to see what he will make of "Norwood." And alike as editor of an agricultural paper in Indiana, and of a religious paper in New York, alike on the platform and in the press, alike in politics, art, and religion, in philosophy, theology, ethics, and romance, he proves himself among the most popular of writers and speakers in America.

But it is not doubtful that Mr. Beecher's final reputation will be built upon his voice rather than upon his pen, upon his sermons rather than upon his humorous effusions or his political efforts. To see him at his best one must hear him in his own pulpit and among his own people. He is never greatest on great occasions. He always does best what he does without effort. All that he says and writes is really sermon. "Did you ever hear me preach?" said Coleridge. "I n-n-never heard you d-d-do any thing else," replied stuttering Lamb. We might almost say the same thing of Mr. Beecher. His humor is not broader in the *Ledger* than it is in his own pulpit. His lectures are sermons with life for a text. His political addresses always discuss the moral aspects of the canvass, and address themselves chiefly to the moral sense. His novel is a slender thread of story on which to hang a very beautiful array of moralizing pearls. And we venture to predict that his promised "Life of Christ" will be far more a development of the philosophy of Christianity than a dramatic or even historic narrative of the earthly life of its Author. The sermons of Mr. Beecher constitute his best work. By them posterity will judge him.

It is Mr. Beecher's misfortune to hate literary labor. He is never painstaking. There is not a busier man in America. But he is constitutionally opposed to *hard* work. He works, but because to his abounding life it is easy to work, hard only to be idle. He does every thing extemporaneously. He writes his sermons always at a white heat; almost always at a single sitting; writes, not as most ministers, that he may be sure he has something to say, but that he may guard against the danger of having too much. He never stops to pick up mistakes. He dreads to revise, recast, correct. If he has not done the right thing yesterday, he prefers to do some other right thing to-morrow. This is admirable philosophy. But the consequence is that until now he has never issued any thing from the press worthy of his name. Some admirers have caught

† Symbolism, or Exposition of the Doctrinal Differences between Catholics and Protestants. By JOHN ADAM MOEHLER, D.D. New York: The Catholic Publication House.

‡ Notes, Critical, Explanatory, and Practical, on the Book of Psalms. By ALBERT BARNES. In three vols. Vol. I. New York: Harper and Brothers.

§ Sermons by HENRY WARD BEECHER, Plymouth Church, Brooklyn. Selected from published and unpublished Discourses, and revised by their Author. In two volumes. New York: Harper and Brothers.

up pungent sayings and given them to the public in "Life Thoughts" and similar fragmentary publications. His sermons have been taken down by short-hand and given forth without revision or correction—with all the imperfections of heated discourse, and none of that interpretation which his inimitable voice and manner afford. Meantime there was danger that his influence would die with him, and that his name would remain, like that of Whitefield, the name of a brilliant rocket shot across the sky and then gone out forever. Mr. Beecher has at length, however, yielded to the importunities of his friends. Kept to his work, we know not by what assiduous endeavors, and aided in it by a friend who acknowledges his appreciation and personal indebtedness to Mr. Beecher in an introductory note, he has at length given to the public and to posterity, in the two handsome volumes which lie before us, forty-six characteristic sermons, which he has carefully revised, and by which he is willing to be judged. They constitute the only official and authoritative exposition of his philosophy and his methods.

These sermons are selected from over five hundred published and unpublished discourses. Some of them have never before been printed. Others are substantially rewritten. Others are materially modified. They are not theological, though there are theological discussions among them. They give a fair portraiture of the author's preaching; illustrate his most common and most popular methods; appeal, as he does, with almost equal power to every faculty; address in turn the reason, the imagination, the fancy, and the affections; and always, though by different routes, reach the heart. They will interpret to many a young minister the secret of true success; not only because in one or two autobiographical discourses Mr. Beecher uncovers his heart and lets us look therein, but because in them all he displays the customary methods of the most popular modern preachers. They will be esteemed by every student of theological philosophy as the authentic exposition of the views of one who has done more to modify modern theology—at least in his own denomination—than any other man since the days of Edwards. For Mr. Beecher is essentially a metaphysician. He believes, with Rufus Choate, that "it's a great mistake to think any thing too profound or rich for a popular audience." The profoundest problems of modern philosophy form the topics of his most popular and powerful sermons; but always presented, as Jesus always presented the like topics, in "anecdote, or sparkling truism, or telling illustration, or stinging epithet; always in some concrete form, never in a logical, abstract, syllogistic shape." Above all, these sermons will be warmly esteemed by many a Christian who will find in these pages the wants of his heart appreciated by an exquisite sympathy and fed by one whose unrecognized wealth of heart is greater even than his recognized genius. The richest of these sermons, the richest of all Mr. Beecher's sermons—as all will agree who have been attendants on his ministry—are not those that deal with the problems of the intellect, but those that deal with the subtler problems of the heart. And while no student can rise from the perusal of such discourses as that on "The Divinity of Christ," "The Second Incarnation of Christ," or "The

State of Christianity To-day," without a profound admiration for the philosophic breadth and insight they display, no man can rise from reading such sermons as those on "The Sepulchre in the Garden," "The Blind Restored to Sight," "The Lilies of the Field," "The Ministration of Suffering," or "A Conversation about Christ," without profound affection for the one whose warm heart pulsates through these disclosures of Christian experience, and profound gratitude to him for the inspiration they afford. For this, after all, is the power of Mr. Beecher, that no one ever goes from his church empty away. This must be the power of any pulpit. Not by the symmetry with which the table is set, not by the flowers that garnish it, but by the food that is upon it, the meal must be judged. We predict for these volumes not only a present extensive popularity, but a permanent place in American literature.

REV. W. H. FURNESS is always a suggestive writer, and his little book,* whose title is too long for its size, follows out a new line of thought, and is not less valuable for its indirect influence in leading the reader to a better appreciation of Scripture than for its direct influence in meeting some of the skeptical tendencies of the age. The same may be said of Dr. KIP's book,† which draws attention to facts and events in Scripture which the cursory reading it generally receives fails to observe. GEORGE JONES's larger work,‡ companion to a previous volume of like character on the New Testament, is better in design than in execution. He endeavors to take Bible scenes and Bible characters out of that mystic land in which our reverential fancy places them; but his learning is ill-digested, and he constantly carries his readers away from the thread of his narrative by quotations which should be confined to notes or an appendix, and by digressions from which they return to the main road with difficulty.

MR. GREELEY's *Recollections of a Busy Life* (Ford and Co., Hartford) are already familiar to the public, not only through the columns of the *New York Ledger*, but through those of other journals, into which many of his chapters were copied. He is the accredited author of the saying that "No man can succeed in New York who is not able and willing to do two days' work in one." His *Recollections* are a sufficient attestation that he has practiced on his own motto.

The Eminent Women of the Age (S. M. Betts and Co., Hartford) is a remarkable book chiefly for the method of its composition. It is a sort of mutual admiration gallery, in which a number of eminent men and women have combined to paint the portraits of their friends, so that each one has sat for her portrait to an appreciative artist. Such photograph albums, where a great company of outline profiles are gathered in a single volume, are increasingly popular.

Monthly Record of Current Events.

UNITED STATES.

OUR Record closes on the 29th of October, four days previous to the Presidential election, the canvass for which has to a great extent occupied the public mind during the month. Long before these pages are read the result of the election will be decided.

It was conceded on both sides that the issue of the State elections to be held on the 13th of October in Pennsylvania, Ohio, Indiana, and Nebraska would give important indications of the vote for the Presidency. Each party professed perfect confidence in its ability to carry at least three of these four States. The Republicans succeeded in all, though by small majorities. In *Pennsylvania* General Hartranft, the Republican candidate for Auditor-General, the leading office now voted for, received a majority of not quite 10,000, in a total vote of about 653,000. The Legislature is Republican by a decided majority in both Houses, which insures a United States Senator of that party in place of Mr. Buckalew, whose term of office will soon close. There are one or two seats in the House which will be contested; but the Democrats will probably gain three or four members.—In *Indiana* the contest was still more close. Mr. Baker, the Republican candidate for Governor, having only about 1000 majority over Mr. Hendricks, now United States Senator from that State.—In *Ohio* the Republican majority was a little more than 17,000. In *Nebraska* the Republican majority was about 2500. Last year Pennsylvania and Ohio were carried by the Democrats by very small majorities. The Republicans this year carry them by majorities greatly less than those which they received in 1864.—In *West Virginia* the election took place on the 22d of October. The official returns are not complete, but the Republicans have probably a majority of about 5000.—In all these States each party charges that enormous frauds were committed by the other. It is certain that the number of persons naturalized in view of the coming election is large beyond all precedent. In the city of New York alone the number naturalized within a few weeks is nearly 30,000; and it is clear that in some of the Courts certificates of naturalization were granted without due investigation. It appears that many of these certificates, duly signed and sealed, were made out, leaving blanks for the names of the applicant and his voucher; and that these papers were sold in beer cellars for a mere nominal sum to any one who applied, upon assurance that they should be used for the Democratic party. One agent, who has been arrested, boasted that he had disposed of 5000 of these fraudulent certificates. It is understood upon all hands that a very large majority of the newly-naturalized citizens will cast their votes for the Democratic candidates.

The immediate effect of the elections of October 13 was a general conviction that the defeat of Seymour and Blair was inevitable. A strong effort was made to induce them to withdraw, in order that other names might be substituted. It was said that Mr. Blair's Brodhead letter had done great injury to the cause. The intent evi-

dently was to present Chief-Justice Chase as the candidate for the Presidency. Brief reflection, however, convinced the leaders of the party that any change of candidates at so late a day would insure inevitable defeat.

Mr. Seymour was induced to enter personally into the canvass, especially in those Western States which are considered at all doubtful, and upon whose vote the result of the election will depend. His speeches at different points were essentially the same. In form and manner they were courteous and dignified. The leading point in all was one entirely new in the canvass. It was an attack upon the financial policy of the Republican party, so far as it is embodied in the National Banking Law. He affirmed, in substance, that this system, wrong in itself, and to which he had interposed his veto as Governor of the State of New York, was also unfairly carried out to the great advantage of the East and the great detriment of the West. He said: "The people of New York had a great many bonds; New England had many bonds. The East made a great deal of money out of the war. You made some, but not as much. When this privilege" [that of issuing currency upon the security of national bonds] "was given out, they should have said, 'Here are all the great States of the West, which want currency because they do business with it, and they shall have it according to the rule of proportion.'" If this rule was departed from, according to Mr. Seymour, it should have been in favor of the West, because there business is done with currency, whereas at the East it is conducted mainly by means of checks. Illinois needed more currency than Massachusetts in proportion to population; but in fact Massachusetts had \$57,000,000, while Illinois, with twice the population, had only \$10,000,000. The result was that the people of the West had to borrow from the East at a heavy rate of interest, and thus the West has "to pay 10 or 12 per cent. interest, when in New York it is 5 or 6 per cent." Other topics were introduced into the several speeches of Mr. Seymour. The Reconstruction measures were declared to be wholly wrong in principle, and ineffectual in practice. The introduction of Senators in Congress from Southern States who did not fairly represent any constituency was a wrong, for, by way of example, "Two men sitting in the Senate of the United States from the State of Florida—one who went from the State of New York an unknown man, the other from some quarter who does not represent the white people of that State—not represent the negroes, because they do not know that there is a Senate—cast the same vote as the Senators from the great central States."—In one of his earlier speeches, by way of answering the objections raised against Mr. Blair's Brodhead letter, Mr. Seymour said that there could be no ground of alarm, since if he and Mr. Blair were elected, they would really be wholly devoid of power, the Republicans having a majority in Congress and the control of the army.

Mr. Blair also has made several speeches, the general tone of which is widely different from

those of Mr. Seymour. Perhaps the most significant of these was delivered at New York on the 28th of October. He said that the "Radical fanatics had devised infinitely worse treatment for the South than the British oppressors of Ireland had ever invented.....they had put the people of the South under the heel of their negroes." He reaffirmed what he had elsewhere said, that the Reconstruction Acts were unconstitutional, and therefore null and void. The Constitution gave no authority to establish military despotisms to take the place of civil Governments at the South. The gist of these Acts was to disfranchise 300,000 white men of the South, and confer the right of suffrage upon the negroes, "thus giving to the negroes the entire control of the Southern States." This disfranchisement, Mr. Blair averred, was of the nature of a bill of attainder, and could only be made after a fair legal trial. He illustrated the point by a reference to the case of the late Vice-President of the Confederacy. Mr. Stephens, in the Georgia Convention, made the most able speech ever delivered in favor of the Union. But the Convention was overawed by men armed with weapons seized by permission of the Government from the arsenals of the United States. Government failed to protect Mr. Stephens, and consequently had no claim to his allegiance; and therefore no jury could ever convict him of treason against the United States. Mr. Blair was quite willing that the Government should prosecute, and, if found guilty, punish, any man who was dangerous to the Republic. There was one man whose prosecution he would like to undertake. That man was Mr. Stanton, late Secretary of War. He, as Mr. Blair affirmed, encouraged Mr. A. G. Brown, then Senator from Mississippi, to go home and make war upon the Union. "After the war was ended," continued Mr. Blair, "Alexander H. Stephens fell into the hands of our forces, and was delivered over by Mr. Stanton, and was by him thrust into Fort Warren in Boston Harbor; and I would like to have a verdict of a jury to show on which side of the door stood the traitor when Stanton turned the key on Stephens." Mr. Blair then went on to speak of the affirmation which had been made that General Grant "had no policy." "I know him a heap better than that," said Mr. Blair; "he has a policy. His policy is to reach supreme dictatorial power in this country. If you think he has no policy you are dreadfully mistaken about him. It is mighty bad policy on our part to think he has no policy," and so on, the purport of all being that General Grant, if elected, would never leave the Presidential Chair so long as he lived, but would establish a permanent military despotism.—This speech, of which we have given mere abstracts of some of the leading points, was delivered within Tammany Hall, Mr. Blair closing it rather abruptly for the reason that he had of late over-exerted himself in speaking in the open air. He soon appeared at a stand out of doors, in order, as he said, to supply an omission in the speech which he had just made. This omission related to a charge of "Know-Nothingism" which had been made against him. This he denied most absolutely. "Every time that he had been

a candidate it had been his good fortune to beat a Know Nothing, and he should have to beat a Know Nothing this time." He then charged his immediate opponent with being a Know Nothing. He said, "The whole history of Schuyler Colfax is that he was vomited out of the stomach of a Know Nothing lodge into politics.If I wanted to set a trap to catch him with, I would bait it with a secret political society, and I would have him as sure as any old rat that was ever caught in a trap with a piece of roast cheese.....He is the very dad of the Know Nothing ticket, and I have a right to charge him with that crime."

Mr. Colfax has entered somewhat into the canvass; but General Grant has sedulously refrained from taking any part. After his letter accepting the nomination he put forth no statement of his views and proposed line of policy.

The general condition of the South remains very much disturbed. Outrages have rather increased in frequency during the month, and have assumed a graver character. Thus in *North Carolina* Governor Holden, October 7, wrote to General Miles, commanding in that district, that large quantities of arms had been received at various places, and distributed among the members of a political organization, these arms being Enfield rifles, and other weapons of a purely military character, and that there was every reason to believe that they were to be used for purposes hostile to the General Government and the peace of society. In case of a conflict, the civil authorities, after exhausting their power to preserve the peace, would call upon the Federal military, and he requests that these may be so posted as to afford the greatest practicable aid to the authorities.—General Miles replied that he had received reports, legally substantiated, to the same purport, and that he would lay the whole matter before General Meade, the Commander of the Department. General Meade subsequently issued an order directing that the United States forces should aid the civil authorities in preserving the peace.

In *Louisiana*, especially in New Orleans and its vicinity, serious disturbances have taken place. On the 26th of October Governor Warmouth telegraphed to the Secretary of War that the civil authorities were unable to preserve the peace in the parishes of Orleans, Jefferson, and St. Bernard. He, therefore, desired that the forces of the National Government should be employed for that purpose. The Secretary thereupon directed General Rousseau, commanding in that Department, to take such action as might be necessary to preserve the peace. On the 28th General Rousseau issued a proclamation stating these facts, and urging all good citizens to abstain from assembling in large bodies in the streets, and for the present prohibiting political processions and patrolling the streets by armed men. General Steedman was appointed temporary chief of police, with the assurance that in case of need the police would be supported by the military.

In *California*, on the 21st of October, several earthquake shocks of considerable violence were experienced. Much damage was done, especially in the neighborhood of San Francisco.

Editor's Drawer.

AND after him came next the chill December;
Yet he, through merry feasting which he made,
And great bonfires, did not the cold remember;
His Saviour's birth so much his mind did glad.
Upon a shaggy bearded goat he rode,
The same wherewith Dan Jove in tender years,
They say, was nourisht by the Idaen mayd;
And in his hand a broad deepe bowle he beares,
Of which he freely drinks an health to all his peers.

So wrote glorious old Edmund Spenser, two hundred and sixty years ago; and in his words doth the Drawer "freely drink an health to all his readers," and commend to them the pleasant things strung together for the Christmas month.

IN the recent debate in the House of Lords on the bill to disestablish the Irish Church, the speech of the Bishop of Oxford is acknowledged to have been the best delivered, having in largest measure the qualities of warmth, fervor, readiness, and spontaneity—if not, indeed, of wit and humor. Among his unepiscopal functions the Bishop possesses a rare talent for mimicry, and in quoting Lord Grenville imitated his ingenious and coaxing tones so exactly that even the noble earl joined in the laughter. "The unction," says the *London Review*, "with which he related the sardonic Dean of St. Patrick's theory about the Irish bishops was irresistible. The Bishop did not read the quotation, but gave it from memory—how that in Dean Swift's time the English Minister used to select the best possible man for an Irish bishop. Unhappily for poor Ireland the holy man, after his consecration, always set out in his chariot to travel down to the west coast. But as, by the laws of geography, he had to pass over Hounslow Heath, the highwaymen beset his cattle, murdered his servants, and pitched the bishop into a ditch. 'The captain of the highwaymen' (added the caustic Dean) 'then puts on his small-clothes and goes over to Ireland, where he acts as bishop in his stead.' It is true that the wit was the Dean's and not the Bishop's, but the loud and prolonged laughter was due in great part to the felicitous way in which the Bishop gave the apologue. The Conservative peers may have preferred the speech of Lord Derby, or Lord Salisbury, or the Lord Chancellor, but the favorite orator of the Peeresses' Gallery was certainly the Bishop of Oxford." The point will be better understood by the readers of the Drawer when told that the Bishop of Oxford's side is that which appointed "the best possible man for bishop," and that the "highwayman" is the man whom Gladstone would send over to fill the episcopal office.

THE anecdotes of General Houston published in late Numbers of the Drawer are attracting the attention of his friends. We are favored with several original ones, more or less amusing, from which we select the following:

During the first summer of the late war there lived in one of the sea-port towns of Texas a merchant named Stubbs, originally from the North, but for many years a resident of the Lone Star State. Anxious to appear entirely Southern, he allowed his heart to ignite early in the conflict, and became well known as a leading secessionist. When it became certain that a

blockading fleet would soon be off the town, several merchants, Stubbs included, prudently removed their goods to Houston for safety. After the first important battle of the war a negro belonging to Stubbs asked permission to make a brief visit to San Jacinto, which was granted, on condition that he should call on General Houston, and ask what he thought of the battle of Bull Run. The condition was accepted; the visit made. Before returning the man and brother approached the General and, with much bow and scrape, said: "If you please, Sah, massa Stubbs, Sah, wanted me to ax you, Sah, what you thought of de battle of Bull Run?" Old Sam slowly raised his eyes, and said: "He wants to know what I think of the battle of Bull Run? Tell him I think a good many Yankees were killed there, and a good many mean Yankees ran away, but I don't think any of them were as mean as he is, nor could run so fast, nor *knew when to start* as well as he does!" The negro delivered the answer, which was received standing and in silence. Old Sam, however, not satisfied with his message, added to it a conundrum, which rapidly circulated throughout the surrounding country: "Why is Stubbs like Washington?—Because he is first in war, first in peace, and *first in the heart of the country!*"

ON a certain occasion Hon. Alexander H. Stephens, of Georgia, was engaged in a political discussion with Hon. Benjamin F. Hill of that State, when the latter charged him with saying that he (Stephens) could eat Judge Cone for breakfast, himself (Mr. Hill) for dinner, and Governor Cobb for supper. To which Mr. Stephens quietly replied: "I never said it; but if I had, the arrangement of the meals would have been somewhat different. I should not have taken Mr. Hill at dinner, where he has placed himself, that being the heartiest meal of the day. In fact, I should prefer him for supper, in accordance with that wise rule of medicine which prescribes a *light diet* to sleep on!"

AT another time Mr. A. R. Wright, of Georgia, is said to have drawn the fire of the "great Georgian" in the following way. Mr. Stephens, at the time of the great Know-Nothing conflict in the South, was accompanied by a favorite dog named *Rio*, and the intelligent animal was almost as well known on the hustings as the statesman.

Mr. Wright, at the close of a political speech, turned to Mr. Stephens and said: "Sir, I demand a list of your appointments. I intend that the people shall have information. I want to know when and where you are to speak, for I intend to *dog* you all around this Congressional district."

"Then," retorted Mr. Stephens, pointing his long thin finger to his dog sleeping on the stand at his feet, and lifting his life-like voice to its highest note—"then I shall send *Rio* home. One *dog at a time* is enough!"

AMONG the thousands who have read the speech of Vice-President Stephens of Georgia against secession, made November 14, 1860, there are probably few who have heard of an

amusing incident that followed it. At the close of the speech the leader of the Opposition party, Hon. Robert Toombs, arose, and after complimenting Mr. Stephens as one of the purest of patriots, moved that the meeting give three cheers for him and adjourn, which was done. Governor Herschel V. Johnson, who was present, met Mr. Toombs on their return to the hotel, and said to him, in substance: "Sir, your action to-night, coming from so prominent a secessionist, deserves all praise, and I for one can not forbear to congratulate you upon such handsome conduct and admirable behavior."

Toombs put on that droll look which always precedes his best hits, and said, dryly, "Yes, I always behave myself at a funeral."

THE following incident occurred in Charleston, South Carolina: A little girl had lost her brother, and on going to school the next day a little playmate noticed her grief, and asked the cause. This was soon told, with the addition that little Willie had gone to heaven, and she could not see him. Her little friend asked if she was certain he was gone to heaven, and was assured that there could be no doubt of that, for mamma said so. "Then," was the instant rejoinder, "I know where heaven is, for I saw where they put him, and know the way." The little mourner had seen the place too, and not knowing the way she started with her guide as soon as the infant-school was dismissed. It was late at night, and the earth was wet with those angel tears, the dew drops, when the two friends were found crying at the grave—because, as the sister said, "They had come to the door of heaven, and Willie would not let them in, nor even answer."

DR. MONTGOMERY, of the Harrodsburg (Kentucky) Presbyterian Church, had a little boy as pretty as he was intelligent. His mother, like all mothers, was proud enough of her little prodigy in short dresses, and liked to show off his acquirements before visitors. On one occasion he was up for inspection before some lady callers, and his mother put the usual Catechism question, "Who made you?" Reverently little Jimmy folded his hands as at prayer, and raised his eyes as birds do when "saying grace" after drinking; and then the answer came, "Dod makes and p'eserves us;" and instantly added, "Dood Dod to make p'eserves for us; ain't he, mamma?" Children understand sweetmeats sooner than they do the Catechism.

Is there extant a boy—be he boy of fifty or boy of ten—who will not appreciate the grim humor of the following advertisement, which, under the head of "Instruction," we copy from the New York Daily *Times* of August 10:

FLUSHING INSTITUTE.

DEAR BOYS,—TROUBLE BEGINS SEPT. 15.

E. A. FAIRCHILD.

Ah! *didn't* it?

WHEN Miss Logan, the charming actress, was in the South, her manager happened to be a veritable cockney, with a chronic habit of omitting his *h*'s where they should be, and inserting them where they should not be, as "art" for "heart," "hedge" for "edge," and the like. On arriving

one evening at a new place Miss Logan was indignant at finding that no room had been prepared for her, and said as much. Whereupon the manager bawled out at the top of his voice: "Miss Logan's room is hell! Here, boy, make a fire in hell, and put Miss Logan in there!" The good-humor of the lady was at once restored; for she knew that he referred to the room marked on the door with a capital "L."

AN overgrown political opponent once undertook to sneer at the diminutive size of Mr. A. H. Stephens, and said, "I could put a little salad oil on you, and swallow you whole." To which Mr. Stephens at once replied, "And if you did you would have more brains in your bowels than you ever had in your head."

THE etiquette of the bar-room in Colorado may be inferred from the following notice, posted in a saloon in that Territory, and forwarded by a correspondent for Eastern enlightenment:

"NOTICE.—No one is allowed to remain in the hall longer than five minutes without taking a drink, or in the sitting-room ten minutes without doing likewise. Any one refusing to drink will be kicked out. No gentlemen are expected to eat the lemon-peel in their cocktails, and those who do so will not have any more in future, and will *not* be considered gentlemen."

BANKERS must have their little jocularities as well as other people. Some years ago the President of one of the oldest banking institutions of Western New York was called upon to discount a note signed by Mr. G—, a member of the Universalist church, and Mr. M—, of the Presbyterian church. The note was handed to the President, who, after scanning it closely, passed it to the cashier, saying, "Signed by Universal Salvation and Universal Damnation: I reckon *that's* safe enough; we'll take it."

THE gigantic failure of the Marquis of Hastings on the English turf, and the disgusting immoralities of the racing men of England, have been capitally hit off by *Punch* in the following

WAIL BY A SMALL "BOOKMAKER."

I ain't a member of Tattersall's,
But I ventured my pound or so
At a bookmaker's 'ouse in the Boro',
As gentility might term low.
I lost my pound, and the gent
Was took afore the beak;
To prison of course he's sent
For four-and-twenty week.

It's wrong for to venture small,
It's right for to venture large:
It seems all square for the rich and sich
What never gets given in charge.
You may book the bet of a Bart or Duke,
Not of cads and snobs and tykes;
For there's one lor for the Hearl of Fluke,
And another for Villiam Sykes.

THIS of Tom Corwin by a Columbus correspondent: Some one asked Mr. Corwin if he had heard a certain story of Lewis D. Campbell's.

"Was it about himself?" inquired Corwin.

"No, I believe not."

"Well, then, I never heard it," said Mr. C., gravely.

THE pardonable aversion to bomb-shells entertained by fond mothers who, through the papers, were made acquainted with their awfully

destructive explosions, was strongly felt by a good woman at a place called Lewis's Island, in Maine, who, seeing a huge object moving rapidly high in mid air, cried out to her brood of little responsables, "Come in, children, for Heaven's sake; come in *quick!* there's an awful big bomb-shell coming from the South!" It was Professor Wise, who in his mammoth balloon had made an ascension from Bangor on the ever-memorable Fourth.

BOSTON is celebrated for its monument to the lamented Mr. Bunker Hill, Providence for Roger Williams, Philadelphia for its butter and Quakers, New York for its curiously constructed "rings," and Hartford, as we now learn from the excellent Mr. Twain (Mark), for its Charter Oak. Mr. T. has visited Hartford. He saw the Oak. Likewise heard it spoken of. He says:

I went all over Hartford with a citizen whose ancestors came over with the Pilgrims in the *Quaker City*—in the *Mayflower* I should say—and he showed me all the historic relics of Hartford. He showed me a beautiful carved chair in the Senate chamber, where the bewigged and awfully homely old-time governors of the Commonwealth frown from their canvas overhead. "Made from Charter Oak," he said. I gazed upon it with inexpressible solitude. He showed me another carved chair in the House. "Charter Oak," he said. I gazed again with interest. Then he looked at the rusty, stained, and famous old Charter, and presently I turned to move away. But he solemnly drew me back and pointed to the frame. "Charter Oak," said he. I worshiped. We went down to Wadsworth's Athenæum, and I wanted to look at the pictures; but he conveyed me silently to a corner, and pointed to a log rudely shaped somewhat like a chair, and whispered "Charter Oak." I exhibited the accustomed reverence. He showed me a walking-stick, needle-case, a dog-collar, a three-legged stool, a boot-jack, a dinner-table, a ten-pin alley, a tooth-picker—

I interrupted him and said, "Never mind—we'll bunch the whole lumber-yard, and call it—"

"Charter Oak," he said.

"Well," I said, "now let us go and see some Charter Oak for a change."

I meant that for a joke; but how was he to know that, being a stranger? He took me around and showed me Charter Oak enough to build a plank-road from here to Great Salt Lake City. It is a shame to confess it, but I began to get a little weary of Charter Oak finally: and when he invited me to go home with him to tea, it filled me with a blessed sense of relief. He introduced me to his wife, and they left me alone a moment to amuse myself with their little boy. I said, in a grave, paternal way,

"My son, what is your name?"

And he said, "Charter Oak Johnson."

This was sufficient for a sensitive nature like mine. I departed out of that mansion without another word.

A CORRESPONDENT at Galveston, Texas, in alluding to our inquiry as to the authorship of the saying, "Much may be done with a Scotchman if he be caught young," remarks that it was said of Lord Mansfield by Doctor Johnson, and adds: The connection in which it is told may be worth

repeating. Lord Mansfield, having received his education in England, always considered himself an Englishman; but his Scotch origin was once referred to with great effect. General Sabine, Governor of Gibraltar, failing in extorting money from a Jew, sent him back by force to Tetuan, in Barbary, from whence he had come to Gibraltar. The Jew afterward came to England, and sued the Governor for damages. Murray (not yet Lord Mansfield) was counsel for the Governor, and said in his defense before the jury:

"True, the Jew was banished; but to where? Why, to the place of his nativity. Where is the cruelty, where the hardship, where the injustice of banishing a man to his own country?"

Mr. Norvell, who appeared for the Jew, retorted: "Since my learned friend thinks so lightly of this matter, I would just ask him to suppose the case his own: would *he* like to be banished to *his* native land?"

The court rang with peals of laughter, in which Murray himself joined.

Doctor Johnson would never allow that Scotland derived any credit from Lord Mansfield, as he was educated in England, and then added what has passed into a historical witticism—"Much may be done with a Scotchman if he be caught young."

APPROPOS to Lord Mansfield's banishment. In early Texas legal history, a Mrs. M—— was convicted of forgery, and sentenced to death—then the legal penalty for that crime. There was at once a general feeling of repugnance at the capital punishment of a woman, especially for such an offense; but there was also a general desire to rid the country of the convict, who was a very notorious character; and President Lamar offered her a pardon provided she would go back to Arkansas, from which State she had removed, and never return to Texas. She peremptorily refused, and is said to have answered, "H—itself before Arkansas!" The President was obliged to pardon her unconditionally.

MR. E. HANNAFORD, of Cincinnati, has recently published on the subscription plan a clever book, in which is narrated the services performed during the war by the Sixth Ohio Regiment. It contains here and there an anecdote, hitherto unpublished, showing the humorous side of war. We reproduce four:

Mr. E. A. Pollard, in his "Lost Cause," when speaking of the Confederate defeat at Missionary Ridge in November, 1863, quotes a humorous repartee of a Confederate soldier. "A brigade," says Mr. Pollard, "in the centre gave way, and in a few moments what had been a regular and vigorous battle became a disgraceful panic and an unmitigated rout. Never was victory plucked so easily from a position so strong..... General Bragg attempted to rally the broken troops; he advanced into the fire, and exclaimed, 'Here is your commander!' but was answered with the derisive shouts of an absurd catch-phrase in the army, 'Here's your mule!'"

IN the olden time, when planters were less thoughtful for the spiritual than for the corporeal health of their slaves, Colonel Ramsey saw his "boy" Dan (aged forty) going one morning, Bible in hand, to church. Knowing that Dan

was not a person with strong literary proclivities, the Colonel said: "What are you doing with that Bible, Dan?—you can't read it?"

"No, massa, can't zack'ly read 'em, but I c'n spell 'em out a little."

"What's the use of spelling it out? You can't understand it, any way. The Bible, for instance, says that 'the very hairs of our head are numbered.' Now you haven't any hair on your head—nothing but wool. What do you say to that?"

"Yes, massa, I 'spect dat's so; but I spell out little verse w'ich say dat on las' day de sheep dey will go one side and de goats on de toddler. Now de *sheep* has de *wool*, but de *goats* dey got *ha'r*, *jus' like white folks*, and I 'spect dey ain't gwine to be saved—dat's w'at I 'spect!"

DURING the march of the Sixth Ohio Regiment from Cripple Creek to the Chickamauga the soldiers were compelled to sleep in that most uncomfortable of all shelters, a "dog tent"—so called from its capacity to hold about one ordinary dog. The successes of Rosecrans were bringing the campaign to a conclusion. In the Confederate army there seemed to be a growing dissatisfaction and consciousness of weakness—such, in fact, as induced many hundreds of Tennesseans to desert and return to their former homes. The mistake was not unnatural, therefore, when Rosecrans's men pronounced the war in Tennessee "about played out;" or, as a staff-officer in the Sixth Ohio expressed it, by a pun of unmitigated atrocity, it ~~was~~ "about ended to all *in-tents* and *purp-houses*!"

APROPOS of the terrible earthquakes in South America, we have to tell a story which will serve to illustrate the comic features of even so terrible a scene:

Just before the departure of the Hon. Anson Burlingame for China, some years ago, he was closeted with Mr. Van Valkenburg, Minister to Japan (the same who has since distinguished himself in maintaining foreign foothold in Osaka); Colonel Buckley, Chief Engineer of the Siberian Telegraph Company (the same who has since given us a correct estimate of the value of Alaska); and Colonel Thomas M. Knox (the same who has since given the readers of this Magazine an entertaining account of his travels on the Amoor and through Siberia, and who is still to tell his story of a thirty-six hundred mile sleigh-ride through *White Russia*), engaged in a game of "High, low, Jack, and the game." Fred Macrellish and Will Woodward, proprietors of the *Alta Californian* (since and *always* distinguished as "jolly good fellows"), were engaged in watching the game. Knox had been indulging Macrellish, during the intervals of the game, with an account of his horror of earthquakes, and his fear that if one should happen (eight or ten visit San Francisco every year) his two hundred pounds would be the first to suffer. Macrellish endeavored to quiet his fears by hoping that he would have an opportunity of enjoying one before he sailed. Shortly after the pictures and looking-glasses hanging on the wall began to shake and rattle; the glass and the pitcher of ice-water on the card-table jingled together, and "those who were seated" felt the floor moving beneath them in a most intoxicating manner.

"There!" said Macrellish, "there, Tom—

there's one of those infernal earthquakes. Play the ace! play the ace, Tom! catch Jack sure."

And sure enough "Jack" was caught in spite of bad playing and earthquakes too.

JOHN SAVAGE, Esquire, has spoken in glowing terms of the appearance of Alexander H. Stephens before the Commercial Convention at Charleston, South Carolina, in the year 1839; but there is an incident of that visit to the "city between the rivers" which he does not give. Mr. Stephens was accompanied by two merchants (Mr. Thomas Chafin and Dr. John M. Anthony), who were his personal friends, and together they sought the hotel kept by a kind but very energetic woman. Mr. Stephens was then, as always, of feeble health, and being fatigued, availed himself of a comfortable sofa or lounge to make the situation as easy as possible. Just then the landlady came in, and found the two merchants still standing, while some one, whom she took for a country boy, occupied the easy lounge. Her manner was perfectly kind, and somewhat patronizing, as she said to him, "My son, you must let the *gentlemen* have this seat."

The "gentlemen" were amused, and the good lady somewhat troubled when she afterward found that her "son" was the important personage of her house, and the lion of the whole city.

MANY good things have been published as the sayings of Judge Dooly, of Georgia, but the following is, so far as we know, new to the types.

His residence was approached by a long lane, some mile and a quarter in length, leading through the plantation, and far from comfortable on the burning August day of the incident. A neighbor, possessed of more lungs than brain, rode down this lane, and without dismounting at the yard gate, some five hundred feet from the dwelling, he began to call aloud and wave his hat, as if a house was on fire. Judge Dooly came out in great haste to learn the cause of the noise, and was saluted with, "I say, you haven't seen Mr. Williams about here to-day, have you?"

"No," said the Judge.

"Well, that's all I wanted," said the fellow, as he rode off.

Dooly waited until he was nearly out of sight up the long lane, and then commenced to blow a horn which hung in the porch; and when the horseman turned to see what it was the Judge in turn began to beckon with his arms, and shout for him to return, which he did at full speed. Arriving again at the yard gate, Dooly called out to him, "Come up here, I want to speak to you!" So the man dismounted, and came up to the porch. The Judge paused in his walk, and said, fiercely:

"No, Sir! I have not seen Mr. Williams, and hang me if I want to see him! That's all, Sir: you can go now."

HON. GARNETT ANDREWS, of Georgia, tells of another occasion in which he was the victim of Dooly's wit.

It seems that Judge Dooly had conceived the idea that young Andrews, then only an attorney, was quite too *slow* for a business man. At one of the County Court sessions some of the bar, including the Judge, were congregated to eat water-melons. When the supply on hand was exhaust-

ed, without satisfying the general desire for the ice-cold fruit, Mr. Andrews volunteered to go across the square and get another one.

"No, don't go," piped the Judge in his shrillest tones; "don't go; it would be *dead ripe* before you got back."

JUDGE ANDREWS also tells of another occasion when, to use a Southern phrase, he was "taken down" by one of his audience during a political address. He was a candidate for Governor of his State, and was explaining to the large crowd how his friends had pressed him to be a candidate, and that the office was seeking him, and that he was not seeking the office.

"In fact," exclaimed he, "the office of Governor has been *following* me for the last ten years!"

Just then a tall countryman in the audience arose and shouted, "But here's yer consolation, Judge: you're gainin' on it all the time, and it will never catch you!"

The prophecy was literally fulfilled.

OUR Southern friend to whom we are indebted for the anecdotes of Alexander H. Stephens sends us the following epitaph, copied from a grave-stone in Union District, South Carolina:

"Here lies the body of Robert Gordin;
Mouth almighty and teeth accordin:
Stranger, tread lightly over this wonder;
If he opens his mouth, you're gone, by thunder!"

This reference to the upper part of Robert's body reminds us of an epitaph on a good woman whose death was caused by ailment lower down:

"Here lies the body of Betty Bowden,
Who would live longer, but she cou'den;
Sorrow and grief made her decay,
Till her bad leg carr'd her away."

How will this do on a disreputable subject of the British crown?

"Here lies William Smith; and what is somewhat rarish,
He was born, bred, and hanged in this here parish."

Or this, on a Mr. Bywater? (By-the-way, we think all these are entirely new to readers of the *Drawer*.)

"Here lies the remains of his relatives' pride:
Bywater he lived, and by water he died;
Though by water he fell, yet by water he'll rise,
By water baptismal attaining the skies."

Or this, which is commendably exact as to the age of the parties?

"Here lies Donald and his wife,
Janet Mac Fee:
Aged 40 hee,
And 30 shee."

Or yet this, which being upon an editor, is especially commended for "copy" to the brethren who propose to notice this Number of the *Magazine*?

"Here lies an Editor!
Snooks if you will;
In mercy, kind Providence,
Let him *lie still*.
He *lied* for his living; so
He lived while he *lied*;
When he could not *lie longer*,
He *lied* down and died."

On a certain occasion Judge Underwood (not

Hon. J. W. H. Underwood, but his father) was engaged to defend some lawsuit in Upper Alabama; and the point of this story lies in the fact that Georgia had just removed the *savage tribes* of the Cherokee Indians from her mountain counties.

At an early stage of the case the Georgia Judge saw a weak place in the pleadings, and by a few appropriate words so opened it that it was soon evident to the presiding Justice and the most of the bar that his point was fatal to the suit. It so happened that a young Alabama lawyer, who was the opposing counsel, did not see the point, nor appreciate its power. Therefore, in his reply, instead of endeavoring to weaken it or overthrow it, he attempted to make sport of what he termed "the Georgia lawyer." His intended severity was closed by the recommendation that the *Georgia lawyer* had best reserve such points as that to make before his own home courts, but not attempt to play Georgia tricks before an Alabama bar.

Judge Underwood then arose, and after quietly restating his point in a few words, turned suddenly on the young man with this retort: "And as for my very *young* friend, who advises me to keep my Georgia law at home, I would simply remark, for his information, that Georgia ultimately extends her jurisdiction over all *neighboring savage tribes*."

SYDNEY SMITH, in his celebrated Peter Plymley letters, affords a notable illustration of the powers of rhetoric in written eloquence. As instance this passage, *apropos* of the English Embargo Act—by which, among other things, drugs were for the moment excluded from France: "Such a project is well worthy the statesman who would bring the French to reason by keeping them without rhubarb, and exhibit to mankind the awful spectacle of a nation deprived of neutral salts. This is not the dream of a wild apothecary indulging in his own opium; this is not the distempered fancy of a pounder of drugs, delirious from smallness of profits; but it is the sober, deliberate, and systematic scheme of a man to whom the public safety is intrusted, and whose appointment is considered by many as a master-piece of political sagacity. What a sublime thought, that no purge can now be taken between the Weser and the Garonne; that the bustling pestle is still, the canorous mortar mute; and the bowels of mankind locked up for fourteen degrees of latitude! When, I should be curious to know, were all the powers of crudity and flatulence fully explained to his Majesty's Ministers? At what period was this great plan of conquest and constipation fully developed? In whose mind was the idea of destroying the pride and the plasters of France first engendered? Without castor-oil they might for some months, to be sure, have carried on a lingering war; but can they do without bark? Will the people live under a government where antimonial powders can not be procured? Will they bear the loss of mercury? There's the rub! Depend upon it, the absence of the *materia medica* will soon bring them to their senses, and the cry of *Bourbon and bolus* burst from the Baltic to the Mediterranean!"

HARPER'S NEW MONTHLY MAGAZINE.

No. CCXXIV.—JANUARY, 1869.—VOL. XXXVIII.

THE SILENT CITY AT GREENWOOD.

SHIPS SAIL PAST THIS SILENT CITY, BUT THEIR OWNERS QUIET LIE.

I.

THERE'S a city vast yet voiceless, growing ever street on street,
Whither friends with friends e'er meeting, ever meeting never greet;
And where rivals fierce and vengeful calm and silent mutely meet:
Never greeting ever meet.

II.

There are traders without traffic, merchants without books or gains;
Tender brides in new-made chambers, where the trickling water stains;
Where the guests forget to come, and strange, listening silence reigns:
Listening silence ever reigns.

III.

Ships sail past this silent city, but their owners quiet lie,
And no signals fly from top-tree 'gainst the glowing, crimson sky,
Telling the neglectful owner that his well-built Argosy
For the Fleece is sailing by.

Entered according to Act of Congress, in the year 1868, by Harper and Brothers, in the Clerk's Office of the District Court of the United States, for the Southern District of New York.

VOL. XXXVIII.—No. 224.—10

IV.

Here the belle forgets the fashions, mindless of her snow-white dress;
 All unheeded now her toilet, free, ungathered lock and tress;
 None here flatter face or figure, none come fondly to caress:
 Tresses flow and none caress.

V.

Hushed are all these many mansions, barred and bolted door and gate;
 Narrow all the walls and earthy, and the roof-trees steep and straight;
 Room for all!—the high and lowly. Rich and poor here equal mate;
 Equal dwell and equal mate.

VI.

Flowers are blooming near these mansions, kissed by loving dew's at night;
 Breathing softly round their porches, flowing through the cooling light;
 Pealing from their bells sweet music, pealing odors pure and white:
 Pealing only to the night.

VII.

Here each keeps his well-ceiled dwelling, fearing naught of quarter-day;
 Here no landlord duns the tenant, and no tenant moves away;
 Dwelling ever unevicted, dwelling on from May to May:
 Paying never quarter-day.

VIII.

Beckons ever this mute city to its comrade living gay;
 To its comrade laughing loudly, sitting on the pulsing bay;
 Drawing from its masqueraders pale, white spectres day by day:
 Spectres now, men yesterday.

IX.

Thus two cities grow forever, parted by a narrow tide,
 This the shadow, that the substance, growing by each other's side;
 Gliding one into the other, and for evermore shall glide:
 Growing ever side by side.

FLOWERS ARE BLOOMING NEAR THESE MANSIONS, KISSED BY LOVING DEWS AT NIGHT.

THE BUFFALO RANGE.

BY THEODORE R. DAVIS. ILLUSTRATED BY THE AUTHOR.

THE HERD LEADER.

THE American bison, or buffalo, as the animal is here familiarly designated, differs in very many prominent points from the European bison and the Indian buffalo of Asia and Africa. It has a pair of ribs more than the European bison, and two pair more than the domestic ox. The limbs and tail of the American bison are much shorter than those of any of the bison species, unless, indeed, we except the musk-ox, which inhabits the coldest regions of this continent.

A somewhat extended investigation leads me to believe that the bison once ranged as far east as the Atlantic sea-board in Virginia and the Carolinas, but there is no evidence that they ever reached points to the east of the Hudson River or Lake Champlain.

From Catesby we learn that about the year 1712 herds of buffalo were to be seen within thirty miles of Charleston, South Carolina. At present, however, if one desires to do buffalo hunting he must journey something like

two thousand miles westward from the Atlantic coast. A few English gentlemen recently undertook a buffalo hunt among the Catskill Mountains, and in the neighborhood of Covington, Kentucky, but in each case failed to find the game of which they were in quest. These gentlemen should now go to Leavenworth, Kansas, and from thence proceed west by the Union Pacific Railroad, Eastern Division, or, as it is familiarly known in the Western country, "the Smoky Route." Then they may find the buffalo herds, hunt them, and perhaps be hunted by them too, if they prove no better buffalo hunters than some of the Britons that I have seen scutter away chased by a wounded bull. Neither will the party need the permit which an English gentleman who had journeyed across the Atlantic in quest of sport was anxious to obtain. Could any thing be more absurd to an American than to have, as once I did, a person ask, "Ah, and could you favor me with the person's name who would kindly furnish me with a permit to hunt the buffalo? Are they carefully preserved? They should be."

The best hunting-ground at present will be found between the Republican and Arkansas rivers. For days I have traveled pony-back over this section of the Plains, when at any moment I could glance in some direction and look upon vast herds of buffalo. There may be some little objection to this hunting-ground arising from the fact that it is the favorite one of the most unreliable Indians that range the Plains, and you are safe only so long as you are not discovered by these same aborigines.

From the last of July until the first of September the buffaloes are engaged in settling family matters for the year to come. The bulls fight viciously, and are attended during these

combats by an admiring concourse of wolves, who are ever ready to come in at the death of either of the combatants, or will even take a chance in and finish any killing that has been imperfectly done.

It is at this season, too, that the young bulls promote themselves, by establishing a retiring board and driving the old and useless officers out of the herd. This expulsion is final, as after being thus driven out the old bulls wander singly or in small bands over the Plains. At times they may tarry in the vicinity of a herd, but I have never known them to join one permanently.

The leader of a buffalo herd is generally a splendid-looking young bull, who, having fought himself into his position, holds himself ready to maintain his rank by the same prowess that has gained it. This party, it may be needless to remark, has now and then a fight on his hands, or may be, to speak very correctly, horns.

The buffalo cow carries its calf eleven months, July being in Indian parlance "the moon of heat and buffalo pappoose." The buffalo continues to grow until it is seven or eight years old, and ordinarily lives, if unmolested, to reach the age of twenty-five or thirty years. I once saw a buffalo killed (by a green hunter) which, judging from the rings upon the horns and other signs of age, must have been nearly if not quite fifty years old. The meat, I may remark, was a little tough.

The average gross weight of grown bulls is about twenty-five hundred pounds. I once killed a buffalo that weighed over three thousand pounds gross. Old bulls are not often killed by the experienced hunter, as the beef of the younger members of the herd is far preferable as food, it being more tender and free

YOUNG BUFFALO COW AND CALF

THE HERD MOVING TOWARD WATER.

from the decidedly disagreeable and rank flavor noticeable in the tough old bull-beef that novices are apt to select as their game.

The young calf is very light in color. This changes and deepens as fall gives way to winter, and the chill, keen winds of the Plains begin their frosty song, "More hair, more hair." Will Comstock used to aver this to be the burden of the music of the breezes; "for," he would say, "don't you see how quickly the Indian beef puts on his thick coat? That is undoubtedly the reason why he does it." During the winter season the hair is of a rich brown color. This coat of hair is shed from the flanks and sides, as well as considerably thinned out about the head and shoulders, during the next summer; and the fall of the second year sees it darker and more luxuriant than during the season previous. Once past the prime of life and the hair becomes tinged with a rusty brown. Will Comstock used to designate these as "old moss-backs," which could not carry any of his lead, and might be good coyote bait, but not the kind that he bit at if he had any choice in the matter. But the tongues, tender-loin, and hump of such a buffalo are not to be despised, and the rest of the beef would not be considered tough by the frequenters of some of the restaurants of Gotham.

A few months since passengers on the way to Denver and Salt Lake, by the Smoky Hill route, had frequent opportunities of seeing herds of buffalo from the cars of the Union Pacific Railroad, and on several occasions the buffalo were

sufficiently close to the trains to be killed by shots from the car windows and platforms; the engineer being accommodating enough to slow the locomotive sufficiently to keep pace with the buffalo, which were seemingly engaged in a race with the iron horse. When buffalo were killed the train was stopped, the game secured being granted a free ride in the baggage-car. It would seem to be hardly possible to imagine a more novel sight than a small band of buffalo loping along within a few hundred feet of a railroad train in rapid motion, while the passengers are engaged in shooting, from every available window, with rifles, carbines, and revolvers. An American scene, certainly.

The feeding-ground of the buffalo is usually located at some distance from the streams at which they quench their thirst. If undisturbed, the buffalo frequently graze for days in the same vicinity, moving once each day, usually at evening, toward the water. At this time it is a picturesque sight to see them; each band is being led by its chief, and the whole herd by "a leader." Flankers are thrown out; the cows and calves are in the centre of the herd, which moves slowly. Many of the buffalo are formed in lines of greater or less numbers. Their heads are down, frequently so low that the long, matted beard drags and brushes the ground. They seem satisfied that the sentinels are doing their duty, and that any sign of danger would be quickly noted and signaled to the herd.

Some hunters have told me that the buffalo is supplied with a sort of internal reservoir, by

THE STINKING WATER.

means of which they are enabled to travel long distances away from water without suffering inconvenience from thirst; also that a person perishing from thirst may, by killing the buffalo and having recourse to this spring, find the much-needed supply of water. I can not vouch for the truth of this, as I have never seen such a method resorted to for quenching thirst. I have noticed, while cutting up a buffalo, that there seemed to me to be a somewhat different internal arrangement from that observable in a bullock. I might say, too, that I have never used my hunting-knife on a buffalo as a means of securing information, food being the inviolable object of my search.

The smaller water-courses of the Plains are mostly found to run through deeply-cut banks. This makes it difficult to reach the water except in occasional marshy places, where the mud is deep, and in some places seemingly bottomless. Such a stream is the "Stinking Water," one of the small rivers emptying into the Republican. The name was conferred by the Indians, who have more than once been forced to abandon a camp-ground on this river on account of the offensiveness of the water, caused by the decaying carcasses of buffalo that had been mired in the mud and there died. At a point where I once crossed the skeletons of buffalo lay strewn about as thickly as if the spot had been used as

A HERD AMONG THE BREAKS.

an abattoir. Will Comstock was sure that it was bad "medicine" (luck) to camp on the Stinking Water, and I expect that some troopers who tarried there once thought so too, for those among them who drank the water were made decidedly uncomfortable by so doing. Hundreds of buffalo perish each year in such places as this stinking water, for an accessible crossing-place is difficult to find, and when discovered is almost invariably similar to this crossing of the badly-named stream.

The character of the Plains is, I find, almost invariably misunderstood by persons who have not obtained any

very particular information with reference to these vast oceans of land. It is seldom that one meets with any stretch of country that might be designated with any truth as a prairie. Back from the water-courses the land lies in great billows, rising one above the other to a crest known technically as a "divide." This is simply the highest point of land between two water-courses. The "cañon" is met with on the Plains; it is, however, a term generally used to designate a pass or gulch in the mountains. The breaks of the Plains will be found to be picturesquely wonderful.

In journeying north from the Republican to the Platte River, one must have a good knowledge of the country and the trails, or he will certainly find, when he reaches a point within from six to ten miles of the Platte River, that he is in the most broken country that is to be found on this continent, without a trail by which to travel. The buffalo trails are the surest guides through the breaks. Though they follow a sinuous course, they are pretty certain to lead to a cañon which, if followed, will bring you to the broad meadows through which the Platte has its course.

I do not wish to be understood as saying that the country through which the Platte flows is all of this conformation, but the Buffalo Range is as I have described; and a single herd of buffalo will frequently occupy two or three days in moving through the breaks of the Platte, traveling always by the most favorable route.

The Indians seem well aware of this fact, for in moving their villages they make use of the stream-crossings used by the buffalo, knowing that by so doing they travel by the most convenient route.

It seems to be a very general impression that Indians can go to any portion of the Plains by a direct route. Unencumbered with the village, a war party will move with great rapidity and in any direction; but to move the village is quite another question. The tent-poles must

be transported, and these can only be carried by fastening them on each side of the ponies and permitting one end to drag. On these ends the Indian fastens great wicker baskets, which serve him for the transportation of all manner of things. With this load the pony must have a good stream-crossing, and such a thing is not frequently found on some of the rivers of the Plains.

Persons who have never seen the vast herds of buffalo moving can have but little conception of the almost irresistible power of such a living mass, and the difficulty of turning or breaking the herd when once it is in motion on a certain course. The countless thousands press forward, overwhelming any but the strongest barrier. Wagons have been overturned in this way, and teamsters have saved themselves and the stock only by flight.

An army officer who with a strong force crossed the Plains by the Smoky Hill route in 1865 was forced to "corral" his train of wagons and order his men to fire volleys into a herd which threatened to march over his train. This is, however, infrequent. A party may be on the Plains, or even on the Buffalo Range, for years and never see it; still such instances have occurred.

I have frequently been amused at the calculations made by wise old hunters whom one finds on the Range. They settle within a million or so the exact number of buffalo that are yet wandering about. One old fellow is convinced that there is something like seventeen millions, and that this is the exact number required to keep up the present stock. The buffalo is certainly decreasing since 1858. They have been pressed more than a hundred miles west in Kansas and Nebraska. They no longer range up to the Platte in the great numbers that formerly visited that stream; and the Indians are ever bringing forward the fact, in their powwows with commissioners, that soon the buffalo will be gone, and the red brother must keep peace with the white and eat his "spotted buffalo"

BREAKING A HERD.

A BATTLE FOR LIFE.

(Indian for domestic cattle). I am tempted to remark that they do eat a very considerable number of spotted buffalo that are not procured in a very brotherly way; and no Indian is complete in his outfit until he has a cow-skin (hair on) bow-case and arrow-quiver. If, as the Indian fears—groundlessly, however, at present—the buffalo will pass away, I am at a loss to know what he would do, for the buffalo feeds, clothes, and warms the nomads. The flesh being used as food, either fresh or sundried. The skin is used as clothing, blankets, and, with the hair removed, becomes the best material out of which to manufacture the tents or “tepes,” and the “*bois de vache*” is as good fuel as the Indian asks for. In fact, there is scarcely a manufactured article that the aborigine uses but what one may discover that some portion of the buffalo has been used in the construction of it. Certainly the redskin must feel something like consternation as he sees the buffalo become year by year less plenty.

It is commonly supposed that it is the white man only who kills and wastes buffalo. I do not think that this is entirely the case, as an Indian is not always particular about using all the meat that is killed. Buffalo are frequently killed by Indian war-parties, who take what may be needed as food, but the rest of the carcass falls to the lot of the wolves and ravens, that are sure to be ready to take such leavings of the Indians. Many of the young buffalo fall prey to the hungry gray wolves and coyotes, and a sick or wounded buffalo is sure to have a numerous body of attendant wolves, all ready to speed the

lame one on until he falls tired and, no longer able to protect himself, an easy victim to his famished funeral procession.

During the winter storms on the Range the wolves are frequently starved into bravery; then, and not until then, they attack the solitary bulls that wander from cañon to cañon in search of forage. It must not be imagined that the wolves partake of this feast without a severe fight, for the old bull will fight furiously, and several wolves are placed out of the fight before the bull is conquered and killed.

Now comes a verification of the old adage, a little changed, maybe, but still pertinent, “To the brave belongs the *fare*,” for the big wolf takes the first seat, and fails to extend any invite to the wolves of lesser size and pluck, until his wolfship has quite satisfied the cravings of his starved system; even then the invite might be considered somewhat doubtful, as the feeding of the smaller coyote is accompanied by occasional sharp snaps from the gray wolves, which have remained just near enough to render a meal at the second table a somewhat lively affair.

That the buffalo is fast disappearing there is certainly no reason to doubt. The Indians tell you that the herds are less numerous; the “rancher” vouches the same fact; the trader has raised the price of the robe; and many of the eastern trails are “mossed over” from disuse. The Indians and buffalo are moved about as far to the west as they can well go.

As a usual thing if you hunt buffalo you may consider the fact certain that you are in the “In-

dian country," and it is a well-known fact that our aboriginal nomad will kill his white brother if the opportunity offered is a good one. So don't venture too far from the government post or ranch without a sufficient escort to fight if need be. Not but what you may go on fifty buffalo hunts without even seeing an Indian; but don't tempt him too far, for flesh is weak, and the red baby must be made familiar with the different varieties of hair, and blonde tresses are highly prized among the tepes.

Of the various methods of hunting buffalo, the true sportsman will not hesitate to pronounce in favor of that usually adopted by our cavalry officers and the best hunters among the frontiersmen. This is known as "running buffalo," in which, to be successful, the hunter must be a good horseman and a cool and steady shot, with either carbine or revolver; the revolver being the preferable arm from its greater convenience in handling. Your mount must be fleet and courageous; in fact, a "buffalo-horse." The Indians mark such animals by a short slit in the top of each ear.

General Lander was, I think, the best buffalo hunter that I ever saw. Mounting an unsaddled pony—a lariat served him as bridle—he would dash among a herd of buffalo. He was the best two-handed shot that I ever saw, his right or left hand pistol being used with like result. Either meant meat, and the best that the herd afforded. "Cow beef for me," was a favorite remark of Lander; and if he shot the buffalo the cow was pretty certainly young and fat.

There is much to be said of what is known on the Range as a "buffalo-horse." Some horses become so frightened at the sight of buffalo that they become unmanageable, and for the time the rider has quite as much as he can attend to in simply staying on the horse's back. Such a horse can seldom be made a good buffalo-horse, though a good rider may eventually use him and kill buffalo from his back. A dead buffalo will cause this horse to show great fear.

Other horses may exhibit some little hesitation in running alongside of a buffalo, and jump as the shot is fired, but a little judicious training will eventually bring them to their work. But your close-built, plucky little buffalo-horse seems to enjoy the sport. Give him the rein, and with ears set back and tail flagging in the air, he will lay you alongside of your game, and with a free, steady jump keep pace with the buffalo that is loping along within ten feet of you. Until this moment your revolvers should be in your belt, for if you have them in your hands you may cock them, and if they are cocked they frequently go off accidentally, and make a fellow-hunter think that he is as likely to be shot as the buffalo. The best hunters use the thumb of the hand in which the pistol is held to cock the weapon, the hammer being raised as the pistol is thrown up. The shot is then fired almost instantly, seldom with any exact aim, however; most good hunters preferring to shoot as it were by intuitive feeling, glancing maybe along the barrel as they draw the trigger.

A BUFFALO HUNT.

The rapid motion of horse and game is not favorable to any steady aim by means of the sights, but the near approach that you are enabled to gain by the good conduct of your mount affords an opportunity to deliver shot after shot into the buffalo until you may be sure of your "meat," or the buffalo, refusing apparently to be made further game of, turns, driven furious by the pain of the wounds that you have given him. This is the moment for a little calculation. If the buffalo is bleeding from nose and mouth it is certain that your shots have done their work; for the buffalo is mortally wounded, and needs no more of your lead, and you are free to gallop on for the next victim, following up the sport until your revolvers are emptied, or you are satisfied that you have a sufficiency of meat.

I have no idea of the quantity of lead that a buffalo can carry off, if the shots are not well placed. The vital point of the buffalo—his heart—is to be reached by a shot fired from a point a little behind him, aiming just behind the shoulder-blade, and about two-thirds down from the top of the hump. A single revolver-ball well placed is quite sufficient to bring down the stoutest old bull. Some hunters have killed as many as eight or nine buffalo on a single run. That is, with the twelve loads contained in their brace of revolvers, but this is extraordinary, and a thing of very occasional occurrence, three or four buffalo being usually counted as a first-rate run.

A word here with reference to the arms used in buffalo hunting. Those who prefer a carbine will find the short Ballard or Spencer guns very effective, as they shoot "heavy lead," and may be used with great rapidity. The carbine is frequently used without bringing it to the shoulder, the piece being rested across the saddle in front of the hunter, and discharged while in this position. This was the old style of hunting the buffalo when breech-loaders were unknown, and a short muzzle-loading rifle of large bore was used as the best arm for buffalo hunting. With such a weapon the hunter dispensed with a ramrod, charging his gun by simply pouring the powder into the barrel, and then dropping a bullet from his mouth into the gun, and sending the charge home by striking the butt of the rifle smartly on the pommel of the saddle.

Of the revolvers in use the old style dragoon pistol of the Colt pattern seems the favorite, though the bullet that it shoots is no heavier than that used in the present style known as Colt's army revolver. The pistol itself is heavier and more steady to shoot, and the cylinder is chambered for more powder. I am not aware that this arm is any longer manufactured. The Plains men who possess a pair hold them in great esteem. Their calibre is 44-100ths of an inch. I have found it best in loading my pistols not to rely upon the fixed ammunition supplied for them, preferring to use loose ammunition, or cartridges made by myself. Then there is some certainty of the quantity of powder, and

a charge as heavy as the weapon will contain.

It seems best to speak thus explicitly with reference to the description of arms to be used, as I have met so many persons who have gone out on the Range with too light a carbine or pistol for the game that they purpose hunting. Then, too, there is no particular fun in shooting into a buffalo a bullet that is just sufficiently large to worry the animal into turning on you, and making itself the hunter and you the hunted. True, you may in some measure avoid this by dashing past the animal as he pivots on those stumpy front legs, and thus get a little behind him again. He may dash at you as you run past, but quick movement will save you, and some one of your little pellets may reach his heart or some other vital point; but the chances are against the light pistol.

Or if the buffalo turns so quickly as to throw you off your guard, and your horse is not right up to his work, the horse is in some way turned too; then comes a neat performance in the shape of a hunter being hunted. The horse is frightened, and away he dashes. Perhaps you are hunting over ground perforated with the holes of the prairie-dog. Your horse's foot falling into one of these would send both steed and rider—how or where is not certain. I once saw an army officer in such a plight do some ground and lofty tumbling that the most successful acrobat would have looked at with astonishment.

A gentleman with whom I once hunted was unceremoniously turned upon by an old bull, which he had been previously advised to leave undisturbed, and a most laughable scene was the result of the over-valorous attempt to kill tough meat. The couple were flying away over the Plains, when the hunter, feeling that he was about to lose his hat, put up his hand to save it. In the hand was the cocked pistol that was to have sounded the death-knell of the bull. Just as the hand reached the hat the pistol was discharged, and the hat went in one direction and the pistol was thrown in the other. The horse, startled by the report, made a quick movement which landed the rider out of the saddle into an inconvenient seat on the horse's neck. Things were looking just a trifle serious, and one of the party started off, and after a few well-directed shots brought the bull down and relieved the hunter from his trying situation. I am not aware that he has hunted any more old bulls since that time, if he has been on a buffalo hunt, which I think extremely doubtful.

For an old buffalo hunter there is no better sport than to go out with a number of tyros and witness their first hunt. To be sure the shots from their carbines and revolvers sometimes come hurtling past you. Will Comstock used to remark at such a time that the safest place was nearest the buffalo; but I have never known of any person that was the recipient of any of these wild shots. A hunter who is unused to the sport, and becomes excited during the run,

GO IT, DOCTOR!

will frequently shoot his horse—how, I never could quite comprehend; but the revolver goes off, and the horse has the bullet. The rider loses his mount, gets no sympathy, but learns how to bear jokes of all descriptions. He may learn, if he will, “that there is no particular demand for horse-robbers just at present, though they may come in style if he remains on the Range for any length of time.”

I remember on one occasion to have seen a large party leave a column of cavalry that had halted for rest, and start for a herd near by. A few buffalo were killed by old hands; but the novices had a time all of their own with a buffalo that had separated from the herd. Round and round the point where the command was halted was the buffalo hurried; shot after shot

was discharged at him, until the excitement was too great for one of the wagon-masters, who mounted his mule and galloped after the flying chase. Two quick shots from his revolver and the buffalo fell. In a moment the spot was crowded with horsemen armed with empty revolvers. “How many shots in him?” “What a lot of lead he could run with!” “He must have had an accident-insurance policy!” and divers other like exclamations were heard. I will simply remark that two shots were all that the closest examination by a score or more pair of eyes could discover in that buffalo, and who fired those shots was never quite determined, as the wagon-master failed to claim his shots. But some of those who assisted in frightening that buffalo on that occasion have since become good

hunters and successful shots; but they do not now shoot at a buffalo when he is running quite fifty yards distant from them.

It must not be supposed that a person can ride directly into a herd of buffalo without danger. In your excitement the horse may stumble and fall; or, as is frequently the case, you may, before you are aware, ride into a dog village, and the wide, deep holes that are to be seen in almost every square yard are traps that it is impossible to avoid entirely. I have seen several instances of this kind, and horses have been killed or disabled, and the riders severely bruised.

The buffalo, too, is sometimes known to turn with a surprising quickness of movement; and woe betide the hunter who is not instantly beyond the reach of those short, sharp horns. Then, too, you may bear in mind the fact that a wounded bull is not as safe a companion as you might select if you had a choice.

I have seen old hunters, who were excellent horsemen, kill buffalo with lances somewhat similar to those used by the Indians; but this has been more for bravado than as a favorite style of hunting. To lance a buffalo the hunter must have a horse that has no fear of the buffalo, and is thoroughly trained as a buffalo-horse—a "split ear" if possible, for his Indian education is then of service to you.

*What is known as still hunting is a favorite mode of hunting practiced by those who do not hunt so much for the sport as for the meat, and desire also to save their ponies for other work than running buffalo. Some of the colored infantry troops on the Plains are quite successful in this kind of hunting, which is merely to gain a position as near the herd as possible, taking care to keep well concealed from the vigilant eyes of the watchful pickets of the herd; then, selecting the buffalo, crack away with a long musket, which you will find the best arm for this kind of hunting. If you are careful, three or four buffalo, and sometimes many more, may be secured before the herd moves off.

This is regarded by many Plains men as a kind of pot-hunting, that is not entitled to the name of sport, and only to be resorted to for the purpose of securing the meat needed as food. I must say, however, that the skill displayed by some of the colored soldiers, as they approach a feeding herd and single out their game, is worthy to be classed as the work of good hunters. These same sable warriors make good antelope hunters too.

The principal food of the buffalo is a short, fine grass that grows in tufts, and only to the height of four or five inches. This, it would seem, is very nutritious, for domestic cattle fatten on the "buffalo grass" even during some of the winter months. On the bottoms or lowlands, through which the water-courses flow, there is found a taller growth of grass that grows rank and coarse. Somewhat similar to this is the forage found in the cañons among the breaks.

At first sight the short, fine buffalo grass seems but a scanty forage for the vast herds; but close examination will reveal the fact that grazing on it will be full and abundant. During the summer months the color of this grass is a greenish gray; as autumn approaches it becomes more brown in its tint; but late fall and winter spreads a mantle of gray, with a just perceptible tint of blue, that is in pleasant harmony with the delicate skies of the Range.

Grass that has been thoroughly fed over or burned off is the first to spring up the next year. During April and May bright green grass marks the ground that has been burned over during the previous fall. The Indians, taking advantage of favorable winds, will burn thousands of acres of grass each fall, knowing full well that this will make a hunting-ground during the next spring, and at the same time afford the forage that will be greatly needed by their ponies.

Buffalo are in the best condition during the fall, spring time being a rather unfavorable period of the year to look for fat bison. The Indians have a number of ways of designating the months or moons of the year. They have "fat buffalo moon," "thin buffalo moon," "the moon in which to find the buffalo with much hair," "the moon when the hair is gone." But I will not go through with the calendar, for Indians use all manner of things by which to designate and remember the great changing luminary of the night, which so frequently affords light for depredations that they fear to commit during the day.

In hunting buffalo the Indian is not particular in his selection. If the animal is old and tough, his hide will make many articles that a thin skin would be unfit for: soles for moccasins, shields, etc. The sinews are larger and stronger, which fact makes them useful for innumerable purposes that are best known to the squaws who collect and use them. Give a squaw time and a raven would starve on the leavings that he could find on the spot where the buffalo had been killed, so thorough is the removal of every particle of nutritious matter.

The Indian prefers as food the flesh of a young cow; he will eat the oldest bull, however; and an unborn calf is a feast to the red-skin. The hide of this very young buffalo baby is greatly prized by the Indians, and frequently used, when nicely tanned, as one of the articles of wearing apparel with which a show may be made. A hunting party of twenty or thirty Indians will frequently kill more buffalo during one day than the squaws of the band are able to skin and strip in two days; for the squaws do nearly if not all of the actual labor that Indians find necessary; and, to say the truth, an Indian squaw will accomplish an amount of labor that is surprising, and do it well too.

Hunting buffalo is to the Indian a labor rather than a pastime; so he kills the animal, and leaves the labor of cutting out the meat, curing the skin, etc., to the women. He prefers the easiest mode of killing the buffalo, and regards

hunting them on snow-shoes as one of the best methods of securing his quarry. The number of buffalo that may be killed in this way, even by a small party of Indians, would supply a considerable band of Indians with food for weeks, maybe months; for there would seem to be hardly a limit to the number of buffalo that could be slaughtered.

When the snows are deepest on the Range, which is most generally during January and February, the top of the snow will be melted by the noonday sun. This melting ceases as the afternoon comes on, and by nightfall the cold winds have frozen a crust over the snow, which crust is sometimes sufficiently thick and strong to support the weight of a man. Provided with the broad snow-shoe, or, as they are sometimes termed, "rackets," the Indian will move over the frozen crust quite rapidly, and entirely without danger of breaking through. With the buffalo things are somewhat different; to him the deep snow is bad enough, but a thick crust is still worse, as it not only impedes progress, but renders it painful as well, the crust being sharp almost as a knife-blade. All of this is well known to the Indian, and is at the same time a source of profit, for he loses no time when near a herd of buffalo thus embarrassed by the crust, but starts out on his snow-shoes, and, with arrow and spear, makes game of the troubled bison. An Indian on snow-shoes has the buffalo herd at a great disadvantage, unless the herd be a very large one; then a solid path is beaten which will be kept by the main herd, which in this manner is enabled to escape. At such a time it is the scattered members of the band that are the victims; and it is to these that the Indians devote their entire attention. This mode of hunting the buffalo is principally

practiced by the northern bands of Sioux and other Indians whose range is well to the north of the true hunting-ground.

Buffalo are to be found as high as latitude fifty, and as low as thirty. To the east the settlements form a boundary, and to the west the foot-hills of the Rocky Mountains. This embraces an area of many thousands of square miles. But, as I have previously stated, the best hunting on the Range is to be found between the Platte and Arkansas rivers. Here I have seen the Indians have recourse to another method of slaughtering buffalo, in a very easy, but to me cruel, way, for where one buffalo is killed several are sure to be painfully injured; but these, too, are soon killed by the Indians, who make haste to lance or shoot the cripples.

The mode of hunting is somewhat as follows: A herd is discovered grazing on the table-lands. Being thoroughly acquainted with the country, the Indians are aware of the location of the nearest point where the table-land is broken abruptly by a precipice which descends a hundred or more feet. Toward this "devil jump" the Indians head the herd, which is at once driven pell-mell to and over the precipice. Meanwhile a number of Indians have taken their way, by means of routes known to them, and succeeded in reaching the cañon, through which the crippled buffalo are running in all directions. These are quickly killed, so that out of a very considerable band of buffalo but few escape, many having been killed by the fall, and others dispatched while limping off. This mode of hunting is sometimes indulged in by harum-scarum white men; but it is done more for deviltry than any thing else. I have never known of its practice by army officers, or persons who professed to hunt buffalo as a sport.

INDIANS HUNTING BUFFALO IN THE SNOW.

DRIVING BUFFALO OVER A BLUFF.

Some time since some enterprising individual became imbued with the idea that one of the vast herds of buffalo—say a thousand or so—might be driven eastward until near the Missouri River, when the herd was to be made to enter a strong stockade that should be arranged for their reception. Then, as he expressed it, they were to be *beefed* and sent East, or put into cattle-cars, and killed after they had arrived in the Eastern cities. The exact number of men that would be necessary for the accomplishment of this neat drover performance was not definitely stated, but the party did not think that it would take many “*fellers*,” if the boys were only up to the mark. Fancy this idea practicable, what a lively entertainment would be the result of an attempt on the part of a beef-butcher to act as executioner of a stout old buffalo bull! Young America could have a buffalo hunt in a Communipaw stock-yard, and the Board of Health might take advantage of the opportunity thus afforded to discover the effect of the cattle disease on bison.

Governor Gilpin, of Colorado, once suggested that a very sure way of keeping the Indians off the Smoky Hill route would be to drive all the buffalo to the north of the Platte River, and then station guards to keep them there. I told the Governor that when this was done I should surely be on hand to secure a sketch of the performance. It has not been done as yet.

A question frequently propounded to a person returned to the East after a journey to and over the Buffalo Range is, Did you see a white buffalo? In my experience I have seen but one, and then, being mounted upon a pony tired from much travel and a somewhat long run, failed to secure a position sufficiently near the animal to make any sure shot, but a white buffalo it certainly was. I have met persons who have seen white buffalo, but never yet with a party who has succeeded in killing a white bison; neither have I ever seen a white buffaloeskin.

The Indians regard the possession of a white buffalo-robe as “good medicine” for the tribe; but they do not carry them about during their wanderings over the Plains. The reason for this I am not aware of; but from the best information that I have been able to obtain I believe that the Indians *cache* or hide the skin

in some unfrequented place, and only resort to it for the purpose of “making medicine,” or some other mummery in which the white robe is thought to be of great and important assistance.

Some persons have suggested that the white robe and white buffalo were things of the purest imagination, or at best only old bulls that had been wallowing in some alkali bottom and thus coated their hides with a whitish earth, which at a distance might easily cause them to be mistaken for white buffalo. I saw my snow-backed friend during that part of the season when the buffalo is not much addicted to wallowing, so still adhere to my belief in the existence of at least one white buffalo.

I have frequently noticed the statement published that buffaloes made their wallows in marshy places, and made pilgrimages to such locality for the purpose of indulging themselves in an occasional roll. This may all be, but for one wallow found on the lowlands you will find twenty on the rolling Plains, far from water and high above any thing damp, unless it be rain. These wallows may be well described by stating that they seem as if huge saucers of eight or ten feet in diameter had been used as moulds, and the impress had been secured by pressing them into the earth. On every hand you will note these basins in the earth, and during the spring time you may frequently notice the buffalo pawing or wallowing in these spots. At times he will throw himself on his back, and seeming to pivot on his hump, he will “wabble” and kick for some moments. By many the buffalo is supposed to have recourse to this per-

formance as a means of securing some relief from the vermin with which he is at times sorely afflicted, for, they say, you see that he does it when he can get mud after a rain, and thus cover his hide with earth. Very true; but I have noticed them at this performance when there was only dust in the wallow, and very dry dust too. My idea is that the chief reason for the wallow is that the buffalo finds it necessary to assist the shedding of the hair which he loses during the spring and early summer of each year, and that he has recourse to the wallows for this purpose almost entirely. You will not, indeed, find much hair in the wallows. The strong afternoon wind of the Plains would quickly blow this away; but kill a buffalo early in the summer, when the hair only hangs to the flanks in short tufts, and you will find that he has dusted these tufts, and his whole skin for that matter, with a liberal coat of fine earth.

The Plains man is familiar with another use which may be made of the buffalo wallow. It is to him an earth-work, from which a desperate and frequently successful resistance may be made against a numerous party of Indians.

I remember one wallow that my attention was attracted to by noticing that there had been a track beaten about the wallow by the unshod hoofs of Indian ponies; a track circling the wallow at a distance of nearly two hundred yards from it, that was as plain as a beaten road. The ground near the wallow was strewn with arrows. The whole story seemed to be told by the four piles of exploded rifle-caps

that were found at different points in the wallow.

November and December are the months during which to find the buffalo wearing the most expensive clothes; his robe during these months is at its best. All of which the Indian is quite as well aware of as the trader, and hunting is brisk and work plenty with every band of redskins on the Range; food may be an incentive too, but the robe is certainly a prime object for the energetic hunting that the Indian does at this season of the twelvemonth.

The squaws are busy with their work of curing the robes and jerking the meat. The hard and incessant labor that is necessary to properly "Indian tan" a robe is not easy to realize unless one may see the work go on day by day from the first step, which is to spread out the pelt or undressed hide upon the ground, where it is pinned fast by means of wooden pins driven through little cuts in the edge of the robe into the earth. The flesh side of the robe, being uppermost, is then worked over by two, and sometimes three, squaws. The tools used are often very rude, some being provided simply with sharp stones or buffalo bones. Others, more wealthy, have a something that much resembles the drawing-knife or shave of the cooper. The work in hand is to free the hide from every particle of flesh, and to reduce the thickness of the robe nearly one-half, and sometimes even more. This fleshing, as it is termed, having been satisfactorily accomplished, the hide is thoroughly moistened with water in

SQUAWS CURING ROBES.

TRADER'S CAMP.

which buffalo brains have been steeped; for ten days the hide is kept damp with this brain-water. Once each day the hide is taken up, and every portion of it rubbed and rerubbed by the squaws, who do not have recourse to any thing like a rubbing-board, but use their hands until it would seem as if the skin would soon be torn off. There seems to be no definite rule as to the length of time which the robe shall occupy in curing. The squaw labors until the hide becomes a robe, which may require the work of one week or two, sometimes even more; but I think that ten days may be considered as the average time which it takes to properly cure a robe.

I have not the space here to go into a lengthy account of the different modes of dressing the skins which the Indians use for tents (*tepes*) and clothing. Some skins from which the hair has been removed are as white as the paper on which this article is printed.

The painting and decorating of a robe is the work of much time, and for the extremely rude materials employed by the squaws in the work a result is attained which is highly creditable to the uneducated and somewhat savage wives and daughters of "Nasty Elk," or whatever euphonious term the master of the lodge may see fit to designate himself by. But this work increases the price of a robe, and is generally only expended upon a robe that is to be used in the family, and not as a means of obtaining sugar, coffee, calico, and other coveted articles which are of use to the Indian, and serve as

an indication of wealth on the part of the possessor, who takes care to make great parade of all such articles as may be likely to excite the envy of the habitants of neighboring *tepes*.

In "old times," said Colonel Saint Vrain to me when I last saw him at the little New Mexican pueblito of Mora, "the Indians came to the posts when they had any trading to do; camped near by, and did their trading; settled little disputes among themselves; had pony-races with the mountaineers that had come in with pelts, and a sort of good time generally. If you could have seen the old trading post that stood where Bent's Old Fort now stands, on one of these trading visits, you would have seen a sight worth remembering. We did not let many Indians into the fort at a time, and those who were in had to exhibit good behavior or none at all. There have been more than forty thousand robes sent out from that post as the result of one year's work. There was money in the trade then, but now— Well, there's but few of the traders who go out to the villages with an outfit but what might have found quite as good employment for themselves in some other line of business."

The Colonel's stories of the wild scenes of gambling that the Indians indulged in at their villages near the post, and the "nice row" they would occasionally kick up among themselves, certainly indicate that there must have been a much more plenteous supply of whisky within the reach of the Indians than there is at the

present time when a trading outfit goes into camp in an Indian village.

Then the white men were the masters of the situation; now it would seem that the Indian has quite the first voice in the trade. Not a comfortable thing for the trader; but how is the individual to help himself after he has willingly placed his outfit in the midst of an Indian encampment, situated maybe many miles from any post or fort? I fear that the too shrewd, driving Yankee outwitted himself when he thought to take to himself the cream of the trade by proceeding directly to the Indian villages with trading goods, rather than to await the coming of the Indians to the neighborhood of a trading post or government fort.

A first-rate trading outfit consists of four or five large wagons, each with a four or six mule team. The wagons are loaded with blankets, cloths of different descriptions, calico, flannel, flour, sugar, coffee, trinkets of all kinds—such as beads, small mirrors, square plates of German-silver, and the like. To enumerate the stock of the Indian trader I should be forced to go into a long disquisition showing what possible use could be made of many of the articles comprised in the outfit. Sometimes the trader carries his own tent, but more often he depends upon the hospitality of the Indians.

The party will consist of five or six men, of these two must understand the language of the band that is to be traded with, and if possible the whole party is previously well known to the head chief of the band. Upon the arrival of the trader at the Indian village the chief assigns him a tepe, which he may make his abiding-place. This would seem an act of kindness on the part of Mr. Big Injun, but—Well, the trader has a tent to call his quarters,

and the privilege of feeding probably the largest family which the village contains.

I must dwell just a little on this family joke. All the food which the trader has is expected to be shared by this family. The quantity of bread and other white-man food which is devoured by this family may be said to gnaw a large hole into the profits of the trip. Next, Indians flock to the trader to tell him that they have “a heap of mighty fine robes,” but they want to see some of the trader's stock to discover whether it is good before they can trade with him. This means presents. The chiefs must have something in the way of presents too, and not a small something either. The old women are, to use the language of an old Indian trader, “the loudest beings on a beg that ever stood on leather.” But this is not the end of give and take; the evening following the arrival of a trader in the village is almost sure to be a season devoted to the execution of a performance known as a “begging dance.” This is certain to make a somewhat heavy draft on the trading goods; and this is not all, for a continual and persistent beg is kept up during the entire stay of the trader in the village or in its vicinity.

I have taken pains to state thus particularly the drain which the trader's stock must meet before trading opens, that it may not seem that the trader got “too much robe for too little sug” (sugar), as the Indian will always aver.

The currency used in Indian trading is much like this:

10 cnps of sugar make one robe.
10 robes make one pony.
3 ponies make one tepe.

A ten-dollar bill is also a “robe;” but, as may be supposed, as it takes but seven pounds of su-

THE ROBE PRESS.

gar to fill the trading cup ten times, the trader quite prefers his cups, temperate man though he may be. With such a standard it is not difficult to see how trade is carried on. Ten cups is not the invariable price for a robe. Some robes will command more than ten cups' worth of calico, and some may bring but five cups' value of any desired article.

As the robes are secured the trader has them arranged in lots of ten each, with but little regard for quality other than some care that particularly fine robes do not go too many in one lot. These piles are then pressed into a compact bale, by means of a rudely constructed affair composed of saplings and a chain. The trader does not leave the village while there is a skin to be traded for, or until his goods are exhausted. I have simply referred to the trading for buffalo-robes as this is supposed to be a buffalo article, but traders will, as a rule, pick up all manner of things—horses (sometimes branded U. S.), mules, cattle, white prisoners, etc., etc.

That there may be found among the adventurous men who seek their fortunes in this not entirely safe business persons who seemingly would sell their souls for a consideration I have no doubt. I have not met them. On the contrary, some of the best men on the frontier are Indian traders, and these will show you that it is not only unwise to sell whisky, fire-arms, and ammunition to the Indians, but it is absolutely unprofitable, and not, as a usual thing, put up for "the outfit."

Of the different robes the Comanche is perhaps the best in its dressing, but the fur is not likely to be so good as that of the Sioux dressed robe. The only way of accounting for this is the fact of climate, the Comanche being a southern Indian, and the Sioux ranging far to the north. The Sioux robe is not, however, so well dressed as either the Comanche or Kiowa robes. What is known as the split robe—that is, a robe which has been divided in two parts and is sewn together after it has been dressed

—is uncommon among the southern Indians, but frequently met with in trading with the Sioux.

We will leave the Range with the trading outfit, and note as day by day we journey eastward how the grim white skulls which but a few days since dotted the Plains so thickly are less seldom seen; chips (*bois de vache*) are scarcer; the trails fewer and not freshly marked with the thousands of sharp hoofs that but a few years since cut them out deep and strong, to mark where the Range was but is now no longer.

The outfit is in the settlements. The question is, how to dispose of the furs? The two great gatherers or collectors of buffalo-robes are Charles Bates, of St. Louis, and Durfree, of Leavenworth. Their combined collections during a single year have amounted to over two hundred thousand robes; and the entire stock collected may be said to reach, during good years, nearly a quarter of a million of skins; of these two-thirds are said to find their way to the New York market, where they are classed as first, second, third, and calf. At present the prices paid by large dealers in New York, who buy by the hundred bales, is something like \$16 50, \$12 50, \$8 50, this being the prices for first, second, and third rate skins. Calfskins bring from \$3 50 to \$4, and are not much dealt in. The great collectors are said to hold their robes for the market sometimes as long as three or four years, this being done when the market does not range to suit them, though one would think that controlling the trade as they do they might dictate the prices of the robe. A few untanned robes are sent to New York from Texas, but there is no particular price demanded or paid for them; in fact, I do not think that they are mentioned in the fur market.

Think, as you tuck the warm robe about you for your joyous sleigh-ride, this winter skin of the bison was once the very best clothes of a roamer over "the Buffalo Range."

THE SKULL.

PAUL DU CHAILLU AGAIN.*

LYING LOW FOR ELEPHANTS.

NINE months ago, that is in April, 1868, we had something to say touching our friend Paul du Chaillu. He had written more than one very good book designed for grown-up readers. Then he wrote a book for Young Folks, wherein he told something of his adventures in the Gorilla Country, closing it with the words: "*Au revoir*;" that means good-by till I come again."

He has now come again, and a more welcome visitor it would be hard to name. There are three great travelers whom the Editor of this Magazine knows well, and whom at various times he has specially introduced to its readers. The scenes of their explorations lie far apart, all of them being in regions heretofore almost unknown. No three men can be found differing more widely in personal appearance. Mr. CHARLES F. HALL, to whom it has been reserved by his own individual labor to clear up the mystery of the fate of Sir John Franklin and his associates—a task which had been vainly attempted by expeditions fitted out by the Governments of Great Britain and the United States—born, we think, certainly reared, in the Great West—is a man of large frame, with light hair, blue eyes, and flowing beard, a very Viking in aspect; rather slow of speech—a man whom upon first introduction one would be apt to set down as the most diffident person he ever met. Mr. JOHN ROSS BROWNE, now American Minister to China, born in Ireland, but

from boyhood an American, is rather above middle height, spare of figure, with scanty dark hair, broad forehead, and the general air of a scholar rather than of an explorer. Mr. DU CHAILLU—our "Friend Paul"—is, though born in America, of French descent, and educated in France; and while he writes our language with perfect facility, and speaks it with fluency, it is with a marked Parisian intonation. He is hardly five feet four in stature, and slight in form; we doubt if he weighs a hundred pounds. His closely-cropped hair is as black as a raven's wing; and were it not for the flashing of a most brilliant black eye, he is about the last man whom one would dream of being the most daring traveler of our day. To these three we add the name of another whom we only know from his books, but who yet always seems to us like a personal friend: DAVID LIVINGSTONE, Scotch by birth, but African by long residence and wide travel. A spare, wiry man of middle stature—we judge from his portrait—with strongly marked and rather rugged features; by no means a notable-looking personage.

But all these three men whom we know possess one characteristic in common. They are *lovable* men. Children—those instinctive judges of human nature—take to them at once. Let either of them be seated at your fireside, and in half an hour—you can not tell how—all your Young People will be clambering around them. So, too, with uncivilized men, who are but big children, and quite often very bad ones. They take to these men. Livingstone also clearly

* *Wild Life under the Equator; narrated for Young People.* By PAUL DU CHAILLU. Harper and Brothers, New York.

belongs to this class. There is hardly in all story any thing more touching than the perfect faith with which the wild Makololo followed Livingstone across the whole breadth of Africa, and for weary years awaited his return from England to lead them back from the sea to their inland homes. If a man lacks this personal magnetism, no matter what else he may have, he will not be one of those great travelers whose books men, women, and children love to read. There is nothing more notable in the narratives of these travelers than the perfect devotion which these wild attendants bear to their civilized companions. It is the story, over which so many tears have been shed, of Robinson Crusoe and his man Friday.

In the opening of his book Paul Du Chaillu gives in brief a summary of its purport. He says:

I am going to lead you into the great forest of Equatorial Africa. I am going to try to make you travel with me in the wild country I have explored. I am going to bring you face to face with the gorilla, and lead you into the midst of the wild tribes of men I have discovered. I will tell you how they live, what queer superstitions they have, and what sort of people these poor savages are. I shall tell you about snakes, leopards, elephants, hippopotami, and other wild beasts of the forest; about insects, wonderful ants, and many other curious things. You will follow me in that great jungle; you will get lost with me in it; you will build your camp with me; you will hunt with me; you will be hungry with me; you will have the flies to plague you; you will have lots of adventures; and perhaps when you close this book you will shout, "What a glorious time we have had with our friend Paul!"

The following Table of Contents will evince how abundantly our friend Paul has fulfilled the promise in his preface:

Parrot Island; How the Parrots build their Nests; Parrot Soup.—An African Creek; A Leopard among the Chickens; A Night-watch for Leopards.—Hunting Elephants and Buffaloes; A venomous Serpent; A Snake-charmer; He is bitten; He commits Suicide.—At Court in Africa; Costumes of the Court; An Af-

rican Household; A false Alarm.—Hunt for Gorillas; A large one shot; The Negroes make Charms of his Brain; Mourning in a Bakalai Town.—An African Fireside; A Camp by the Sea-shore; The first Gorilla Hunter; Negro Blarney.—Hippopotamus hunting; We kill one; The Men eat it; Poor Beef; What the Tusks are for.—A great Gorilla.—Death in an African Village; Lamentations; The Funeral Ceremonies; An African Cemetery.—A Tornado; Before the Storm; Thunder and Lightning; After the Storm.—A Creek infested by Snakes; Snake in the Boat; An ugly Visitor.—Drinking the Mboundou; How Olanga-Condou could do it; How the Mboundou is made; The Effect of the Poison.—A royal Feast; On the Banks of the Ovenga; Preparations; The Bill of Fare; A Taste of Elephant and a Mouthful of Monkey.—The terrible Bashikouay; March of an Ant-army; They build Bridges; They enter Houses; Their Habits.—The Sorrows of the Birds; Curious African Birds; The Barbatula du Chaillu; The Barbatula Fuliginosa; The Sycobius Nigerrimus.—On the Ofoubou River; Elephants bathing; Pursuit through the Swamp; Escape of the Elephants.—Njali-Coudié; An African Town; The Chief; Courtship and Marriage in Africa; Buying a Wife; Quarrel over the Spoils.—The Feast of Njambai; The talking Idol; Secret Proceedings; The Women and their Mysteries.—Sick in a strange Land; Adventure with a Snake; How a Squirrel was charmed.—Witchcraft; Accusation of Pendé; Result of his Trial.—Gorilla hunting; Preparations; We kill a male Gorilla; Bringing him to Camp.—In the Bufalo Country; The Paradise of Flies; The various Species.—Elephant Pits; A Captive; Dividing the Meat; The Alethe Castanea.—A deserted Village; Fear of Death; Wars between Villages; African wild Boar; The Hunt.—In the wild Forest; Hostile Tribes; An intrenched Camp; Forays for Provisions.—We discover human Footprints; We spy out the Enemy; A female Gorilla; Maternal Fondness.—How we were received at Camp; Threatened with Starvation; A Night in Camp; Malaouen's Story.

We propose to give, greatly abridged, but still preserving in the main Du Chaillu's own language, some portions, taken almost at random, of these adventures:

There is, he says, in the estuary called the Gaboon, formed in the Bight of Guinea, on the west coast of Africa, some fifteen miles north of the equator, an island called Nengue Ngozo, or "The Island of Parrots." In some respects it is an African paradise, for it is free from beasts of prey, and indeed from animals of every kind. Its only inhabitants are a few negroes gathered in a little village, and innumerable flocks of birds who fly over at evening from

PARROT ISLAND.

ENCOUNTER WITH A LEOPARD.

the main land to pass the night in this place of security. There are big-pouched pelicans, long-legged cranes, and other fish-eating birds; but the majority of the feathered denizens is composed of parrots, who begin to arrive at about an hour before sunset. Soon every tree is covered by hundreds of them, their gray plumage and red tails contrasting with the green leaves. Toward morning they awake from their slumbers, and set up a chattering as though all the bells of a great city were ringing and all the milkmen and servant-girls therein were having a simultaneous confab. As day begins to dawn they take their flight to the main land, and by sunrise there is not a single parrot left upon the island.

The king of the island—a monarch with a woolen cap and cane by way of crown and sceptre—took kindly to Paul, and set his wives to cooking a dinner for him. But in a few days this influx of strangers had exhausted the monarch's stores, and the guests had to look to the parrots for provisions. The birds are very shy, and so long as there is a particle of daylight no one can get within gunshot of them. But Paul had noticed a particular tree which seemed to be a favorite roosting-place, and had, during the day, made a path to it. In that darkest hour which just precedes the dawn he crept along this path. Arrived under the tree he raised his gun toward what he supposed must be its centre, and fired both barrels at once. When day broke he found twenty parrots killed by that one double shot. He had a grand feast. There was parrot soup, which was not at all bad, roasted parrot, and grilled parrot. The old birds were tough, as well they might be if what the negroes said was true, that they live a hundred

years; but the young ones were excellent, their flesh being black, and tasting much like that of the pigeon. The next night not a single parrot rested upon that tree.

A while after Paul took up his head-quarters in a village on the main land situated in the midst of a dense forest, abounding in birds, where wild boars were said to be plentiful, and leopards rather common. His hut was at the outskirts of the village. One night he heard a great cackling among his fowls, and thinking some one was trying to steal them, he went out, and in the dim moonlight found himself face to face with an enormous leopard. For a few seconds man and beast, as if spell-bound, stared at each other, at a distance of not more than six yards. Paul came to himself first, and rushed into the hut for his rifle. Coming out, he found that the leopard was gone. Next day he bought a goat, and when night had fallen tied the animal to a tree at the edge of the forest, and rifle in hand seated himself against another tree a few yards off. The poor goat kept up an incessant bleating, and Du Chaillu could plainly see him in the faint starlight. Hour after hour he watched, seated on the ground, sometimes fancying that he heard snakes crawling around. He must have fallen asleep, for, looking toward the tree, no goat was there. Creeping to the place he found blood. Lighting a torch he found that it was four o'clock, and that he must have slept two hours. In that time the leopard, whose tracks were plainly visible, had crept up and carried off the goat without awakening the hunter, who could only thank his stars that the goat instead of himself had been the victim. One can not wonder that he resolved to be more careful in future.

The hunting of elephants, hippopotami, buffaloes, and gorillas occupies a considerable space in the book. But we have elsewhere at various times dwelt in detail upon these subjects. We therefore pass them over, and give two or three snake stories. The first of these shall be told by Du Chaillu in his own words:

It is intensely hot. We are at the end of the month of March, and the rays of the sun are pouring upon us with a power which is terrific. Every two or three minutes I dip my umbrella into the water, for after this lapse of time it is perfectly dry; green leaves and a wet handkerchief are in my Panama hat, which now and then I also dip into the water of the stream.

You will ask me in what kind of country I find myself in such a plight. I am in a very complicated net-work of creeks, swamps, dense forest, and overflowed lands, forming a delta, which in the work I published in 1861 I named the Delta of the Ogobai. For several days I have been here in a canoe exploring the country by water. What a lonely place! We have not seen a single village, we have met not a single human being; it is a complete desolation, and on the day in question it seemed more desolate than usual. The creek we had got into was narrow, and on both sides there was an interminable forest of palms—that kind which yields bitter nuts to eat; these grow to the water's edge, and many of their graceful branches are bathed in the stream.

The current was strong, and evidently a tremendous quantity of fresh water coming from the interior was carried by it into the sea. The atmosphere was hazy, and, as is generally the case in those equatorial regions, I could see the vapor arising and quivering as it ascended. At last we entered a narrow creek, where the current was not so strong. We had hardly proceeded two or three miles when snakes became quite abundant in the water. We were in the Creek of Snakes. I do not know what else to call it.

What a horrid sight! They were of all colors and sizes: some were small and slender, others short and thick. One peculiar kind struck me at once as one that I had never seen before. It swam not far from our canoe, and appeared to be of a bright orange-yellow color. I am sure it was a very venomous one, one whose bite would kill a man in less than five minutes, for the head was very triangular. Then came a large black one with a yellow stripe on the belly; it appeared to me to be ten feet long; the black shone as if it had been oiled. This fellow I also knew to be very poisonous; so when he raised his head above the water I sent a load of small shot into it, literally crushing it to pieces. Then we went immediately at him, and with a few strokes of the paddles we finished him up. I was going to make off, when two of the slaves who were of our party said we must put it in our canoe, and that they should eat the fellow in the evening. This created a great laugh from my Commi boys; and after making sure that the loathsome creature was dead we fished him out of the water. There was at first a jumping about of the men which I was afraid would upset the canoe, in which case we would have been in a pretty fix, swimming about in a stream filled with snakes. At last order was restored; the

snake was cut into several pieces, which continued to move and almost appeared like several separate snakes. The pieces were put in a basket, and the eyes of my Apingis began to shine with delight, and it made their mouths water, they said, to think of the nice meal they were going to have in the evening.

Just at this moment I spied one of these black snakes trying to get into our canoe by the bow. I made a tremendous leap, as if I had been bitten by a scorpion, the sight was so sudden. I took my gun, loaded with small shot—the best load to kill serpents with—and fired, cutting the saucy fellow in two; then we paddled on, leaving Master Snake to take care of himself, knowing that his case had been settled.

I really believe all the snakes of the country had come to bathe in this creek on that day; and I did not wonder at it, it was so hot and sultry. I had often met with snakes in the river before, but never in such great numbers and of so many different species. In little more than one hour and a half I must have seen two hundred of them. I had never seen such a sight before, and never have since.

There has been an abundance of discussion as to whether snakes have the power of fascinating or charming their prey. But if any thing can be proven by testimony, we think it is settled that they have this power. Thus Du Chaillu says:

I shall never forget that one day as I lay ill under that big tree I spied an enormous snake folded among the branches of another tree not far off from me. My attention had been drawn to that tree by the cries of a squirrel. I wished some of my men had been with me to kill it, so that I might have something nice to eat, though I was not very hungry; but there was no man with me, only three women who were taking care of me. I was not strong enough to take my gun. I was so weak that I did not mind having the snake so close to me.

The snake was charming the poor little squirrel. How nice the squirrel was! how beautiful his little tail! how black and bright seemed his little eyes! His little feet were moving onward toward the snake; his little tail was up, and he chattered as he advanced toward certain death.

The snake was still as death, not one of his folds could have been seen moving. How black and shiny the ugly creature was, and what a con-

IN THE CREEK OF SNAKES.

CHARMING THE SQUIRREL.

trast with the green leaves of the trees! Part of his body was coiled on a limb of the tree. How fixedly he looked at the squirrel! His head was triangular, and he belonged to that family of snakes that spend the greatest portion of their time on trees. This was of a very venomous kind. I wished I had been strong enough to take my gun and kill the serpent, and so save the life of the little squirrel.

Nearer and nearer the squirrel came; louder and louder were his chipperings; he tried to run away, but could not. At last he came within a foot of the snake. There was a pause; then suddenly, like a flash of lightning, the snake sprung: the poor little squirrel was in the folds of the ugly reptile, and soon I saw his body gradually disappearing into its inflated mouth, and the broken silence of the forest resumed its sway.

That snakes are susceptible of being charmed is certainly beyond all manner of doubt. It is said that snake-charmers usually remove the poison-fangs from the animals which they exhibit, thus rendering them really incapable of doing harm. But Du Chaillu relates an incident which shows that this is not always done. Among the most venomous snakes of Equatorial Africa is the *naja*, a species of water-snake, growing to the length of ten feet, and, unlike most of its class, having the power of erecting itself. There was on the Gaboon a negro from Goree who had great reputation as a snake-charmer. He was a bold fellow, who declared that he was not afraid of any snake. He was the only person known to have taken a *naja* alive. One day he made his appearance with a huge *naja* which he had captured, and began to amuse himself and crowd by teasing the reptile. Du Chaillu shall describe what followed:

At first when I saw him he had the snake

around his body, but he held it firmly just below the neck, and I could see by the muscles of his arm that he had to use great strength. As long as this part of the body is held firmly the snake loses much of its great power of crushing one to death, as the boa constrictor or python does with larger animals, and as small snakes do with smaller game; but with this *naja* the danger would have been the venomous bite.

Then with his other hand he took the tail of the snake, and gave it a swing and gradually unfolded the reptile from his black body, which was warm and shining with excitement, but always holding the head. On a sudden he threw the snake on the ground. Then the creature began to crawl away, when suddenly the Goree man came in front of it with a light stick, and instantly the monster erected itself almost to half its full length, gave a tremendous whistle, which we all heard, looked glaringly and fiercely in the man's face with its sharp, pointed tongue out, and then stood still as if it could not move. The Goree man, with his little stick in his left hand, touched it lightly as though to tease it. It was a fearful sight—and if he had been near enough the snake would no doubt have sprung upon its antagonist. The man, as he teased and infuriated the snake with the rod he held in his left hand, drew the attention of the reptile toward the stick; then suddenly and in the wink of an eye, almost as quick as lightning, with his right hand he got hold of the creature just under his head.

The same thing that I have just described again took place. The snake folded itself round his body, then he unfolded the snake, which was once more let loose, and now this horrid serpent got so infuriated that as soon as he was thrown on the ground he erected himself, and the glare of his eyes was something terrific. It was indeed an appalling scene; the air around seemed to be filled with the whistling sound of the creature.

Alas! a more terrible scene soon took place! The man became bolder and bolder, more and more careless, and the snake probably more and

more accustomed to the mode of warfare of his antagonist, and just as the monster stood erect the man attempted to seize its neck, as he had done many and many a time before, but grasped the body too low, and before he had time to let it go the head turned on itself and the man was bitten! I was perfectly speechless; the scene had frozen my blood, and the wild shrieks of all those round rent the air. The serpent was loose and crawling on the ground, but before it had time to go far a long pole came down upon its back and broke its spine, and in less time than I take to write it down the monster was killed.

To the French doctor who had charge of the little colony the man went (happily he was just at hand); all the remedies were prompt and powerful; the man suffered intensely, his body became swollen, his mind wandered, and his life was despaired of; but at last he got better, and though complaining of great pain near the heart, he was soon able to go out again. A short time after this accident, having an axe in his hand, going as he said to cut wood, he suddenly split his own head in two. He had become insane!

But more potent than snakes, lions, leopards, or gorillas, is a species of ant called the *Bashikouay*. It is the dread not of man alone, but of every living thing from the elephant and leopard down to the smallest insect. A half-inch is about the average length of one of these ants, though some are found of twice that length. Individually they are bold; the bull-dog has not more pluck and tenacity of grip. But their great power lies in the immense armies into which they organize themselves, and the military order which they preserve. When on the march they go in a column of two inches broad, but often miles in length. Du Chaillu once saw a column formed in close order, which occupied twelve hours, from sunrise to sunset, in passing the spot from which he watched them; and as they march by night as well as by day, he did not know how long the column had been

THE BASHIKOUAY ANT, TWICE THE NATURAL SIZE.

passing before he saw it. All along the line were larger ants, clearly officers, standing outside the column until their squads had passed, when they moved on and joined them. How many millions upon millions there were in this army it would be idle to attempt to estimate.

When on the march the column comes to a small stream they fling across it a living bridge. Selecting a spot where the branch of a tree reaches nearly over to one on the other bank, only lower down, the second of the pontoniers, as we may fairly call them, with his fore-claws grasps the hind-claws of the one in front, and lowers him over; a third does the same by the second; and so on until this living chain is long enough to reach the desired point. Line after line is thus stretched until a bridge is formed wide enough for the whole army to pass over. Imagine the strength of muscle which these creatures must possess to enable them to maintain their grasp for hours.

THE SNAKE-CHARMER.

MARCH OF BASHIKOUAY ANTS.

The marching column throws itself into line of battle with wonderful precision. When it sweeps over the country nothing living can stay its progress. Du Chaillu was once plodding through the forest in search of game. All at once he was startled by a strange sound. It was caused by a rush of wild beasts. He thought he caught a glimpse of a gorilla; he was sure that he heard the footsteps of an elephant; and soon after a mighty crash, as though a herd of elephants were rushing through the forest. Soon the air grew thick with insects. While wondering what this might mean he felt the torments of innumerable bites, and in an instant he found himself almost covered by ants. He had been fallen upon by the skirmishers of an army of Bashikouay. He set off

at his sharpest run in the direction which the other fugitives had taken. Fortunately his speed was greater than that of the ants; and as soon as he thought himself safe he stripped off his clothing. It fairly swarmed with ants who had literally buried themselves in the garments, striking their pincers clear through into the flesh beneath. They never let go their grip until they have taken out the flesh. Pull at one till his body is separated from his head, and the jaws, if we may so call them, keep their hold. He had just resumed his garments when the Bashikouay came upon him, and he again took to flight, never stopping until he had crossed a stream and taken refuge in a swamp beyond.

These Bashikouay can not bear the heat of the sun; and hence they are only found in re-

gions covered by forests. If on the march they come to an open place they dig a tunnel four or five feet underground, through which they pass to the jungles on the opposite side. When they enter a village the inhabitants run for their lives. In an incredibly short space every hut is cleared of vermin, and the only trace left of them is the bones of rats and mice and the horny wing-cases of insects. Nothing that breathes comes amiss to them. An antelope which had been shot by Du Chaillu was picked to the bones in a few hours. The carcass of an elephant would be cleared away quite as quickly as by a kraal of natives. They sometimes come upon a huge snake lying torpid, perhaps, after the manner of his species, gorged with food. In that case it is all over with his serpentine majesty. "I was always rejoiced," says Du Chaillu, who does not like snakes, "when they got hold of a serpent; though these are pretty shy, and manage generally to get out of the way, except when they are in a state of torpor." But rats, mice, roaches, centipedes, scorpions, spiders, and such small pests, are doomed. A swarm of ants will kill a rat in a minute or two, and devour him in almost as short a space. Upon the whole they are a blessing to the human race in Africa, by keeping down the vermin which would otherwise render the country uninhabitable. They will not touch vegetable matter. One might almost imagine that the author of the Book of Revelation had in his mind the Bashikouay when he speaks of the swarms of "locusts" which at the sounding of the fifth trumpet arose from the smoke of the bottomless pit, to whom "it was commanded that they should not hurt the grass of the earth, neither any green thing, neither any tree;" but whose "torment was as the torment of a scorpion when he striketh a man." Certain it is that the description fits the Bashikouay, while it is altogether inapplicable to the creature which we call a "locust," whose only

food is green things, and who have no tormenting bite.

But we must leave the hunting adventures of our friend Paul, and touch briefly upon a few of the human beings with whom he became acquainted in the course of his adventures.

If, as Shakspeare avers, "there is a divinity that doth hedge around a king," it was an odd hedge that fenced in the monarch of the forest-girt village of Mbondemo. Du Chaillu, properly introduced, had reached the village, and seated himself in the palaver-house—a large shed built in the middle of the street. Soon his Majesty, followed by his headmen or court, made his appearance. In honor, most likely, of their foreign visitor, they wore European costume; or rather, if the costume of the whole five dignitaries had been worn by one of them, it would have formed a tolerably complete suit, lacking nothing essential except that garment which covers the lower limbs, but which in some form or other is thought indispensable every where except among the Scotch. Not to put too fine a point upon it, the great "breeches question" is one which could not have come up in the court of Mbondemo. But Du Chaillu shall describe his reception:

His Majesty headed the party, followed by his headman. He wore an old red English coat, and no other garments. He was a short, thick-built negro, and wore an immense pair of iron ear-rings. He was followed by what I supposed to be the second headman, or prime minister. This one had for his costume an old shirt which had only one sleeve, and no sign of button to be seen any where—a shirt that formerly must have been white, but had never been washed since he got it, which was several years before. This prime minister had nothing else on. The third man, who of course formed part of his Majesty's suite, had on an old beaver hat, and nothing else. Another that followed him had one of those old-fashioned black neck-ties (as tight as the neck itself, and attached with a buckle) which were worn some thirty years ago, and nothing else. How the deuce did that fel-

A ROYAL RECEPTION.

AN AFRICAN WAR-DANCE.

low get that cravat? I asked myself. I learned afterward that he had inherited it. Then came a fellow who, by hook or by crook, had possession of an old pair of shoes; how he had got them I was unable to find out. His father had perhaps left them to him. How steady, how grave they looked, as they passed one after another before me. These were the leading men of this Mbisho village. They thought themselves splendid, and their people thought the same. They looked at me and I looked at them, and at last, with one voice, they asked me to notice how handsome they were, each at the same time, in one way or another, making the most of what he wore. I said they were very fine.

The costume of all the others consisted mainly of grease and red ochre. "The women,"

says Du Chaillu, "seem to lay on the oil and red earth a little thicker than their husbands." The third evening there seemed something strange going on. Every body kept in their huts, and were as silent as death. By-and-by the king came out and danced along the street. His face and body were painted white, black, and red, in spots as big as a peach. Paul asked the reason of this. His Majesty said not a word, but pointed to the moon. It was new moon. He afterward learned that the moon is their emblem of time; and when it appears they think that before it again disappears it will "eat somebody"—that is, some one will die. How this catastrophe is to be

averted by the royal painting and dancing was not explained.

An African war-dance has been often enough described ; but nowhere better than in the picture given by Du Chaillu, which hardly needs any explanation. "The men," he says, "were all painted with colored chalk, red and yellow being the favorite colors. They were covered with fetiches, which they believed would protect them from the deadly weapons of their enemies ; and by the dim light of their fires they appeared to me more like devils than men."

Among their superstitions is that of the Njambai, which reminds one of the Roman mystery of the Bona Dea. Njambai is a good spirit who protects women. Her worship is a kind of mystery, carried on in a house closely shut up, to which men are never admitted. Du Chaillu was anxious to witness the ceremonies ; but the King told him this was out of the question. "I can not myself go and have a look." Opportunity at length favored Paul. The great feast which comes off once a year was going on. From all the villages around the women had gathered, dressed in their best suits of red and yellow paint. The men had all gone hunting. Most of the women had gone into the forest, singing wonderful songs ; but a few went into the Njambai-house, where they remained, keeping a mysterious silence. Paul sauntered back and forth two or three times past the house, and finding himself unobserved pushed aside the leaves which formed the walls and stuck his head through. He says :

For a moment I could distinguish nothing in the darkness. Then I beheld three perfectly naked old hags sitting on the clay floor, with an immense bundle of greengreases, or fetiches, before

them, which they seemed to be contemplating in silent adoration. I was put aback, for I expected to see no one. As soon as their fear and wonder had somewhat subsided they set up a hideous howl of rage, and rushed out to call their companions in the bush. In a few minutes these came rushing toward me with gesture of anger, and threatening me for my offense. I quickly reached my house, and, seizing my gun in one hand and my revolver in the other, told them I would shoot the first one that came inside my door. I never saw such an infuriated set. My house was surrounded by above three hundred angry women, every one shouting out curses at me ; and still they kept coming in, their number every moment growing greater and greater.

King Mbango at length came to the rescue, and by dint of fair words and presents succeeded in pacifying the devotees. "I only hope," says Paul, "that whenever you travel it will never happen to you to have several hundreds of infuriated women after you ; for I can assure you that I would have rather encountered a gorilla of the worst kind than to have faced them."

But we must bring this paper to an end. Let the reader imagine adventures of all sorts and almost without number in the interior forests and jungles, and look at Paul when he felt that he must bring his trip to a close. He was dressed in clothes which he had himself made from skins. He was sick and half starved. His goods were all gone ; his powder and bullets were nearly expended. But he had made a magnificent collection of objects of natural history, which he had sent down to the coast, where he had a sort of trading post, called Washington, which he had left in the charge of some of his faithful friends and servitors, the Bakalais.

As an offset to some of the savage scenes, we

INTERIOR OF THE NJAMBAI-HOUSE.

GOOD-BY TO THE BAKALAI.

copy a part of Du Chaillu's account of his parting with his faithful friends. He called them together and told them that he must go. The men cried, "What shall we do without you?" The women shouted, "Chaillee, you must not go!"

Gambo, Malaouen, and Querlaouen made long faces and were sad, for we had a real affection for each other, we were such great friends, and how could it be otherwise? We had braved danger together; we had gone through hardships and starvation together; many and many a night had we spent together in the forest. Of any wild animal they killed I was sure to have a piece; the best plantains were sure to be mine; the nicest fishes their women caught they brought to me. How kind they were to me, how gentle! No children could have been more docile, and yet how fierce, how brave, when the day of battle or of danger came!

As we were preparing to go my Bakalai friends came in with presents of provisions. Baskets of cassava, smoked boar-hams, smoked fishes, sweet potatoes, were brought as free-will offerings. When the morning arrived our canoes were on the beach. I was on the shore ready to embark; Obindji stood near me; every woman and man brought to me a parting gift. I was very much touched by their simple ways.

When all was ready for a start Macondai, my boy, fired a gun, and then I swung the American flag to the breeze, the first time that it or any other flag of a civilized nation was over these waters. The people shouted, and we were off; and as we glided down, and before we disappeared by the bend of the river, I saw Obindji's hand waving farewell to me.

To our friend Paul we bid adieu in the words in which he said farewell to the readers of his former book: "AU REVOIR." We trust that we shall meet again.

SOUTH-COAST SAUNTERINGS IN ENGLAND.

[Saunter XX]

STONEHENGE.

STANDING on the top of the highest and most beautiful spire in England—that of Salisbury Cathedral—one may see on the plain, at about nine miles' distance, a strange circle of white stones; or, standing on the top of one of those stones, one may see the spire, gleaming like a column of flame, against the sky; and in either case he will feel a sense of mystery stealing over him, as it may perhaps be felt nowhere else on earth. If one could read the history written in the dust of Salisbury Plain, or gauge the spiritual formations that stretch between the cromlechs of Stonehenge and that cathedral in the distance, he would probably hold the key to the story of every race that lives or has lived. The geologist can show that the vast plain was once the bed of a sea; but who can tell us of that vast surging sea of humanity—mingled of streams confluent from all the fountains of races—which once swept and raged with storms and battles over this serene landscape, on whose solitudes

SARUM STONE.

the sun now looks so peacefully down? Sauntering near Old Sarum this morning I picked up a little piece of carved stone, which had evidently been part of a cornice, and had no doubt that I held in my hand one of the last bits of that ancient cathedral built on this spot

760 years ago. Of that cathedral, which formed the centre of the city of Old Sarum, the sun even yet traces the extensive outline amidst the waving corn; but the mansions and streets of that once populous city are not even traceable in the dust. Few cities have ever so utterly perished from the earth. Truly the fashion of

this world passeth away. When, forty years ago, the English people were overhauling their rotten boroughs, the most salient example of the whole system, the *reductio ad absurdum* under which chiefly it broke down, was that an old tree near this spot had for more than a century sent two members to Parliament! Septennially—or at every election—the two candidates drove out to the spot, taking a returning officer and two nominators; the bribery act was read, and they were formally nominated to the Infinite Silences and the sheep, if any happened to be near; the sheep bleated and the tree boughed their assent; the officer made up the certificates, pocketed his comfortable fees, and the five repaired to dinner in a Salisbury hotel—all of which was plainly proved at the time, and, indeed, not denied. “Old Sarum” thus became politically a by-word, and, indeed, is occasionally referred to now in Parliament as a case not unlikely to be paralleled unless the coming redistribution of seats shall more fully than it promises represent the changes that have been wrought in England by that arch-innovator—Steam.

And yet Lord Macaulay's famous New Zealander, sitting on the last half-crumbled arch of London Bridge to sketch the ruins of St. Paul's, would hardly be a more significant object than the parliamentary radical holding up Old Sarum to ridicule. From this hill, the centre of the perished city, and from the fortress, whose very *débris* has been nearly all eaten as grass and bread by man and brute, Briton and Roman, Saxon, Dane, and Norman, successively commanded the whole district, and for ages kept Southwestern England in subjection. The Romans, when they first entered the country, found it a famous strong-

hold, and they chose it as the key to the country, surrounding it with a vast fosse, and making it the point of divergence for six military roads, with which they intersected the entire neighborhood. King Alfred drew a wider circle around it. The Normans completed the fortress, and built a wall around the city, inclosing a space of 16,000 feet in diameter. Nearly all of these more ancient works are yet traceable, though the comparatively modern works are not.

But even seven centuries ago, though the generations seem indiscriminately warlike, one age differed from another. In the time of King John the people of Old Sarum began to feel that their city had been built on a site selected with reference to war alone. When they began to think of cultivating the soil their eyes looked yearningly toward the neighboring valley, with the beautiful Avon shining through it almost as far as the eye could reach. And at last, in obedience to their longing, the first stone of the cathedral of New Sarum, or Salisbury, was laid (A.D. 1220) by Henry III., and after this a single generation witnessed the entire removal of the city and its inhabitants from the fortified hill to the peaceful valley. In the time of Henry VII. the county jail and a "chantry" in the cathedral were alone the active relics of the city which had so shortly before been crowded with life; but in the next reign Leland went there and found that only "a chapelle of Our Lady was yet standing and maintayned," and that there was "not one house, neither within old Saresbyri or without, inhabited." It is not wonderful, then, that, visiting it in 1868, the most striking sight I saw was a flock of sheep, on the backs of two or three of which, as they grazed, starlings were quietly perched! The birds were paying for their pleasant roost by picking ticks from the sheep's backs. The old tree I found to be itself a kind of cathedral; and the bit of cornice inscribed with a lesson concerning many institutions in many lands, reared in and adapted to ages

which have long passed, but which still continue, like Old Sarum, to sway the living interests of the fruitful valleys to which the real power has emigrated.

Salisbury Cathedral is externally one of the most impressive I have ever seen. A double cross in ground-plan, purely Gothic in style, it rises with pyramidal definiteness to the top of its spire, which rises to the height of 400 feet, and is even spiritual in its lightness and beauty. The whole building might well have inspired Coleridge's felicitous description of a cathedral as "frozen music." The spire is more recent than the rest of the church, which formerly ended in a great lantern. The simplicity of the inside is quite astonishing. One may wander, however, for a long time about its cloisters—the very finest in Europe—and its chapter-house, and find many points of singular interest. On a window in the Lady Chapel is a fine copy of Sir Joshua Reynolds's picture of the Resurrection. The most interesting monuments are those which were transferred from the cathedral of Old Sarum, the most curious of these being one on which is the figure of a boy dressed in pontificals. In early times a boy was annually elected by the Romish Church to be a bishop, in honor of the patron of children, St. Nicholas—whose name has gradually become Santa Claus. The visitor notes the tombs of Bishop Jewell and of John Bampton, founder of the Bampton Lectures, and lingers with veneration before those of the Herberts, to whom literature is so deeply indebted. One of the most interesting is that of Henry, Earl of Pembroke, who did so much toward the exploration of the antiquities of Wiltshire. He was an enthusiast about Stonehenge, of which he had a model in his garden, built by the famous architect Inigo Jones. He also had old Stukeley as a resident in his house, that he might devote himself more completely to exploring this region. The chapter-house is, like nearly every chapter-house, circular; and it is not a little remarkable that in this part of the European cathedral—the place

OLD SARUM.

SALISBURY CATHEDRAL, FROM BEHIND.

of initiation—there should still survive the old Druidic form, the circle. But there are few chapter-houses that are so rich in interest as this. In the carvings of the niches near the floor there is very quaint work, representing nearly all of the Old Testament history. Some are rather ludicrous. In one God is represented resting after creation in the form of an aged man whose head has fallen one side with fatigue, and looking with distress upon the world, which he holds in his hand; in another Joseph's feet and legs as far as the knee are seen held by his brother's hand—the rest of him is down in the pit. But amidst these grotesques one now and then finds a sculpture of marvelous beauty, as in a representation of Abraham tenderly embracing Isaac on the altar with one arm, while his knife is raised by the other, and hardly yet arrested by the angel. On the keystones of the surrounding are some good carvings of the chief characters of the time when it was built—king, queen, monk, nun, and so on; and among these the face of a student in a condition of religious ecstasy.

Apart from its cathedral, Salisbury, with its interminable gable-fronts and red Dutch tiles, is an interesting old city. An old and elaborately-carved "cross" stands in the centre of a space called the Poultry Market. Back of this, and immediately to the right in the accompanying picture, the reader will observe a quaint old gable-front with a cross on top. This is an old hostelry, where Catholic pilgrims who came up to the cathedral in old times were lodged. After their time it became a famous resort for gallants. Old Pepys slept there in 1668, and found a "silken bed and very good diet," followed by a bill that made him "mad." There is also in the city an old apartment called the "Halle," in which a merchant of the seventeenth century was wont to entertain other merchants. It shows carvings in wood worthy of the attention of the artist of to-day. In it is a stained window representing the merchant

of that period, dressed magnificently—the long toes of his shoes fastened by chains to his knees!

Three miles out from Salisbury is Wilton Hall, the noble mansion of the Earls of Pembroke, and now of the Sidney-Herberts. The present Lord Herbert is a youth who has grown so fast—being already 6 feet 4 inches in his

CHAPTER-HOUSE.

POULTRY MARKET CROSS.

minority—that his friends became alarmed for his health and induced him to visit Australia. The mansion was designed by Holbein, and built by Inigo Jones. It has many fine old pictures and war-trophies, the latter won by the ancestors of the house from the French at St. Quentin. But the modern pilgrim goes there not to see the rusty relics of dead feuds, but to see the place where Inigo Jones wrought and Stukeley studied, and—above all—where Sir Philip Sidney imagined and wrote his “Arcadia.” For it was amidst these iron memorials of an “age of chivalry” that was past that Sidney’s fine spirit caught the tints of a chivalry that can never pass away—amidst these peaceful plains and by the gentle Avon that he dreamed of an Arcadia happier than any in the past, by being civilized and knowing its own happiness. It is a beautiful spot to be forever associated with that exquisite vision. The Sidneys lived themselves at a charming place in Kent called “The Knolls;” but a sister of Sir Philip’s having married Earl Pembroke, the noble knight continually yearned toward Wilton House, where he passed much of his time. This sister was hardly less accomplished than her famous brother, and was extremely beautiful. The portrait of her recently shown in the National Portrait Exhibition at Kensington, and the family traditions concerning her virtues, render it certain that there was ample justification for the epitaph which “rare Ben Jonson” with rarest felicity wrote upon her :

“Underneath this marble hearse
Lies the subject of all verse,
Sidney’s sister, Pembroke’s mother.
Death! ere thou hast slain another
Wise and good and fair as she,
Time shall throw a dart at thee!”

From a row of eager cabmen who stood near the railway station in Salisbury I called to one who did not seem to want me, but, having deposited some one, was about driving off. Having bargained with him to take me to Stonehenge—eighteen miles (there and back) for nine shillings—he confided to me that he was not in the habit of driving himself; he superintended and sent out coaches and horses to others. This morning he had been suddenly called upon to take from a hotel to the station an individual afflicted with delirium tremens.

“What kind of man was that?”

“Oh, a gentleman—not a tradesman, but a real gentleman.”

The word “gentleman,” as spoken by the lower classes in England, never has a moral but only a technical meaning, and would be used concerning a thief if he had moved in respectable society and done no work. The desire, also, of this superintendent of coaches not to be confused with the class of drivers of coaches was one among many illustrations which I have met with in England of a fact often overlooked—namely, that the terms and boundaries of classes in the upper stratum of English society are not more definite than those which are preserved in the lower stratum.*

I soon found that my coachman was a “character.” He had been for the greater part of his life keeper of Lord Somebody’s stud, and an eminent jockey for the same nobleman in steeple-chases. “Do not a great many accidents happen in steeple-chases?” I asked. “Yes, Sir, a goodish few.” “Have you ever met with many?” “Me? Oh, I always came off well. I got my ankle broke once; afterward a rib broke; and then again a shoulder out of joint. I was always very lucky, Sir, very.” “Other jockeys must fare badly, then,” I remarked. “Yes, Sir, a goodish few gets killed; and most gets crippled for life.” Just then we came in sight of the race-course, over which horses were being led and trotted to familiarize them with the ground previous to the coming races. The sight acted on my companion like a taste of blood on a tame tiger, and he lashed his poor horse until I had to interfere.

At last we saw the mysterious blanched

* “Down among the people that live by manual labor are ‘lower,’ ‘middle,’ and ‘upper’ ranks; slaves of toil, a well-to-do grade, an aristocracy; serfs, capitalists, theologians, artists, poets, generals; an infinite sea of humanity, which looks like a monotonous expanse only because we are so far off as not to mark the individuality that clothes each momentary wave. . . . Brute force is cut off from skill of hand by as wide an interval as the selling of groceries is cut off from the writing of diplomatic dispatches. In one sphere of life 15s. a week more or less makes as great a difference as £10,000 a year makes in another.”—*Fraser’s Magazine*, March, 1868.

stones gleaming on the plains ahead of us; and soon I was wandering and meditating amidst the strange "circles" of the earliest British temple—if temple it be. My ex-jockey was fruitful of explanations. "That stone you are sitting on was the haltar on which the sacrifices was hofferred," he said, profoundly. "And this was the main hentrance. 'Ere the wictim's blood trickled down. Some folks thinks as they were 'uman wictims," he added, with a shudder. Mr. Carlyle told me that when he and Emerson visited Stonehenge, many years ago, they took a local "antiquarian" along with them, and his revelations amounted to about the same as those gratuitously vouchsafed by my jockey. Emerson, however, thought there was something in the old man, who divided the stones into "sacrificial" and "astronomical," and placing the philosopher upon one of the former, pointed him to an "astronomical," and bade him notice that its top ranged with the sky-line; which being conceded, he stated that at the summer solstice the sun rises exactly over the top of that stone; and at the Druidical temple at Abury there is a stone in the same relative position. "I was," said Mr. Carlyle, in giving me some account of the visit, "somewhat disappointed in Stonehenge at first. But I found in subsequent reading that in early days the now closely-shaven plain on which it stands was covered with a dense forest; and the roads traceable from the entrances must have reached out for many miles to every point of the horizon, which must certainly have been impressive." He also told me that he had found, in the volume of some old traveler, an account of a very similar stone temple in the heart of a forest, discovered (as a living institution) in Tartary.

The said traveler went into the Tartar Stonehenge and listened to the prayers of the people, which consisted of petitions to the gods that they would bless their herds to such extent that every cow should that year bear two calves instead of one; and that in selling the

calves they might be able to obtain for each twice as much as it was worth! The grim humorist of Chelsea could not find much difference between this species of prayer and one he had heard somewhere in a chapel where the preacher prayed, substantially, in Carlyle's version, "O Lord, Thou hast plenty of treacle; send us down a continued stream of it!" That the Druids were supposed to have a particular power over herds, which were prolific or barren accordingly as their owners were blessed or cursed by the priests, is known to us; but it detracts considerably from the romance of the hallowed spot to think that such prayers as those of the Tartars were once offered in it. However, it is now conceded that those who worshiped at Stonehenge adored the sun. The stone, sixteen feet high, and about two hundred yards from the temple, called "the Friar's Heel"—a stone thrown at the devil, according to the legend—is not only set exactly at that point toward the northeast where the sun rises at the summer solstice, exactly over its top, but has been set in a place where the ground has been scooped so as to bring its top, as seen from the altar, precisely against the horizon. It is thus plainly an astronomical stone. Every year people go out on the 21st of June to see the sun rise above this stone; and that it does with absolute exactness admits now of no question. Concerning the Tartar temple it may be said, that while it would be natural for worshippers to connect the sun with the fruitfulness of their flocks, the more we search for temples or monuments resembling Stonehenge in other countries the more difficult is it found to assign any particular locality as their origin, so various are the quarters in which they are found. Dean Stanley saw a similar one a few miles north of Tyre. Fergusson found one at Sarchee in India. And now there lies before me Mr. Squier's remarkable account of Peruvian temples (in *Harper's Magazine* for May, 1868), which henceforth it will be impossible to dissociate from these relics of the pre-historical Old

THE FRIAR'S HEEL.

World. What then? Are we to find at length that America was the cradle-land of the human race—that the New World is really the Old World? Science has once or twice revolutionized our ideas as much as that, and there is no telling whither she will next lead us. Already the earliest animal in the world, the Eozoon, has been found in the Laurentian rocks of Canada.

The etymologists who love to trace English names to Saxon roots and those who find Norse etymons every where have their respective explanations of the name Stonehenge. The former see it to be plainly Stan-henge, or hanging stones; the latter to be Stanning (it is so spelled in some old records), from *Stan*, a stone, and *Ing*, a field. The former seems to me the more probable origin of the name; for though there are many old Danish names in England, they are found chiefly on the eastern coast, where the Vikings mainly hovered in early times. The word "Viking" itself indicates that the Norsemen kept about the bays and inlets of the coast. "Vik" is the same as "Wick," which signifies the corner of the mouth, and was applied to such inlets of the sea as run up into the land like the side of the mouth. It is preserved in "Berwick," and by reference to the inlet on which that northern town stands one may see what was meant by *wick*. The wick of a candle is that part of it which is similarly shaped. *Ing* (a field) means the spreading of such an inlet toward the sea; and Wick-ing or Viking is the whole name, which was gradually given to those who, probably for piratical purposes, infested such nooks on the coast. There, too, we find the names which end in *by*—*e. g.*, Whitby—*by* being the old Danish word for town. By-laws are town laws, that is, local regulations as distinguished from general or national laws. These words stretch into the east of Scotland, from which region Mr. Gladstone gets his name; *Glead* meaning a hawk, and the name a stone where hawks roost. But when we come into the southwest of England we find that Saxon is the back-ground of the proper names; and it is in the proper names that original tongues linger longest.

Again, a question has arisen whether Stonehenge was built for a temple, or for a courthouse. Undoubtedly we find that in early times civil trials were held in such places. In 1349 William de St. Michel was summoned to a court "*apud stantes lapides de Rane en le Garniach*," and in 1380 Alexander, Lord of Regality of Badenoch, held a court "*apud le Standand Stanys de la Rathe de Kingney Estir*." But archæologists find no difficulty in a country where religion is connected with the state in concluding that the Druid priests were also the magistrates, and that civil law began in religious and moral law. At any rate, the tradition of the country, joined with the fact that wherever stones similarly placed in other countries have been found they are invariably temples, renders it quite certain that Stonehenge was a religious structure.

Coming now to the temple itself, we find it consisting of 94 stones, with traces of there having been many more. It is generally thought that there were originally 160 in all. It is estimated that the largest of these would weigh nearly 40 tons, and would require 140 oxen to draw it. There is one stone whose weight has been estimated as high as 70 tons. The first question that arises in the mind is how these enormous stones could have been brought all the way from Devonshire or Cornwall—nearly 100 miles—the nearest point at which rock of a similar character can be found. There have been surmises that it must have been at that inconceivably remote period when elephants existed in England! But it is known that the very greatest power can not be got from horses, elephants, or any other animals than men; and this simply because mere animals can not be completely adjusted to the direction of intelligence, that is, can not be thoroughly drilled, nor inspired by a clear perception of the task to be accomplished. Reason at last is the chief force, even in mechanics. The heaviest single block of stone ever moved is that upon which the equestrian statue of Peter the Great stands in the city of St. Petersburg. It was brought from a point many miles away by men. The men in this case were drilled like an army. The first task was to lift one end enough to get it upon a roller. When the effort was to be made they were all—the number being several thousands—harnessed to the stone; the king and his court came out; innumerable banners were waved; the bugle was sounded; and amidst strains of martial music and under an inspiration such as is evoked at the onset of a battle, the men gave a great combined movement, and the first step, which made all others easier, was gained. Day after day this splendid performance was repeated amidst the presence and plaudits of vast numbers of spectators, including the king and nobility, until the work was done. Now if we add to such power as this the animation of that religious faith which can "remove mountains," the building of Stonehenge and other great temples ceases to be a mystery. The huge blocks of stone found in the temple of the Sun at Baalbec are so far beyond any force that the people of that region can now imagine that they say they were cut and removed from the neighboring quarries by the *genii*. And one enormous block which, after being cut, remains in the quarry, has given rise to the legend that the *genii*, who were employed by Solomon on this temple, struck work because the king broke his contract with them. So the temple was never finished. But when we learn from history that three hundred young men, the flower of the Carthaginian youth, came cheerfully to that temple to be offered up as sacrifices on its altar for the benefit of their city, we feel that the corresponding amount of faith in the workmen would be ample to cut and raise all the stones of Baalbec. At Stonehenge every visitor feels thrilled and awe-

stricken under a mysterious sense of being in the presence of some almost supernatural influence; and I doubt not that the feeling, if analyzed, would be found in the recognition in the monuments of a degree of faith which has passed away from the earth. "Why can not we build such cathedrals now?" asked Alfonso of Heine as they stood before the great structure at Rheims. "That cathedral," answered Heine, "was built by an age of convictions; ours is an age of opinions."

The plan of Stonehenge is two circles and two "horseshoes," each marked by stones which rise in height from east to west. The outer circle is 300 feet in circumference; the smaller circle is contained within this; and the oval circles open from these, impinging upon them; and one is inclosed within the other. The stone called the altar is inclined, and is of a kind different from the other in substance, and said to be impervious to the action of fire; it is a Devonian hornstone, called *Sarsen*; the other stones are of simple Cornish granite.

As the decay of the popular faith in Baal among the Syrians was marked by the rise of the superstition that not men but only genii could have built the temples of Baalbec, so the appearance of a new faith in these islands—the faith of Thor, it may be—was followed by the rise of legends that these stones were brought to Salisbury Plains by the magic art of Merlin, or by giants. The superstitious country people call them now "the giants' dance," and one may now and then meet with a peasant who believes that they were giants who were transformed to stone while engaged in diabolical orgies. The legend, as gathered from Giraldus, Lewis, and Geoffrey of Monmouth, is that these stones, which had a preternatural virtue, were originally gathered by giants at Kildare in Ireland. On the occasion when the Britons were invited to Salisbury by the Saxons to make a treaty of peace, the Saxons fell upon and slew them. Subsequently Ambrosius, King of the Britons, wishing to set up on the spot some everlasting memorial of this Saxon treachery, applied to Merlin, who informed him that there were in Ireland these magical stones that would last forever. As the Irish were unwilling to have them removed, Uther Pendragon went with 15,000 men and defeated them; but the stones could not be moved until Merlin came and with magic art transferred them.

It is not at all improbable that it is to this legend, acting upon the superstitious fears of Wiltshire peasants, that we owe the preservation of Stonehenge through many ages in which so many of these old structures have been broken up to make houses in a region where good stone is rare. It was not until 1620 that any real efforts at obtaining a rational explanation of these stones was made. The first of these was by Inigo Jones, the architect, who, at the desire of James I., investigated them, and attributed them to the Romans. This brought out a great controversy, which was carried on

by Hoare, Charleton, Webb, Sammes, Gibson, Keyser, each of whom had his theory, and among whom Stonehenge was attributed in turns to all the races that ever had a foothold in Great Britain. But it is from 1740 that we may date the little we have in the way of historic probabilities concerning the temple. In that year Dr. Stukeley, as before alluded to, went to reside with the Earl of Pembroke, and gave a thorough investigation of Stonehenge, the surrounding barrows, and the temple at Abury. He found at Stonehenge the bones of oxen and other animals similar to those sacrificed by Egyptians and Hebrews. In a large barrow—there are 160 barrows within a circle of three miles around—he found a skeleton with head to the north; a bone drinking-cup; a bone needle; two burned cones of jet; eighteen beads of amber; two oblong jet beads; glass beads, yellow and black; amber of various forms; urns of unbaked clay; a few beads with film of gold; all of which had been touched by fire. One barrow was evidently that of a heroine. It contained the skeleton of a young girl, by whose side were many costly ornaments, a bodkin of bone, and a javelin of brass. Stukeley showed conclusively that these were not Roman monuments.

At that time Celtic literature was beginning to receive some attention; and it was found that the Welsh bards alluded to "the stone cell of the sacred fire," and "the great stone fence of the common sanctuary." The Welsh Triads recorded three great works done in their time: 1. the lifting of the stone of Ketti; 2. building the work of Emrys; 3. piling up the mount of Assemblies. The "Emrys" spoken of here seemed to Mr. Davies, author of "Celtic Researches," so nearly related to "ambres"—the British name for sacred stones, which gave its name to Amesbury (Ambresbury), now called Abury—that he suggested the temple at Stonehenge as the second of the great works alluded to; and indeed the agreement of scholars from that time that the temple belonged to a Druidical period. But now Stukeley observed that the Stonehenge temple was built by people who venerated the circle and the oval; that those who were buried in the barrows belonged to a people who venerated the North, toward which the heads were placed; that those who built the Ambresbury temple built it in the form of a serpent; and that all these were built with reference to early astronomical theories. Now it is known that the Egyptians, Phœnicians, and Greeks all had a religious veneration for the North. The serpent was a still more universal symbol, there being hardly a race which has not some traces of serpent-worship. The snake is on the banner of China and that of South Carolina. But the old scholar found something more definite in the use of the oval, the circle, and the astronomic forms. He found that among Egyptians and Phœnicians a circle was the symbol of the Deity, and the earth was supposed an egg; and thus he was able to trace

the circular and oval forms observed in the plan of Stonehenge. "Plato, who learned much from the ancestors of our Druids, says, in Diogenes Laertius, that God is spherical, which he must mean hieroglyphically. So our Druids, as well as he, may mean the infinity of Nature in the Deity, who made the world by this scheme of Stonehenge; at least they understood by the circle the heavens, which include all things." Of the placing of the main entrance due northeast, where the sun rises at the summer solstice, he writes: "As well because that is the farthest elongation of that great celestial luminary northward; the complement of our earthly felicity in ripening the fruits of the earth; as because they then celebrated one of their principal religious meetings or festivals with sacrifices, public games, and the like." But though, as we have said, the serpent symbol is so universal, Stukeley proved that the great temple at Amesbury, clearly supplementary to that at Stonehenge and belonging to the same era and people, was built after that particular form of it which is found particularly in Egypt.

Any one familiar with Egyptian monuments will know how uniformly they are adorned with the figure of the circle alated with two serpents. Now this is just the shape

EGYPTIAN SYMBOL.

of the Amesbury temple. These facts seemed to point to the Egyptian origin of those who built these stone temples. But there is evidence that at an early period these British monuments became associated with the mythologies of other nations. Diodorus Siculus says: "Among the writers on antiquity Hecataeus and some others relate that there is an island in the ocean opposite to Celtic Gaul, and not inferior in size to that of Sicily, lying toward the north, and inhabited by the Hyperborei, who are so called because they live more remote from the north wind"—i. e., as compared with the Scythians. "The soil is excellent and fertile, the climate temperate, and the harvest is made twice in the same year. Tradition says that Latona was born here, and therefore Apollo is worshiped in preference to any other deity; and because the inhabitants celebrate him daily with continued songs of praise, and pay him the highest honors, they are considered as the priests of Apollo, to whom a magnificent precinct is allotted, and a remarkable temple of a round form adorned with many votive offerings. The country is also dedicated to this deity. Many of its inhabitants are musicians, who, striking up their harps within the temple, chant sacred hymns to the god, and honorably extol his actions. The government of the country and the care of the temple are intrusted to the Boreadæ, who inherit this government by an uninterrupted line of succession." Davies has shown that the

name of this Apollo (for there is no doubt that Britain is referred to in the above extract) was Bel—the same as Baal—and that the early name of this country was Vel-ynys, or the Isle of Bel.

Notwithstanding the belief of some good authorities that Hercules is purely a myth, the quantity of particular statements concerning him have brought the weight of critical opinion in favor of the existence of a great navigator whose career gave rise to the stories connected with that name. Max Muller has shown how nearly all, if not all, mythologies are traceable to the sun. Apollo is the sun whose light voyages throughout the earth; but Hercules, the Tyrian mariner, who sailed from the remote East to set up his "Pillars" at what was supposed to be the remotest Occidental point of land, was deified as a kind of human avatar or incarnation of Apollo. That he, or the legends connected with his name, was known in the earliest days in Britain is shown by sundry old names traceable to him—e. g., Hartlepool, Hartland, etc. Moreover, there is no doubt that an old altar to Hercules, with a Greek inscription confirming the fact, was discovered in Corbridge church-yard. The greatest mariners of ancient times were the Phœnicians, and nearly all authorities agree that they instituted a commerce with Cornwall, and first worked its tin-mines. Hercules was a Tyrian, and some say built that city. Stukeley believes that he and his Phœnician mariners discovered the use of the lodestone in Cornwall, where a large vein of it exists, and that they kept it for ages a profound secret, wishing to enjoy its benefits exclusively; and he finds this magnet hinted at in nearly all of the mythological legends of the time. Hercules, it was said, being once overpowered by the heat of the sun, drew his bow against that luminary; whereupon the god (Phœbus), admiring his intrepidity, gave him a golden cup, with which he sailed over the ocean. This cup was the compass, which old writers have called *Lapis Heracleus*. Pisander says Oceanus lent him the cup, and Lucian says it was a seashell. Tradition affirms that the magnet originally was not on a pivot, but set to float on water in a cup. The old antiquarian is wildly theoretical on this point, and sees a compass in the Golden Fleece of Argos, in the oracular needle which Nero worshiped, and in every thing else. Yet undoubtedly there are some curious facts connected with the matter. Osonius says that Gama and the Portuguese got the compass from some pirates at the Cape of Good Hope, A. D. 1260. M. Fauchet, the French antiquarian, finds it plainly alluded to in some old poem of Brittany belonging to the year A. D. 1180. Paulo Venetus brought it in the thirteenth century from China, where it was regarded as oracular. Genebrand says Melvius, a Neapolitan, brought it to Europe in A. D. 1303. Costa says Gama got it from Mohammedan seamen. But all nations with whom it was found associate it with regions where

ANCIENT COIN OF TYRE.

ANCIENT COIN OF TYRE.

Heracleian myths prevailed. And one of the most curious facts is that the ancient Britons, as the Welsh do to-day, call a pilot *llywydd* (lode). Lodemanage, in Skinner's Etymology, is the word for the price paid to a pilot. But whether this famous, and afterward deified, mariner had a compass or not, we can hardly regard the association of his name with so many Western monuments as accidental. The dollar mark (\$) so familiar to Americans is certainly derived from the "Pillars of Hercules," as the two great rock-hills at Gibraltar are called; and I have in the pursuit of this subject come to the conviction that there is in that dollar-mark a very interesting piece of symbolism hitherto undiscovered, which the reader may regard as an episode in this inquiry.

The Tyrian form of the Heracleian legend is this: Claudius Julius Hercules, having been bitten by a serpent, was ordered by an oracle to sail to a distant region where he would find a plant that would heal him. He came to Spain, where he found the plant colocassia—or, as Salmusius says, *dracunculus*—which cured him, and then he built the city of Gades (Cadiz), and raised the "Pillars of Hercules"—which was his tenth labor. This legend found its way in the course of time on the coinage of Tyre. In examining these old coins it struck me that they singularly resembled the earliest representations of Adam and Eve, with the tree of life and the serpent. The earliest of the coins (No. 1), which was "struck by Tyre in honor of its founder, Hercules, the navigator," shows simply two round-topped pillars with a tree between them, with an altar and a couch, which was the device of Tyre. But on the more recent coin (No. 2) there are significant modifications; a serpent surrounds the tree, and the stone pillars on either side are irregular. In fact the plain stones of No. 1 are in No. 2 on their way to become statues. It must be remembered that at the time when Tyre was at its height of prosperity as a commercial city Greece had no history, and Greek art did not exist. The nations beyond Greece in both time and place had gradually ascended from the worship of lowest fetiches to the worship of the planets. Even the setting up of sacred

stones—originating in altars—was probably a reaction and innovation from the more western tribes which ultimately crystallized into Greece. Maximus of Tyre says the Arabians worshiped he knew not what, for he "only saw a great stone." Pausanias says the more ancient Greeks worshiped unhewn stone instead of statues. But at the time that the fable of the stones cast by Deucalion after the deluge over his head and transformed to men was forming these primitive religious stones also became statues; and thus the story of Adam and Eve, the serpent and the apples, blended with the legend of Hercules, the serpent bite, the healing plant, and the pillars of Hercules. The later or Greek form of the fable is the apples of immortality, guarded by a serpent in the interest of the three nymphs (Hesperides), which it was one of the labors of Hercules to gather. There seems to me no doubt whatever that we have, therefore, in our Spanish-American dollar-mark at once the pillars of Hercules, the dracunculus, and the serpent; the daughters of Hesperus, the serpent, and the golden apples; and the tree of life with the serpent twined around it.

We must, then (to return to Stonehenge), conclude that at about the period of time when Jacob took the stone which he had for a pillow and set up for a pillar, marking the spot which had been "the gate of heaven" to him, wanderers from the same region—the region of astronomic religions, pyramids, etc.—were setting up these pillars on Salisbury Plain. And the little we know about the Druid priests who presided over them indicates that they had many of the characteristics of those of Egypt who represented the established church of Pharaoh and the aristocratic task-masters. Dr. Stukeley thought, however, that the builders of Stonehenge were Jews. Nor is this impossible. We probably make a serious mistake in supposing that the Jews and their ordinary priests differed materially from the old Egyptian priests. Moses was clearly in advance of his followers, whom he found worshiping the Egyptian calf; and even Moses, in an emergency, offered for their adoration the sacred serpent of the country they had left. And it is certainly remarkable that He-

brew names, derived from immemorial times, are met with constantly in England. The Hamath of Scripture is found also in Gloucestershire, with an Ararat Hill, too, in the vicinity. The Aven of Ezekiel is repeated in the Avon. Nebo, Bel, Gilboa, occur in Wiltshire; and we have Calneh in Calne, and Ham, Hampton, etc., frequently. We have Mara-Zion in Cornwall, and Baal-peor meets us in Belper. The Rev. Samuel Lysons has collected over four thousand words and names in Great Britain which are plainly cognate to Hebrew words. It must, however, be borne in mind that it is well known that the Hebrew language is a Chaldee dialect. And so when we find, as we constantly do, ancient customs and traditions in Great Britain clearly related to those recorded in the Bible, although certainly anterior to the advent of Christianity here, it is necessary to reflect that the Hebrews derived them from many tribes—Egyptian, Babylonian, Syrian, and other. Of these ancient customs I shall have something to say presently. Before leaving Stonehenge it may be interesting to sum up briefly all that we know concerning the Druids, most of which we get from Cæsar, and one or two Greek writers. The Druids (priests), according to them, led austere lives, worshiped in forest solitudes, believed in immortality and transmigration, and were supposed to have the power of bringing blessings or cursings upon the people, who stood in great awe of them. They were a distinct hereditary caste, and their employments were divided among three classes. One of these (who may be taken as the originators of the Welsh bards and harpists) chanted hymns to the gods, and sang of heroes; the second decided judicial questions and attended to the education of youth; the third, and highest class, presided over religious rites and sacrifices. The priests were exempted from taxes and military duties. No enterprises were undertaken without consulting them. They appointed all officers. When disobeyed they ostracized the offender, to whom no one dared speak thereafter. They dealt much in charms and astrology. They held the oak sacred; and the mistletoe, under their incantations, became a panacea for every ill. They went barefooted and dressed in white. They gathered the lunaria, or moon-plant, when the moon shone on it, and vervain at sunrise, and used them for healing. They had secret symbols and signs, into which only the higher priestly orders were initiated; these it was not permitted to commit to writing. There were female priestesses, vowed to perpetual celibacy; and seem to have carried the doctrine of the equality of the sexes very far. This seems to ally them with the Germans and Cimbri.* Tacitus says: "The Germans sup-

pose some divine and prophetic quality resident in their women, and are careful neither to disregard their admonitions nor to neglect their answers." And of the Cimbri Strabo says they were followed to war by barefooted prophetesses in white linen, fastened with clasps of brass. "These go with drawn swords through the camp, strike down the prisoners they meet, and drag them to a brazen kettle. The priestess ascends a platform above it, cuts the throat of the victim, and from the manner in which the blood flows into the vessel she judges of future events. Others tear open the bodies of captives thus butchered, and from inspection of the entrails presage victory to their own party." There is no doubt that the Druids sacrificed human beings, who, selected generally from captives or offenders against their laws, were caged in a great basket and burned, the victims being supposed to be purified for the gods by this means. They believed in testing offenders by ordeals, as fiery furnaces, hot oil, and the like. They believed in destiny. They were severely moral as to sexual sins, and were undoubtedly the stratum out of which the Puritans and Calvinists were ultimately fashioned. They consecrated the darkest caverns and groves, believing them tenanted by potent spirits, and similarly apotheosized all the sombre and hard elements of the human mind and heart. They abhorred all images and statues, looked kindly on suicide, and esteemed physical courage above all traits of character. Altogether, I take it, your genuine Druid must have been unlovely.

The earliest allusion to Great Britain which we find is in Herodotus (B.C. 445), in which he mentions the Scilly Isles as a place from which tin was obtained. Aristotle, a hundred years later, mentions England and Ireland under the names Albion and Ierne. Polybius (B.C. 160) mentions the British Isles in connection with tin. Strabo (B.C. 40) gives something of the geography of the islands, and he quotes from a previous writer, Pytheas, who had traversed England and says: "It was neither land, nor sea, nor air separately, but a certain concretion of them all, like sea-blubber, in which land and sea and all things are suspended, and this is as it were the bound of all things, being neither passable by traveling nor by sailing." The sea-blubber is explained by some writers by the phenomenon of half-melted and amassed ice-slush, sometimes found about the Scilly Islands even yet. But it is to Cæsar (B.C. 56) we must look for our particular accounts of Britain at that period. He says that the Druids had knowledge of the stars and of geometry; that they used Greek letters; that they had vast numbers of youth studying, who had

* The Germans and Cimbri must have been brother-tribes or races. German means "man of war"—*ger* being *guerre*, and radically the same word with *war*, and with the Scotch word *gar*, to compel. Cimbri is traceable to *kampf*, battle. *Deutsch* is traced by some

to an old German word for fighting; but it is probably from the old German deity *Teut*, who was transformed by Christianity, like many other deities, into a *Teufel*. *Teut* may have been *Thoth* or *Taut* of the Egyptians, from the Chaldaic word *Tit*, the clay out of which man was formed.

to commit sometimes 20,000 lines to memory at a time. The discrepancies between the accounts of the personal appearance of the people given by Cæsar and the writers who immediately succeeded him are amusing. Cæsar says they painted themselves blue and dressed in skins; Solinus that they were tattooed; Herodian that they stained themselves with the figures of animals, and went naked; Pliny says that men and women, when at their religious ceremonies, were naked, and were black; Jordanes says they colored themselves with iron ore, which would make them red; Ovid calls the Britons *virides*, or green. From all of which we may gather that at about the Christian era these islands were peopled by races gathered from all parts of the earth.

Any one who will examine a physical map of the Eastern Hemisphere shall find the human race originating upon the rocky and sandy mountains and plateaus of Asia, with their average of 2000 feet above the sea. The hardness of nature there would give rise to a severe struggle for existence, and this would tend to scatter and sunder the race. Out of these wars migrations would arise, and these migrations would naturally follow the rivers by which Asian table-lands and mountains irrigated the pleasant and fruitful valleys of Europe. On examining Europe it will be seen that it is so intersected by mountain ranges, waters, and so forth, as to be admirably contrived to divide up the human race, as a hand is divided into fingers. Europe thus became the grand place for the establishment of those various nationalities, to whom Destiny distributed various tasks which were to unfold the several talents which were folded up in the seed-brain of the Asiatic man. The history of Europe is the history of these varieties. Having in their separateness developed their respective powers, the epoch of reunion began, and the long-parted races began to mingle again on the pleasant slopes of Western Europe. In Great Britain this mingling came as the overture to the great harmony of races which prepared for America her great task—the unification of the race on a higher plane, that is, with all the characteristics unfolded by its European nationalities preserved. We must then think of the settlement of Great Britain by successive invasions of Celts, Saxons, Romans, Norsemen, and the rest, as like the gathering into one Niagara or St. Lawrence of the waters of kindred but separate lakes. But it was not, like Niagara, by one fall that the confluent races found their way here, but rather by many falls—like those of Trenton—occurring after distinct intervals, and each with its own character. It followed that England was an immense caldron of contending bloods for ages; and that only after long struggles for supremacy were they formed into any thing like a consistent mass—even then the Irish being unmixable. And as there was a struggle of races here, so was there a struggle of their religions. We can find traces in these islands

of all the religions that ever existed on earth. It would surprise many of the devout people in England, Wales, Scotland, Ireland, and consequently in every part of America, if they knew (what is a fact) that some of their most pious and ardent rites are derived from pagan usages which existed in these islands ages before the introduction of Christianity. How little do they who sing and shout in camp-meetings in the woods reflect that ancient Britons, in their forests, similarly chanted their incantations, and shouted to frighten away evil demons! How little do they who dress their churches with evergreen at Christmas see in them the ancient mistletoe, or the votive offerings to the sun which clothed the earth in robes of green! Fortunately for our researches in this direction, those who first brought Christianity to Great Britain did not attempt to trample out the various religions which they found already occupying the ground, and deeply rooted in the faith of the people. Indeed, if Christianity had denied the people their old observances they would have trampled it out. In the year A.D. 601 Gregory the Great wrote to the Abbot Mellitus, then going into Britain, the following directions to be communicated to Augustine, the first Archbishop of Canterbury:

“When, therefore, Almighty God shall bring you to the most reverend Bishop Augustine, our brother, tell him what I have, upon mature deliberation of the affairs of the English, determined upon, viz., that the temples of the idols ought not to be destroyed; but let the idols that are in them be destroyed; let holy water be made and sprinkled in the said temples; let altars be erected and relics placed. For if those temples are well built it is requisite that they be converted from the worship of devils to the service of the true God; that the nation, seeing that their temples are not destroyed, may remove error from their hearts, and, knowing and adoring the true God, may more familiarly resort to the places to which they have been accustomed. And because they have been used to slaughter many oxen in the sacrifices to devils, *some solemnity must be exchanged for them on this account*; as that on the day of the dedication, or the natiivities of the holy martyrs, whose relics are there deposited, they may build themselves huts of the boughs of trees, about those churches which have been turned to that use from temples, and celebrate the solemnity with religious feastings, and no more offer beasts to the devil, but kill cattle to the praise of God in their eating, and return thanks to the Giver of all things for their sustenance; to the end that, while some gratifications are outwardly permitted them, they may the more easily consent to the inward consolations of the grace of God. For there is no doubt that it is impossible to efface every thing at once from their obdurate minds; because he who endeavors to ascend to the highest place rises by degrees or steps, and not by leaps.”

Mosheim, in his Ecclesiastical History, shows that this was every where the practice of the Church. He says:

“To those festivals which were celebrated in the preceding (fifth) century were now added the festival of the Purification of the Blessed Virgin, invented with a design to remove the uneasiness of the heathen converts, on account of the loss of their Lupercalia, or Feasts of Pan, which had been formerly observed in the month of February—the Festival of the Immaculate Conception—the day set apart to commemorate the birth of St. John, and others less worthy of mention.”

The Purification of the Virgin and the Birth of St. John are still preserved as festivals in the Church of England. Thus the Birthday of the Sun, the Scandinavian Feast of Yule, with its log and wassail bowl, were baptized into the feasts of Christmas; and our fine dinners on that day were originally burned to cinders on altars instead of nicely cooked for our own palates. Our forefathers' "Masques" and our Pantomimes are reminiscences of veritable Saturnalia. *Uley* is an old Chaldaic word for "ascend," and was used with reference to the ascent of the sun; whence Yule. In some parts of Yorkshire the people run about and into the churches at Christmas, which corresponded to the feast of Apollo, crying *Ule, ule*. A Christmas custom also remains in Kent called Youling, in which numbers of people encircle the apple and cherry trees to invoke a good crop, singing:

"Stand fast root; bear well top;
God send us a youling sop;
Every twig, apple big;
Every bough, apples enow."

Sun-worship may not only be traced in hundreds of names of places in Great Britain—as, for instance, in this very Saul's (*i.e.*, Sol's) bury—but in actual religious usages. In many churches during the recitation of the Apostles' Creed the congregation turn and bow toward the east; in English cemeteries bodies are buried with head to the east. One who penetrates the most primitive districts, in regions where the Celts are known to have existed from the oldest times, will get glimpses of some very antique proceedings. Bel-fires are still lighted at midsummer in some parts of Ireland, and cattle driven *through* them. Dr. Moresim speaks of a custom in Scotland of which he was an eyewitness. "They take," he says, "on their return from church, the newly-baptized infant, and vibrate it three or four times gently over a flame, saying, and repeating it thrice, 'Let the flame consume thee now or never.'" This is plainly a relic of fire-worship, and probably of the custom of human sacrifices.

In some parts of Scotland they have a still more distinct reminiscence of human sacrifices. About midsummer a number of people go out on a common and build a fire. They then proceed one after another to run and leap over or through the top of the ascending flame. None can give any account of the origin of this performance; they only say that it has always been the usage of their neighborhood; but there is little doubt that those who instituted it often went into and not over the fire. The widespread custom of bowing to the new moon certainly had its origin in the Druidical ceremonies which occurred at every change of the moon, as have also many of the beliefs of country people as to its influence upon their crops; some of which, however, as Mr. P. J. Lesley, of Philadelphia, has shown, are not entirely superstitious. Those who strew flowers on graves are unconsciously following the precedent of Alex-

ander, who strewed them on the grave of Achilles, after the manner of the ancients, as described by Virgil in the sixth *Æneid*. In the Book of Ruth we read: "Now this was the manner in former time in Israel concerning redeeming and concerning changing, for to confirm all things; a man plucked off his shoe and gave it to his neighbor: and this was a testimony in Israel." The giving of the shoe meant the resignation of property. Castell says that the Emperor of Abyssinia used the casting of the shoe as the sign of dominion. The old custom is alluded to in Psalm ix.: "Over Edom will I cast out my shoe." This custom survives in the practice of throwing the shoe after a bride when she leaves her parental home; the father resigns his property in her. In some countries the right-hand glove was used instead of the shoe, and in medieval times the giving of a pair of gloves signified a quit-rent for lands. At many English weddings now it is the custom for the parents of the bride to furnish the gloves worn by the guests. April-fool's-day plainly refers to the Druidical festival which marked April 1—the first day of the ancient year, when the sun entered the sign Aries, and the season of frolic and mirth began. The May-pole is a Phallic symbol. The circular dances around it originally represented the movements of the planets. The British goddess *Ma*, "the great mother,"—etymologically related, as some think, to the Hebrew *Am*—was succeeded by the Roman goddess *Maia*, who was again succeeded by the Christian *Mary*, who, in the Roman Calendar, is the Queen of May. Each goddess in turn represented the fecundity of Nature. At one period the May-day festival was marked in Great Britain by much licentiousness. Homer represents the gods as passing the nectar from right to left. The ancient sun-worshippers passed the goblet in the same way, following the course of the sun. And now at any public dinner in London the bottle is sure to pass to the left hand. The drinking of healths was originally a libation and invocation; the liquid was poured on the altar instead of down the throat. To this day the London cabman, stopping before a public house for a glass of ale, will always stop short of the bottom of the tankard and pour the rest on the ground, without in the least knowing why he does it. Hydro-mel or honey-water was Attila's nuptial bowl. Diodorus Siculus says the Celts used a drink of honey mixed with water. This was the methaglin or mead of the Norse gods. The Gaelic-Welsh custom of celebrating the felicity of marriage by drinking this beverage for thirty consecutive days after marriage originated that happy festivity called the Honey-moon. Quintus Curtius tells us that "the king ordered a large cake to be brought, which was the most solemn pledge of those who entered the marriage state, which being cut through with a sword, each of the parties partook of." The ancient Britons had this hallowed cake, and believed that those who ate of it would that night

see in a vision his or her "future partner." Hence the wedding-cake, and the custom of placing a bit of it beneath the pillow to be dreamed on. Mr. M'Lennan, of Scotland, in an interesting work on "Primitive Marriage," has pointed out various sports and customs which are traceable to the period when the wife had to be captured from her relatives, who defended her—a period which may be ascribed to the time of the early migrations of Eastern races into Europe, the emigrants then (as now) leaving their women behind, and finding few enough in the countries to which they migrated to make every woman a prize. Of these relics of the age referred to one of the most common is the favorite game of fairs and country people called "kissing in the ring." The girl drops a handkerchief behind a young man (who, with the rest, helps to form a ring), and then runs; the youth pursues until he captures her; she is then brought into the centre of the circle, where she must give him a kiss.

The score of fortune-tellers in London—of whom Zadkiel, with his annual Astrological Almanac, is chief—are of the apostolic succession of the Druids. Every summer there is fitted up at the Cremorne Gardens a cave, lighted by a solitary lamp, where sits a white-robed, gray-bearded individual, who, for a sixpence, gives those who consult him a paper covered with cabalistic signs, on which are a few mystical doggerel lines concerning their future. He is the ghost of the Druid priest, as described in the most ancient Pictish chronicle:

"There remained of them in Ealga,
With many artificers and warriors,
They would not leave Breagmach,
Six demon-like Druids.

"Necromancy and idolatry, illusion,
In a fair and well-walled house,
Plundering in ships, bright poems
By them were taught.

"The honoring of Sredkhs and omens,
Choice of weather, lucky times,
The watching the voice of birds,
They practiced without disguise."

The priest seated in his confessional was originally a Druid in his cave, examining those ominous entrails of fowls which the poulterer still sells as "giblets," or *cabalistic* things. (Cabala=Heb. Quel=Cell: Cabalist is the Man of the Cell. Solomon called himself Quelt.) Many of the old pagan feasts survive as games. The favorite sport of all English fairs, Aunt Sally—the most common form now of the game called *Cockayne*, where small prizes are set up on poles to be gained by him who can hit them by throwing—originated with sun-worshiping countries. The Emperor Heliogabalus, the *ci-devant* priest of Apollo at Baalbec, introduced it to Rome. The amusement, called *la Cocagne*, remains in Italy, where cakes, etc., are contested for; and in Germany, France, Belgium, the *Mat de Cocagne* combines the May-pole with the setting up of the popinjay to be shot at. Lysons attributes it "to

feasts in honor of Coc, one of the names of the sun, to whom altars have been found in Cumberland under the name of Cocidius." "There is," he adds, "a field in the suburbs of Gloucester which, in the Hundred Rolls, *temp.* Edward I., was called Cocayne, now corrupted to Cog-gins. And we read in Spelman that these games especially flourished in the time of Edward I. A *pays de cocagne* is a place of amusement, idleness, and luxury. A person who devoted himself to unprofitable amusements became a lazy, idle vagabond, in French called a *coquin*, in England a cockney. The female of cockney is coquette; she, too, contends for the hand of many a man, careless of her success when obtained."

Mr. Peter J. Lesley, in his admirable work, "Man's Origin and Destiny," which is an honor to American philosophy, has a very curious passage on the origin of common games. He says: "Cricket is the game of the Druid kirk, and its characteristic is a wooden gate, or wicket, made in imitation of one of those tremendous trilithons which compose the circle of Stonehenge; and the game is a mimic war between two parties, one of which represents the priesthood, whose whole business it is to protect the sacred lintel, which the other party strive to cast down and destroy. The game of marbles represents a similar attack from outside foes upon the safety of the initiated into the Church, in the form of marbles in a ring; for kirk or church is the same as *κυκλος*, or circle, in the Druid mythology of the past. The order of the Knights of the Temple were the last in Christendom to keep alive the mystery of building circular churches. The very name, *Tor-alley*, which the boys give to the great marble in the centre of the ring, is enough to show the Arkite tradition in the game. But, above all, the game of hop-skip speaks for itself. No one can watch two boys draw with chalk on a pavement an oblong space, terminating in an apse at one end and divide it by cross lines, and draw a cross at the farther end, without seeing at once that the figure is the ground-plan of a French cathedral church.....Then see one of them take an oyster-shell—a neophyte—and with great difficulty hopping on one foot, and with all sorts of mystic motions and complicated rules of conduct, according to a well-established order of tradition, which his opponent jealously observes, being on the watch to trip him up at the least infraction of the rules, and see him shove the oyster-shell from division to division, on toward the cross and altar-place, where the catechumen becomes a communicant, and the communicant a priest—and tell me there is nothing ancient, nothing Archaic, nothing of the Eleusynian, or still older Old Egyptian mysteries in that!"

I may mention here that the usual derivation of Druid from the Greek word *δρυς*, an oak, is not quite satisfactory. It is more probable that *δρυς* was derived from Druid, or Dryad, as it clearly received its name from its sacred

character, and the oracles of Dodona. A further analysis of Druid takes us back to the Chaldaic and Hebrew word *dur*, which means "to go round"—i. e., like the sun and moon. The word Dervish is derived from the same *dur*. It is well known that the dance of the Spinning Dervish is supposed to represent the movements of the heavenly bodies; as we read in the Oriental song of the Dervish which Mr. Emerson has translated:

"Lost in whirl of spheres I rove,
And know only that I love."

Such sacred planetary dances were universal among the ancient sun-worshippers. The favorite amusement—*ballet*—preserves the name of *Baal*, whose religious ceremony it once was. As a religious custom the mystical dance is preserved among the Shakers in their usual worship, among the Methodists in the procession which moves around the auditorium at the close of a camp-meeting, and still more plainly among the Roman Catholics in the circular procession of lustration observed at the consecration of a church. There is little reason to doubt that the legend of the peasantry that the stones of Stonehenge were giants transformed while at their wild orgies—which gave the place the name in the Middle Ages of *Chorea gigantum*, and causes it to be now called "The Giants' Dance"—originated with these early Druidic rites. Any one who visits the old circular Temple in London, around which the Knights Templars lie buried under their little pylons or truncated pyramids, will at once feel that its pedigree is on Salisbury Plain, and that both rest upon that early effort of man to raise the earth to the harmony and order of heaven, which is well uttered by the prophet Sasan: "The first time I was called to the world above the Heavens and Stars said unto me, O Sasan! we have bound up our loins in the service of Yezdan and never withdrawn from it, because he is worthy of praise; and we are filled with astonishment how mankind can wander so far from the commands of God!"

I have refrained in the foregoing account from venturing any opinions concerning the barrows to be found around Stonehenge. The whole subject of barrows is in confusion, and the barrows themselves have been singularly neglected. We can not criticise the English, however, in this regard while our own Indian mounds, which Ben Franklin regarded as the repositories of many important secrets, remain generally unexplored. A considerable number of tumuli have, however, been opened in Europe; but their contents are so mixed that men of science seem to hope for little results from their further exploration. Implements of stone, bronze, iron, are often found side by side. Bodies are found partly burned, unburned, and urned as ashes. Some bodies have faces turned upward, others with faces turned downward. Some are found lying under boats with their keels upward, and these sometimes are in keel-

shaped barrows. There are round skulls in round barrows, and long skulls in long barrows. All these things are at present under discussion. It is generally supposed that the races mixed somewhat their burial customs, and that those buried with faces downward were slaves. The implements chiefly found are of flint; and their

FLINT IMPLEMENTS.

mixture with those of bronze and iron may be easily accounted for by remembering that, as is now the case in India and other countries, the most ancient implements and utensils of a country remain in use with the humbler classes long after improved ones have been in use among the rich. Flint weapons were used in the battle of Hastings. When a man of sufficient importance to have a mound raised over him died, his slaves would signify their respect by depositing their arrows in his grave. (These arrows, wherever the religion of Thor had gone, were also supposed to be able to keep off demons.) The bones of animals sacrificed for (or to) the spirit of the departed are generally found about the entrance. I have formerly, in speaking of Devonshire, remarked that many of the most ancient barrows have an interior structure resembling that of the houses in which the earliest inhabitants of the country resided. It is of even more importance that at the entrances to some of them (especially in Cornwall) there are indications of certain dark holes and caves which were connected with the most sombre portion of these ancient religions. The entrance of the rare species of barrow to which I now allude is called the Dolmen, and consists of a great stone resting upon two others which have a perforation. Borlase, who gave an interesting account of one found in Cornwall (of which a representation is herewith given), ob-

ENTRANCE TO BARROW.

serves that it was among the Druidical mysteries that persons drawn through this opening—a very severe operation—would be purified from every sin. The fact is very important as showing some remote connection between this creed and that of India, where (at Malabar) there is a famous perforated cavern-door

of the same kind, through which, as Mrs. Ellwood, in her "Journey to the East," says, "penitents squeezed themselves in order to obtain the remission of their sins." There is also some reason to think that we can get here some inkling as to the origin of the idea of Hell, which is known to be a blending of the Gehenna of the Jews with a wide-spread Teutonic and Scandinavian belief concerning the ice-cold realms of the goddess Hela. It is known that the Dolmen I have just described was called "Hell-stones." From these was named the parliamentary borough of Helston in Cornwall, which is more remarkable for the continuance of ancient pagan customs than any town in England. Hell is the same as hole; but it has a more remote relation with *Helios* (the sun), and with *heilig*, holy, heal, and a vast number of such words. In the form in which it has entered our English speech it originally meant this purgatorial, healing Hole. Mr. Lysons mentions that there is in a Saxon crypt, under Ripon Cathedral, a hole in the wall in connection with which a superstition exists in the neighborhood that they only can pass through it who are chaste; and that unmarried women passing through it will be married within the year. The verger said that vast numbers passed through it annually.

And now, at the end of my second saunter, I must confess that the mystery that yet clings to Stonehenge and its environs is still deep enough to evoke from my breast a response to an apostrophe to Literature, which I first read as quoted in the old folio of Stukeley, written by Queen Anne's domestic, Samuel Daniel:

"O blessed Letters, that combine in one
All ages past; and make one live with all!
Make us confer with those who now are gone,
And the dead living unto counsel call!
By you the unborn shall have communion
Of what we feel and what does us befall.

* * * * *

"And whereto serves that wondrous trophy now
That on the goodly plain near Wilton stands?
That huge, dumb heap that can not tell us how
Nor what nor whence it is, nor with whose hands
Nor for whose glory it was set to show
How much our pride mocks that of other lands."

Yet the poet little dreamed that it would be one of the triumphs of Letters in the future to create a science that should analyze the very elements of "letters," down to the smallest alphabetical sign, and thereby evoke a vast deal of the buried past; that step by step we should attain some knowledge of the races that once lived amidst these silent plains; and that even those "dumb" stones near Wilton would, under the waxing light of knowledge, at last emit, Memnon-like, some faint strains of the old music to which they arose, and which were chanted by their worshippers. Had he so dreamed the poet would have had another tribute to offer to that Literature which enables man to draw nearer to the most distant eras of the Past in knowledge as he becomes farther removed from them in time!

LEARNING COMMON-SENSE.

COMMON-SENSE is the application of ordinary wisdom to the affairs of daily life. Its title imports that it is no aristocratic privilege of a favored few, but a general patrimony, in which most or all persons are supposed to share. The truth is, however, that the term common-sense expresses rather what ought to be than what absolutely is. Intellect is certainly common, so is sensibility, so are many other gifts of nature and experience; but common-sense is not yet a mark of the race.

Common-sense is learned in the school of life. In that school every sense of the body, every power of the mind, every attribute of our twofold nature, every relation of the person, is constantly in exercise; and by them, in connection with the consciousness which animates and the outward objects that address them, the judgment is trained to perceive, the will to execute, and the passions to sustain, the dictates of its wisdom. To know what we are, and what we are designed for; to know what to do, and when, where, and how to do it; to know just what to expect, and the means to be used to realize it, are some of the main offices of common-sense.

Popular opinion assigns this sense to merely practical men, and they are viewed as the monopolists of this virtue. But this is a mistake. All greatness requires its presence. There is no genuine talent, no lofty genius without it. If it exist alone, it does not necessarily distinguish its possessor, but none of the best order of thinkers and actors were ever found destitute of it. For this same common-sense, disguised under various forms, is the one inevitable condition on which nature suspends all her benefits. She does not give bread by one law and beatitudes by another. The practical man, the poetic man, the philosophic man, are all simply men, amenable to the rule of common-sense however diverse the fields in which they operate. Newton and La Place, Watt and Whitney, Burke and Milton, meet and stand together on this common ground. In fact, it is the chief source of intellectual sympathy between men. Such thoughts, feelings, experiences, as are common to the race constitute the frame-work of society; they are the bones of the body politic, and in every age the force of conservatism may be measured by the strength belonging to them.

If you wish to acquire common-sense, you should early learn to set a high estimate upon its worth. It is not a dazzling thing, nor is it often a passport to fame; but for this very reason it deserves the more to be appreciated. One's own heart is always suggesting the mighty argument in its behalf. Every man feels that life is somehow a trust—that a certain treasure, which he little understands how to define, has been committed to his care; and then the ever-pressing conviction that circumstances are not quite propitious, that safeguards

are needed, and that on himself hangs his destiny: these are sentiments that plead for thoughtful judgment and prudent action of common-sense. Apprehension is awake to the dangers around us, and it seeks refuge in common-sense as the only security. Then, too, when outside objects begin to act upon the mind, when bread and raiment are daily problems, when we are to balance ourselves a thousand times over amidst the changing scenes of the world, what infinite pains nature takes to magnify the virtues of common-sense!

The temper of common-sense is a natural humility that studies wisdom in little things. It sees a harvest in a grain of wheat. It finds a world in a dew-drop. It reads the universe in an atom. If it can manage trifles, it believes that great events will dispose of themselves. Lafitte picked up a pin, and became a wealthy banker. Marryatt saw the funeral of Lord Nelson, and the sight made the novelist. A

newspaper paragraph quickened the embryo chemist that lay hidden in the young Humphrey Davy into life. Common-sense estimates every object by the truth it contains. It counts a fortune in a few pennies. It has faith in easy victories, if the battle is fought at the right hour in the right way. With circumstances it has no quarrel, and it keeps on reasonably good terms with its own capacity. It understands the art of getting along with people, and creates in others what it expects to receive from them. Certain that the world is pretty much what we make it, common-sense carries the true secret of life in its own heart. In to-day it holds to-morrow, and by commanding the present controls the most distant future. Common-sense is the union of all the faculties in obedient and contented service to the firm laws of human existence. It is animal and intellectual copartnership, having a vast estate in common, and deciding on just terms of use and enjoyment.

MY OLD WOMAN AND I.

I.

WE have crossed the bridge o'er the middle of life,
My old woman and I,
Taking our share in the calm and the strife,
With the travelers passing by.
And though on our pathway the shadows are rife,
There's a light in the western sky.

II.

Some losses and crosses, of course, we've had,
My old woman and I;
But, bless you! we never found time to be sad,
And a very good reason why.
We were busy as bees, and we weren't so mad
As to stop in our work to cry.

III.

On our changeable road as we journeyed along,
My old woman and I,
The kindly companions we met in the throng
Made our lives like a vision fly;
And therefore the few that imagined us wrong
Scarcely cost us a single sigh.

IV.

The weak and the weary we've striven to cheer,
My old woman and I;
For we each of us thought that our duty while here
Was to do as we'd be done by,
In the hope to exhibit a balance clear
When the reckoning day is nigh.

JOHN BROUGHAM.

“WE HAVE CROSSED THE BRIDGE O’ER THE MIDDLE OF LIFE,
MY OLD WOMAN AND I,
TAKING OUR SHARE IN THE CALM AND THE STRIFE,
WITH THE TRAVELERS PASSING BY.”

CHIVALROUS AND SEMI-CHIVALROUS SOUTHRONS.

By J. W. DE FOREST.

I.

THEY certainly are, these "Southrons," a different people from us Northerners; they are, perhaps, as unlike to us as the Spartans to the Athenians, or the Poles to the Germans; they are more simple than we, more provincial, more antique, more picturesque; they have fewer of the virtues of modern society, and more of the primitive, the natural virtues; they care less for wealth, art, learning, and the other delicacies of an urban civilization; they care more for individual character and reputation of honor.

Cowed as we are by the Mrs. Grundy of democracy; moulded into tame similarity by a general education, remarkably uniform in degree and nature, we shall do well to study this peculiar people, which will soon lose its peculiarities; we shall do better to engraft upon ourselves its nobler qualities.

Before entering this gallery of pictures which the abolition of slavery has destined to dispersion and decay, let me explain that by "chivalrous and semi-chivalrous Southrons" I do not mean crackers, sand-hillers, and other low-downers. Let me add also that I shall draw largely for portraits on the district in which for fifteen months I performed the duties of "Bureau Major."

SELF-RESPECT.

"Southern chivalry, you see, Madame," said Mr. Calhoun Burden, of Greenville, South Carolina, to the wife of a United States surgeon.

Mr. Burden, a stoutish, middle-aged gentleman, richly flavored with Durham tobacco and Pickens whisky, and as proud of himself in his suit of homespun as if it were broadcloth, had called in a reconstructing spirit on the Yankee family, and in the course of conversation had found it desirable to put a question to the colored servant-girl. Making a solemn bow to the mistress of the house, he said, "With your permission, Madame;" then added, in an impressive parenthesis, "Southern chivalry, you see, Madame;" then delivered his query.

That no such delicate behavior was known among the Vandals north of Mason and Dixon's line; that it could not easily be matched in Europe except among the loftiest nobility; that it was especially and eminently Southern chivalry—such was the faith of Mr. Calhoun Burden.

It was a grotesque, and yet not a very exaggerated exhibition of the sectional and personal pride of the Southerner. He never forgets that he represents a high type of humanity, and that it is his duty not to let that type suffer by his representation. In the company of Yankees and foreigners he always bears in mind that he is a triton among minnows, and he endeavors to so carry himself as that the min-

nnows shall take note of the superiority of the triton character. In men of native intelligence and high breeding this self-respect produces a very pleasing manner, an ease which is not assumption, a dignity which is not hauteur, consideration for the vanity of others, grace of bearing, and fluency of speech. In men of inferior quality and finish it results in such farcical pomposities as we have heard from Mr. Calhoun Burden.

"I can't stand this any longer," said a young Kentuckian of old Virginian blood, who had tried in vain to habituate himself to New York. "I can't respect myself when I am run against a dozen times a day by Irishmen, Jews, Yankees, and all kinds of busy people. I am of no consequence here; nobody cares whether I am a gentleman or not—whether I am angry or pleased; nobody values me as I know that I ought to be valued. I must go South again—go where there is more elbow-room—go where I can make myself known. I detest a city where seven hundred thousand people tread on my toes, and haven't a moment's leisure to apologize, and don't even know that my name is Peyton."

It was indescribably amusing to watch a Charlestonian friend of mine during his first and last visit to New York. Dressed in a full suit of black, and bearing a gold-headed cane in his hand, he walked Broadway at the dignified rate of two and a half miles an hour. Some one brushed against his right elbow: he turned and glared, grasping his cane tightly: the intruder was gone. Some one brushed against his left elbow: another pause, glare, and settling of the cane in the fist: no antagonist visible. Every few steps he felt himself insulted, prepared to vindicate his honor, and failed to discover any one whom he could call to an account. At the end of six blocks, fuming with a consciousness of aggregated injuries, he took a carriage, drove back to the St. Nicholas, drank a mint-julep, seated himself in a window of the reading-room, and stared sullenly at the interminable crowd which hurried by unaware of his existence. He was like a cat who should be hustled and intimidated by a garret-full of scrabbling mice. Within a week he left the city, thoroughly disgusted with its multitudinous bustle, and never returned to it.

If you ever see a tall man in Broadway, standing stock-still, glaring about him, and swearing, you may be sure that he is a Southerner, and that some one whom he can not find has run against him. If you ever see a tall man in Central Park, seeking the loneliest paths, and surveying the mob of pleasure-seekers from a distance, you may pretty safely infer that he also is a Southerner, and that he is mainly happy because he has found a little elbow-room. Should you address either of these bewildered

personages respectfully, he will receive you with a cordial smile, cotton to you without difficulty, and presently ask you to take a drink. He feels like a man who has been abused, and who unexpectedly finds sympathy; like a voyager who has been shipwrecked, and who unexpectedly gets food and lodging.

I remember a young Georgian on the Cascade of Florence, who was disturbed in his position near the music by the prancing grays of an English family carriage, and who, refusing to move, called to the coachman, "D—n you, Sir, if you drive one step further I'll tear you off your box!" When the coachman replied, "I beg your pardon, Sir," and when the rosy old gentleman and the two handsome girls in the carriage looked respectfully at him, he was instantly appeased, lifted his hat in apology for his objurgation, and made way for the advance of the equipage.

Yes, it is a sensitive quality, this self-respect which has grown up in the solitude of great plantations and the quiet of small towns; it can not bear the dense crush of a busy world, and is especially hurt by the friction of a hurried democracy. These things rub the down off its wings, and make it sore and angry and miserable. Where it can have consideration it is gentle and charming; where it can not it is pugnacious or sullen, and socially inconvenient. How often, especially in the times before the war, have we encountered Southerners at the North who seemed driven by a mania to prattle perpetually concerning their sectional peculiarities, excusing them, vindicating them, and boasting of them! For instance, slavery: they would insist on touching it off under our noses; they would not see that our chiefest desire concerning it was to ignore it.

An Englishman, sailing from New York to Liverpool, found himself occupying the same state-room with a clergyman from South Carolina, whose everlasting topic was the welfare and felicity of negroes under the patriarchal institution. Parting with him joyfully on landing, he shortly afterward met him again in Oxford at a dinner of the high-mightinesses of the University. The reverend gentleman began a dialogue with his *vis-à-vis* on the happiness of negro slaves in South Carolina. The subject received some delicate attention, suited to its fastidious nature, and then was dropped. At the first pause in the general conversation our countryman, who meanwhile had said nothing, opened upon the happiness of negro slaves in South Carolina. There was a word of civil response, and again the matter was gently superseded. Presently a change of courses produced another silence, and our friend reintroduced the happiness of negro slaves in South Carolina. Losing patience, the *vis-à-vis* answered, "My dear Sir, if things are as you say, why not go back to South Carolina and become a slave?"

Our high-toned and reverend friend flew into a rage upon the spot, and next morning sent his interlocutor a challenge, which was not accept-

ed. It would be safe to wager that he very soon returned to South Carolina, and that he did not attempt to get the Constitution changed so that he might enter into the joys of slavery.

The chivalrous Southron is great in his own eyes not only because he is what he is, but because he lives where he lives. In these modern times there is no other civilized creature so local, and, if I may be offensive, so provincial, in sentiments, opinions, prejudices, and vanities, as he. The Turks are hardly more incapable of conceiving that people born afar off may be as good as themselves. At least a part of the contempt of the Southerners for Yankees arises from the fact that the latter drew their first breath several hundred miles from the land of cotton. Imagine the scorn with which they would regard an adventurer from the Milky Way! A friend of mine asserts that, if the South Carolinians should once become satisfied that the New Jerusalem is outside of their State, they would not want to go to it. Let us charitably hope that this is an exaggeration.

"I'll give you my notion of things," repeatedly declared a sturdy old planter who bestowed much of his wisdom upon me. "I go first for Greenville, then for Greenville District, then for the up-country, then for South Carolina, then for the South, then for the United States; and after that I don't go for any thing. I've no use for Englishmen, Turks, and Chinese."

To a Charleston friend, who was wont to boast of the high qualities of the "true Southern gentleman," I sometimes said, "Oh! you mean Texans and Arkansans, I suppose."

"Not in the least," he laughed. "When we speak of the Southern gentleman we mean the product of our city and of the region immediately around it. All else is more or less spurious—a base imitation."

Of old the contrast between the Southerner's proud self-assertion and the Northerner's meeching humility was inexpressibly mortifying to every thoughtful inhabitant of the free States. On a Mississippi River steamboat there was once a little chance party of travelers who met there and then for the first time, and whom iced drinks incited to a temporary boon companionship. After many stories and some singing, the youth who had been chosen president of the conclave, a jolly, gracious, graceful, gigantic Virginian, proposed that each man should toast the State of his nativity. When every Southerner had glorified his own commonwealth to the best of his ability, a Yankee arose and stammered: "Gentlemen, I am ashamed to acknowledge that I was born in the abolitionist State of Massachusetts. I am now, however, a resident of Louisiana, and I beg leave, therefore, to drink to her."

No sooner had this pitiful recreant taken his seat than the Virginian uplifted his six feet four inches of stature, stood there erect, large-chested, head "full high advanced," and said: "Gentlemen, no man need be ashamed to come

from the State of Benjamin Franklin and Daniel Webster. Gentlemen, I call on you myself to drink to the glorious old Commonwealth of Massachusetts."

If ever a "mean Yankee" felt himself to be distinctly and unequivocally mean it must have been then. Thank God that those shameful days—those days in which our representatives cowered in Congress, and our private citizens ate dirt in every corner of the land—thank God that they have been ended, though at a cost of half a million of lives!

PUGNACITIES.

Self-respect, as the Southerners understood it, has always demanded much fighting. A pugnacity which is not merely war-paint, but which is, so to speak, tattooed into the character, has resulted from this high sentiment of personal value, and from the circumstances which produced the sentiment. It permeates all society; it has infected all individualities. The meekest man by nature, the man who at the North would no more fight than he would jump out of a second-story window, will at the South resent an insult by a blow, or perhaps a stab or pistol-shot.

I knew a middle-aged South Carolinian, at one time a representative of our country to one of the minor courts of Europe, who temporarily withdrew his connection from the church of which he was a member in order to give himself elbow-room for a duel.

I knew a clergyman of the same pugnacious little State who was the hero of another "unpleasantness." The Reverend James Clayton, as I shall presume to miscall him, had suffered under various disobliging remarks and irritating practical jokes from a fellow-citizen whom I will venture to stigmatize as Mr. Tom Noddy. One sale-day, that is, on the first Monday of a month, a number of people had gathered around the steps of the village court-house, attracted by an auction of property sold for delinquent taxes. Amidst the magnates of the place, leaning backward upon the cane which he held behind him in both hands, discussing some grave subject (perhaps the nature of the negro soul) with his usual blandness of aspect, stood Parson Clayton. While thus beneficially engaged his cane was knocked from its hold in the earth, causing him to reel backward. Supposing that some intimate friend had done this thing, the reverend gentleman turned round with a smile, and beheld the exasperating grin of that low-toned Noddy. In a second the cane was in the air, and in another the insulter lay on the ground. Next Mr. Clayton rushed to the office of a legal acquaintance; not, however, with the intention of taking refuge behind the legal code; no, but to plant himself in front of the code of honor.

"But, my dear Sir, your cloth!" objected the lawyer; "you certainly are not bound to fight a duel; your cloth relieves you from that obligation."

"I will not attempt to shield myself under my cloth, Sir."

"But—excuse my frankness—this is a grave matter, and you have placed it in my hands—but will not the public consider that your cloth prohibits you from appealing to the code?"

"Sir, I am a minister of the gospel; I am proud of my profession; I have sought to honor it. Had I been insulted as a clergyman I would have accepted it as persecution, and would have endured it meekly. But I have been insulted as an individual. My family has a social status and a reputation which I must not allow myself to ignore. It will not do for a Clayton of Clayton District to suffer these impertinences as though he were a poor white or a slave. I must act suitably to my name. I beg, Sir, that in arranging this matter you will not consider my cloth any more than the low-bred person who insulted me considered it."

"Nevertheless, you are not bound to take the initiative. You knocked Mr. Noddy down, it appears; and consequently it is his business to challenge. That is the code, Sir; you may rely upon it."

As Mr. Noddy was in every respect unchivalrous, and did not at all regard it as his business to challenge, the affair went off without triggers.

Very curious in certain cases is the contrast between a man of turtle-dove disposition and the falcon-like ferocity which Southern public opinion can force him to exhibit. A citizen of New Orleans who had been repeatedly insulted by a bully, and who was threatened with expulsion from society because of the meek manner in which he had endured his wrongs, found himself at last driven to appeal to arms. With a cocked pistol in either hand he entered an eating-saloon where sat his persecutor, and marched slowly to the attack, swearing viciously. He might have slain the foe at once; but he was too tender-hearted to shed blood except in the exigency of self-defense; his agonizing desire was that the other should run away. Fortunately the threatened blusterer had no weapons, and, after one glance at his plated table-knife, skedaddled through a side-door. There was a noisy chase down the street; the promenaders made way, followed on, applauded; the omnibus-drivers stopped to see the issue of the affair; there was a general disappointment when the fugitive dodged into his boarding-house.

Then did the turtle-dove rampage up and down the pavement, defying his adversary to come out to mortal combat, and blaspheming like a veritable falcon. The grandeur of the demonstration was somewhat diminished by the circumstances that he was as pale as a sheet, and that in his nervousness he fired both his Derringers into the sidewalk, very nearly amputating his own toes, and leaving himself at the mercy of his antagonist. But, as the latter did not make a sally, the turtle-dove escaped with the palm of victory, and was thence-

forth passably esteemed in New Orleans as possessing at least a showing of the high-toned valor.

The average Southerner, however, was not like this man; he was quicker to fight, and when he fought he meant business. How quick he was to fight, how prompt at believing that the combat had begun, how disposed to accept an insult as an injury, may be inferred from the charge of a Virginian judge in a case of trial for murder. "Gentlemen," said his Honor, "the lie is the first blow."

If this is not common-law at the South, it is, I believe, common sentiment. In the early part of 1868 I heard a South Carolinian of respectable position relate the particulars of a recent rencontre, or, in other words, murder, in which the victim was a Northerner.

"The most remarkable circumstance in the transaction," said he, "and what struck all the by-standers with surprise, was that the fellow made no attempt to defend himself. Every one supposed, from his giving a desperate man the lie, that he was prepared for a fight; but he allowed himself to be shot down without offering the least resistance; in fact, he had no arms about him."

Evidently the amazed narrator and his equally astonished listeners considered "the lie the first blow," or something so near akin to it that it was not worth while to speculate upon the difference.

"There is something miraculous about the geography of Dixie," said a Yankee to me; "the backwoods have always remained unnaturally near to the sea-coast."

I am aware that Southerners will deny that bloodshedding is more common with them than with us, and will point to the murders of New York and Philadelphia as a set-off to their combats of honor and passion. But the two things are not parallel: our tragedies are crimes, so regarded by the community and so punished; their tragedies are gentilities which the public voice does not condemn, and for which the law rarely exacts a penalty. Moreover, duels and rencontres have been far more numerous south of Mason and Dixon's line, at least in proportion to population, than murders north of it. As Bureau officer, responsible for the peace of a large district, it was my business to know what acts of violence occurred in it; and in the course of my inquiries concerning the affairs of my day I necessarily learned much of what had happened during years previous. I declare positively that I was quite amazed at the number of persons who bore marks of frays, and the number of houses which had been rendered memorable by scenes of blood.

Opposite my hotel was a building where an old gentleman had sought to cane his niece's husband, and, before he struck a blow, had fallen dead under the youth's ready pistol.

Do you see that tall and dignified man, a person of repute in the community, and an ex-member of Congress, who pauses to salute an

acquaintance with such an ingratiating smile, such a musical intonation of voice, and such fluent speech? He has been attacked with knives and bludgeons; he has fallen down wounded, and been forced to scuffle for life; he has pulled trigger on three human beings, once with fatal effect; he will tell you of these things as "lamentable occurrences, which I very much regret."

That other gracious personage, portly in build, dignified in bearing, with the intellectual forehead and the benevolent smile, a man of probity, a citizen of distinction, has also killed his antagonist.

That young fellow with the dark eyes and the silvery utterance has in his hand a huge cane which will never be the solid stick that it was before it came in contact with a human head.

If you will ride with me up a certain road I will show you four plantations within a few miles of each other, the former proprietors of which have either been slain in single combat or have slain others.

Yet Greenville has been a nest of turtle-doves compared with some other portions of South Carolina. There was once a famous "gentleman of the old school" in Abbeville who ruled his district with the pistol, who during the course of his long and high-toned life killed several other high-toned fellow-creatures, and who consequently had himself elected to office whenever he pleased. Abbeville was renowned for its hundreds of shooting men, but this man shot straighter and quicker than any body else. Yes, pugnacious Greenville is a haven of Quakers compared with Abbeville, Newberry, and half a dozen other districts.

Of the Carolinian of the sea-coast who may pretend to dispute my statements I will ask whether he has ever heard of a now bland and dignified old planter, who won in his youth, by dint of frequent fights and duels, the surname of Tiger Bill. In one specially famous encounter this antique worthy, disarmed, prostrate, and held down, doubled his legs over his adversary's back, and roweled him from loins to knees with Spanish spurs. And Tiger Bill was but the first among peers; he was a model for wide-spread and jealous imitation. Probably he has not an acquaintance who does not regard him with more respect than he would accord to John Howard or any other hero of peace and good-will toward men.

COURAGE IN THE FIELD.

The pugnacious customs of Southern society explain in part the extraordinary courage which the Confederate troops displayed during the rebellion. A man might as well be shot doing soldierly service at Bull Run or The Wilderness as go back to Abbeville and be shot there in the duel or street rencontre which awaited him. The bullet-hole was a mere question of time, and why not open one's arms to it on the field of glory?

Fighting qualities result in a great measure from habit; and when the war commenced the Southerners were, in a sense, already veterans; they had been under fire at home, or had lived in expectation of it. They went into battle with the same moral superiority over their Northern antagonists which a border militia has over an urban militia; which, for instance, the Highlanders of Prince Charles Edward, habituated to the dirk and claymore, had over the burghers of Edinburgh; a superiority resulting from familiarity with the use and the effect of weapons.

But this was not all: there was also the power of patrician leadership; there was also the sense of honor. The Southern troops were officered in the main by the domineering, high-spirited gentlemen who governed them in time of peace; and they were fired by the belief that the greatest glory of humanity is, not learning, not art, not industry, but successful combat.

Even this was not all: they were defending their own native soil; they were stimulated by a long-cherished hate and encouraged by a carefully inculcated contempt for their antagonists; finally, they were guided in their operations by a superior knowledge of the country. Is it wonderful that a race educated under the circumstances which spring from that state of suspended war, slavery, should for a time foil and often defeat superior armies of men who had been gathered from a purely peaceful democracy? The result was as certain as that there is logic in history, although we had too much confidence in ourselves to expect it. Time alone enabled the higher civilization, the greater mass of population, the larger wealth, the more widely diffused intelligence, the superior capacity for organization, to overcome the military aptitude and feudal passion of a rebellion of aristocrats and low-downers.

But the courage and tenacity which these men displayed were wonderful and admirable. Such figures as 400 soldiers' widows in Greenville District, 600 in Pickens District, 13,000 men killed or dead of wounds in South Carolina, 19,000 in North Carolina, prove a struggle unparalleled since that of the Romans in the second Punic war. There never was such another insurrection, and I doubt whether any other nation would have put it down, although several would not have suffered it to occur. But let us not write of the war; it is said to be an unpopular subject.

Unquestionably a strong military tone is perceptible in the character of the "chivalrous Southron." Notably brave, punctilious as to honor, pugnacious to quarrelsomeness, authoritative to imperiousness, generous to extravagance, somewhat formal in his courtesy, somewhat grandiose in his self-respect, there is hardly an agreeable or disagreeable trait in him which you can not find in the officers of most armies. This is doubtless one reason why, at the opening of the war, many of our old regulars leaned to the rebel side; there was a re-

lationship of sentiment between the professional militaire and the feudal head of a plantation; moreover, the latter had always treated the former with distinguished hospitality.

Before the war this soldierly spirit flowered out in military schools, in a prodigious crop of governor's aids, and in enthusiastic militia musters. Since the war it is quiescent—it has had its fill of arms and glory.

VIRILITY.

It seems to me that the central trait of the "chivalrous Southron" is an intense respect for virility. He will forgive almost any vice in a man who is manly; he will admire vices which are but exaggerations of the masculine. If you will fight, if you are strong and skillful enough to kill your antagonist, if you can govern or influence the common herd, if you can ride a dangerous horse over a rough country, if you are a good shot or an expert swordsman, if you stand by your own opinions unflinchingly, if you do your level best on whisky, if you are a devil of a fellow with women, if, in short, you show vigorous masculine attributes, he will grant you his respect. I doubt whether a man who leaves behind him numerous irregular claimants to his name is regarded with disfavor at the South. He will be condemned theoretically; it may be considered proper to shoot him if he disturbs the peace of respectable families; but he will be looked upon as a nobler representative of his sex than Cælebs. The good young man, as pure as a young girl, whom one finds in the Abrahamic bosom of Northern Puritanism, would not be made a Grand Lama of in Dixie. The chivalrous Southron would unite with the aristocracy of Europe in regarding him as a sort of monster of neutral insipidity. I doubt whether even the women of our meridional regions admire that sort of youth. "I shouldn't fancy a hen-husband," said a lively Southern girl, alluding to a man without vices.

It may be taken for granted that a people which so highly prizes virility looks upon man as the lord of creation, and has the old fashioned ideas as to what is the proper sphere of woman. If the high-toned gentleman continues to be influential at the South, it will be a long time before the "strong-minded" obtain much of a following there, a very long time before they will establish female suffrage. Next to our supposed passion for putting the negro on an equality with the white, there is nothing in Northern life so abhorrent to the Southerners, of both sexes, as the movement in favor of woman's rights.

"I do think," said an emphatic old planter to me, "that your free-love business, and women's voting, and all that, is just the miserablest mess that ever was invented. I don't see what ails you to go for such vile nonsense. But then you always were as full of whimsies as the devil."

It would have been useless to tell him that

he was binding in one fagot ideas which had no connection. I did my wisest by him; I left him unanswered.

COURTESY.

There certainly is more suavity of manner at the South than at the North. It is delightful to see two high-toned gentlemen of the old Virginian or Carolinian school greet each other. Such gracious bows and insinuating tones! Such mellifluous compliments, particular inquiries concerning health and welfare, animating congratulations as to future prospects! Such sunny and, one might almost say, equatorial blandness! You feel as if you were in Paradise, hearing Dante address Beatrice as "gracious lady." The moral thermometer rises to summer heat; your humanities expand and bloom under the influence; you are a kinder and, I think, a better man for the sight. It is a pity that we have not been better educated in such gentilities, and that we have not the requisite time for the exercise of them. If there were twenty-eight hours in a day the Northerner might possibly become thus urbane; as it is, he has barely opportunity to fill his pocket with the necessary greenbacks and his head with the necessary information to get on in the world; he is too much hurried by practicalities to make his manners. At the South there has hitherto been a leisurely caste which set the example to all the others.

But the high-toned gentleman, full of provincial prejudices, is not always civil to outside barbarians. He was not civil to our Congressmen in the old days when he governed them; he cracked the plantation whip over them as he did over his negroes, and for the same reasons: they were not of his caste, they were his natural subordinates, and they were sometimes fractious.

Returning to my own experience with this grand personage, I must state that I have not always obtained sweetness from him. It must be remembered that to my native infamy as a Yankee I added the turpitude of being a United States military officer, and the misdemeanor of being a Sub-Assistant Commissioner of the Freedmen's Bureau. In the exercise of these atrocious characteristics it was once my duty to settle a dispute as to the division of a crop between an elderly negro and a South Carolinian of historic name and French descent. The planter's accounts were admirably kept; the right was on his side, and I decided in his favor. Throughout the interview I treated him with all possible courtesy for the sake of the worth of his revolutionary ancestor; but, alas! I committed the error of pronouncing his patronymic after the English manner instead of the French. When his Huguenot patience was exhausted he corrected me: "Sir, my name is —," giving it the Gallic accent.

"I beg pardon," I replied. "We at the North habitually anglicize foreign names. My name is French by origin, but we use the English pronunciation."

He picked up the certificate of settlement on which I had just indorsed my official approval, glanced at my signature, and said, with a half-concealed sneer, "Oh, I see that you put a *De* to it!"

Conceive my humiliation, thus charged with stealing a French particle!

A few days later I had occasion to approve a labor contract for a lady of another family, but likewise of Huguenot race. Her name I also anglicized, not in ignorance of the Gallic form, and not with the purpose of giving offense, but solely because of Northern custom. Again I was corrected: "Sir, my name is —."

Struck with the repetition of incident, I made the same reply as to the gentleman: "I beg pardon; we at the North habitually anglicize foreign names; my own, etc., etc."

The lady picked up the now finished contract, glanced at the indorsement, and said, "Oh, I see—De Forest. I knew a Mr. De Forest once; that is, he did some work for me. He was a shoemaker."

Conceive my second humiliation, thus crushed under this degraded De Forest, who was a shoemaker!

But before the war, before the days of rage and ruin, the high-toned was not thus peevish; he was, notwithstanding some superciliousness and imperiousness, our courtliest social figure.

I shall never forget the grace and kindness of a man who must yet be remembered in Charleston as one of its most finished social ornaments. I was at a supper of the Literary Club; we were standing or sitting around a table which would have pleased Brillat-Savarin; all the others were well-known citizens, reverend and respectable; I was the youngest and the only stranger. I had dropped out of the conversation and withdrawn a little aside, when Colonel John Alston observed me and divined my stranded situation. He did not know me; it was the first time that we had ever met; but he instantly came toward me and begged leave to wait on me. It was not the deed so much as the manner which was so exquisitely ingratiating. There was an *empressment* in his expression which seemed to say: "Sir, your mere appearance fills me with respect and interest; you are obviously worthy of my attentions." I have sometimes thought that it would be a fine thing to be a handsome young lady; and I felt at that moment as if I were one. Well, this hospitable act toward a perfect stranger, this courteous advance toward a wall-flower, was characteristic of the man, and, in general, of his caste.

GENEROSITY.

It was not that Yankee generosity which sends pundits to convert Hottentots, founds school systems, hospitals, sanitary commissions, and endows colleges with millions. It was the old-fashioned sort, the generosity of the Arab and of the feudal noble, feeding every beggar who came to the door, setting bounteous tables

and keeping full wine-cellars. It was the profuseness not of philanthropy, but of good-fellowship. Even before the war there were single States in the North which gave more to missionary, educational, and charitable organizations than the entire South.

But the Southerner was more than lavish; he was good-natured and easy in his business transactions; he had such a contempt for small sums that he would not use pennies; he paid loosely at long credits, and was careless in his collections. I knew an upright wretch in a Southern town who strictly settled his debts and sternly demanded his credits, and who was consequently very unpopular, in spite of many virtues and worthy deeds. I knew a jolly fellow who was not much astonished, and not at all angry, when another still jollier fellow borrowed a hundred dollars of him, treated him handsomely out of it, and never repaid him.

"Is that what you call generosity?" I asked, with a Vandalic sneer.

"Well, I like it better than stinginess," replied the victim. "He thought he was doing what was handsome; he felt as if it were his own money. If it had been his own he would have spent it just as freely. It was just a little rough, though, that he should get all the credit of the bender when it was I who really paid for it."

Meum and tuum were a little mixed; people who lived on negroes felt it right to live on each other and to help each other; what a man could borrow or get trusted for was his own until a neighbor asked for it. Happy-go-lucky planters settled their store bills once in seven years, or after they were dead; and the store-keeper settled with his Northern furnisher as soon after his notes matured as was convenient. When the war opened more than half the rice and sea-island estates were mortgaged to the verge of bankruptcy; and the personal debts of Southerners to Northerners were estimated at eighty-five millions of dollars. The virtue of generosity had been prolonged into the vice of ruinous extravagance.

HONOR.

Notwithstanding his thoughtless lavishness, there was a high sense of honor in the "chivalrous Southron." He did not mean to defraud any one. I have known an expensive, generous fellow to cut his throat because he could not meet a note which was coming due. I have known another bankrupt to put his wife and children into a buggy and drive with them into the sea, drowning the whole party. I do not assert positively—I only give it as my strong impression—that such tragedies of wounded honor were more common in Dixie than in Yankeeland.

The honor of Southern students is not college honor as it is understood at the North, and perhaps in Europe; it comes much nearer to the honor of good citizens, and the honor of the gentleman of society. The pupils are not

leagued against the teachers for the purpose of passing fraudulent examinations, by the trickeries of stealing the prepared lists of questions, carrying furtive copies of lessons into the recitation-rooms, mutual postings, and purchased compositions. A professor of the Charleston Medical College assures me that he has never detected such a cheat in thirty years of tuition. A professor of the University at Columbia, South Carolina, told a friend of mine that he had known but one such instance, and that in that case the two criminals were forced to leave by their classmates. The "chivalrous Southron" undergraduate, at least while surrounded by his native moral atmosphere, considers himself a gentleman first and a student afterward. When one remembers the strength of college *esprit de corps*, these facts exhibit an individual self-respect and uprightness which is astonishing, and which must, I suspect, fill the faculties of Yale and Harvard with envy. I must explain that my testimony on this point refers only to South Carolina, and I may therefore have drawn too large an inference in extending my eulogium to all Southern students. It is worth while also to note that in Dixie examinations are less severe than with us, and that a failure in passing them rarely ends in expulsion.

"How can a race of traitors be called honorable?" will be the objection of millions of loyal citizens. It must be remembered, I answer, that the "chivalrous Southron" conceived himself as owing a closer allegiance to his State than to the Union; and that, furthermore, he, like the Roman patrician, like the aristocrat of all time, felt that he owed fealty to his caste. These questions have now been settled by the highest of earthly courts. If the South rebels again it will be traitorous even in its own eyes.

INTELLECTUAL TRAITS.

One of the mistakes of the "chivalrous Southron" was to suppose that he was a great reader, and well up to his age in science and literature. The truth is that while his reading was mainly good, it was venerable; he had a conservative taste for what had been considered improving and interesting by his grandfather; his shelves were loaded with the worthy though possibly heavy old "books which no gentleman's library should be without;" he was sure to own Hume, Robertson, Gibbon, Addison, Johnson, Goldsmith, etc. In theology he was strenuously orthodox, holding fast by the English fathers in biblical exegesis, and distrusting all Germans without knowing any thing about them. In science he was averse to admitting novelties, unless they went to show that the negro is not a human being, and so can not claim the benefit of the Declaration of Independence. In light literature he was cautious how he meddled with Northern, and even with English publications, lest he should unawares become entangled in some "ism."

It is wonderful to hear a "sound" Southern clergyman defending the deluge, measuring off

the ark so as to show how it might contain all the species of animals, asserting that the fossils on Mount Lebanon date from the time of Noah, and supporting a strict interpretation of Genesis by the traditions of the Potawatomes. The belief that the American Indians are the descendants of the ten lost tribes, and as such ought to be besomed off the face of the earth, has more followers in Dixie than in all the rest of the world put together. There has been a prodigious movement in the Southern mind in consequence of Dr. Cartwright's discovery that God created three kinds of beings, to wit, men, "living creatures," and beasts; and that the negroes, being evidently "living creatures," are lower than "humans," though not so low as animals. This remarkable "reading," having been popularized by a writer who signs himself "Ariel," has been used with great effect by Governor Perry in his letters against universal suffrage, much to the confusion of certain Radical pundits, who did not know what the Governor was talking about. In short, the learning of the South is what one might expect to find among solid, squire-like people addicted to farming. If the true savant wants a hearty laugh let him read the old numbers of *De Bow's Review*.

Before the war things were growing worse, instead of better. Bullied and reproached by abolitionism, scared at the prospect of losing two thousand millions of dollars invested in negroes, the chivalry concentrated its intellect into a defense of slavery, and actually thought of little else. The subject was dwarfing the Southern mind; it had infolded and partially stifled that fine genius which produced so many of our early statesmen, and wrote no small part of the *Federalist*; it was like a theological dogma which insists on being taken for granted, and, being so taken, destroys the freedom and power of logic. The Southerners, trammelled by admitting slavery, could no more reason on politics than the Jews, trammelled by the Mosaic dispensation, could reason on Christianity.

Indeed, they had begun to lose the power of thinking justly and brightly on any subject. An unprejudiced person who will glance over their literature will discover a vast declension since Jefferson and Legaré; that is, since the period at which slavery was established as an axiom of Southern ethics and political science, not to be disputed under penalty of death or exile; in other words, since the intellect of Dixie ceased to be free. Its condition of late years has been much like that of the natural philosophers of Putterum, who are obliged by law to preface every inquiry into the astronomical position of the earth by saying, "I believe that it stands in the centre of the universe, on the back of the sacred turtle." After that, it will be perceived, inquiry becomes needless; and the philosophical writers of Putterum always stop just there: hence a decadence in Putterum science and logic.

It is a curious instance of the power of prejudice that, with regard to the late war, the chivalrous Southron does not fully credit the evidence of his own senses. Although regiments from every Northern State marched over every Southern State, he still holds to the idea of Yankees which he formerly established on an experience of subservient Congressmen, obsequious merchants, and non-combative peddlers, and believes that we conquered him with columns of foreign mercenaries. Having served three years in the field and fifteen months in the Provost Marshal General's Office, I know from sufficient authority the fallacy of this supposition, and could state that our alien-born citizens had scarcely furnished their fair proportion to our armies. I could remark that if all our able-bodied Irish and Germans had served they would not have made up one-half of the twenty-five hundred thousand men whom we enlisted under our flag. I could suggest that if every Hibernian in the world had volunteered for us we should still have lacked a million and a half to our gigantic levy. It was useless; the Dixieite held fast by his venerable prejudices: "the Yankee could not fight, and therefore had not fought." It is a kind of logic which one frequently encounters in Putterum.

The Southerners are equally wrong-headed, at least according to our view of the matter and "the sword of Brennus," in pointing out the causes of the war. Over and over have they assured me that the contest arose not from the necessity of slavery to rule or ruin, but from the aggressive spirit of the Northerners, and particularly of the New Englanders.

"They always were, you know, the most quarrelsome people that God ever created," remarked a Greenville planter. "They quarreled in England, and cut off the king's head. They have been quarreling here ever since they came over in the *Mayflower*. They got after the Indians and killed them by thousands. They drove out the Baptists and whipped the Quakers and hung the witches. Then they were the first to pick a fight with the old country. It's my opinion, Sir, and I think you must agree with me, that God never made such another quarrelsome set. What in h--ll he made them for passes my comprehension."

As this was better history than one usually meets in Putterum I let it pass without controversy.

POLITICAL OPINIONS.

There is an old traveler's story to the effect that in the highlands of Africa exists a race of monkeys who, during the cold season, gather into tight little knots, each one having for its centre a venerable senior of great wisdom and influence, and the business of the others being to keep him warm. The chief inconvenience of this organization is, that as there is a general desire to be the central monkey, much strenuous crowding toward the middle

ensues, attended by an uncomfortable amount of scratching and squalling.

In consequence of the somewhat feudal, somewhat patriarchal, social position of the large planter, politics at the South have been conducted very much on the central monkey system, only that there has been a decent regard for the central monkey. Every community has its great man, or at least its little great man, around whom his fellow-citizens gather when they want information, and to whose monologues they listen with a respect akin to humility. For instance, the central monkey of Greenville was Governor Perry. When he stood at a corner people got about him; when he opened his mouth all other men present closed theirs. Had he favored the "constitutional amendment" Greenville would have accepted it; as he denounced it Greenville rejected it, without taking the superfluous trouble of reading it.

I found it so every where that I went, and during all the time that I remained, in the South. Not one man whom I met had read the amendment, yet every man scouted it with the utmost promptness, confidence, and indignation. He scouted it because he had been instructed to do so by his central monkey. The latter, the little great man of his district, had, of course, issued these instructions mainly because the third section of the amendment deprived him of the power to hold office unless a two-thirds vote of Congress should remove his disability, that Congress being then two-thirds Radical. In short, I found the chivalrous Southron still under the domination of his ancient leaders.

Political opinions had necessarily been somewhat muddled by the results of the war. The logic of events had been so different from the logic of *De Bow's Review* and the *Charleston Mercury* that men scarcely knew what to think. A soul which had been educated in the belief that slavery is a divine and reverend institution could not help falling more or less dumb with amazement when it found that there was no slavery to revere. On this point, however, the Southern mind presently accepted the situation, and I found a surprisingly general satisfaction over the accomplished fact of abolition, mixed with much natural wrath at the manner of the accomplishment. "I am glad the thing is done away with," was a frequent remark; "it was more plague than pleasure, more loss than profit." Then would perhaps follow the Southern *Delenda est Carthago*—that is to say, "D—n the Yankees!"—always appropriate.

Just imagine the condition of a nation of politicians which sees every one of its political principles knocked into non-existence! Slavery and State sovereignty had for years been the whole of Southern statesmanship; they had formed the rudder, the keel, the hull, the masts, and the rigging; when they vanished the crew was in the water. The great men and the little men, all the central monkeys and all their adher-

ents—every body was afloat like so much driftwood, not knowing whither to swim. Blessed interregnum! No wire-pullers, no log-rollers, no caucuses, no mass-meetings; a time of peace in which every man could mind his own business; an opportunity for building and launching financial prosperity. How we at the North envied it! how glad should we have been to drown *our* central monkeys! how we hoped that the conflict of sections was forever closed!

President Johnson, the greatest enemy of Dixie after Jefferson Davis, was the diver who brought up the wreck of Southern politics, and set it afloat on the simple tack of opposition to Congress. Since then there has been life and unity among the chivalrous Southrons; the old hopes and feelings, and, as far as possible, the old issues and opinions, have regained their empire; there has been one vast babble, factious, frothy, foolish, and beyond expression fatiguing.

I found it nearly impossible to converse ten minutes with a Southerner without getting on to the subject of politics. I saw the monster coming afar off; I made my preparations in good season to evade it; I dodged it, ducked under it, swam away from it; all useless. At the moment when I least expected it thrust out its arms like the *pieuvre* of Victor Hugo, enveloped me in its slimy caresses, sucked me dry, and left me flaccid.

MY VISIT TO UTOPIA.

I.

IT would occupy too much time, and perhaps trespass too largely on your patience, if I should tell you exactly why or how I went to Utopia, or even the precise geographical locality of that much-disputed place. Suffice it that I have been there, and that what I saw and heard during my brief sojourn was so remarkable that I recorded it at the time, and feel that it is quite worthy of your attention now.

It was late in the afternoon of a day last April when I reached my destination—so late that, after the customary delay in identifying my trunk, I looked down the fast-darkening street with a very slight decrease of my courage. I said "slight" because I remembered even then that I was in Utopia, and that remembrance tended to reassure me; so I walked briskly out of the waiting-room at the station to the nearest corner.

By one of those fortunate chances which are common to dreams and novels, but so seldom occur in real life, I had in my porte-monnaie the card of an old school-mate and friend, long since married, like myself, but who, I was certain, had not forgotten me; so I determined to pay her a visit at once.

Feeling naturally doubtful as to the direction of my steps I asked the necessary information of a well-dressed man who presently overtook me, and I must say that I was agreeably disappointed at receiving, instead of a gruff answer thrown over his shoulder and scarcely audible

at that, such a careful and courteous direction as once more reminded me that I was in Utopia.

As the distance was trifling, I soon reached my friend's house, and, ascertaining from the servant that Mrs. Jenkins was at home, I sent in my card and awaited her coming.

I had not long to wait; in an instant my friend was at my side, while her affectionate embrace spoke as plainly as her words of welcome of her pleasure at seeing me. There was no such thing as resisting her cordiality; and almost before I knew it I found myself comfortably seated in her cozy library, with my bonnet and cloak put out of sight, a tempting supper on a small table beside me, and a messenger dispatched for my trunk.

"For you must make your home with us, of course," said Laura, decidedly; "and we'll try to make your visit as pleasant as we can; won't we, William?"

"We will, indeed, dear," said Mr. Jenkins; and added so many expressions of satisfaction at seeing his wife's particular and oft-mentioned friend at last that I yielded, well content, and began to make myself, as Laura urged, "very much at home."

After she had asked, and I had answered, countless questions as to the fortunes and whereabouts of mutual acquaintances, and we had both exclaimed, a dozen times at least:

"Why, how natural it seems to see you again!" and, "Who would have thought it?" I said, looking at an open volume on the table:

"Don't let me interrupt the employment of the evening, Laura. I am sure you were reading before I came in, for I fancied I heard you as I stood in the hall."

"No," said Laura; "that was William reading the newspaper, and he had just finished it when you came."

"And nearly finished you with it," laughed her husband, "for you were almost asleep when Jane announced your friend."

Laura laughed too, as she replied: "Well, I believe I was; for the paper was uncommonly stupid, and I was very tired. You don't know how fretful the baby has been all day, and he wouldn't let the nurse touch him."

"Well, never mind," said Mr. Jenkins, soothingly; "I'll manage him to-night, so you will be rested and wide-awake for to-morrow evening."

"Truly, Laura," I said, softly, "you have a model husband—reading the paper to you instead of enjoying it in silence, as is the manner of husbands in general, and, more wonderful still, proposing to take care of your baby at night merely to let you sleep. I'm afraid you are not half grateful enough for such a prize."

Laura looked at me with an air of genuine astonishment, which speedily gave place to a smile, as she answered:

"Oh, I had really forgotten; you are not accustomed to the ways and manners of our country, and therefore even such a small matter as this surprises you, but—"

"*Small matter!*" I interrupted. "Do you call it such a small matter to have a husband who cares not only for your amusement, but for your comfort as well?"

Laura smiled again as she replied: "I suppose it is only in Utopia that one finds husbands quite perfect and wives quite satisfied; therefore I can easily imagine that you think William quite a paragon, when in fact he is only acting as any man ought to act under the same circumstances—that is, trying to lessen, by sharing, his wife's cares and duties; and to increase, by division, his own pleasures."

"But," I began, "it is generally conceded that it is a woman's especial duty to—"

"To wear herself out! Yes, I know it is so believed in your part of the world," said Laura, warmly; "but I am happy to say that no such belief exists in Utopia, and even orthodox suicides are unheard-of in consequence. We decided long ago that the heaviest burdens should not be suffered to fall on the weaker partner in the matrimonial contract (of course, when I say 'the weaker,' I mean physically weak), and our children are educated accordingly. As a natural consequence our husbands are not ignorant of *their* duties; and the man who could sleep tranquilly while his wife walked the floor with the baby, or who could enjoy an unsociable cigar or paper in the evening, when his wife needed the cheer and comfort of his words as well as of his presence, would be voted a monster and punished as he deserved."

"And how would that be?" I asked.

"Why, by depriving him of his home—a very appropriate discipline too for any man who doesn't know how to value a home. Such an offender would be sent to the 'House of Correction for Bachelors,' I suppose, and there he would be obliged to wait upon others in exact proportion to the degree in which he had allowed his wife to overtask herself for him. Imagine the misery of a married man suddenly deprived of all the comforts of his home and the kind attentions of his wife, with not even the poor satisfaction of fault-finding left to him, and tell me if you don't think the wife will be amply avenged!"

"Doubtless he will think so, but you made one remark just now, Laura, which I would like you to qualify; you spoke of 'the cheer and comfort of a husband's words as well as his presence,' and I was thinking that if he was a grumbler, or even an habitually fretful man, the 'cheer and comfort of his words' might be questionable, to say the least."

"Your hypothesis might be worth discussing, my dear, if it were not so impossible," answered Laura, with a mischievous smile. "You are continually forgetting that this is Utopia, and that husbands of the types you instance are only found in less happy localities. Grumblers indeed! Why, a woman could get a divorce here without a week's delay if she could prove that her husband was addicted to such a vice."

Too much bewildered to say any thing more,

I was silent for a few moments. Mr. Jenkins, who had been an amused listener thus far, now took up the argument.

"I should suppose that you would fall in readily with Laura's views," he began, "since they tend so directly to the benefit of your sex. To be her husband's *companion* in truth, as well as in name, must conduce to a true woman's happiness, while at the same time it necessitates mental culture and constant development. She must be worthy of the position assigned her, and so we begin by teaching her aspiration through possession—not aspiration without the possibility of attainment, as is the common practice."

"Oh! I see it all now," said I; "you have tutored your husband to defend the oft-vexed question of 'Women's Rights' very creditably. Do you, then, approve of female suffrage and the rest?" I added, returning to Mr. J.

"Indeed you astonish me, my friend," he said, earnestly, "for I have but spoken a truth so simple that it is in danger of becoming a platitude, even from more eloquent lips than mine; and yet you treat it as if it were, to you at least, a novelty. But I won't discuss this subject with you to-night, for I trust that during your sojourn with us you will learn as much from facts as from theories; besides you are fatigued, as I see."

"But one thing you said certainly did surprise me," now said Laura, as she rose at my request to show me to my room; "you spoke of female suffrage as if it did not exist in your country. Can it be possible that women vote nowhere but in Utopia?"

"Even so," I answered, as I bade Mr. Jenkins good-night, and I retired to bed with a lively curiosity to know more of this strange country, and a vague wish that I too lived in Utopia. And so wishing I fell asleep.

II.

The next morning as we sat chatting over the breakfast-table Laura said:

"How fortunate it is! we are invited to a wedding this evening, and you can go with us; it will give you an insight into our customs and ways of thinking that I know you will enjoy, besides the ever-new delight of seeing two people tied together 'for better for worse.'"

I was too anxious to see the workings of this new system, as I called it, to make any demur; so after a discussion as to what I should wear, a matter, by-the-way, which is never ignored in Utopia, where people are always expected to look their best, the thing was settled. Another good long talk with Laura and a drive filled up the day, and soon after dinner we made our toilets and sat down to wait the arrival of the carriage. We were joined presently by Mr. Jenkins, also in holiday costume; but Laura, after a critical survey of his *tout ensemble*, exclaimed:

"Oh, William! your collar is too high, and it isn't at all becoming to you."

"Think not?" asked the husband, surveying

himself complacently in the mirror. "Why, Laura, this is the newest style of collar, and all the rage just now."

"I can't help that; they don't look well on you," said Laura. "Now do go and get on another before the carriage comes, to please me."

Up stairs went Mr. J., while I sat speechless with surprise. At last Laura broke the silence.

"I see," said she, "you are amazed because William is changing his collar to please me, isn't it so?"

"It is; and I am more amazed than I can express. I never saw a man do such a thing before."

"Well, of course, I don't know how it is with you, but with us a man is just as much bound to please his wife as the wife to please her husband. I wear this dress because William admires it, then why shouldn't he defer to my taste? The obligation is certainly mutual."

"Ah yes! that's all very well in Utopia," I sighed, as the carriage was announced, and our conversation ended.

We were somewhat later than we had intended to be, so we found the bridal party already in their places when we were ushered into the rooms, and very natural they looked too—not unlike the bridal parties I had seen often before. This was somewhat surprising at first, but afterward I reflected that love was more or less Utopian in its origin and character; and I began to wonder whether most newly married pairs did not aim at Utopia on their wedding-tours.

"And how did you like our marriage service?" questioned Laura, as she drew me to a sofa at one end of the room.

"To tell you the truth, I missed so much that I am accustomed to hear that I don't think I was particularly pleased. In the first place, the minister omitted entirely the promise to 'love, honor, and obey,' on the wife's part; and in the next, he said nothing at all of the husband's duty as protector and guardian of his wife, or of her duty as regards proper deference to his will—absolutely leaving out of his address all the things that are most indispensable, as well as touching, on such occasions. Why, I was astonished."

Laura looked amused as she replied: "Ah, my friend! your prejudices will not let you understand or appreciate these things yet. Don't you know that in Utopia people always marry for love? and, therefore, we do not exact at the very altar a promise to love each other, since we know that the sentiment can not be compelled by any form of words. As for the honoring and obeying, why surely true love always honors and (better than obeying) always seeks to please its object; so we drop the obsolete and useless sentence out of our service. Did you not observe that the minister (taking for granted that these two people really loved each other as they should do) spoke much of mutual effort and forbearance, much of reciprocal ten-

derness and courtesy, addressing husband and wife equally? Did you not hear him say, too, that people when they marry ought to strive to make each other wiser and happier, and therefore better, all the time? and could any more be said? But come, I want to introduce you to some of our friends here, so we must not pursue this subject at present."

"Tell me first," I said, detaining her as she rose from her seat, "who are these young people directly in front flirting so desperately?"

"*Flirting!*" said Laura, beginning to laugh as usual at my words, but she grew grave directly as she continued: "That is another of your educational errors, my dear, and a very unfortunate one, let me tell you. There can be no candid and profitable intercourse between young men and young women if it is liable to such a construction as the one you have just alluded to; and therefore, as we regard this same companionship not only as a pleasure, but also as a means of culture for both parties, we encourage it in every possible way, and particularly by never commenting upon it. You will never hear any of our young people say that 'Mr. So-and-so has been very devoted,' or that 'Miss This or That has given him the mitten;' and the very name of *flirt* is unknown to them. A young man may have, and should have, many female friends whom he admires and respects, without of necessity being in love with any of them; and, of course, a young girl has the same privilege. What more natural than that they should enjoy each other's society? and what more unfortunate than that they should grow up with a mutual distrust of each other?"

"I am reduced to my usual answer," I exclaimed. "This is all very well in Utopia, but it would not answer—"

"Well, then, let me answer for both of you, that supper is ready, and I would like some," said Mr. Jenkins, as he offered an arm to each, and ended our conversation, which was not resumed during the rest of the evening.

III.

The next day Laura proposed that we should "do a little shopping," a custom, by-the-way, which is in no wise different from ours, except that every thing was (as it ought to be in Utopia) enchantingly cheap.

"How is it?" I asked, as we walked homeward, "that you have so few young men or boys in your shops? Do you prefer female clerks and assistants?"

"It is not a question of preference, but of right, since we give to females all these less arduous and fatiguing avocations for which they are so abundantly qualified, and employ men in the severer labors for which their physiques so plainly indicate that nature designed them."

"As for instance?"

"Why, scrubbing, house-cleaning, and the like—all that requires the application of mere muscular force without mind. It is well understood in Utopia that a woman's organization is

too delicate and susceptible for many of the employments assigned her elsewhere; so we have corrected this abuse as far as is possible by giving such employments to men.

"Consequently when we need assistance in very laborious tasks we send for a man; and though he can not work as deftly as a woman can, and is much more trying and perverse, that is no argument whatever against his employment."

"But in our country," I persisted, "women object to being waited on by women clerks. I have even heard my friends say that they disliked to enter shops where only females were in attendance."

Laura looked indignant, somewhat incredulous, as she said:

"Such a sentiment is too unwomanly for utterance, certainly too much so for belief."

"But the men themselves—did they not rebel against this new division of labor? How is it possible that they have been made to consent to such a revolution?"

"Oh, people are never quite unreasonable in Utopia; even men can be convinced;" and so saying, Laura rang the door-bell, which she had quite forgotten to do before in the interest of our discussion.

We had to ring several times before we could gain entrance, however, and then the nurse opened the door, exclaiming as she did so:

"Oh, Mrs. Jenkins! *such* an accident! The cook has fallen down the cellar stairs and broken her arm, and the dinner all to be cooked yet; and the doctor has been to see about it, and he says she had better be taken home directly; and—dear me, I'm all out of breath!" which she must certainly have been, as she had not stopped to take any since the beginning of her speech.

Meanwhile Laura hastened to the kitchen, from whence she presently returned with a more cheering report.

The cook had not broken her arm, only sprained it, but she was suffering so much pain that she begged to be taken home at once; and accordingly a carriage was called and she was sent thither without delay. As soon as this was accomplished, I asked Laura if I could not help her in some way, adding:

"You have no idea how capable I am in the culinary department, my dear, so have no scruples."

"Help me? in what?" she questioned, looking puzzled.

"Why, in preparing the dinner, to be sure; did not your nurse say that it was untouched? and I know Jane is too inexperienced to attend to it."

"And so you fancied that cook's presence must be replaced in some way?" said Laura, laughing. "Why, do you know that I haven't the most remote intention of cooking any dinner, or letting you do it either? No! on the contrary, we will rest from our fatigues of the morning—you on that lounge, I in this easy-

chair—and by so doing we shall feel like dressing and entertaining William when he gets home.”

“But it is precisely on his account that I volunteered my services, Laura. Won’t he be annoyed if he finds no dinner prepared on his return?”

“Certainly not,” she replied, coolly. “Why should he be more annoyed than we are? Of course, this accident will bear more heavily on me than on him, and consequently he ought to take it amiably.”

“Well,” was my only comment, “this is certainly an extraordinary country, where the wives consider their own comfort, and the husbands eat cold dinners and are expected to be good-natured notwithstanding. It makes one wish that the rest of the world was like Utopia.”

Despite all that Laura had said, and all that I had seen, I was decidedly curious to know how Mr. Jenkins would conduct himself under the circumstances; and I was not sorry to find that, when Laura ran to meet him as he opened the door, she had left the door of the library half open, so I was an unobserved spectator of all that followed.

“You are earlier than usual, William, are you not?”

“Yes, dear, I believe I am; but the fact is I was uncommonly hungry, and so hastened my steps. Is dinner almost ready?”

“Poor fellow!” said his wife, playfully, “you are doomed to a sad disappointment to-day”—and in a few words she told him all the *contre-temps* of the day, ending with, “But you need not make up your mind to starve, after all, for there is plenty of cold ham, and, with bread and butter and a cup of coffee, I think you may contrive to satisfy your hunger.”

“I have no doubt I shall do very well,” said Mr. Jenkins, pleasantly, as he ran up stairs, while Laura returned to me with a triumphant smile, which I could not avoid noticing as she inquired:

“Now, my dear friend, what do you say to Utopian husbands?”

“Why, I can only wish that some husbands I know would take pattern by them; but perhaps I should not judge by Mr. Jenkins. He may be an uncommon specimen; now isn’t he, Laura?”

“No,” she said, frankly; “I can not say that he is; in fact, I know he is not. The praise you would award to him is due not so much to the man as to the system under which he has been trained, and through which he has been taught that the inevitable mishaps of domestic life are not necessarily occasions for cold looks and harsh words; and that a woman can better bear the demolition of her best china dinner-set than an unsympathizing reprimand from her husband as to her folly in keeping Bridget. If an occasional hitch in the domestic machinery warns one that it is yet far from perfection, how contemptible it would be to quarrel with the perplexed engineer of the fabric, who is doubtless expending all her care on the com-

fort of the ingrate himself! And now what do you say to dinner, good people?” said Laura.

So to dinner we went. The repast was certainly very enjoyable, after all. Mr. Jenkins was in excellent spirits, and entertained us with some laughable stories, which we applauded warmly.

After our return to the parlor he read to us for a while; and then, as it was the last evening of my visit, and I had some packing to do, Laura and I excused ourselves, and she went with me to my room.

“I am so sorry that you must leave us in the morning,” said she, seating herself on my trunk when every thing was done. “I don’t see why you couldn’t have staid longer.”

“Many thanks, dear Laura, for your kindness; but I can not delay my departure another day. To tell you the truth, it would not be wise for me to do so if I could, for I should grow discontented with my own country if I remained too long in yours; and, worse than that, it is even possible that I might wish all our husbands—”

“Were in Utopia,” suggested Laura. “Well, then, I won’t urge you any further, but say ‘good-night’ at once.”

IV.

Early the next morning we parted, with many expressions of esteem and friendship, and a cordial invitation from Laura and Mr. Jenkins that I would visit them soon again.

But I have not complied with their wishes, nor do I think, much as I enjoyed my sojourn there, that I shall ever return to Utopia; for—I might as well confess it—the effect even of my brief stay in that favored land was to make me (at least so my husband said) “very unreasonable and exacting.”

One word more. I have become very tolerant of all those reformers, as they are too often derisively called, who are fighting, with too much violence and too little grace, perhaps, in the cause of progress, on the side of liberality.

I am, as I said before, tolerant of all these, notwithstanding that I do not indorse them fully or approve their manner of warfare; because I see that they too have been in Utopia, and that they are striving to reproduce even a dim outline of that symmetry and beauty which have led their souls, as mine, captive.

A PUBLIC BUILDING.

FEW of its owners are aware how stately a structure is the Capitol Building at Washington. Not that it is by any means a perfect thing; far from it—it is full of faults; and though it seems fitting that our central seat of power should represent our riches and resources, still there is a trace of something barbaric to-day in all its lavishly squandered splendor. Yet, with some genius of their own, with the models of all the ages before them, and with the unlimited treasure of the whole country at

command to carry out their ideas, it would be strange if all the designers employed upon it since Washington laid its first corner-stone could fail to give it that portion of excellence with which one, who does not fret soul and body apart in search of abstract perfection, can rest well pleased, if not utterly satisfied.

Yet whoever may find much to blame in the body of the building, the architects have their full meed of praise in the loveliness and grandeur of the dome. It is something unsurpassed; it springs into the sky as lightly as a bubble—as resplendently; it rests there as easily as a cloud; it seems, as it should, to be only a part of its airy surroundings. Art could do no more in its construction. That its effect is sadly impaired by the bronze colossus, which, instead of merely accentuating it as a final would do, crowds it down to earth, is no fault of the dome pure and simple.

It is due to that avarice which first planted the city in a swamp that the Capitol does not rear its white magnificence on some hill crowning a campagna vast as Rome's; and yet, though erected on comparatively low ground, go where you will, for miles on miles, that dome haunts and follows you; now as you see it from the heights of Arlington—while you stand in the midst of the acres of graves there and picture the terrible moment when some trumpet shall call all this army of ghosts from their trenches—rising like a guardian genius still overlooking these white head-stones that stretch away across the rolling land on every side, like the crests of mighty and melancholy waves; now as you cease treading down the purple hyacinths in the grass, and wandering under the magnolia-trees, and between the breast-high hedges of fragrant box at Mount Vernon, and, turning the bend of the river almost twenty miles away, meet its great shadow resting like a film upon the air, opening slowly on the gaze like a vision, with its phantom-like length of lustrous column and setting of wind-tossed greenery. When you behold it thus remote it seems like a dream of the past—too beautiful a thing for the common use of daily life; only men in sweeping Grecian raiment and phylactered purple should move slow and meditative through its halls—never these hurrying black beetles, these rough garments and rude gestures of the modern generations. It is possibly for some such reason that in the beginning the Capitol turned its back upon the town, rather than because the family that owned the land in front set too high a price upon their property and drove purchasers to lots in the back-ground, which, after all, is perhaps as well, as otherwise we might not have the long vista of the Avenue closed at the end by these walls rising on their grassy terraces, lifting their shining colonnades over the tree-tops, and sending the dome soaring upward into heaven.

Mr. Ruskin, who demands that the architecture of every country should accommodate itself to that which best suits the damp atmos-

phere of Britain and those lands washed by the fogs of northern seas, would not praise the Capitol too warmly. But as such climates need the spires and pointed arches to reach aloft and conduct down to earth what sunshine there may be found scattered in the upper air, so the flat roof and recesses of shade in which the Egyptian and Greek found shelter from fervent heats are particularly adapted to the climate of our seat of government, whether it be of so lofty a character as the other or not; and it is not exactly unsuitable that a nationality so mingled as ours, so far from being settled in one type, where Saxon and Celt and Jew and African are equally sovereign, should be represented in architecture by a mass comprehending almost every order under the sun.

The critical aspect which the outline of the edifice presents at a single glance leans, it must be admitted, toward a striking coincidence. Thus seen its proportions are more nearly those of a spread-eagle than any thing else. If the architect had really no design of glorifying the national bird, we must look upon the fact of his having done so as a special inspiration—he builded better than he knew—or else as an irrepressible outbreathing of the national character. This, however, will not be so palpable a mischance when an improvement still hoped for shall, in less burdensome days, be carried to completion, and, the old façade being done away with, the main front shall be brought forward into the prominence which is its right; by which means the central portion will not seem to be about to be crushed by the dome above; the present wings, instead of seeming separate parts of a block, will secure a normal connection with the building, and there will appear to be some original unity of design about the whole disjointed group of porticoes and pillars. There will nevertheless probably always remain Crawford's statue to crown it with a blemish—not that the idea of Armed Liberty from that height watching over the wide nation is not a glorious one, not that the statue itself is not the most ideally beautiful thing in the whole conglomerate, but being in bronze, and elevated on the dome instead of upon an obelisk, it seems always to be weighing down its supports; at too great a height to be seen to any advantage, and serving no purpose but that of putting a period with its blackness to all the soaring of the snowy dome, like an extinguisher upon a flame; whereas, as it has been already said, were this colossus of white marble it would lift the dome with it into airier heights, and would seem like the very apotheosis of Freedom.

The old Capitol, from which the new wings are extended, was constructed of a sandstone from Acquia Creek, which is painted white—one of those economical artifices which are ultimately an extravagance, as the rains affect the stone badly, and it is constantly requiring to be repainted. The extensions are of marble, from Massachusetts and Maryland, of shining

quality and particularly choice veining. The columns were all brought from their place of debarkation, it is said, after an exceedingly primitive method of rolling them along the ground with ropes; this being complained of at the time, it was found upon experiment that it was altogether the safest way of transporting them, as only those broke in which hidden flaws made it desirable that if they were going to break at all they should do so before being set in their final places under the superincumbent weight of architrave and entablature. The dome, which was originally of wood, is now of cast iron, weighing more than four thousand tons, or eight million pounds; one can scarcely believe the enormous figures when catching the first glimpse of that light and airy ease with which it lifts its rich decorations into the sunshine; its foundations, however, are said to be adequate to a much heavier pressure. The ascent is up a winding flight of stairs between the outer and inner shells, and is a morning's journey; but once there the climber hangs over a landscape that lies beneath, broadening away into mellow distances, overswept by sailing cloud-shadows, and threaded by the silver of the Potomac.

It is within the old Capitol that some of our earlier statesmen rivaled one another in the decorative arts—Jefferson, evincing here a good deal of architectural taste and capacity in pillars carved after the likeness of sheaves of our native maize, the ears and blades and silk forming the capital, the clustered, jointed stems bound together for the shaft; and also in designs where the blossoms and foliation of the tobacco-plant make an effect as exquisite to the full as that of the old acanthus leaf; and John Quincy Adams, emulatory, grouping some figures in an allegorical representation on a frieze. It was the arm of Justice in this alto-relievo that on or about the time of one of the late Inauguration Days fell and broke upon the steps of the ascent. But though Mr. Adams's sculpture may not be the most affluent in merit, it can not approach the poverty of that which adorns the entrances below—the Ten-strike of Columbus, as it is called, and all its at once laughable and pitiable companions—and it rises into a lofty altitude of art beside the painting which disgraces us and the interior of the rotunda together.

Why the rotunda of the Capitol Building of the Republic should be considered, or allowed to be, a rendezvous where every one who has a daub of paint or a dab of plaster to exhibit may hang it up to sight is an inexplicable mystery. Here a miserable cast of some block-head out of which the people are making a temporary idol; there the colored photograph of some equally ephemeral hero; just beyond a painting in which the Goddess of Liberty is a lady in white satin, décolletée, gores, and trail; and in another place a mass just out of its mould, in which a President is twice murdered: it is like the selling of doves in the

temple. Meantime the walls are covered with such a meaningless charivari as Powell's De Soto, and its associates; and although Trumbull's panels are valuable as the contemporaneous portraits of their time, the others have certainly not the least excuse for being. Higher up the old historical reliefs of Causici and Capellano are so extraordinarily ugly as plainly to proclaim the fact that they are not for sale, and thus in a measure to redeem the place by showing that it could have been meant for no such desecrating frivolities; and you can forget them each and every one when you lift your eyes up the vast concave and see, nearly two hundred feet above you, a long slant sunbeam separate the blue mist always brooding there and come swimming down through the aerial depth. This distance softens a tawdry fresco in the roof of the Father of his Country surrounded by the fair sisterhood of Peace and Plenty, like a bevy of pretty waiter-girls, at which poor fresco many poorer jokes are flung; and beneath it there is a circle of other subjects, each interpreting some idea of the American dominion—in one compartment of which Neptune is taming his sea-horses for us, and in another a bar-maid with a soda-water bottle pretends to be Electricity and a Leyden jar. But these trifles belong to the generations that are gone, and we are not responsible for them; the only thing to be regretted is, that when the British began their vandalism by burning our Capitol they did not do their work more effectually, and leave us a fair field for fresh beginning.

Behind the rotunda, always dusty, dirty, thronged, and deafening with loud reverberations, is a different region, a charmed place, to which the rabble seldom penetrate, though open to one as to another, and which seems as if it could scarcely belong under the same roof. When leaving the vulgar jostle and bustle behind and reaching its soothing seclusion, one is reminded of those dwellings of the medieval Jews, hovels without, and entered through reeking alleys and up dilapidated stairways to be found palaces within. This place is the Congressional Library, and it is a room which is three halls in one, or rather two great halls and a transept, where the soft green coloring just pricked out with gold is a blessing to the brain, and where great generous windows let the tired gaze out upon wide and lovely views. In other parts of the building there are the libraries of the two legislative bodies, and, far away and below, the Law Library overflows what was formerly the Supreme Court Room. But here the more general scholar finds rare indulgence, and the mere dilettante may revel as, in a place where vastness gives the mind delicious freedom, he turns over books of priceless old engravings, over volumes of natural history—of the trochilidæ, for instance, where the real humming-bird seems to dart through the pages with all his jewels upon him. In a portion of this library-room hangs the mosaic

portrait of Mr. Lincoln, executed for the nation at the command of a European city out of an infinite number of atoms and at a cost of infinite labor and skill.

There is always a sense of enchantment about any great library, where the mighty dead are living round us, where we command them and their thoughts long after their bones are dust, and where a luxury of study reigns; but when you come directly from the echoing rotunda or from the pandemonium of the Hall of Representatives into the silence and hush of this, where not a voice resounds and the very chairs are muffled in rubber, you question if every thing is not fairly spell-bound. This library, with its triple height of galleries and alcoves, enjoys, it is said, the pre-eminence of being the only one that is fire-proof in the world. Books in themselves are scarcely to be called inflammable material; set them on fire, and owing to the want of air between their covers they will smoulder and go out; they have only succeeded in burning when the shelves beneath them and above them afforded kindling and sustenance to the fire. In the present instance, the shelves, the supports, the fittings throughout are of iron, the heavily decorated ceiling and the rafters are of iron under a roof of copper, and whatever moth and rust may do to corrupt these treasures, fire at least is powerless over them, and so far as that agency is concerned these books are imperishable; and it is certainly pleasant to think that they are fortified against a second hostile attack from an enemy, not by casemates and cannon, but by a little application of the science which they teach, and though he may make a loot of them, his torch must pale ineffectual fires before them.

Passing from wing to wing of the Capitol, since its extension, affords the visitor quite a stroll. The passage being something more than the eighth of a mile in length there is always a fresh wind blowing through it and slamming the great doors, which resound with multitudinous echoes. One finds upon the way a place known as the Temple of the Winds, in which the miniature model of an ancient temple has been set bodily; it has its use in the system of ventilation, but with a truly national largeness of temperament its frequenters, said a witty guide, use it for a cuspidor. Up its hollow depth come cold draughts, suggestive of shivering *oubliettes* and dungeons underneath; but there is nothing of the sort beneath, other than that great gloomy chamber with its low and heavily vaulted roof and gigantic Egyptian columns, in the central crypt of which it was first intended to entomb the remains of Washington, with statues of his generals keeping guard in a charmed circle around him; and farther away the quarter where the burnished engines slide silently to and fro by day and night, sending volumes of air over leagues of hot tubes in the winter-time to diffuse a soft warmth every where; and in the summer fanning up equal volumes over great blocks of ice, distilling cool-

ness and freshness in like manner, and forming all the diablerie to be found in the place. It is in this same substratum of the Capitol that the marble-lined baths, luxurious enough for a Roman, are situated. Certainly our legislative work ought to be done with clean hands, for no appliance, no delicacy, no delight of the bath is wanting; foreign soaps and essences and cosmetics and perfumes, damasks soft as satin, and attendants deferential as slaves, all being supplied to our lawgivers without money and without price. And this facility for purification is by no means an unwise provision at the public expense, for a glance at some of its participants is sufficient to show that they would never have it at their own.

Reascending from this excursion into the usually unexplored regions of the building, leaving behind us the thousand and one restaurant-rooms, and passing onward toward the southern wing, we traverse the old Hall of Representatives, a fine amphitheatre, with its roof upheld by pillars of a polished pudding-stone resembling the gray scagliola. It has been barbarously treated of late, being always unclean, and filled with the litter of plaster busts of various worthies and the paintings on exhibition there. What relation Rothermel's "Christian Martyrs" bears to public affairs and statesmanlike ideas is a problem among the unknown quantities; yet there it hangs, and there the plaster busts stare and smirk at one another from their black cambric pedestals; and one imagines that the fair figure of History there speeding over a winged globe, with a dial for her chariot-wheel (perhaps the most beautiful design for a clock in the world), suspends her pencil and gazes contemptuously below, finding nothing worthy to record. Not very far away are Rogers's famous bronze doors, pieces of wonderful workmanship and beauty, but illustrating American history much more fully than they were intended to do, inasmuch as it is feared they will have to be removed into some less frequented portion of the building, in order to prevent their being carried off piecemeal by curiosity-seekers, otherwise thieves; the truncheon on which one of the prominent figures ought to lean having been feloniously abstracted, together with the chain that bound the hands of another, and various other portions within the reach and the ambition of small peculators. One would think that the heroic stories wrought here in the bronze, hieroglyphs of all our history, would lift every beholder above sacrilege; and even if unable to do so, that they would inspire sufficient pride of country in every citizen to let monuments of art such as these remain unutilized.

We come now to the grand staircase by which we ascend to the gallery of the new Hall of Representatives. The balustrades of this staircase are of a gray marble from the quarries of Tennessee, so beautiful in tint, and susceptible of so brilliant a polish, that it is amazing it should be so seldom used elsewhere. This

staircase has a massive majesty of its own, as has also its companion of the Senate Chamber. The light falls full upon it and shows it solid enough to endure for ages. At one point upon it you turn and look upward where story after story of panel and pilaster rises light and graceful, though emblazoned with florid and unmeaning ornament. It is quite stately and noble, and seems to be the befitting entrance to these halls of empire. Upon its sides may be seen Leutze's "Westward, Ho," below which a smaller piece of fresco-painting affects the beholder more pleasantly than the canvas of larger pretensions does.

The Hall of Representatives is a great oblong chamber, which, although very lofty, affords you a contrary impression, owing to the deep caissons of the ceiling, which, being planted between huge pendants of gilding, and the panes of glass being stained with the arms of the several States, give a sense of low-browed heaviness. An untraveled citizen can hardly obtain a better idea of the vastness of his country than when he takes his place in the galleries of this hall—entrance to which, very differently from the arrangements of the English Houses of Parliament, he finds to be unrestricted—and, looking down at the mob of members, recalls to himself all that they represent, and fancies that he sees at one glance the rock-bound sea-coast of New England, the impassable mountains and wild rivers of the West, the savannas of the South. The room is very elaborately upholstered, and the desks of the members are handsome specimens of carving; the Speaker's desk is a pile of white marble; and in the surrounding walls there are spaces, now filled by panels well painted in imitation of satin damask, where at some future time historical portraits shall be inserted, while corresponding statues shall occupy the vacant niches in the galleries above. The scenes usually going on within these walls are things beggaring all description. It might easily be taken for the inside of some turbulent and unruly school in Brobdignag; and it strikes one as rather fortunate that the school-boys have no windows either to clean, as in Dotheboys Hall, or to gaze out of, the room being entirely lighted, or unlighted, from above. Here a person sits with his heels on his desk; there one passes through on his way from one committee-room to another without so much as dreaming of taking his cigar from his mouth; here a group stroll about with their hats on; there a little child of one of the members plays bopeep between the chairs; in another spot a cluster are talking together animatedly and with loud voices; meantime every member has his spittoon and uses it, or else his neighbor's, though he is not at all particular; letter-writers are clapping their hands for the runners to wait upon them; some speech-making legislator is leaping about the open area and vociferating eloquent periods which nobody hopes to hear, though a score pretend to listen; the pages are skipping along the aisles or tossing coppers

where they wait for orders; the hum and din rise loud and perpetual; the Speaker is hammering; a dozen members at once are calling upon him for the floor; and one gentleman is lying stretched out upon the sumptuous sofas, boots and all, and in the midst of the well-accustomed uproar and confusion sleeping the sleep of the just. In whatever proportion individual members may be oppressed with a sense of their responsibility, it is impossible to gaze upon this drama of disturbance and not wonder that the affairs of the nation do not become involved in an inextricable tangle.

Very different is the scene presented by the Senate Chamber, where calm dignity sits enthroned, and where business really seems to be done. This room, in the opposite wing, is much smaller than that of the other branch, yet has a gaudier appearance, being tawdrily furnished in jarring colors, the carpet bright scarlet and yellow, the sofas a dull magenta tint, which is, however, a trifling matter, and which, as it may by-and-by so easily be rectified, need not annoy any one who wishes to listen forgetfully to the orotund sentences of deep-mouthed Senators.

The lobby of the Senate is at present much the superior of the Senate Chamber itself, with its lofty groined arches covered by an arabesque of scrolls and floral suggestions in decorative plaster-work; and the committee-rooms opening upon it, and the reception-room for the wives and friends of Senators, rejoice in windows, each of which seems only the setting to a lovely picture. There are, however, other entrances to these sacred floors, reserved to the members of Congress themselves and to their attachés, few of whom, it may be doubted, know half how beautiful are the passages through which they daily hasten. Here, for instance, is a staircase of bronze and brass, which, being erected in a well of darkness, is seen only when some occasion lights the gas, and then only imperfectly, unless the visitor's pocket-match comes to the rescue; yet it is a wonder of art, its balustrade being a lattice-work of exquisitely executed fancies—the forest-creature plunging between the boughs with his horns bent back—naked little boys at play with leaf and spray—mother-birds bringing food to their fledgelings—a snake twisting up a tree to protrude his fangs into a nest over which the parent-birds flutter helplessly—the great shield of the eagle sealing it as the republic's property. This staircase, and its companion in the other wing, costing severally eighteen thousand dollars, and not to be valued in gold or silver, are monuments of a nation's liberality of which we may well be proud. These staircases lead into long corridors lined on either side with panels painted in *distemper*, in one place after the Pompeian manner, and in another merely with a Moresque of hanging vines and flowers, which enframe representations of nearly the whole ornithology of the United States. Here a bobolink reminds the Carolina

rice-fields of the Berkshire meadows; there scarlet flamingoes and rose-colored spoon-bills from the banks of the Louisiana bayous give brotherly greeting to robin-redbreast, just ready to warble a good-morrow from his bold and brilliant throat. Through all these halls there is a breadth and loftiness well befitting the way to an empire's council-chambers, whose penetralia they seem to surround and fortify, if from no other approach, yet from that of the common outside air and light. Into these halls communicate various apartments, committee-rooms, flirtation-rooms, whose name describes their uses, the Speaker's room, post and telegraph offices; and in the Senatorial wing the withdrawing-room, commonly known as the marble-room, and those of the President and Vice-President. The latter is the only one with any look of comfort about it, or that has an appearance as if designed to be occupied by gentlemen; the others all being commonplace show-rooms of upholstery goods, or else seeming to have connection with some museum of fantastic and bizarre decorations. In the closet of the Vice-President's room hangs a little mirror some three feet by eighteen inches in extent. In our early days there was question made as to the propriety of so extravagant a purchase as that; a great sheet of glass now stretches to the ceiling in this room; the Speaker's room is a quadruple reduplication of mirrors; and the walls of the marble-room are merely immense mirrors, and nothing else, set in a wainscoting of the gray Tennessee marble. Certainly, if our legislators want to play Narcissus, they have every aid toward developing a full-blown genius in the rôle; or is all this only a fulfillment of the ancient adage of coming events casting their shadows before—a prophecy of the softening influence of woman when the vexed question of female suffrage and women's rights shall be answered affirmatively—a providential interposition in favor of back hair?

This marble-room, so-called, is considered to be one of the chief attractions of the Capitol, for, besides its looking-glasses, the roof is upheld by two rows of fluted columns in white Carrara marble, which the mirrors repeat and repeat down vistas of infinite beauty. When the soldiers were quartered at the Capitol the enormity was committed, in the face of the tremendous empty vaults and cellarage below, of hanging this white place full of fitches of bacon, slices of which our hungry sentinels toasted on their jack-knives at roaring fires in the chimney-place. A beautifully tessellated marble floor is now covered with what was possibly left over from the carpet of the adjoining Senate Chamber, which is to be noted as economy, though it may not be commended as taste—unless, indeed, the aforesaid fitches of bacon discolored the floor too deeply for cleansing.

The President's room, a few steps beyond the last place of which mention has been made, and into which the Chief Executive comes to sign those bills hurriedly passed at the close of a

session, is a collection of choice fresco-work, splendidly executed portraits of our illustrious ancestry, and a slightly improved version of the fresco in the roof of the rotunda, where the Father of his Country again appears ringed about by bright allegorical damsels; and although the greater part of the work is very finely done, especially the portraits of Franklin, Jefferson, and their compeers, yet the whole effect is a confusion of rich color, and one is wearied with a single glance by the quantity which reverses the old rule of "nothing too much." That, indeed, is the chief defect through the whole vast pile; its designers do not seem to have known how to spend their unlimited resources. Every thing is massive and stupendous throughout the building; the arched carriage-ways under which you drive are as superbly solid as the pyramids; but, not content with that, every thing is gilded and ornamented and painted and finished beyond the last point of endurance. There are but few really good paintings on all the square rods of the walls, and there are some that are atrocious; an equestrian Washington hangs over the landing of one of the staircases, a waking nightmare; and Congress, it is said, has some idea of giving Powell another great place to lay waste; but a portrait in the apartment of one of the dignitaries, and the copy of a Murillo in that of another, are at present almost the only things of merit to be found. How superb the great stretches of the walls might be if Bierstadt and Church should spread their splendid colors there in pictures of our wild vast scenery, with the mountains of the Yosemite and the rapids of Niagara, does not seem to have occurred to our purveyors of public taste, who throw away our treasure on canvases violating every law of perspective and chromatics.

As we descend from the generous galleries we may pass perhaps a spot known by its stained rose-window, an innocent-looking spot with its quiet clerks, and with no appearance of being the place where the thousands of scissors, pen-knives, egg-whisks, cork-screws, and curry-combs, the gallons of cologne and stronger waters, the boxes of lemons and hundred-weights of sugar, the porte-monnaies and the kid gloves, are drawn under the modest name of stationery. But hurrying onward we come—with the exception of that where John Quincy Adams breathed his last—to the last place of special interest for the sight-seer. This is the Supreme Court Room. It is in the old Capitol—an amphitheatre of moderate size and entirely faultless—the one perfectly beautiful room of the whole assemblage. Its walls are softly tinted, and between the flat and polished pilasters of scagliola brackets uphold the busts of the previous Chief-Justices. There is a gallery opposite the door, supported by a screen of noble columns like those in the old Hall of Representatives. In front of these columns sit the Justices in their solemn robes of office, and the lawyers and the spectators occupy the space be-

fore them. The room is furnished in soft yet sombre colors, and the wood-work is of mahogany so old and dark as to deserve its original name of Madeira-wood, for its rich wine-stains; there is nowhere any thing glaring or dissonant, and nothing can exceed the pleasure of the place when on a chilly day the great chimneys, at either end of the loggia behind the Justices, send out the cheerful crackle and flitting illumination of their broad wood-fires. It is perhaps a dull and stupid case which makes the air soporific, the place is vacant save for those who necessarily have to do with it, and if one or more of the reverend seigniors be not asleep they simulate admirably; or it is perhaps a great field-day, there is a full bench of gray, sagacious heads, beautiful women fill their appointed places and rustle all the time after they are in them, civilians throng upon the other side, some orator, erect and stately as a field-marshal, deploys the battalions of his words, the forces of his arguments, and every name of political or legal note, clustering around him on the floor, listens in eager silence. There is Reverdy Johnson with his head of the Cæsars; Black, restless as fire; the venerable Thomas Ewing, who looks as if he had just stepped out of Plutarch; Cushing, in some intense but icy reverie; Evarts, polished and keen as the blade of a ra-

pier. And we do not forget that this same room where now congregate the intellects of the bar is the arena where formerly contended those who have gone into history; and the memories of Webster and Calhoun, Crittenden and Clay, like gigantic Caryatides, are holding up the roof to-day. And as we leave the splendid building on its hill we look back and feel that it is sacred to every American who remembers that under its second corner-stone reposes the scroll on which are written these immortal words:

"If, therefore, it shall be hereafter the will of God that this structure shall fall from its base, that its foundations be upturned, and this deposit be brought to the eyes of men, be it known, that on this day the Union of the United States of America stands firm: that their Constitution still exists unimpaired, and with all its original usefulness and glory, growing every day stronger and stronger in the affections of the great body of the American people, and attracting more and more the admiration of the world. And all here assembled, whether belonging to public life or to private life, with hearts devoutly thankful to Almighty God for the preservation of the liberty and happiness of the country, unite in sincere and fervent prayers that this deposit, and the walls and arches, the domes and towers, the columns and entablatures, now to be erected over it, may endure forever.

"GOD SAVE THE UNITED STATES OF AMERICA.

"DANIEL WEBSTER.

"Secretary of State of the United States."

A CHRISTIAN'S CREED.

I BELIEVE in dreams of duty
Warning where they can't control,
Fragments of the glorious beauty
That once filled th' unfaill'n soul:
In the godlike wreck of nature
Sin did in the sinner leave,
That may still regain the stature
It hath fall'n from—I believe.

I believe in human kindness
Large amid the sons of men,
Nobler far in willing blindness
Than in censure's keenest ken:
In the gentleness that slowly
Sanctions what would others grieve,
In the trust that, deep and holy,
Hopeth all things—I believe.

I believe in self-denial,
And its secret throb of joy:
In the love that lives through trial,
Dying not, though death destroy:
In those fond and full believings
That, though all the world deceive,
Will not let its dark deceivings
Wake suspicion—I believe.

I believe in man's affection,
Tender, true, unselfish, high,
Infancy's almost perfection,
And in woman's purity:
In *his* lofty soul-sustaining
That can to *one* purpose cleave,
In *her* gentle uncomplaining
Peace and patience—I believe.

I believe in self-devotion,
The long sacrifice of years,
Noblest fruits of deep emotion,
Man's blood-shedding, woman's tears:
In the pure prevailing passion
Human hearts by God conceive,
And, despite the world's cold fashion,
Live and die for—I believe.

I believe in human weakness
Trying to be strong and true,
Owning in impassion'd meekness
What it would, but could not do:
In its consciousness of failing,
Which the less it doth perceive,
Doth the more leave unavailing
All its efforts—I believe.

I believe in Love renewing
All that sin hath swept away,
Leaven-like its work pursuing
Night by night and day by day:
In the power of its remoulding,
In the grace of its reprieve,
In the glory of beholding
Its perfection—I believe.

I believe in Love Eternal
Fixed in God's unchanging will,
That beneath the deep infernal
Hath a depth that's deeper still:
In its patience, its endurance
To forbear, and to retrieve,
In the large and full assurance
Of its triumph—I believe.

THE NEW TIMOTHY.

Part Eighth.

I.

HOPPLETON was astonished—John has gone away to teach!

"People lie about my being cross with you," Issells, the peevish tailor, remarks to his worn-out wife at supper, "and I *may* be put out a little by the everlasting bother and misfortune I have, stitch, stitch, stitching all the time, sick or well; people dissatisfied with their fits, people promising and not paying, and *you* sick all the time, of course! as if I did not have worry enough without that; but just look! Think that girl didn't have some good cause for leaving? And he in the pulpit on Sundays preaching away his miserable stuff about love to God and love to man! Hypocrites, the whole of them! It's the detestable cant in the world that is the cause of all the villainy in it! Had my way, I'd sew them all up, preachers and the fools that listen to them, in sacks and pitch them into the Atlantic."

"What girl? I don't know what you are talking about!"

"What girl? The one living in that Preacher Wall's family. She's gone off somewhere to teach school. Cruel to her. I have no more doubt of it than I have of my own existence. As beautiful and patient-looking a young creature as I ever saw in my life. And there's that daughter of his—old maid—comes to see you so much when you are sick, with her flowers and things—dare say she could tell a story if she would."

Mr. Josiah Evers, on hearing the same report, was surprised.

"But she will make a splendid teacher," was his thought. "She is one of the kind that do not talk much, that rules by the eye instead. She can make them love and respect her. If ever a woman succeeds she will;" and Mr. Evers respected her that much the more than before. An excellent teacher himself, he could judge of qualification in others. "It shows, however, that she is as poor as I supposed. I am sorry, because I was almost ready to marry her," he added, passing his right hand through his hair, and lingering with the fingers thereof among his scant whiskers. But here Mr. Josiah Evers's thoughts took an indignant direction: "Why don't these people pay their minister better?" This was the less astonishing, however, from the fact that Mr. Evers had never as yet contributed a cent toward the salary of Mr. Wall himself.

"Gone off to teach, eh?" Jack Clemur remarked, stirring the coals in the forge, while Lanny, his son, worked at the bellows. "Well, I've no objection. Teaching is easy work to sweating over the anvil, I guess. Hard work is the best thing in the world, especially for young people. And now, Lanny, I do sincerely hope you'll be able to go to your own church on Sunday nights, instead of dressing

up and going to Mr. Wall's church for nothing else on earth but to see that Miss John, and to hear her sing. Do you think the Lord will ever bless you, pretending to worship him that way?"

Lanny had no words in reply. Since that tap upon the head from his father's hammer, nothing had hurt him so much as her leaving. He worked on mechanically, but the world was, for the time, a wilderness to him.

M'Clarke bewailed her leaving as the loss of the best voice—next to his own—in the choir. Even Anna Burleson came over to Mr. Wall's to try and persuade her out of the notion.

"Bug is bother enough for me. The idea of twenty little dirty-faced things to take care of, treading on your skirts, pulling at your dress with their sticky hands! I solemnly declare," said Miss Anna, with perfect sincerity, "I would rather lie down on the spot at once and die and be buried than teach school! Don't go, John, dear. There is Bug in a perfect stew about it. I didn't know the little ball of butter cared any thing but for cake before. As to Ned, of course he don't *say* any thing, dear! I declare I lay awake all last night expecting to hear a pistol go off in his room, or something. We love you, dear; you can't tell how much. We hope—you know—never mind—" and Miss Anna colored herself, if it was only as the reflection of John's face. Not a day but Miss Anna was becoming more acid in view of her wrongs, as poor Issells in view of his, but there was a freshness and sweetness about John that she could not resist. "There's that Louisiana Mills," Miss Anna continued. "Lazy, fat, good-for-nothing thing. If that father of hers would make her lay off her fine dresses, and cut off some of that hair, and lock up a little of that jewelry, and go far away from home, where she would have to get up early and eat corn-bread and molasses, and teach forty children all day, it would do *her* some good."

Perhaps it would. But if her own father could have pursued some such course with Miss Anna herself—given something for her thoughts and temper to grind on besides herself, it might have been a blessing to her also. One thing her father did do, of which no one else save himself and his pastor were ever aware—that is, call upon that pastor in a quiet way just at that juncture, and beg his acceptance, as an addition to his salary, of a very round sum of money, according, at least, to village estimate.

"Thank you, Mr. Burleson—but no," his pastor had said. "I dare say I know," he continued, with a smile, "the cause of your kindness. It is a delicate matter. It is not because she imagines herself at all a burden. She knows she is not. We have always loved her more than a daughter; she has been more assistance to us than most daughters ever are. Gentle as she looks, amiable as she is, she inherits from her father a singular strength of character, a clearness and energy of purpose

one would not imagine in a girl so young and so lovely. Her father was a—what you would call a first-class business-man. I don't intend to flatter, but you remind me more of him than any man I know. I did not dream she had so much of her father in her, for she is the image of her mother, one of the loveliest of women. No. We have used every kind of persuasion with her in vain. Go she will, if only to give the matter a fair trial. She seems to have arranged it all when on a visit to General Likens; did not let us know until it was all a settled thing. Do you know, Mr. Burleson," said the pastor, in his frank, impulsive way, "I believe—at least Mrs. Wall thinks so, and ladies are wonderful judges in such matters—that a member of your family has something to do with her leaving?"

"Ned?" exclaimed Mr. Burleson, with equal frankness. "I only wish he could get her! I don't know what it is, there's some screw loose about him—a sort of reckless, heedless, devil-may-care—a kind of scoffing—a lack of energy, of purpose in life; I hardly know what. There is something in that balk he made—I hardly know what else to call it—in religious matters years ago—you remember it—that has had a singular influence on him."

"Charles tells me," said Mr. Wall, "it is because Edward did not become a minister as he first intended. You know how intimate they are. I have conversed with him—Edward, I mean—several times. In fact, I wrote to him when he was in college. His religious condition is a singular one—a state of suspended animation—almost petrification. I remember a singular remark he made to me the other day. His religious knowledge seemed so clear that I mentioned it to him—wondered how, with such distinct conceptions of Divine truth, he could *feel* so little. 'Your looking at religion,' he said, 'is as at a landscape in all the verdure, and leaf, and flower of summer; while I look on the same landscape under its winter aspect—no grass, or leaf, or flower, to obstruct the view—every stone on the ground, every twig and bough distinctly visible in the cold clear air!' It made me shudder. 'All winter, only, with me,' he said. The fact is," continued the pastor, "if a young man once fully resolves to preach the Gospel, with such a view as Edward had of the supreme dignity and grandeur of the work, and then fails, from almost any cause, to carry out his purpose, he is singularly unfitted thereby—pardon me—for being any thing else. Unless greed of money, from which your son is free, takes its place, every other aim seems low, every other motive powerless. His *heart* is dead! Only for the time, I hope!" the pastor added, earnestly.

"He never talks with me on such matters," said the father. "I don't understand him. He has mind enough—more than I have, for that matter, but you can't get him to apply it steadily in any direction. He has heart a-plenty; yet he has, or affects to have, a perfect heart-

lessness in regard to every thing. He distresses me! And I fear he is growing worse and worse. I would not speak of it to any one but yourself—not even Mrs. Burleson—but I am constantly in dread lest he should take to drinking or gambling. I have a vague terror. He is so uncertain there is no telling any day what he may not do!" and the pastor noticed for the first time in the clear, somewhat hard face of the bank president, those dark lines at the corners of the eye, the lengthening shadows as of a setting sun, the hair-breadth droop at the corners of the mouth as from the tasting of a bitter cup. To think how one's hand may be full of gold, and the heart—so to speak—at the roots of the arm, full of wretchedness. Mr. Burleson was the richest man in Hoppleton, but there were happier homes in Hoppleton by far than his.

"I do not know how the idea has crept into my mind," says the bank president at last, "but I have taken a singular fancy to Miss John. If any thing could have influence upon Ned I do believe it would be some such woman as she seems—she is so young—is going to be. Her solid sense would be dower enough. I would consent to such a thing with all my heart. I only hope he may succeed. But I dare not let him know it, he is so contrary it would be the very way to prevent it. But the woman that marries Ned will have to take her chances in regard to him. He may be all she could wish—he may turn out—Ah, well, we will talk of something else."

Mr. Wall had been on the point of saying something of his own happiness in his nephew. It would hardly be appropriate just now, he thinks, and only says, "There is Charles, now. I only wish he had the practical sense, in worldly things at least, of Edward. We shut our candidates for the ministry up in a seminary by themselves for years, just when they are forming their habits for life. For whole years they are associated only with their professors and themselves—monks almost. There must be terrible error in our system. They come out too often enfeebled for life in health, separated in feeling and habits from the people, scholastic, deficient in common-sense. One thing, however; if there is sound piety in the heart, and fixed purpose to live for God and man in the soul, a young man will in the end adapt himself, correct himself—"

"A living piety at heart, a fixed purpose in life," interrupted Mr. Burleson—"exactly, and I dare say your nephew has it. There is nothing you may not hope for him in the future on that account. But, unfortunately, piety and purpose are just what Edward lacks. No definite course before him in life—no power in him to impel him along that course, even if he had one."

However that might be, young Burleson found path and purpose enough to arrive from Hoppleton at General Likens's front gate early one Saturday afternoon soon thereafter.

II.

"That young Burleson!" whispered Mrs. General Likens's prophetic soul as soon as she saw—she was knitting upon the front piazza—the buggy turn into view up the road, long before she could see who was in it. "Just as I knew—exactly!" Mrs. General Likens exclaimed to herself, as that gentleman drew up at the gate, alighted, fastened his horse, and entered. Mrs. General Likens took a fresh needle to her knitting and looked approvingly upon him as he approached. She was glad to see him because he fulfilled her standing prophecy, and because there was no one at home to talk to him but herself.

"Don't be afraid, Mr. Burleson," she said, without rising; "walk in. Our dogs don't bite. We had one in Virginia once—Tige we called him—bit a stage passenger, and the General he killed him. How's all?"

"I had some business in the neighborhood, Madam. As I had to pass I thought I would stop a while," fibbed Burleson, after due salutations. "The General is well, I hope?"

Mrs. General Likens scoffed inwardly at the plea of business, and informs the anxious applicant that the General is *not* well. "Some trouble in the chest," she explains. "It's only of late. The General's hardly ever known what you may call a sick day. It must be his constant smokin' injures him. The doctor said so. He tried to give up his pipe. 'Pshaw—stuff!' he says at last. 'Remedy's worse than the disease.' An' so he's been smokin', if possible, more'n ever."

"Is he at home this afternoon?" asks Burleson, not caring the millionth part of a straw whether he is or not.

"No," replies the wife, perfectly aware of it. "He went over to Araminty Allen's—remember you met her when you were here last—wore a crimson dress—soon after breakfast. Araminty is there alone by herself. She has I don't know how many black ones, and always in a snarl with them about something. The General has to go over almost every day to fix things up. He has a wonderful faculty man'ging hands, because he don't say much to them—don't allow them to say much to him. But Araminty she *will* talk to them, an' they sarce her. I'm mistaken if that yellow Phillis of hers—her cook woman—didn't do something more than sarce her last night. Araminty was to have company to-day—and them's just the very times cooks pick out for a fuss. Any how, a boy rode over to get the General to ride over there with Miss John when she went—*she* was to spend the day there."

"That reminds me," said Burleson. "How is Miss John by this time? Mr. Wall's family will be asking after her when I return."

"Well, I can't entirely say," replied Mrs. General Likens, carefully impressing him with the idea that the lady inquired after was in rather a precarious condition than otherwise. "I can't say I know for certain that she uses

snuff," continued the old lady, pausing on her needles to reflect; "but she associates with Araminty a great deal, or, rather, Araminty associates with her all the time, an' Araminty she uses snuff constant. Yes, snuff and Amelia Ann, an' the way Mr. Merkes talked about Amelia Ann at the funeral—you heard about it?—are about all Araminty Allen lives on. She's mighty apt to have got in the habit—the snuff I mean—with her—mighty apt! People say it ruins the complexion—Araminty is sal-low enough, goodness knows—makes a body histeriky an' cross. They tell me it makes the hair come out by handfuls, spoils the teeth, injures one's lungs. Do you know whether it is so, Mr. Burleson?" she asks, with an anxious face but a laughing soul.

Mr. Burleson does not know the exact effects. He is positively certain it is, however, a most disgusting habit in every respect.

"And there's early risin', too," continued Mrs. General Likens. "I always had to get up early, I know, when I was a girl—have had it to do ever sence. It distresses me about Miss John; she won't get up early, do all I can. I've talked an' talked an' talked to her about it, but she won't. Get all sal-low sleepin' till nigh sun up? of course." And the old lady seemed really distressed. John was not an ethereal nymph; like every other merely human being she had her faults. And this was one of them—she did not rise habitually before the dawn.

"And then her drawers!" continued Mrs. General Likens; "they really grieve me. I'm speaking in confidence to a friend now, you know; of course you won't mention it in Hoppleton," said the old lady, looking at her guest while she knitted evenly on. "They are large enough, I'm sure, and she's got plenty of them; but she won't keep them in what I call order, now. A good deal at sixes and sevens. And she's as neat as can be about her person, too. It must be Mrs. Wall was such an invalid all the time. Or because that Miss Laura Wall is so extra neat in all her ways—old maids always are—she kept things neat after her. Ah well! we can't expect perfection. An' she isn't fond of knittin' nor darnin' nor quilting!"

Imperfection again. By no means the Rosa Matilda of romance—flesh and blood, and not at all faultless.

"But that isn't to compare with using snuff, in my opinion. Do you think Mr. Wall, now—the uncle, I mean—would object if they knew it? You see," the old lady explains, "it's true she lives in our house, an' we think the world of her; but whether we can take any authority over her is the question."

Mrs. General Likens must have been—in fact, she was—a terrible lassie in her teens. The General could bear witness to that fact—a nice time he had of it during his courtship.

"Will Miss John return this evening?" Burleson asks at last, with some affectation of indifference.

"Back this evening?" The old lady pauses in her knitting to weigh the probabilities. "Well, maybe so. I didn't ask her. Araminty will keep her if she can."

"And how does she succeed in teaching?" asks Burleson at length, not by any means as cheerful as when he entered the house.

"Ah! what could one expect?" replies Mrs. General Likens, sorrowfully. "I gave her fair notice before she came. 'Child,' says I, 'why, your voice 'll get cracked with scolding, an' your eyes 'll get red with cryin' o' nights, an' your hands 'll get hard with slappin'.' I told her *then* she'd ruin all her good looks. 'It 'll break you so in one session you'll be an old maid for the rest of your days, child, certain sure,' I said. She didn't believe me; perhaps," added the old lady, with ominous emphasis, "she has learned sence whether or no I was right."

"And she has found it as unpleasant as you described?" asked Burleson, almost as miserable as Mrs. Likens was endeavoring to make him.

"Why, Mr. Burleson!" exclaims the old lady. "Of course you know, every body knows, what teachin' is in the South. Josiah Evers—he tried it here once, poor fellow—says they manage it dif'rent at the North where he was raised. It's to be hoped they do! If you please the children, that is, let them have their own way in school, they'll all run over you torectly—won't learn a single thing. Their parents 'll say it's no use sending, teacher ain't worth any thing, an' so that 'll break up your school. If you try to make the children mind—a thing they never began to do at home—an' whip, you'll have to fight to see which is the strongest. Suppose you conquer? they'll go home, tell their Pas and Mas you almost killed them, an' that 'll break up your school. Even if none of that happens, an' you slave through the session worried to death from morning till night, come to collect what is due you, it's about the hardest work you ever undertook in *your* life. School bills and minister's salary is about the very last people like to pay. Even if you are the best teacher in the world they are sure to get tired of you by the end o' one year at longest. You know how it is in this country—people like to be changin' their doctor, an' changin' their preacher, an' changin' their teacher all the time. I've seen enough of it in my days," says Mrs. General Likens, knitting furiously in her earnestness—"preacher has a hard enough time of it, goodness knows, but teacher's is hardest. I'd rather scrub floors, I'd rather maul rails, I'd rather do any thing in this world for a livin' than teach school! Never knew a teacher yet didn't hate teachin'!" and Mrs. General Likens only told the honest truth of that section. It was largely on this account that all her friends had so opposed John in her undertaking, nor would she have entered upon it had there been any other possible pursuit open before her. She regarded it as a martyrdom, and deliberately entered upon it as such.

As it was, his hostess succeeded perfectly in making her visitor unhappy. Was Mrs. General Likens really so profound a tactician? Did she indeed remember that pity is near akin to love? And was she endeavoring to rouse the first feeling in the lover's bosom to its deepest depth that his love might be quickened? Who knows?

But Mrs. General Likens forgets that her guest is lawyer in embryo. As such, taking up a vague idea that the lady of the house is hostile to his intentions upon her fair inmate, he determines by a bold move to win her over. Gradually he changes the conversation from John altogether. He compliments her upon the pleasant situation of the farm, upon the fatness of the cows down the lane; he envies her her bees; he alludes to the unusual excellence of her freestone well water, declares he must really take a third drink out of the nice gourd: "We don't have such water as this in Hoppleton, Madam." But no impression is made; he is lawyer enough to know it. He glances desperately around—"A noble orchard, Madam!"

"Only tollable," is the cold reply.

Would it do to venture on her yarn? "I wonder if it will be possible, Madam, to get you to sell me a few hanks of that yarn?" he asks, after a while. "I could not make my sister a more acceptable present; she has searched all the stores in Hoppleton in vain—there is none worth any thing to be had. Is it possible you spun it yourself?" handling the same admiringly. It is an awful falsehood. His sister never knit a stocking in her life—abhorred it as having some indefinable connection with gray hairs, spectacles, and a single life. He sees that he has touched Mrs. General Likens a good deal more than she shows, for she is perfectly aware of his manœuvres. But he has not struck the right string yet. He reflects a moment. Exactly! he has it at last!

"But I stopped on purpose to speak about one thing with you, Madam," he says, drawing a little nearer, throwing truth utterly to the winds, and speaking seriously. "I am glad no one else is here, and I must speak before we are interrupted. It is a delicate matter, Madam. I know that persons gifted in that way are peculiarly unwilling even to be justly praised—shrink, in fact, from any mention of the thing. You see, Madam, I am well acquainted with the editors of both the papers in Hoppleton, and I am anxious the world should know something of your talent. You remember that basket, Madam? I wish you could have seen us gathered around it that day when we stopped at noon! I dare say it was intended for Miss John alone. Knowing your delicacy of feeling she hesitated some time before she would let us enjoy the treat with her. Will you permit me to say all I wish in the matter? For force of expression, for beauty of language, for copiousness—especially copiousness!—but I am afraid—"

Yes, it *was* monomania. The shrewdest old

lady that ever lived—it must have been insanity, or she would have seen through it, admirably well as the unprincipled young lawyer acted his part. As it was, she was taken as a bird in the snare of the fowler. She even forgot the existence of any motive to prompt him thus to flatter. Yes—Walpole was right. All you have to do is to discover the *kind* of coin which will buy up a person body and soul! Mrs. General Likens had this, at least, in common with Homer and Milton—she too was blind.

“But, if it is not a secret of your wonderful gift,” said Burleson, at last, after hearing the much she had to say, after listening to several poems of her writing, with, in every sense of the word, the most painful attention, “how do you manage, my dear Madam, to compose? I don’t understand—”

“Blank verse, you mean?” asked his hostess, unhinged additionally in mind by excess of delight, and whose whole heart was open to the tempter. “Why, I take a quire of foolscap—foolscap for blank verse always—begin at the top of the page, and write straight on till my fingers get too tired, or till the General just up an’ *insists* on my comin’ to bed. You see I only write at night.”

“And how about the rhyme?”

“I take letter-paper to that. You would think to find words to rhyme together would make hard work. But it don’t. Besides, in finding the word to rhyme, it brings its own idea with it, and so helps amazin’ly. Here’s this poem I’ve just read to you about that Ishmael Spang’s to-do up here at our church. I took this quire of letter-paper that night, set down after the General was in bed, dipped my pen in the ink, an’ wrote, without stoppin’ a moment to think, this first line:

“‘For pious folks to fight an’ quarrel’—

Now for something to rhyme to quarrel. Here’s the way I always do: begin at the first of the alphabet an’ run down—borral, corral, dorrall, forral, gorral, horral, jorral, korral, moral—Stop, I says, moral? Let me see; yes, an’ *immoral*; that rhymes pat. Now see how the rhymin’ word brings its own idea with it. Immoral! yes:

“‘For pious folks to fight an’ quarrel,
It is exceedin’ly immoral.’

See?”

Burleson nods his head in dumb assent. He does not dare to raise his eyes or open his lips.

“Now next,” continues the beloved of the Muses, with almost Sapphic frenzy, “I write down this next line without stopping a minute to think what is to come after it—rises like water in a well:

“‘With staff he has to guide his tread’—

What is to rhyme to tread? When I wrote it I had no more notion than you have this minute. It *comes* to me!” adds the pythoiness, touching her finger to her brow with awful meaning. “Tread? tread? Now you’d sup-

pose I’d begin at top of the alphabet as I did before—bred, cred, dred, and so on down. No; you see I must have variety. It’s that gives a sparkle like to poetry. I’ll tell you: every other time I begin at the *bottom* of the alphabet an’ go up. Now here I’ve got to find a rhyme to Tread. Tread? Lemme see—zed, yed, wed, ved, ted, sted—sted? Ah yes! there it is—instead, instead! An’ see how the word brings its own help with it—its own particular idea—an’ I write it under the other in a flash. Then both lines read:

“‘With staff he has to guide his tread
Each knocks his neighbor down instead.’

See?”

In the fullness of her soul there is no imagining when the poetess will stop. Burleson has already made repeated efforts to this end: they were but straws tossed instantly aside in the rush of the waters of Helicon. Like the magician in the story, he has raised the demon—how to lay it is altogether beyond his might. He is becoming alarmed. The exertion is beyond his strength. Glad sounds to his ear—the wheels of a vehicle approaching! Mrs. General Likens hears them too. Instantly the poetic fire pales on her brow, stern common-sense is about to resume its inexorable sway.

“I see we are goin’ to be interrupted,” she says, with profoundest regret, as she gathers the precious MS. together. “It’s *always* so! Never mind—we’ve had a few pleasant minutes anyhow”—two hours nearly by Burleson’s watch. “We won’t let you off till Monday any way. I’ve got ever so many pieces are entirely suitable for the Sabbath. I’ll read them all to you some time to-morrow!”

“If you do it will be because my horse founders to-night, or whirlwinds wreck my buggy,” thinks Burleson, while he utters only his ardent thanks, and, as Mrs. General Likens proceeds to replace her treasures in the dark closet under the stairs, Burleson stands in the doorway of the piazza to greet the arrival. The General assists his fair passenger from out the Jersey wagon. There is no step, and the General has almost to take her out in his sturdy arms. Burleson hastens to his aid. It is many weeks since he has seen her; he wonders. The young lady takes off her sun-bonnet as she enters the gate. Lawyer as he is, he can not conceal his astonishment at the change wrought in her even during that short time. She is dressed somewhat more plainly than he has ever seen her before. But her face, her whole person, in fact—Burleson forgets that she was when he last saw her just at the critical turning-point from girlhood to maidenhood. She is now a lovely woman, the loveliest *he* has ever seen. Her life for the last few weeks has brought determination to her lip and purpose to her eye. There is a deeper flush of health upon her cheek, more ease and grace in her step. Burleson forgets that Mrs. General Likens has hurried away her papers and has returned expressly to watch how he will note the

change in her charge. The old lady feels amply repaid for her deception practiced upon him as she observes the expression of his face.

But Miss John does not color at all as much as that lady expected when she recognizes Burleson. Mrs. General Likens understands the female heart as much as any one can understand that complex mystery, and she is perplexed at John's whole manner, so calm, so self-possessed toward her "Hoppleton beau," as Mrs. General Likens designated him to herself, and to a great many besides in the neighborhood. John is truly glad to see him. Seems too much so, frankly and unaffectedly, Burleson fears, for any other and deeper feeling. Yes, she is glad to see him, sits down immediately, bonnet in hand, and questions him about Mr. Wall's family, about Bug and Anna and all the rest. Her clear, guileless eyes are never averted, there is no confusion, no little tremor of manner, not the least, or only the least, hurry or nervousness. Mrs. General Likens is Burleson's devoted friend and ally, and she does not like it, is almost angry with John.

The General returns from the stable soon, is glad to see Burleson, adds his entreaties to those of his wife—and of John, too—Burleson does not like that at all—that he will remain all night. Burleson has come all the way from Hoppleton for that sole and express purpose, and, therefore, he requires a great deal more persuasion. He consents at last.

Supper arrives in due time, family prayers afterward. At this last the General asks Burleson to lead in prayer—the General invariably reads the Bible at family worship himself, it is his inalienable prerogative as the patriarch of the household, whoever else may be there. Burleson declines.

"Not a religious man?" asks the General, gravely. Burleson is compelled to reply in the negative. "I am truly sorry to know it," says the General, in slow, serious tones, and himself leads in prayer, in the course of which he makes special supplication for his young guest.

"You notice? I don't like it, child," says his wife to John, whom she accompanies to her chamber at the hour of retirement. The two hours between supper and bed having been utterly wasted—in Burleson's opinion—in such conversation with John as the presence of the old people allowed. "The General is changin', getting so much more serious like, just the way James did before he died!" She had come into the room with John to say something for Burleson, but this new and painful idea has taken possession of her. "That dreadful chest complaint, child. The Lord forbid! You must pray for us, child, it would kill me—dead," and she kisses John on the cheek, and goes down stairs with a slow, heavy step.

She is as cheerful as ever the next morning at breakfast. It is one of John's special Sabbath mornings; bright and clear as if Nature, too, remembered the event it commemorated and smiled with gladness in the recollection.

And John looks lovelier than the day before. In fact, she always does on Sabbath. And it is not in the Sabbath toilet either. Nothing can be plainer than that. It is the subdued gladness of eye and lip, the softened modulation of tone and motion, the repose of manner of a soul enjoying the holy rest. The very trials of her new occupation—and they have been very near as dark as Mrs. General Likens painted them—have only brought her piety into more active exercise. She has been driven only so much the nearer to her Saviour, and is grateful, unconsciously though it be, for all that has driven her there. And who does not know that all intimate friends come to resemble each other, and in proportion to their intimacy? Her entire religion being simply a personal friendship with One—if Mr. Josiah Evers can excuse her—whom she regards as her wisest, ablest, nearest, dearest friend!

To Burleson it is Sunday; exactly that much—no more. He drives John to church in his buggy. He has been treasuring up his interview with their hostess; he details it to John with glee. It is not in human nature not to be amused; but Mrs. General Likens is their friend, of whose unsuspecting hospitality he is freely partaking. It was a deception, too, he had practiced upon her, which has to John an unpleasant aspect. If her companion is so adroit and prompt in this, may he not be as prompt, as adroit, as successful, too, in other deceptions—many other deceptions in other matters—any other—all other, when an end is to be gained? All this she feels rather than actually thinks, and he seems so utterly destitute of suspicion that he has done any thing to which the least objection can be made. Is it the Sabbath atmosphere around and within her which causes his conversation in some way to jar a little on her ear? She is no ascetic Puritan—no sourness in her simple piety; she does not stop to reason much on the matter as she rides and listens, but she does not *feel* with him.

And, on the return ride, she can not but agree that Mr. Merkes is open to severe criticism. She can not refrain from laughing at Burleson's criticisms. But Mr. Merkes is a preacher of the Gospel, too; it was the worship of God he was conducting; it is the Sabbath afternoon through whose lengthening shades they are driving home. Burleson is a frank and handsome and genial gentleman as ever lady desired to see. He has driven, as she well knows, all the way from Hoppleton to enjoy her society a few hours to-day; a companion more talented, brilliant in conversation—so handsome, too—she has never known. Nor any stain upon his character—and yet? What is his lack? Something very great, but what? And the very trees through which they ride not more indifferent to, absolutely unconscious of, those things which interest her most. No deception in him here; he seems unaware of the existence, even, of all things or persons except those in grasp or sight or hearing! Unconsciously

she is losing interest in him as she knows him better, and he is sensible of this. Yet it has effect the reverse of offending him. It wakens in him a sense vague yet bitter of something wrong, rather of some great lack in himself, accompanied by increased sense of her elevation above him, substantial value over him, with ever deepening love for her from that very account. His love for her begets, too, a strange contempt for himself. Both emotions on the increase, becoming only the more reckless as they grow.

"Reckless!" His father is repeating it to himself that very hour seated by himself, religious paper lying unread on his knee, as he thinks it over, his head in his bosom. "Yes, reckless—I know of no other word—and it lies in the heart; more so than when he came home; more so every day. No purpose, no conception of a purpose in life! Even Nan, here, has—poor thing!—a set purpose in life: to get married. Even if it was money only, or distinction at the bar. I would be willing, even, to see him go into politics—dirty puddle! He might, at least, have the purpose of gratifying his mother and myself!"

And the banker puzzles painfully over the matter, as the most complex by far of all the business affairs which have ever come before him as yet.

II.

Hoppleton remarks one day: "So that young Mr. Wall has got back from the city."

"Oh yes, of course!" poor Issells growls to his wife in comment thereon, as he disrobes himself for bed. "Common people like me must stay at home and slave. No visiting about among cities for them. Of course! Working their fingers to the bone, hardly making a miserable living at that. But preachers? Of course! They are the lords of the land, ten-dollar-a-yard broadcloth, traveling to cities, eat fine dinners, get tremendous salaries of thousands of dollars and all. Religion? Yes, a blessed thing, as they call it, to them, no doubt! Of course!"

Fifty times a day come the words from Issells's mouth, "Of course!" Very much like poor Mr. Merkes, he has established it as the law of things that he is to be wronged, while all the rest of men are to be favored. If his iron burns him, his shears grow dull, a customer grumbles, a shutter creaks, his wife complains, his stove smokes, rule or chalk are not at hand when wanted, whatever wrong he endures, forever being wronged, it comes to his lips instantly, "Of course!" To injure him is the natural and invariable order of the universe! If lightning were to strike through his window, and harm him only to the extent of melting his lump of wax, he would have said, "Of course!" To be cruelly injured in some way all the time is Nature's first law in reference to *him*!

Almost before Mr. Ramsey knows that he is back from the city Charles is down at the old gentleman's shoe store to see him. He has learned—an easy lesson—to love the good old

man, to take deep sympathy in his labors for drunken Isham, the livery-stable keeper, and in his persistent assaults upon the unbelief, with the hardening of nigh two thousand years in it, of Josephs the Jew. And so he fairly glows with enthusiasm as he tells Mr. Ramsey his city experiences, the old gentleman as interested as he.

As to Edward Burleson, so intimate for years, they have, somehow, drifted apart of late—drifting farther apart every day. Their aims in life are so unlike. Rather, while Wall is entering with enthusiasm upon his profession, Burleson seems caught in an eddy of the current at the outset, not a particle of enthusiasm, sneering at all idea of it, circling passively round and round, as he himself languidly acknowledges it, a bubble, a straw—neither making, nor having the least intention, or even desire, to make any effort in any direction. Nor is it of any use to attempt arousing any ambition in him.

"Edward, I have set my heart upon your becoming a thoroughly competent lawyer," his father had said to him one day in the bank. "I have large tracts of lands in the West. The titles to some of these are in a complicated condition—some of the lands are actually in litigation. Besides, the bank has continual matter outstanding needing the attention of a lawyer, and of a good lawyer at that. I can throw a large practice, too, from others into your hands. If you wish to gratify me you will go to work with a will."

It was a great deal for the bank president to say. A man of few words, he meant every syllable of it. The relation between them was rather that between two gentlemen of the same standing in society than of father and son. Any thing like tenderness of feeling—any manifestation of it, at least—was foreign to the nature of either. A good deal of cast iron and cold steel is essential to the constitution of a first-class business-man. And the father had grown, in conducting his affairs, sternly accurate in his very emotions. There is something in numerals, in the process of calculation, extremely frosty and petrifying to a man. The faculty of a college always give the first honor of a graduating class to the best mathematician. Very wisely; he is the man, in most colleges, who delivers the Latin or Greek salutatory on Commencement-day; he attains the first honor, but the process thereto freezes him from the very centre of his heart till his color has fled, his eyes become glassy, his lips blue—a dead language is the only one for *him* to express himself in. It is Mr. Burleson's piety which keeps his heart warm. He is deeply and sincerely, because understandingly, pious; and it is just this piety, burning an unextinguished and inextinguishable fire at the centre of the man, which arrests and keeps back the process of congealment. Hence the importance he justly attaches to his accurate family worship, morning and night; to his exact attendance on the

Wednesday night prayer-meeting, which he prizes as a sort of Sabbath hour in the centre of the week; to the Sabbath-day itself. These he prizes as the Arctic traveler does the seasons of food and fire by which alone life is maintained amidst the atmosphere and the icebergs of the pole, for their calculable, practical use. Now Edward has all the business faculty of his father, and more. He has actual talent. And he has naturally a larger heart, too, than his father. Who does not know that it is therein that the mainspring of a man is coiled? And just in his *heart* is the defect, the lack, which ruins the whole man.

While his father speaks to him now, standing at his desk, his back to his son, and pausing not a moment, apparently, from writing as he speaks, that son is sitting idly before the fire, smoking languidly, a newspaper upon his knee. A cigar his father abhorred as something altogether unbusiness-like. Edward Burleson smoked none the less—rather the more—on this account. Not that he was particularly fond of smoking. He smoked listlessly, just when it came to hand—has no settled thought or feeling even in regard to that. He would not even dislike Josiah Evers as he does if it required any exertion to do so. He now considers his father's remark very much as if Bug had made it instead.

"I never knew a lawyer in my life," he replies at last, speaking as much to himself as to his father, "who was not a scoundrel. The better lawyer he is, so much the more desperate a villain. To sell one's intellect and reading to the highest bidder—one's power to make people laugh and to make people cry to the scamp that can pay most money for it! Dirty work! Humph! one's power of sarcasm, one's ability to quote the poets, for sale at so much! To keep one's conscience, too, on hire, as that drunken Isham down there at the livery-stable does a horse—any man, gentleman or black-leg, so he has the money, can mount and ride through dust or mire in whatever direction he pleases. Thank you, not if I can help it; at least not till I *must*!"

"You do not mean what you say. We will speak about it again," is all the reply the elder Burleson, after quite a pause, makes to this, and writes steadily on, his son resuming as coolly cigar and newspaper.

And so it was when he conversed with his old college friend instead. Whatever was the topic, it was becoming the habit of his life to indulge only in disparagement, caviling, contempt. "Although I don't care a cent how it is, or, in fact, *what* it is," was his usual conclusion. And the young minister *did* care decidedly in regard to every thing—was full of plan and purpose—hopeful and active: would not have died for a great deal.

"You can never do me a greater kindness, one for which I will be more thankful, than to tell me of any defect I have as a minister or as a man," he said, being so young, to Burleson

one night during a long conversation. "My heart is set upon succeeding in my profession. I am eager to know how to do so—what to correct. I'll tell you," he continued, warmly, to Burleson. "We'll make a bargain. Only tell me frankly every thing you see wrong in me—even in the least—and I will do the same for you. It will be like the wrestlers and boxers in the Olympian games: don't spare me, and I won't spare you; and so we will mutually develop each other into larger men."

"Many thanks, I believe not," replied Burleson, coldly. "I know my faults already a great deal better than you do. But then I have no intention of correcting them. Succeed? I don't want to succeed. Why should I?"

And so it was; the friends seemed changing their identity. The removal of Wall from the Seminary was as the bringing a plant out of a close room into the sunshine and the open air. He had risen into a newer and larger, a more genial and healthful life from the first. He had increased in stature and weight, in color and cheerfulness and energy. He was, under the influence of a powerful motive within, steadily assimilating himself and adapting himself to the living, breathing world in which lay his life's work. A very unfinished man yet, very!

We humbly entreat you, dear reader, do not regard Mr. Ramsey, to whom we return for a moment, as a bore. His species on earth are too few to be esteemed such—interesting rarities rather. Besides, the angels hovering over him may have looked at each other occasionally with a smile at some of his ways; but that they are far more interested in just such than over many a king or queen, to say nothing of blood and thunder hero roaring over the stage of life, I have no more doubt than I have of my own existence or of theirs.

"Ah! back again? Glad to see you!" says Mr. Ramsey to Charles, as he enters his store that afternoon. "How you have improved during your trip! If you go on you'll soon be your uncle over again. You had such a squinched-up look when you first came home from the Seminary I almost despaired of you."

"You must not say any thing against the Seminary, Mr. Ramsey," says Wall, radiant with health and high spirits. "It has been the training school of thousands, who owe all they have done in the world, under God, to it. Suppose the students occasionally overstudy themselves there, get into monastic habits, have a touch of the dyspepsia—these are small evils to the immense advantages they derive. Even these they soon rub off in mingling afterward with the world. And, besides, these objections to seminary life are being removed by new arrangements—gymnasiums and the like."

"I don't know," says old Mr. Ramsey, shaking his head as he leans with his back against the counter. "I am old-fashioned in my notions, I dare say; but the good old plan of having the candidates study under actual pastors,

engaging actively in labor under them, such as visiting the sick, holding prayer-meetings around—things of that kind. With the exception of your uncle, if there's a minister of our denomination that isn't more or less an invalid, I don't know him. However, I won't insist. They are even getting to wear their beards now! Ah, well! It may be right. But tell me something about the city and all you saw."

"I am letting *mine* grow," said Wall, coloring a little at the allusion to his bearded face, "to secure my throat from bronchitis. It is God that planted it, you know, Mr. Ramsey." In fact, any one of his old professors in the Seminary would have been obliged to bring down his spectacles from forehead to nose, and to have looked long and carefully through them even at that, to have recognized their thin, pale-faced, closely-shaven graduate in the bronzed, bearded, and—getting to be—burly youth who now stands full of life and ardor before Mr. Ramsey. "I thought you would like to hear about the city," says Wall, seating himself on the low sofa upon which customers sat to try on shoes, "and I came down as soon as I could get away from home. And now I hardly know where to begin."

"Well," says Mr. Ramsey, "how did you like the members of the church?"

"I hardly know how to answer," says his companion. "To see them—the men, I mean—in their offices and stores, along the wharves and streets, ordering their clerks and porters about, they seem to a stranger—the officers of the church and all—to be as worldly-minded, as shrewd in a trade, as eager and as earthly, as furious in the race for riches as any body. No time for religious talk, or even thought, among bales and boxes, hogsheads and drays, steamers coming in and going out. It had a depressing influence on me at first. How is it possible, I thought, for a man to keep the flame of religion alive in his heart amidst this deluge of worldliness! How can an Enoch, even, really walk with God, mingled so all the week in this crowd and crush and hurly-burly of men?"

"No, you are wrong!" said the elder Christian, gravely. "Piety is not as weakly a thing as that. It isn't a taper flame liable to be puffed out by any chance breeze. It is a living principle—when it exists at all—ininitely stronger than any thing else. It is put by God in a man's bosom a real thing, a hearty thing, a strong thing—a vast deal stronger than any thing else it meets along the streets or any where else! Provided a man is in his duty," says Mr. Ramsey, with warmth, standing up from the counter as he speaks. "In the morning let him realize all the perils of the day before him, with hearty distrust of himself; let him then ask the Good Spirit to be in him in all His power all day; and then let him go along the path God has given him with a bold front and a firm foot, whether it leads through the thick of a crowd or of a battle. Watch and pray always, of course; but for a man to creep

out of his house fearfully in the morning, and go timidly, as if walking on eggs, all day, slow and trembling, hardly daring to look around, or to open his mouth, or to lift his hand, or to raise his foot—what is it?" says Mr. Ramsey, warmly. "It isn't distrust of himself so much as it's distrust of God's Spirit in a man to help him. A man can't distrust himself too much, but he can't trust God in him too much, so that he clings to God—sees that he does nothing to offend Him. I am an old man myself—a poor, feeble one—but I do like to see a manly piety, a healthful, fearless piety, going on its great errand like the sunshine every where—into ships and steamboats, grog-shops, gambling-houses, highways, hedges—every where after people. General Likens and I had a long talk over it once. Bob Long was there too, and gave us *his* views. Somehow preachers, some of the best Christians too, ain't *manly* enough! Bob said: 'Too womanish, creeping, fearful like! We ain't ashamed of George Washington. Them Meggar boys are bold as brass for Andrew Jackson. If we were only as open and bold every where for Christ, now! He's a living man, you know, our *real* President, now and forever!' I never thought of it so till then. We Christians live too much inside our own little circle, afraid almost to peep over our church-pale: we must go out more—go out—abroad—every where! I don't care if it's up to the highest place among men; if a heart beats there, there we must climb to carry that heart the Gospel! And I don't care if it is the deepest and dirtiest ditch in the world, down at the bottom, under the mud and filth, if there's a soul there to be saved, there's our business to be. I don't mean ministers, I mean laymen too—all of us!"

And faithfully did Mr. Ramsey practice what he preached. Did angels smile or did they weep to see the persistent way in which he argued, for instance, and pled and wept even for and with Josephs, the Jew clothes-seller next door? To the Hebrew it was less than the buzzing of a fly. Were it possible, Josephs would have unhesitatingly sold the Saviour over again; not a fibre in him conscious of any sensation beyond that involved in selling his very inferior goods at his very superior prices! And Mr. Ramsey knew it all, but clung to Josephs still. The Saviour was of Josephs's very race; he could not forget that.

Young Mr. Wall had often conversed with Mr. Ramsey. He well knew Mr. Ramsey's favorite theme; he had led the conversation expressly to draw him out. In fact, the new healthfulness and compass and energy of his religious ideas were owing only less to Mr. Ramsey, John, and the rest on the one side, than to Mr. Merkes on the other.

Now here is a man, said Wall to himself, as he sat on the sofa, looking up at his friend, who is really nothing but a weakly, aged keeper of a little shoe store in a village. But see how his religion elevates and expands and ani-

mates him! What a glorious religion it is which gives, even to the humblest, such powerful motives and lofty aims and sublime views! Even in this frail old man one can detect the folded wings and the infinite ardor of the future angel. And Burleson, naturally so far grander than he in body, intellect, heart, this moment, in comparison with him, wiggles a tadpole in a mud-pond an inch across!

But Mr. Ramsey gives his young friend no time for reverie; he wants to know more about the city.

"Only," he says, "never think there's any thing in business necessarily hostile, at least certainly ruinous, to a man's religion. You understand me: every thing in this world is dead set against that, of course. What I am trying to say is that the religion in a man may be, can be, must be, an overmatch for the whole world, our own wicked hearts, the evil one himself! Our wicked heart? the Spirit lives in it constantly to keep it down. Satan? 'Thou shalt tread upon the lion and adder: the young lion and the dragon shalt thou trample under feet,' says Scripture. The world? 'Whosoever is born of God overcometh the world!' No," continued Mr. Ramsey, warmly. "In these last days, when all the world is to be saved by Christian people, there's no earthly use for feeble, creeping, whimpering Christians, everlastingly limping along, talking about, thinking about, working after, praying about nothing else but their own miserable ailments, body and soul. That might do in old times. What is wanted now is large, strong men, forgetting themselves and working for God—Luthers, Knoxes, Wesleys, and the like!"

But good Mr. Ramsey is a little ashamed of having so engrossed the conversation. On every other theme he is as mute as a mouse. And he has no more to say except to draw out Charles in regard to the city.

It seems to me, that gentleman pauses long enough to say to himself, General Likens, even his wife too, Mr. Long, John—all sound upon much the same key. My uncle? Yes, therein lies the explanation.

And so Charles proceeds to tell of the teas he assisted to drink while in the city, of the dinners he was invited to, of the luxury and wealth and all that. And then he tells of the Parsonage. In passing that stately structure one day with Mr. Jacob Langdon that gentleman had, in a purely incidental way, proposed that they should look in a moment. By a singular coincidence, too, Mr. Langdon happened to have all the keys of the edifice in his pockets. So they ascended the steps of brown granite, entered the front-door into the hall paved with encaustic tiles, and furnished with a hat-stand which was itself a wonder of art. From thence they visited the basement, with its kitchen so admirably furnished, and servants' chambers considerably larger and finer than Wall's room in the Seminary. All the little arrangements, too, for wood and water and laundry, were kind-

ly explained by Mr. Langdon. Then they must visit the neat brick stable. "Ah! yes, that is the pastor's carriage," Mr. Langdon explains of an exceedingly neat vehicle therein. "The horses are at the livery-stable while we have no pastor. Splendid animals they are, too, fine as fiddles, gentle as kittens." And so they pass into the back-yard, with its latticed summer-house and child's swing and grounds well stocked with all shrubbery, among which wound gravel-walks. Thence into the house again. Dining-room handsomely furnished, side-board. "Plate in bank," Mr. Langdon explains; "china, you see," he adds, opening the door of the china-closet on one side. Yes; chairs, extension-table, carpet, paintings on the wall—all in keeping. Then up stairs into the second-story. "Only bedrooms," says Mr. Langdon, opening the door of each wide enough for his companion to see how noble and complete are all the furnishings thereof. "Linen-closet," explains the guide, touching the porcelain knob of that apartment in passing. "Bath-room. Now, Mr. Wall, you must look in here a moment. You see marble bath, faucets for hot water and cold; hooks for clothes; shelves for towels; mirror; stand for soaps, perfumes, and such things." And so they pass on.

"Ah, now, this may interest you," says Mr. Langdon, opening a door of a room off from the rest. "Hold on till I open the shutters; pastor's study and library, you see. Yes, several thousand dollars' worth of books there. That writing-table and chair—nice, isn't it?—was got up by the ladies. The inkstand is very costly—inlaid with gold; it's at somebody's house for safer keeping just now. Burke presented that; he picked it up somewhere on one of his trips to Europe. Fine painting that; handsome engravings there—some of Burke's gatherings abroad. The fact is, we ought not to leave these things here, only we hope to get a pastor before very long. It's hardly worth while going up to the attic," says Mr. Langdon, as he passes the stairway leading thereto, after leaving the pastor's study. "It is only fitted up as a play-room for the children when the weather is bad—large enough for a dozen youngsters." And so they came down the ample stairs again. "Ah, the parlors!" says Mr. Langdon, as they reach the hall again. "Carpets are up now for safe-keeping—finest tapestry we could get; those mirrors we are afraid to move, too costly to risk breaking. Parlor organ, you see, and all the rest!"

Mr. Wall had been in many city parlors by this time; but these, even in their denuded condition, rather eclipsed any thing he had ever before seen, and he said so, having main reference to the size of the rooms, the mouldings of the ceiling, the fresco of the walls.

"Yes," said Mr. Langdon, standing in the centre of the wide doorway between the parlors, his hands clasped together beneath his coat-tail, "we take a pride in it, of course. This is a large city, and there are a good

many of us to take part in it, some rather wealthy than not. Each wishes to contribute the tastiest mite to the general object. We are continually making some improvements. Our plan is to obtain as pastor a first-class man in every sense of the word—we will have no other; when we get such we consider that we can not show him too much respect and affection."

Although the young minister did not say so there and then, he certainly thought just this about it all: Poor Mr. Merkes is ruined by his experiences so extremely the reverse of all this. Only another sort of ruin all *this* will work to a man, unless he have, indeed, strong brain, stronger heart, strongest piety.

"And a fine, roomy church they have, I suppose?" asks Mr. Ramsey, at last.

Mr. Wall describes the church in full, its vast width, breadth, height from marble floor to paneled dome. He tells of the pulpit and organ and gorgeous pews. He is enthusiastic on the way the building is perfectly ventilated and brilliantly lighted from above. "No portentous shadow of the minister thrown on the wall behind him," explains Mr. Wall; "every gesture exaggerated and caricatured thereupon for the amusement of the younger portion of the audience!" In fact, he rebuilds the church from foundation to steeple-top before Mr. Ramsey's eyes in a very substantial and vivid manner. There is no one alive but Mr. Ramsey with whom he would care to enter upon such a description. Besides, it has come on to rain since he entered the store. There are no customers coming in, and Mr. Ramsey is interested. A better listener the old gentleman is than Mr. Wall himself would have been, had the narration been made to him instead. The same thing told by us is so much more interesting than when narrated, you see, by any other. The elder Christian is gratified, but not satisfied so far—rather dissatisfied. Therefore the young minister proceeds to tell him of the large Sabbath-school, its circular seats, its maps, library, order, singing. Mr. Ramsey brightens up.

"But how about the week-night prayer-meeting?" he asks. Mr. Wall is compelled to say that it is not attended at all as could be expected.

"I feared so!" says Mr. Ramsey, with a sigh. "And how about the members going to the theatre and balls and the like?" he asks, and is compelled to shake his head even more sadly over the reply.

"And does not this rather contradict what you said in regard to the necessary influence of business in the city upon piety?" asks his companion.

"It is what Christians *might* be, *will* be, as we draw nearer the Millennium, I was speaking of," he explains. "Josiah Evers was in here the other day—pity he tries to be a skeptic, on the same principle that he wears tight boots—to get me to make a pair of shoes he could

wear; his boots had almost killed his feet—a size too small from the start. And he was speaking of the advance of the world in science, art, commerce, civilization," says Mr. Ramsey. "And he was right," Mr. Ramsey adds. "Men have more to do of the kind, grander business of the sort to occupy them every day. And what I think is this: Just when locomotives are most numerous and travel fastest; just when all sorts of manufactories are on the grandest scale; when crops of all kinds are most plentiful; when all kinds of labor-saving machinery are in fullest operation; when ships and steamships are swiftest and biggest; when printing-presses are turning out papers and books in most abundance—oh, you know what I mean," says Mr. Ramsey, with a gesture—"when the business of the globe—worldly business, I mean now—is at its largest and most pressing, it is just then that the men in whose hands it will be, will be all *Christian* men too, as being the *largest* of all men—in their notions, I mean—bodies, too, I hope. In Millennial times men will be *so* Christian, their piety'll be of so ingrained and strong a kind, they'll be able with their left hand like to hold and manage all the vast worldly business of the day, while with the right they turn it all for God. I have the idea but can't express it. Only don't believe I know any thing," he added, hastily, "as to *when* the Millennium is to come and how. I've no patience for any such visionary notions. I'm only saying what piety will be then—ought to be now—what is its *nature* to be!"

"It is almost time for me to go," says Wall, rising; "and I haven't told you yet any thing about Mr. Jones there in the city, and his enterprise."

"And what is that?" asks Mr. Ramsey, with instinctive interest. So the young minister has to tell him at length of white-haired, ruddy-faced, indomitable Mr. Jones, Mr. Langdon's clerk. Of how he went out with a colony a year ago from the grand church; of their Sabbath-school in the engine-house in the outer district of the city; of the preaching therein morning and night on Sabbaths; of their prayer-meeting and tract visitation. It is a long story, and Mr. Wall tells the whole of it with zest. Had he not been with Mr. Jones as much as possible while in the city? Had he not managed to get off from the parent church often enough to attend Sabbath-school and prayer-meeting—in fact, to preach for them once or twice? Truth to say, it was to him by far the most interesting part of his visit to the city—Mr. Jones and the new enterprise. And Mr. Ramsey is more interested in this than in all Mr. Wall has told him yet—much more!

It is almost dark before he can get away from Mr. Ramsey. So dark that, as he passes Mr. Mack's cabinet-shop on his way home, he would never have recognized that gentleman, seated upon the door-step in his shirt-sleeves, notwithstanding the drizzle, if he had not made

it the new rule of his life never to pass any one without recognizing and saluting that individual, if in the bounds of possibility. Mr. Merkes is his impulse in the direction that is away from that gentleman's example, when he now salutes Mr. Mack with a smile—stops, in fact, to shake hands, if it is only for a moment. Mr. Mack has done a good day's work—if his work would only stay together when he has finished it—but he is, if possible, rather fuller of fun than when he had, early in the morning, inquired of Issells, opposite, the exact hour at which he would prefer he should have a coffin ready for his—Issell's—immediate use. "Needn't trouble yourself to give me your measure," he had remarked to the gloomy man. "I know my own measure to an inch, and it takes just one-ninth, you know, for you." Nor has Mr. Mack cooled himself in the drizzle to such a degree but a spark remains for Mr. Wall. He has the instinct of a monkey for fun, whoever and whatever turns up. He knows exactly where a joke will hit surest and penetrate deepest. He now fits his ready shaft to the string:

"And so Miss John and young Burleson are going to make a match of it, I am told, Mr. Wall!"

It strikes as unexpectedly and as deeply as Mr. Mack can possibly wish! Far more so than he dreams!

THE BISHOPS OF ROME.

IN her faded magnificence Rome still possesses the most imposing of earthly empires. She rules over nearly two hundred millions of the human race. Her well-ordered army of priests, both regular and secular, arrayed almost with the precision of a Roman legion, and governed by a single will, carry the standard of St. Peter to the farthest bounds of civilization, and cover the whole earth with a chain of influences radiating from the central city. The Pope is still powerful in Europe and America, Africa and the East. He disturbs the policy of England, and sometimes governs that of France; his influence is felt in the revolutions of Mexico and the elections of New York. Hemmed in by the Greek Church on the eastward, engaged in a constant struggle with the Protestantism of the north, and trembling for his ancestral dominions in the heart of Italy itself, the supreme Pontiff still gallantly summons around him his countless priestly legions, and thunders from the Vatican the sentiments of the Middle Ages.

As if to maintain before the eyes of mankind a semblance of supernatural splendor, the Popes have invented and perfected at Rome a ritual more magnificent than was ever known before. In the Basilica of St. Peter, the largest and most costly building ever erected by man, the annual pomp of the Romish ceremonies exceeds the powers of description. The gorgeous robes, the plaintive music, the assembled throng of

princes, cardinals, and priests, the various rites designed to paint in living colors the touching memorials of the Saviour's life and death, delight or impress the inquisitive and the devout. And when at length the Holy Father, parent of all the faithful, appears upon the balcony of St. Peter's and bestows his blessing upon mankind, few turn away unaffected by the splendid spectacle, untouched by the peculiar fascination of the magnificent Church of Rome.

Very different, however, in character and appearance was that early church which the Popes claim to represent. The Jewish Christians entered pagan Rome probably about the middle of the first century. That city was then the capital of the Roman Empire and of the world. Its population was more than a million; its temples, baths, and public buildings were still complete in their magnificence; its streets were filled with a splendid throng of senators, priests, and nobles; its palaces were scenes of unexampled luxury; and literature and the fine arts still flourished, although with diminished lustre. But the moral condition of Rome during the reigns of Claudius and Nero shocked even the unrefined consciences of Juvenal and Persius. A cold, dull sensuality pervaded all ranks of the people; the intellect was enchained by spells more gross and foul than the enchantments of Comus; crime kept pace with sensuality, and the palaces of emperors and senators were stained with horrible deeds that terrified even the hardened sentiment of Rome. At length Nero became a raging madman. He murdered his mother, his friends, and his kinsmen. Seneca and Lucan, the literary glories of the age, died at his command. To forget his fearful deeds, Nero plunged into wild excesses. He roamed like a bacchanal through the streets of the city; he sang upon the stage amidst the dissolute throng of mimics and actors, and his horrible debauchery was mingled with a cruelty that almost surpasses belief.

The people of Rome were little less corrupt than their emperor. Honor, integrity, and moral purity were mocked at and contemned by the degraded descendants of Cicero and Cato, and the keen satire of Juvenal has thrown a shameful immortality upon the vicious and criminal of his contemporaries. Gain was the only aim of the Romans. The husband sold his honor, the parent his child, friend betrayed friend, wives denounced their husbands to win the means of a luxurious subsistence. The amusements of the people, too, were well fitted to instruct them in licentiousness and crime. Thousands of wretched gladiators died in the arena to satisfy the Roman thirst for blood; gross and licentious pantomimes had supplanted on the stage the tragedies of Accius and the comedies of Terence; the witty but indecent epigrams of Martial were beginning to excite the interest of the cultivated, and even the philosophic Seneca, plunged in the luxury of his palaces and villas, wrote in vain his defense of the matricide of Nero.

It was into such a city that the obscure missionaries from Jerusalem made their way, about the middle of the first century, bearing to unhappy Rome the earliest tidings of the gospel of peace. St. Peter is said to have become Bishop of Rome in the year 42. Amidst the splendid throng of consulars, knights, and nobles, he wandered an obscure and unknown stranger. The first Bishop of Rome, clothed in coarse and foreign garb and mingling with the lowest classes of the people, was scarcely noticed by the dissolute courtiers of Nero or that literary opposition which was inspired by the vigorous honesty of the satirists and poets. Yet Christianity seems to have made swift though silent progress. Within thirty years from the death of its author a church had already been gathered at Rome, and the simple worship of the early Christians was celebrated under the shadow of the Capitol. Their meetings were held in rooms and private houses in obscure portions of the city; the exhortations of the Apostles were heard with eager interest by the lower orders of the Romans; a new hope dawned upon the oppressed and the obscure, and it is said that a large number of the earlier converts were slaves. Little is known of the condition of the Church at this period, yet we may properly infer that its congregations were numerous, and that the voice of praise and prayer was heard issuing from many an humble dwelling of the crowded and dissolute city. Amidst the shouts and groans of the blood-stained arena, and the wild revels of the streets and the palaces, the Jewish teachers inculcated to eager assemblies lessons of gentleness and love.

Suddenly, however, a terrible light is thrown upon the condition of the early Church of Rome. Nero began his famous persecution, and the severe pen of the historian Tacitus bears witness to the wide and rapid growth of the obscure faith. "The founder of the sect, Christ," says the pagan writer, "was executed in the reign of Tiberius, by the procurator, Pontius Pilate. The pernicious superstition, repressed for a time, burst forth again; not only through Judea, the birth-place of the evil, but at Rome also, where every thing atrocious and base centres and is in repute." Rome had lately been desolated by a great fire, which Nero was believed to have ordered to be kindled in one of his moments of insane merriment; and to remove suspicion from himself the Emperor charged the Christians with an attempt to burn the city. Those first arrested, says Tacitus, confessed their guilt; vast numbers were put to death; some were clad in the skins of wild beasts and were torn to pieces by dogs; others were affixed to crosses, and, being covered with some inflammable material, were burned at night, in the place of torches, to dispel the darkness. Nero lent his gardens for the hideous spectacle, the populace of Rome crowded to the novel entertainment, and the Emperor, driving his own chariot, rode amidst the throng clad in the garb of a charioteer. In the last year of

the reign of this monster St. Peter and St. Paul are believed to have suffered martyrdom at Rome, and to have been buried in the spots now marked by the two noble Basilicas that bear their names.

From this period (67) the new and powerful sect became a constant object of imperial persecution. The Christians were denounced as the common enemies of mankind. The grossest crimes, the foulest superstitions, were charged against them. The learned Romans looked upon them with contempt as a vulgar throng of deluded enthusiasts. Pliny speaks of them with gentle scorn; the wise Trajan and the philosophic Aurelius united in persecuting them; and Decius and Diocletian sought to extirpate every vestige of the hated creed. Six great persecutions are noticed by the historians, from that of Nero to that of Maximin and Diocletian, during which the whole civilized world every where witnessed the constancy and resignation of the Christian martyrs.

It was the age of martyrdom. An infinite number of novel tortures were devised by the infuriated pagans to rack the bodies of their unresisting victims. Some were affixed to crosses and left to starve; some were suspended by the feet, and hung with their heads downward until they died; some were crushed beneath heavy weights; some beaten to death with iron rods; some were cast into caldrons of blazing oil; some were thrown, bound, into dungeons to be eaten by mice; some were pierced with sharp knives; and thousands died in the arena, contending with wild beasts, to amuse the populace of Rome. The mildest punishment awarded to the Christians was to labor in the sand-pits, or to dig in the distant mines of Sardinia and Spain. Men, women, and children, the noble convert or the faithful slave, suffered a common doom, and were exposed to tortures scarcely equaled by the poetic horrors of Dante's terrible Inferno. Yet the honors paid to these early martyrs in a later age were almost as extravagant as their sufferings had been severe. The city which had been consecrated by their tortures deemed itself hallowed by their doom. The sepulchre of eighteen martyrs, sang Prudentius, has made holy the fair city of Saragossa. Splendid churches were built over the graves of obscure victims; the bones of the martyrs were looked upon as the most precious relics; they were encased in gold and covered with jewels; they wrought miracles, healed the sick, and brought prosperity and good fortune; and the humblest Christian who had been racked with sharp knives or hung with his head downward, in the days of pagan persecution, was now deified, worshiped, and almost adored.

It was during the reign of the early persecution that the bishops and the Church of Rome sought, and perhaps found, a refuge in that singular hiding-place—the Catacombs. Beneath the Campagna, immediately around the city, the earth is penetrated by a great number of galleries or tunnels, running for many miles

under the surface, and difficult of access even to those most familiar with them. These narrow passages are now known as the Catacombs, and are usually four or six feet wide, and ten feet high. They were formed by the Romans in getting out sand for cement; and as many of the Christians were laborers or slaves, they were probably well acquainted with the opportunity for concealment offered by these *arenariæ*, or sand-pits, where they had often labored at their humble toil. When persecution grew fierce, and the life of every Christian was in danger, the Church of Rome hid itself in the Catacombs. Here, in these dismal passages, may still be seen a thousand traces of the sufferings and sorrows of the early Christians. Here are small chapels cut in the sides of the wall of sand, and provided with altars, fonts, and episcopal chairs, while above the chapel a narrow opening is often excavated to the surface of the earth in order to admit a little light or air to the hidden congregation below. Other portions of the Catacombs were used as cemeteries for the burial of the Christian dead. Countless tombs are seen rudely excavated in the earth, and usually distinguished by an inscription indicating the position and character of the deceased. These inscriptions, indeed, form one of the most interesting traits of the Catacombs, and have been eagerly studied and copied by many ardent explorers. They bring into clear light the simplicity and fervor of the ancient faith. Here are no prayers for the dead, no address to the Virgin or the saints. Upon one tomb is written, "He sleeps in Christ;" over another, "May she live in the Lord Jesus!" Most of the inscriptions dwell upon the hope of a better life, and are full of resignation and faith. One, however, shows in what gloom and terror the Church maintained its existence. "Oh, mournful time," it reads, "in which prayer and sacred rites, even in caverns, afford no protection!"

The bishops of Rome, with their terrified followers, were now the tenants of a subterranean home. They lived among tombs, in darkness and confinement, fed upon the scanty food brought them by stealth by faithful slaves or devoted women. Yet, if we may believe the common tradition, but few of the early bishops escaped martyrdom. They were pursued into the Catacombs, and were often murdered in the midst of their congregations. Stephen I., Bishop of Rome, lived many years, it is said, in these dismal retreats. Food was furnished him from above, and wells and springs are found in the Catacombs. At length, however, the pagan soldiers traced him to his chapel, while he was performing service, and, when he had done, threw him back in his episcopal chair and cut off his head at a blow. The pagan emperors in vain issued decrees forbidding the Christians from taking refuge in the Catacombs, and, although death was decreed to every one who was found there, these endless labyrinths were always thickly peopled. Ladies of rank hid in

the sand-pits and were fed by their faithful maids; the rich and the poor found a common safety in the recesses of the earth. When the heathen soldiers approached the Christians would sometimes block up the passages with sand, and then escape to some distant part of the labyrinth where the persecutors did not venture to follow them.

Long afterward, when all necessity for using them had forever passed away, the Catacombs were still looked upon with singular veneration by the Roman Christians as the scene of many a martyrdom and the home of the persecuted Church. Here they would often assemble to celebrate their holiest rites, surrounded by the tombs of bishops and presbyters, and shut out from the world in the gloom of a subterranean darkness. St. Jerome relates that it was his custom when a young student at Rome to wander on Sundays to the Catacombs, accompanied by his pious friends, descend into a deep cavern amidst the cultivated fields near the city, and enter by a path of winding steps the hallowed abode of the martyrs. His pious pilgrimage represents, no doubt, the common practice of the Christians of his time. But as centuries passed away the ancient usage was neglected, until at length even the very existence of the Catacombs was forgotten. It was only remembered that in the early ages the Christians had hidden in their cemeteries, and that the living had once been forced to seek shelter among the dead. In the year 1578 Rome was startled by the intelligence that an ancient Christian cemetery had been discovered, extending like a subterranean city around and beneath the Salarian Way. The Roman antiquarians and artists crowded to the spot, explored with earnest devotion the crumbling labyrinth, copied the numerous inscriptions, traced the mouldering sculptures or the faded pictures upon the walls, and revived the memory of the forgotten Church of the Catacombs.

During this period of persecution and contempt the bishops of Rome gave little promise of that spiritual and temporal grandeur to which they afterward attained. They are nearly lost to history; a barren list of names is almost all that we possess. Yet the discovery of the writings of Hyppolytus has lately thrown some new light upon the characters of several of the early bishops, and serves to show that the rulers of the Church were not always selected with discretion. Bishop Victor was stern, haughty, and overbearing; his successor, Zephyrinus, feeble, ignorant, avaricious, and venal. But the next bishop, who ruled from 219 to 223, was even less reputable than his predecessors. Callistus, in early life, had been a slave in the family of Carpophorus, a wealthy Christian who was employed in the Emperor's household. His master established Callistus as a banker in a business quarter of the city, and his bank was soon filled with the savings of prudent Christians and the property of widows and orphans. Callistus made away with the funds intrusted

to his care, and, being called to account, fled from Rome. He was seized, brought back to the city, and condemned to hard labor in the public work-house. His master, however, obtained his release, forgave his offense, and employed him in collecting moneys which Callistus pretended were due him. Soon after the defaulting banker was arrested for some new offense, and was condemned to be scourged and transported to the mines of Sardinia. He was again relieved from his sentence through the influence of powerful friends, returned to Rome, and became the favorite and counselor of the feeble Bishop Zephyrinus. When the latter died Callistus succeeded him in the episcopal chair, and thus a public defaulter, snatched from the work-house and the mines, became the head of the Roman Church.

In the last great persecution under Diocletian the bishops of Rome probably fled once more to the Catacombs. Their churches were torn down, their property confiscated, their sacred writings destroyed, and a vigorous effort was made to extirpate the powerful sect. But the effort was vain. Constantine soon afterward became Emperor, and the Bishop of Rome emerged from the Catacombs to become one of the ruling powers of the world. This sudden change was followed by an almost total loss of the simplicity and purity of the days of persecution. Magnificent churches were erected by the Emperor in Rome, adorned with images and pictures, where the Bishop sat on a lofty throne, encircled by inferior priests, and performing rites borrowed from the splendid ceremonial of the pagan temple. The Bishop of Rome became a prince of the empire, and lived in a style of luxury and pomp that awakened the envy or the just indignation of the heathen writer, Marcellinus. The Church was now enriched by the gifts and bequests of the pious and the timid; the Bishop drew great revenues from his farms in the Campagna and his rich plantations in Sicily; he rode through the streets of Rome in a stately chariot and clothed in gorgeous attire; his table was supplied with a profusion more than imperial; the proudest women of Rome loaded him with lavish donations, and followed him with their flatteries and attentions; and his haughty bearing and profuse luxury were remarked upon by both pagans and Christians as strangely inconsistent with the humility and simplicity enjoined by the faith which he professed.

The bishopric of Rome now became a splendid prize, for which the ambitious and unprincipled contended by force or fraud. The Bishop was elected by the clergy and the populace of the city, and this was the only elective office at Rome. Long deprived of all the rights of freemen, and obliged to accept the senators and consuls nominated by the emperors, the Romans seemed once more to have regained a new liberty in their privilege of choosing their bishops. They exercised this right with a violence and a factious spirit that showed them to

be unworthy of possessing it. On an election day the streets of Rome were often filled with bloodshed and riot. The rival factions assailed each other with blows and weapons. Churches were garrisoned, stormed, sacked, and burned; and the opposing candidates, at the head of their respective parties, more than once asserted their spiritual claims by force of arms.

About the middle of the fourth century the famous Trinitarian controversy swept over the world, and lent new ardor and bitterness to the internal contests of the Church of Rome. The Emperor Constantius was an Arian, and had filled all the eastern sees with the prelates of his own faith. His adversary, the rigorous Athanasius, fled to Rome, and had there thrown the spell of his master-mind over pope and people. But Constantius was resolved to crush the last stronghold of Trinitarianism. Pope Liberius, won by the favors or terrified at the threats of the Emperor, at first consented to a condemnation of the doctrine of Athanasius. But soon the mental influence of the great Alexandrian proved more powerful than the material impulse of Constantius. Liberius recanted, proclaimed the independence of the Roman see, and launched the anathemas of the Church against all who held Arian opinions, and even against the Emperor himself. All Rome rose in revolt in defense of its bishop and its creed; but the unhappy Liberius was seized at night, by the orders of the enraged Constantius, and carried away in exile to the shores of cold and inhospitable Thrace. He refused with contempt the money sent him by the Emperor to pay the expenses of his journey. "Let him keep it," said he to the messengers, "to pay his soldiers. Do you presume to offer me alms as if I were a criminal?" he exclaimed. "Away! first become a Christian!"

Two years of exile in barbarous Thrace, and the dread of a worse doom, seem to have shaken the resolution of the Pope. The Emperor, too, had taken a still more effectual means of assailing the authority of his rebellious subject. Felix, an anti-pope, had been appointed at Rome, elected by three eunuchs, and Liberius now consented to renounce his communion with Athanasius. His people, and particularly the rich and noble women of Rome, had remained faithful to their exiled bishop, and as he entered the city a splendid throng came forth to meet him, and welcomed him with a triumphal procession. Felix, the anti-pope, fled before him, but soon afterward returned, and it is said that the streets, the baths, and the churches were the scenes of a fierce struggle between the rival factions. Rome was filled with bloodshed and violence, until at last Liberius triumphed, and closed his life in peace upon the throne of St. Peter.

His death was the signal for new disorders, and two opposing candidates, Damasus and Ursicinus, contended for the papal chair. The latter having occupied, with his adherents, the Julian Basilica, Damasus, at the head of a mob

of charioteers, the hackmen of Rome, and a wild throng of the lowest of the people, broke into the sacred edifice and encouraged a general massacre of its defenders. On another occasion Damasus assembled a force composed of gladiators, charioteers, and laborers, armed with clubs, swords, and axes, and stormed the church of S. Maria Maggiore, where a party of the rival faction had intrenched themselves, and massacred one hundred and sixty persons of both sexes. The contest raged for a long time. Another frightful massacre took place in the church of St. Agnes; the civil powers in vain interfered to check the violence of the pious factions, and at length the Emperor was obliged to appoint a heathen prefect for the city, who, by his severe impartiality, reduced the Christians to concord. Damasus, stained with bloodshed and raging with evil passions, was firmly seated on the episcopal throne, and seems to have obtained the admiration and the support of his contemporary, the impetuous St. Jerome.

In the mean time the magnificent city was still divided between the pagans and the Christians. A large part of the population still clung to the ancient faith. Many of the wealthiest citizens and most of the old aristocracy still sacrificed to Jupiter, Juno, and Minerva, and looked with scorn upon the fierce enthusiasts who had filled Rome with violence and disorder. In one street the pagan temple, rising in severe majesty, was filled with its pious worshippers, performing rites and ceremonies as ancient as Numa; in the next the Christian Basilica resounded with the praises of the trine God. On one side the white-robed priest led the willing victim to the altar, and inspected the palpitating entrails; on the other the Christian preacher denounced in vigorous sermons the follies of the ancient superstition. The contest, however, did not continue long. Ambrose, Bishop of Milan, enforced the condemnation of paganism, and the last marks of respect were withdrawn from those tutelary deities who had so long presided over the destinies of Rome.

The fourth century brought important changes in the condition of the bishops of Rome. It is a singular trait of the corrupt Christianity of this period that the chief characteristic of the eminent prelates was a fierce and ungovernable pride. Humility had long ceased to be numbered among the Christian virtues. The four great rulers of the Church, the Bishop of Rome, and the Patriarchs of Constantinople, Antioch, and Alexandria, were engaged in a constant struggle for supremacy. Even the inferior bishops assumed a princely state, and surrounded themselves with their sacred courts. The vices of pride and arrogance descended to the lower orders of the clergy; the Emperor himself was declared to be inferior in dignity to the simple presbyter, and in all public entertainments and ceremonious assemblies the proudest layman was expected to take his place below the haughty churchman. As learning

declined and the world sank into a new barbarism, the clergy elevated themselves into a ruling caste, and were looked upon as half divine by the rude Goths and the degraded Romans. It is even said that the pagan nations of the West transferred to the priest and monk the same awe-struck reverence which they had been accustomed to pay to their Druid teachers. The Pope took the place of their Chief Druid, and was worshiped with idolatrous devotion; the meanest presbyter, however vicious and degraded, seemed, to the ignorant savages, a true messenger from the skies.

At Rome, the splendid capital, still untouched by the Goth, the luxury and pride of the priestly caste had risen to a kind of madness. Instead of healing the wounded conscience or ministering to the sick and the poor, the fashionable presbyter or deacon passed his time in visiting wealthy widows and extracting rich gifts and legacies from his superstitious admirers. A clerical fop of the period of Pope Damasus is thus described by the priestly Juvenal, St. Jerome: "His chief care is to see that his dress is well perfumed, that his sandals fit close to his feet; his hair is crisped with a curling-pin; his fingers glitter with rings; he walks on tip-toe through the streets lest he may splash himself with the wet soil, and when you see him abroad you would think him a bridegroom rather than a priest." "Both deacons and presbyters," exclaims the monastic Jerome, "strive for the favor of women;" and were, no doubt, in search of wealthy and high-born wives among the greatest families of Rome. The first era of successful Christianity, indeed, was more luxurious and corrupt than had been that of Augustus or Tiberius. The bishop lived in imperial pomp, the lower orders of the clergy imitated his license and his example; the people were sunk in superstition and vice; when suddenly a terrible purification—a baptism of fire and blood—came upon the guilty city.

This was no less than the total destruction of that costly fabric of civilization, the Roman Empire, which had been erected by the labors and sufferings of so many statesmen, warriors, philosophers, and had seemed destined to control forever the future of Europe and mankind. The northern races now descended upon the southern and gained an easy victory. Knowledge ceased to be power, the intellectual sunk before the material, and the cultivated Romans showed themselves to have wholly lost the faculty of self-defense—an example of national decay so often repeated in history that one can scarcely assert with confidence that any people is to remain exempted from it forever. A few thousand Goths or Huns were now more than a match for countless hosts of Romans; they swept away the feeble defenders of Greece, Italy, and Gaul with the same ease that has since marked the progress of the British in Hindostan and Pizarro in Peru. The savages blotted great cities from existence, restored vast tracts of cultivated country to its

early wildness, and forced European intellect to begin anew its slow progress toward supremacy.

No part of the civilized world suffered more severely than its capital. Alaric entered Rome lighted by the flames of its finest quarters; Genseric swept away almost its entire population. Famine, pestilence, and war fell upon the Eternal City. The numbers of its people decreased from one million to less than fifty thousand! A few plague-stricken and impoverished citizens wandered amidst its vast and still splendid ruins; the elegant and licentious priest, the high-born women, the men of letters, the luxurious nobles, and the factious people had been carried away into slavery, or had died of plague or famine; and the Christian fathers, when they would convey to their auditors a clear conception of the Judgment-day, the final dissolution of all things earthly, would compare it to the fate of Rome.

The bishops of Rome, during this eventful period, became the protectors and preservers of the city. Their sacred office was still respected by the Arian Goths and Vandals; the large revenues of the Church were applied to providing food for the starving people; and it is possible that suffering and humiliation had once more awakened something of the purity of early Christianity in the minds of both priest and laity. The bishops, too, were sometimes the victims of wars or civil convulsions. Pope John, imprisoned as a traitor by the Ostrogothic King Theodoric, languished and died in confinement. Silverius was deposed, exiled, and perhaps murdered, by that meekest of heroes, Belisarius, to gratify his imperious wife Antonina. The successor of St. Peter was rudely summoned to the Pincian Palace, the military quarters of Belisarius. In the chamber of the conqueror sat Antonina on the bed with her patient husband at her feet. "What have we done to you, Pope Silverius," exclaimed the imperious woman, "that you should betray us to the Goths?" In an instant the pall was rent from the shoulders of the unhappy Pope, he was hurried into another room, stripped of his dress and clothed in the garb of a simple monk, and his deposition was proclaimed to the clergy of Rome. He was afterward given up to the power of his rival and successor, Vigilius, who banished him to the island of Pandataria, and is supposed to have finally procured his death.

Stained with crime, a false witness and a murderer, Vigilius had obtained his holy office through the power of two profligate women who now ruled the Roman world. Theodora, the dissolute wife of Justinian, and Antonina, her devoted servant, assumed to determine the faith and the destinies of the Christian Church. Vigilius failed to satisfy the exacting demands of his casuistical mistresses; he even ventured to differ from them upon some obscure points of doctrine. His punishment soon followed, and the Bishop of Rome is said to have been dragged through the streets of Constantinople with a

rope around his neck, to have been imprisoned in a common dungeon and fed on bread and water. The papal chair, filled by such unworthy occupants, must have sunk low in the popular esteem, had not Gregory the Great, toward the close of the sixth century, revived the dignity of the office.

Gregory was a Roman, of a wealthy and illustrious family, the grandson of Pope Felix II. Learned, accomplished, a fine speaker, a sincere Christian, in his youth he eclipsed all his contemporaries, was distinguished in the debates of the Senate, and finally became the governor of Rome. The Emperor, when he visited Constantinople, treated him with marked confidence, and honors and emoluments seemed to have been showered upon the young Roman with no stinted hand. He was equally the favorite of the court and of the people, and all that the world could give lay at his command. But suddenly a startling change came over his active intellect; the world grew cold and repulsive; he stopped in his career of success and became a monk. He expended his wealth in founding monasteries; he sold his gold and jewels, his silken robes and tasteful furniture, and lavished the proceeds upon the poor. He resigned his high offices, and having entered a monastery which he had founded at Rome, performed the menial duties for his fellow-monks. His body was emaciated by terrible fastings and vigils, his health gave way, and his life hung by a single thread. The prayers of a pious companion alone snatched him from an early grave.

From this severe discipline Gregory rose up a half-maddened enthusiast. Angels seemed to float around him wherever he moved; demons fled at his approach. His monastery of St. Andrew, over which he became the abbot, was the scene of perpetual miracles. He cast out devils, and angels clustered around his holy seat. One of the monks who had passed his whole time in singing psalms, when he died was covered with white flowers by invisible hands, and the fragrance of flowers for many years afterward arose from his tomb. Yet, like many enthusiasts, Gregory was capable of acts of excessive cruelty, and his convent was ruled with unsparing severity. Justus, the monk, who was also a physician, had watched over Gregory during a long sickness with affectionate tenderness. He was himself seized with a mortal illness, and when he was dying confessed with bitter contrition that, contrary to the rules of the monastery, he had hoarded up three pieces of gold. The money was found, and the guilty monk was punished with singular cruelty. Gregory would suffer no one to approach the bed of the dying man; no sacred rites, no holy consolation, soothed the accursed spirit as it passed away. The body was cast out upon a dunghill, together with the three pieces of gold, while all the monks who had assembled around it cried out, "Thy money perish with thee!" After Justus had lain in

torment for thirty days Gregory relented; a mass was said for the afflicted soul, which returned to the earth to inform its companions that it had escaped from its fearful tortures. Such were the fancies of this superstitious age.

Gregory was chosen Pöpe (590) by the united voice of the clergy, the senate, and the people of Rome, and the Emperor Maurice confirmed the election. But Gregory shrank from assuming the holy office with real alarm. He even fled in disguise into the forest, but a pillar of fire hovering over his head betrayed him. He was seized and carried by force to the church of St. Peter, and was there consecrated supreme Pontiff.

He might well have trembled at the thought of being intrusted with the destiny of Christianity in those dark and hopeless days; he might well have believed, as he ever did, that the end of all things was at hand. The world was full of anarchy and desolation, and a universal horror rested upon the minds of men. From his insecure eminence at Rome Gregory saw every where around him the wreck of nations and the misery of the human race. Germany was overrun by hordes of savages; France, half-barbarian, groaned beneath the Merovingian rule; Britain had relapsed into paganism under the Saxons; Spain was held by the Arian Visigoths; Africa was fast becoming a desert; while the feeble Emperor at Constantinople was scarcely known or heard of in the dominions over which he held a nominal rule. Italy had become the prey of the fierce Lombards, and these ruthless savages plundered and desolated the peninsula from the Po to the Straits of Sicily. They massacred or sold into slavery the whole population of great cities, and made them so desolate that hermits chose their ruins as a fitting abode; they destroyed convents, monasteries, churches, and spared neither monks nor nuns; the very air was tainted with carnage, and the Lombards seemed never sated with bloodshed. At length, in the earlier period of Gregory's pontificate, the Lombard hordes approached to destroy Rome. In the midst of one of his most effective sermons the Pope was startled by the news that the enemy were at the gates; he broke off suddenly, exclaiming, "I am weary of life;" but he at once gave himself to the defense of the city; the gates were closed, the crumbling walls were manned by trembling citizens, and the savage assailants retreated before the apparent vigor of the monk. Yet the environs and suburbs of the holy city were involved in a general desolation. The people were swept away into captivity, the villas, the monasteries, and the churches sank into smouldering ruins, and Gregory wept in vain over the woes of his unhappy people.

From his ruined city Gregory began now to spread his intellectual influence over Europe. Never was there a more busy mind. He was the finest preacher of his age, and his sermons, tinged with the fierce gloom of a monastic

spirit, awoke the zeal of prelates and monks. His numerous letters, which still exist, show with what keen attention he watched and guided the conduct of his contemporaries. He wrote in tones of persuasive gentleness to Bertha, the fair Saxon Queen of Kent, of bold exhortation to his nominal master, the Emperor Maurice of Constantinople; he corresponded with the bishops and kings of France and the Visigothic rulers of Spain; he addressed his laborious but fanciful "Dialogues" to Theodelinda, Queen of the Lombards; he watched over the decaying churches of Africa and the feeble bishoprics of Greece; he urged forward the conversion of England, and drove the timid Augustine to his missionary labors among the savage Saxons; and his wonderful mental activity was finally rewarded by the complete triumph of the Romish Church. Spain, England, France, and even the wild Lombards and Arian Goths yielded to his vigorous assertion of the authority of the see of St. Peter.

Gregory laid the foundation of that splendid ritual which to-day governs the services of Romish chapels and cathedrals from Vienna to Mexico, from Dublin to St. Louis. He knew the advantages of order, and his *Ordo Romanus*, his minute array of rites and ceremonies, drew together the Franks and Goths in a unison of religious observances. The world was to Gregory a vast monastery, in which perfect discipline was to be observed, and he every where enforced a strict unity of forms and conduct throughout all his great army of presbyters and monks.

But it was chiefly upon the power of music that Gregory relied for softening the cruel natures of Goth and Hun. His whole ritual was one of song and melody. He was born a musician, and he impressed upon the services of the Roman Church that high excellence in musical intonation which has ever been its distinguishing trait. His own choristers were renowned for their sweet voices and artistic skill, and tradition represents the austere Pope, the master intellect of his age, as sitting among his singing-boys with a rod in his hand, chastising the careless and encouraging the gifted musician. The Gregorian chants indeed proved to have a singular charm for the savage races of the North. A band of trained singers accompanied St. Augustine in his missionary labors in England, and sometimes, it is related, proved more attractive than the most eloquent divines; the Roman singing-masters, carefully instructed in Gregory's antiphonal, became the teachers of Europe; Charlemagne at a later period founded singing-schools in Germany upon the Gregorian system, and was himself fond of chanting matins in his husky voice—for nature, so liberal to him in all other respects, had never designed him for a singer; and thus music became every where the handmaid of religion, and a powerful agent in advancing the Church of Rome.

A faint trace of modesty and humility still characterized the Roman bishops, and they ex-

pressly disclaimed any right to the supremacy of the Christian world. The Patriarch of Constantinople, who seems to have looked with a polished contempt upon his Western brother, the tenant of fallen Rome and the bishop of the barbarians, now declared himself the Universal Bishop and the head of the subject Church. But Gregory repelled his usurpation with vigor. "Whoever calls himself Universal Bishop is Antichrist," he exclaimed; and he compares the Patriarch to Satan, who in his pride had aspired to be higher than the angels. Yet, reasonable as Gregory was upon many points, his boundless superstition filled the age with terrible fancies. On every side he saw countless demons threatening destruction to the elect. Hell was let loose, and the earth swarmed with its treacherous occupants. But, fortunately for the Church, it possessed a spiritual armory which no demon could resist. The relics of the saints and the bones of the martyrs were talismans insuring the perfect safety of their possessor; and one of St. Peter's hairs, or a filing from the chains of St. Paul, were thought gifts worthy of kings and queens. Gregory, too, had conversed with persons who had visited the realm of spirits and had been permitted to return to the earth. A soldier described such an adventure in language almost Virgilian. He passed by a bridge over a dark and noisome river, and came to an Elysian plain, filled with happy spirits clothed in white, and dwelling in radiant mansions. Above all a golden palace towered to the skies. Upon the bridge the visitor recognized one of his friends who had lately died, and who, as he attempted to pass, slipped, and was immediately seized by frightful demons, who strove to drag him beneath the stream; but at the same moment angelic beings caught him in their arms, and a struggle began for the possession of the trembling soul. The result was never told.

Gregory the Great died in 604, having established the power of the Roman bishopric, and his successors assumed the title of Pope. Under Gregory the Roman see became the acknowledged head of the Western Church. The next important period in its history is the acquisition of its temporal dominions by an unscrupulous intrigue with the usurping kings of France. Various circumstances had concurred to produce this change. The Roman Church had become the representative and the chief defense of all the corruptions of the ancient faith. It adopted the worship of the Virgin and the invocation of saints, the doctrine of purgatory, and the wildest legends and traditions of the monkish writers; it advocated the celibacy of the clergy; its churches were filled with images and relics, and its superstitious laity surpassed in blind idolatry the follies of their heathen ancestors. In the mean time the followers of Mohammed, issuing from their deserts, had conquered the East, Africa, and Spain, threatened Italy itself with subjugation, and preached every where a single deity and an iconoclastic creed. While Christendom was

filled with idolatry the cultivated Arabs aspired to the purest conception of the Divine nature. The contrast became so startling as to awaken a sense of shame in the breast of Leo, the Isaurian, Emperor of the East. He began in 727-30 the famous iconoclastic reform; he ordered the images to be broken to pieces, the walls of the churches to be whitewashed, and prosecuted with honest but imprudent vigor his design of extirpating idolatry. But a fierce dissension at once raged throughout all Christendom, the monks and the people rose in defense of their images and pictures, and the Emperor, even in his own capital, was denounced as a heretic and a tyrant. There was an image of the Saviour, renowned for its miraculous powers, over the gate of the imperial palace called the Brazen Gate, from the rich tiles of gilt bronze that covered its magnificent vestibule; the Emperor ordered the sacred figure to be taken down and broken to pieces. But the people from all parts of the city flew to the defense of their favorite idol, fell upon the officers, and put many of them to death. The women were even more violent than the men; like furies they rushed to the spot, and finding one of the soldiers engaged in his unhallowed labor at the top of a ladder, they pulled it down and tore him to pieces as he lay bruised upon the ground. "Thus," exclaims the pious annalist, "did the minister of the Emperor's injustice fall at once from the top of a ladder to the bottom of hell." The women next flew to the great church, and finding the iconoclastic Patriarch officiating at the altar, overwhelmed him with a shower of stones, and a thousand opprobrious names; he escaped bruised and fainting from the building. The guards were now called out and the female insurrection suppressed, but not until several of the women had perished in the fray.

The Pope, Gregory II., assumed the defense of image-worship; the Italian provinces of the Greek Emperor known as the Exarchate threw off the imperial authority rather than part with their images, and it was these provinces that finally became the patrimony of St. Peter and formed the chief part of the papal domain. A long struggle, however, arose for the possessions of the Greeks. The Lombard kings, always hostile to the Popes, sought to appropriate the Exarchate, and the acute Popes appealed for aid to the rising power of France. But it was not to the feeble Merovingian kings that they addressed themselves, but to Charles Martel and his ambitious descendants. To gratify their own craving for temporal power the Popes founded the new dynasty of the Carolingians. By the sanction and perhaps the suggestion of Pope Zacharias, the last of the phantom kings ceased to reign in France, and Pepin, the founder of the Carolingians, ascended the throne of Clovis. The powerful Franks now became the protectors of the papacy; Pepin, liberal to his spiritual benefactor, gave to the Popes the Exarchate and protected them from the Lombards; and thus France, always catholic and always

orthodox, founded the temporal power of Rome. The Lombards, however, did not yield without a struggle. On one occasion they threatened Rome itself with destruction, and the Pope, Stephen III., in an agony of terror, wrote two letters to Pepin claiming his protection. When the Frank neglected his appeals the Pope ventured upon the most remarkable and the most successful of all the pious frauds. Pepin received a third letter, addressed to him by the Apostle Peter himself, in his own handwriting. St. Peter and the Holy Virgin, in this curious epistle, adjure the Frankish king to save their beloved city from the impious Lombards, and Paradise and perpetual victory and prosperity are promised him as his rewards. Pepin obeyed the divine summons, entered Italy as the champion of St. Peter, and in 755 bestowed upon the bishops of Rome the authority and the dominions of a temporal prince. The gift was afterward enlarged and confirmed by Charlemagne. This eminent man, who ruled over France, Germany, Italy, and a part of Spain, altogether destroyed the Lombard kingdom, and placed Leo III. securely on the papal throne. In return the grateful Pope crowned the half-barbarous Karl, Augustus and Emperor of the West. It was on Christmas of the last year of the eighth century. Charles and his magnificent court were assembled at the celebration of the Nativity at Rome; the Roman nobles and clergy looked on in a splendid throng; the Pope himself chanted mass; at its close he advanced to Charles, placed a splendid crown upon his head, and saluted him as Cæsar Augustus. The assembly broke into loud acclamations, and Charles, with feigned or real reluctance, consented to be anointed by the hands of the Pope.

From this time the Roman bishops began to take part in the politics of Europe. They made war or peace, formed leagues and unholy alliances, intrigued, plotted, plundered their neighbors, oppressed their subjects, and filled Italy and Europe with bloodshed and crime. The possession of temporal power, that "fatal gift," denounced by Dante and Milton, his translator, corrupted the sources of Western Christianity until it became the chief aim of the later Popes to enlarge their possessions by force or fraud, and add to those rich territories which they had won from the superstition of Pepin and the policy of Charlemagne.

The great Emperor died, Europe fell into the anarchy of Feudalism, and the bishops of Rome rose into new grandeur and importance. As the successors of St. Peter they asserted their supremacy over kings and emperors, and claimed the right of disposing of crowns and kingdoms at will. St. Peter no longer wrote humble letters asking aid from the barbarous Frank; he thundered from dismantled Rome in the menacing tone of command. The representative Pope of this new era was the illustrious or the infamous Hildebrand, the Cæsar of the papacy. Hildebrand was the son of a carpenter, but he

was destined to rule over kings and nobles. His youth was marked by intense austerity, and he was a monk from his boyhood. He early entered upon the monastic life, but his leisure hours were passed in acquiring knowledge, and his bold and vigorous intellect was soon filled with schemes for advancing the power and grandeur of the Church. Small, delicate, and unimposing in appearance, his wonderful eyes often terrified the beholder. He came up to Rome, became the real master of the Church, and was long content to rule in a subordinate position. Pope after Pope died, but Hildebrand still remained immovable, the guide and oracle of Rome. He revolved in secret his favorite principles, the celibacy of the clergy, the supremacy of the Popes, the purification of the Church. At length, in 1073, on the death of Alexander II., the clergy with one voice named Hildebrand the successor of St. Peter. He was at once arrayed in the scarlet robe, the tiara placed upon his head, and Gregory VII. was enthroned, weeping and reluctant, in the papal chair.

His elevation was the signal for the most wonderful change in the character and purposes of the Church. The Pope aspired to rule mankind. He claimed an absolute power over the conduct of kings, priests, and nations, and he enforced his decrees by the terrible weapons of anathema and excommunication. He denounced the marriages of the clergy as impious, and at once there arose all over Europe a fearful struggle between the ties of natural affection and the iron will of Gregory. Heretofore the secular priests and bishops had married, raised families, and lived blamelessly as husbands or fathers, in the enjoyment of marital and filial love. But suddenly all this was changed. The married priests were declared polluted and degraded, and were branded with ignominy and shame. Wives were torn from their devoted husbands, children were declared bastards, and the ruthless monk, in the face of the fiercest opposition, made celibacy the rule of the Church. The most painful consequences followed. The wretched women, thus degraded and accursed, were often driven to suicide in their despair. Some threw themselves into the flames; others were found dead in their beds, the victims of grief or of their own resolution not to survive their shame, while the monkish chroniclers exult over their misfortunes, and triumphantly consign them to eternal woe.

Thus the clergy under Gregory's guidance became a monastic order, wholly separated from all temporal interests, and bound in a perfect obedience to the Church. He next forbade all lay investitures or appointments to bishoprics or other clerical offices, and declared himself the supreme ruler of the ecclesiastical affairs of nations. No temporal sovereign could fill the great European sees, or claim any dominion over the extensive territories held by eminent churchmen in right of their spiritual power. It was against this claim that the Emperor of Germany, Hen-

ry IV., rebelled. The great bishoprics of his empire, Cologne, Bremen, Treves, and many others, were his most important feudatories, and should he suffer the imperious Pope to govern them at will his own dominion would be reduced to a shadow. And now began the famous contest between Hildebrand and Henry, between the carpenter's son and the successor of Charlemagne, between the Emperor of Germany and the Head of the Church. It opened with an adventure that marks well the wild and lawless nature of the time. On Christmas-eve, 1075, the rain poured down in torrents at Rome, confining the people to their houses, while the Pope with a few ecclesiastics was keeping a holy vigil in the distant church of Santa Maria Maggiore. The wild night and the favorable opportunity were seized upon by Cencius, a Roman baron, to wreak his vengeance upon Gregory for some former offense. His soldiers broke into the church while the Pope was celebrating mass, rushed to the altar, and seized the sacred person of the pontiff. He was even wounded in the forehead, and being stripped of his holy vestments, was dragged away bleeding and faint, but patient and unresisting, and was imprisoned in a strong tower. Two of the worshipers, a noble matron and a faithful friend, followed him to his prison. The man covered him with furs, and warmed his chilled feet in his own bosom; the woman stanching the blood, bound up the wound, and sat weeping at his side. But the city was now aroused, the bells tolled, the trumpets pealed, and the clergy who were officiating in the different churches broke off from their services, and summoned the people to the rescue of the Pope. As the morning dawned a great throng of his deliverers assembled around the place of Gregory's imprisonment, uncertain whether he were alive or dead. Engines were brought and planted against the tower, its walls began to tremble, and the fierce Cencius, now terrified and despairing, threw himself at the Pope's feet, begging his forgiveness. The patient Pope consented, and only imposed upon Cencius the penance of a pilgrimage to Jerusalem. In the mean time the people broke into the tower, and carried Gregory in triumph to the church from whence he had been taken, where he finished the sacred rites which had been so rudely interrupted. The assassin Cencius and his kindred were driven from the city, and their houses and strong towers were razed to the ground.

It was plain to all that no physical danger could shake the iron resolution of Gregory: he next determined to humble the self-willed Emperor. Henry, flushed with victory, surrounded by faithful bishops and nobles, attended by mighty armies, had refused with petulant contempt to obey the decrees of Rome. Hildebrand summoned him to appear before his tribunal, and if he should refuse to come, appointed the day on which sentence of excommunication should be pronounced against him. The Emperor replied by assembling a council

of his German nobles and priests, who proclaimed the deposition of the Pope. All Christendom seemed united to crush the Bishop of Rome; the married clergy, the Simonists, and all who had received their investiture from temporal sovereigns joined in a fierce denunciation of his usurpation. But Gregory called together a third council in the Lateran, and a miracle or an omen inspired the superstitious assembly. An egg was produced with much awe and solemnity, on which a serpent was traced in bold relief, recoiling in mortal agony from a shield against which it had vainly struck its fangs. The bishops gazed upon the prodigy with consternation, but Gregory interpreted it with the skill of a Roman augur. The serpent was the dragon of the Apocalypse, its mortal agony foretold the triumph of the Church. A wild enthusiasm filled the assembly, the anathema of Rome was hurled against Henry, his subjects were absolved from their allegiance, and the king was declared excommunicated. The effect of this spiritual weapon was wonderful: the power of the great Emperor melted away like mist before the wind. His priests shrank from him as a lost soul, his nobles abandoned him, his people looked upon him with abhorrence, and Henry was left with a few armed followers and a few faithful bishops in a lonely castle on the Rhine.

Henry, with abject submission, now resolved to seek the forgiveness of the Pope in Rome. In mid-winter, accompanied by his wife, his infant son, and one faithful attendant, having scarcely sufficient money to pay the expenses of his travel, he set out to cross the Alps and throw himself at Gregory's feet. Never was there a more miserable journey. The winter was unusually severe, and great quantities of snow filled up the Alpine passes. The slippery surface was not hard enough to bear the weight of the travelers, and even the most experienced mountaineers trembled at the dangers of the passage. Yet the imperial party pressed on; the king must reach Italy or his crown was lost forever. When, after much toil and suffering, they reached the summit of the pass the danger was increased. A vast precipice of ice spread before them so slippery and smooth that he who entered upon it could scarcely avoid being hurled into the depths below. Yet there was no leisure for hesitation. The queen and her infant son were wrapped in the skins of oxen and drawn down as if in a sled; the king, creeping on his hands and knees, clung to the shoulders of the guides, and thus, half-sliding, and sometimes rolling down the steeper declivities, they reached the plain unharmed.

Gregory, meanwhile, doubtful at first of Henry's real design, had taken refuge in the castle of Canosa, the mountain strong-hold of his unchanging friend and ally, the great Countess Matilda. The praises of this eminent woman have been sung by poets and repeated by historians, but the crowning trait of her singular life was her untiring devotion to Gregory. For

him she labored and lived; on him her treasures were lavished; her mountain castles were his refuge in moments of danger; her armies fought in his defense; she was never satisfied unless the Pope was at her side; and she made a will by which at her death all her rich possessions should revert to Gregory and the Church. Matilda was the daughter of Boniface, Margrave of Tuscany, and his only heir. A celibate although wedded, she had been married against her will to the Duke of Lorraine, and had parted forever from her unwelcome husband on her wedding-day. Hildebrand alone, the low-born and unattractive monk, had won the affections of the high-bred and self-willed woman; they were inseparable companions in adversity or success, and the Pope owed his life, his safety, and his most important achievements to a member of that sex which he had so bitterly persecuted and contemned.

To Canosa came Henry, the fallen Emperor, seeking permission to cast himself at his enemy's feet. On a bitter winter morning, when the ground was covered deep with snow, he approached the castle gate and was admitted within the first of the three walls that sheltered Gregory and Matilda. Clothed in a thin white linen dress, the garb of a penitent, his feet bare, his head uncovered, the king awaited all day, in the outer court, the opening of the gate which should admit him to the presence of Gregory. But the relentless Pope left him to shiver in the cold. A second and a third day Henry stood as a suppliant before the castle gate, and hungry, chilled, disheartened, besought admission, but in vain. The spectators who witnessed his humiliation were touched with compassion, and every heart but that of Gregory softened toward the penitent king. At length Henry was admitted to the presence of the compassionate Matilda, fell on his knees before her, and besought her merciful interference. Gregory yielded to her prayers, and the Pope and his rightful lord, whom he had subjugated, met at a remarkable interview. Tall, majestic in figure, his feet bare and still clad in a penitential garb, the haughty Henry bowed in terror and contrition before the small and feeble gray-haired old man who had made kings the servants of the Church.

Henry subscribed to every condition the Pope imposed; obedience to ecclesiastical law, perfect submission to the Pope, even the abandonment of his kingdom should such be Gregory's will. On these terms he was absolved, and with downcast eyes and broken spirit returned to meet the almost contemptuous glances of his German or Lombard chiefs. Yet no man at that moment was so bitterly hated by hosts of foes as the triumphant Gregory. Christendom, which had yielded to his severe reforms, abhorred the reformer; Italy shrank from his monastic rigor; even Rome was unquiet, and Hildebrand's only friends were his faithful Countess and the Norman conquerors of Naples.

No sooner had Henry left Canosa than he seemed suddenly to recover from that strange moral and mental prostration into which his adversary's spiritual arts had thrown him. He was once more a king. He inveighed in bitter terms against the harshness and pride of Gregory; his Lombard chiefs gathered around him and stimulated him to vengeance, while Matilda hurried the Pope back again, fearful for his life, to the impregnable walls of Canosa. But the dangerous condition of his German dominions for a while delayed his plans of vengeance. The German and Saxon princes and bishops who had abandoned him in his moment of humiliation, now fearful of his power, met in a solemn diet at Forchheim, deposed Henry, and elected Rudolph of Swabia in his place. A terrible civil war, nourished by the arts of Gregory, desolated all Germany; the Pope once more excommunicated Henry, and declared his rival king, and he even ventured to prophesy that, unless Henry made his submission by the 29th of June, the festival of St. Peter and St. Paul, he would either be deposed or dead. The fierce priest, assuming to speak by inspiration, was willing to be judged by the failure or the success of his vaticination. But the result was far different from his hopes. Henry met his adversary, Rudolph, on the field of Elster; the Saxons conquered, but Rudolph was slain. His death allowed Henry to turn his arms against his spiritual foe at Rome. He crossed the Alps into Italy, but not as he had crossed them four years before, a heart-broken and trembling suppliant weighed down by superstitious dread. Excommunication had lost its terrors; Gregory had been proved a false prophet and a deceiver, and Matilda's forces, defeated and disheartened, had fled to their strong-holds in the Apennines. Henry advanced unchecked to the walls of Rome and laid siege to the holy city. Gregory, whom no dangers could move, firm in his spiritual superiority, made a bold defense; his people were united in his cause, the Countess supplied him with considerable sums of money, and for three years the massive walls repelled the invader, and the Italians saw with natural exultation the host of abhorred Germans and Lombards decimated by malarias, disease, and perpetual fevers. At length, however, the city fell, Gregory retreated into the castle of St. Angelo—a temporary refuge from the vengeance he had invoked—and Henry caused a rival Pope, under the name of Clement III., to be consecrated in St. Peter's, and received from his hands the imperial crown.

Gregory's end seemed now drawing near. Famine and the sword must soon drive him from his retreat, and he well knew that he would receive short shrift from his enraged German lord. But at this moment news came that Robert Guiscard, at the head of a powerful force, was advancing from Southern Italy to his rescue. Henry retreated, and the Norman soon became master of Rome. Gregory was released, and respectfully conducted to the

Lateran Palace; but a fatal event made his return to power the source of incalculable woes to his faithful people. The army that had conquered Rome was composed of half-savage Normans and infidel Saracens—the peculiar objects of hatred to the Roman populace—and they had marked their entry into the city by a general pillage and license. The Romans resolved upon revenge. While the Normans were feasting in riotous security they rose in revolt, and began a terrible carnage of their conquerors. The Normans, surprised, but well-disciplined, soon swept the streets with their cavalry, while the citizens fought boldly from their houses, and seemed for a moment to gain the superiority. Guiscard then gave orders to set fire to the houses. The city was soon in flames; convents, churches, palaces, and private dwellings fed the conflagration; the people rushed wildly through the streets, no longer thinking of defense, but only the safety of their wives and children; while the fierce Normans and Saracens, maddened by their treachery, perpetrated all those horrible deeds that mark the sack of cities. Rome suffered more in this terrible moment than in all the invasions of the Goths and Vandals. Thousands of its citizens were sold into slavery or carried prisoners to Calabria, and its miserable ruin was only repaired when a new city was gradually built in a different site on the ancient Campus Martius.

Gregory, it is said, looked calmly on the sack of his faithful city. For its destroyers he had no word of reproof. The ferocious Guiscard was still his ally and his protector. He retired, however, to Salerno, being afraid to trust himself in Rome, and from thence issued anew an excommunication against Henry and the usurping pontiff, Clement III. As death approached no consciousness of the great woes he had occasioned, of the fierce wars he had stirred up, of the ruin he had brought upon Germany, of the desolation he had spread over Italy, of the miserable fate of Rome, seems to have disturbed his sublime serenity. At one moment he had believed himself a prophet, at another an infallible guide; he was always the vicegerent of Heaven; and just before his death he gave a general absolution to the human race, excepting only Henry and his rival Pope. He died May 25, 1085, having bequeathed to his successors the principle that the Bishop of Rome was the supreme power of the earth. This was the conception which Gregory plainly represents.

The idea was never lost to his successors. It animated the Popes of the eleventh century in their long struggle against the Emperors of Germany; it stimulated the ardor of the Guelphic faction, whose vigor gave liberty to Italy; but its full development is chiefly to be traced in the character of Innocent III. Of all the Bishops of Rome Innocent approached nearest to the completion of Gregory's grand idea. He was the true Universal Bishop, deposing kings, trampling upon nations, crushing

out heresy with fire and the sword, relentless to his enemies, terrible to his friends—the incarnation of spiritual despotism and pride. In the year 1198, at the age of thirty-seven, in the full strength of manhood, Innocent ascended the papal throne. His learning was profound, his morals pure; he was descended from a noble Italian family; he had already written a work on "Contempt of the World, and the Misery of Human Life," and his haughty and self-reliant intellect was well fitted to subdue that miserable world which he so pitied and condemned. Yet his ruthless policy filled Europe with bloodshed and woe. He interfered in the affairs of Germany, and for ten years, with but short intervals of truce, that unhappy land was rent with civil discord. He deposed his enemy, the Emperor Otho, and placed Frederick II., half infidel, half Saracen, the last of the Hohenstaufens, on the German throne. He ruled over Rome and Italy with an iron hand. But it was in France and England that the despotic power of the Church was felt in its utmost rigor, and both those mighty kingdoms were reduced to abject submission to the will of the astute Italian. France, in the year 1200, was ruled by the firm hand of the licentious, self-willed, but vigorous Philip Augustus. Philip, after the death of his first wife, Isabella of Hainault, had resolved upon a second marriage. He had heard of the rare beauty, the long bright hair, the gentle manners of Ingeburga, sister to the King of Denmark, and he sent to demand her hand. The Dane consented, and the fair princess set sail for France, unconscious of the long succession of sorrows that awaited her in that southern land. The nuptials were celebrated, the queen was crowned, but from that moment Philip shrank from his bride with shuddering horror. No one could tell the cause, nor did the king ever reveal it. Some said that he was under the influence of a demon, some that he was bewitched. Yet certain it is that he turned pale and shuddered at the very sight of the gentle and beautiful Ingeburga, that he hated her with intense vigor, and that he sacrificed the peace of his kingdom, the welfare of his people, and very nearly his crown itself, rather than acknowledge as his wife one who was to him all gentleness and love. At all hazards he resolved to obtain a divorce, and the obsequious clergy of France soon gratified his wishes in this respect, upon the pretense that the ill-assorted pair were within the degree of consanguinity limited by the Church. The marriage was declared dissolved. When the news of her humiliation was brought to the unhappy stranger-queen, she cried out, in her broken language, "Wicked, wicked France! Rome, Rome!" She refused to return to Denmark to betray her disgrace to her countrymen, but shut herself up in a convent, where her gentleness and her piety won the sympathy of the nation.

Philip, having thus relieved himself forever, as he no doubt supposed, of his Danish wife,

began to look round for her successor. Three noble ladies of France, however, refused his offers, distrustful of his fickle affections; a fourth, Agnes, daughter of the Duke of Meran, was more courageous, and was rewarded by a most unusual constancy. To the fair Agnes Philip gave his heart, his hand, his kingdom. His love for her rose almost to madness. For her he bore the anathemas of the Church, the hatred of his people, the murmurs of his nobles, the triumph of his foes. Beautiful, young, intelligent, graceful, Agnes seems to have well deserved the devotion of the king. Her gentle manners and various accomplishments won the hearts of the gallant chivalry of France, and even touched and softened her enemies—the austere clergy. She bore the king three children, and his affection for her never ceased but with her death. Miserable, however, was the fate of the rival queen. Ingeburga, in her distress, had appealed to Rome; her brother, the King of Denmark, pressed her claims upon the Pope; while Philip, enraged at her obstinacy, treated her with singular cruelty. She was dragged from convent to convent, from castle to castle, to induce her to abandon her appeal; her prayers and her entreaties were received with cold neglect, and she who was entitled to be Queen of France was the most ill-used woman in the land.

She was now at last to find a champion and a protector. Innocent, soon after his accession, resolved to interfere in the affair, and to build up the grandeur of his see upon the misfortunes of two unhappy wives and the violent king. Ingeburga, however gentle and resigned, had never ceased to assert openly her marital claims; she pursued her recreant husband with a persistency only equaled by his own obstinate aversion to her person, and she now joined with Innocent in a last effort to reclaim him. The Pope sent a legate into France with a command to Philip to put away the beautiful Agnes, and receive back the hated Dane. If he did not comply with the orders of his spiritual father within thirty days France was to be laid under an interdict, and the sin of the sovereign was to be visited upon his unoffending people. Philip, enraged rather than intimidated, treated Innocent's message with contempt; the thirty days expired, and the fatal sentence was pronounced. For the first time in the annals of Rome it ventured to inflict a spiritual censure upon a whole nation; for the effect of an interdict was to close the gates of heaven to mankind. All over gay and prosperous France rested a sudden gloom. The churches were closed, and the worshipers driven from their doors; the rites of religion ceased; marriages were celebrated in the church-yards; the bodies of the dead were refused burial in consecrated ground, and flung out to perish in the corrupted air; baptism and the last unction were the only services allowed; the voice of prayer and praise ceased throughout the land; and the French with astonishment found themselves condemned to eternal

woe for the sin of Philip and fair Agnes of Meran.

The punishment seemed no doubt irrational and extravagant even to the clouded intellect of that half-savage age; but it was no less effectual. Philip sought to prevent the enforcement of the interdict by punishing the clergy who obeyed it; and he swore that he would lose half his kingdom rather than part with Agnes. But Innocent enforced the obedience of the priests, France grew mutinous under its spiritual sufferings, and the king was forced to submit. "I will turn Mohammedan," he cried in his rage. "Happy Saladin, who has no Pope above him!" Agnes, too, wrote a touching letter to the Pope, in which she said "she cared not for the crown; it was on the husband that she had set her love. Part me not from him." But Innocent never relented. Agnes was torn from her husband and her love, and was confined in a lonely castle in Normandy, where she was seen at times wandering upon the battlements with wild gestures and disheveled hair, her face wan and pale, her eyes streaming with tears, and then was seen no more. Nor was Ingeburga more happy. She was conducted, indeed, by a train of Italian priests to the arms of her loathing husband, and, whether witch or woman, Philip was forced to receive her publicly as his wife. France rejoiced, for the interdict was removed; a clang of bells announced the return of spiritual peace; the curtains were withdrawn from crucifixes and images; the doors of churches flew open; and a glad throng of worshipers poured into the holy buildings, from which for seven months they had been rigidly excluded. Yet the change brought little joy to the Queen of France. For the remainder of her life her husband treated her sometimes with harshness, always with neglect and contempt, and her plaintive appeals against his cruelty sometimes reached the ears of Innocent at Rome, who would then remonstrate with Philip upon his unworthy conduct toward the daughter, the sister, and the wife of a king.

The Pope next turned his spiritual arms against England, and soon reduced that powerful and independent kingdom to the condition of a vassal of the Roman see. John, the wickedest and the basest of English kings, now sat on the throne. His life had been stained by almost every form of licentiousness and crime; he had murdered his nephew, Arthur, and usurped his crown; he had shrank from no enormity, and his subjects looked upon him with horror and disgust; Philip had torn from him all his continental possessions; and his cowardice had been as conspicuous as his vices. Yet John had ever remained the favorite son of the Church, and Innocent would still have continued his ally and his friend had not a sudden quarrel made them, for the moment, the bitterest of foes. It would be impossible for us to review the full particulars of this memorable affair. It is sufficient to say that Innocent claimed the right of controlling the election of

the Archbishop of Canterbury, and that John resisted his pretension. The Pope employed the instrument which had been so effective against France: in 1208 England was laid under an interdict, and for four years beheld its churches closed, its dead cast out into unconsecrated ground, and its whole religious life crushed beneath a fatal malediction. Yet John resisted the clerical assailant with more pertinacity than Philip, and even endured the final penalty of excommunication, and it was not until Innocent had bestowed England upon Philip, and that king had prepared a considerable army to invade his new dominions, that John's courage sank. Full of hatred for the Pope and for religion, it is said that he had resolved to become a Mohammedan, and sent ambassadors to the Caliph of Spain and Africa offering to embrace the faith of the Koran in return for material aid; and it is further related that the cultivated Mohammedan rejected with contempt the advances of the Christian renegade. So low, indeed, was sunk the moral dignity of Christianity under the papal rule, so oppressive was that power, that of the three great potentates of Christendom at this period Frederick II. was suspected of preferring the Koran to the Bible, and both Philip Augustus and John are believed to have entertained the desire of adopting the tenets of the Arabian impostor; and all three were no doubt objects of polished scorn to the cultivated Arabs of Bagdad and Cordova.

John was soon reduced to submission, and his conduct was so base and dastardly as to awaken the scorn of his own subjects and of Europe. He gave up his independent kingdom to be held as a fief of the Roman see, took the oath of fealty to Innocent, and bound himself and his successors to become the vassals of an Italian lord. But his shame was probably lightened by a sense of the bitter disappointment which he was thus enabled to inflict upon his enemy, Philip Augustus. The Pope, with his usual indifference to the claims of honor and of faith, now prohibited the King of France from prosecuting his designs against England, and Philip, who at a great expense had assembled all the chivalry of his kingdom, was forced to obey. The barons of England soon after wrested from their dastard king the Magna Charta, and Innocent in vain endeavored to weaken the force of that instrument which laid the foundation of the liberties of England and of America.

But it is chiefly as the first of the great persecutors that Innocent III. has deserved the execration of posterity. He was the destroyer of the Albigenses and the troubadours, and the first buds and flowers of European literature were crushed by the ruthless hand of the impassive Bishop of Rome. Languedoc and Provence, the southern provinces of modern France, were at this period the most civilized and cultivated portions of Europe. Amidst their graceful scenery, their rich fields, and

magnificent cities, the troubadours had first sung to the lute those plaintive love-songs, borrowed from the intellectual Arabs, which seemed to the rude but impassioned barons of the south almost inspired. The Gay Science found its fitting birth-place along the soft shores of the Mediterranean Sea, the Courts of Love were held oftenest at Montpellier, Toulouse, or Marseilles. The princes and nobles of that southern clime were allowed to be the models of their age in chivalry, good-breeding, and a taste for poetry and song; and the people of Languedoc and Provence lived in a luxurious ease, rich, happy, and secure. Upon this Eden Innocent chanced to turn his eyes and discover that it was infested by a most fatal form of heresy. The troubadours—gay, witty, and indiscreet—had long been accustomed to aim sharp satires at the vices or the superstitions of monks and bishops; the people had learned to look with pity and contempt upon the ignorance of their spiritual guides; the authority of the Church was shaken, the priest was despised, and the Waldensian and Albigensian doctrines made rapid progress and found an almost universal acceptance in the sunny lands of the south of France. Raymond VI., Count of Toulouse, now reigned with an easy sway over this delightful territory. He was believed to be a heretic, yet he was evidently no Puritan. Gay, licentious, generous, affable, the Count had three wives living at the same time, and might well have merited, by his easy morals, the confidence of the Church of Rome. But, unhappily for Raymond, his humanity surpassed his faith, and drove him to his ruin. Innocent was resolved to extirpate heresy by fire and sword, and Raymond was required to execute the papal commands upon his own people. He was to bring desolation to the fair fields of Languedoc, to banish or destroy the heretics, to lay waste his own happy dominions, depopulate his cities, cut off the wisest and best of his subjects, for the sake of a corrupt and cruel Church, which he must now more than ever have abhorred. Life meanwhile had flowed on for the happy people of Languedoc in mirth and perpetual joy. They sang, they danced; the mistress was more honored than the saint, and churches and cathedrals were abandoned for the Courts of Love. In the fair city of Toulouse a perfect tolerance prevailed. The "good men" of Lyons, the Cathari or Puritans, made converts undisturbed, and even the despised and rejected Jews were received with signal favor by the good-humored Provençals. Nothing was hated but the bigotry and pride of priestcraft, and when Arnold, Abbot of Cîteaux, a severe and stern missionary of Rome, came to preach against heresy and reclaim the erring to the orthodox faith, his most vigorous sermons were received with shouts of ridicule. "The more he preached," says the Provençal chronicler, "the more the people laughed and held him for a fool." But a terrible doom was now impending over the merry land of song, for Innocent had resolved

to call in the aid of the temporal power, and involve both Raymond and his subjects in a common ruin. A fatal event urged him to immediate action. The papal legate was assassinated as he was crossing the Rhone, and the Pope charged the crime upon Raymond, who, however, was wholly guiltless. The blood of the martyr called for instant vengeance, and Innocent summoned the king, the nobles, and the bishops of France to a crusade against the devoted land. "Up, most Christian king," he wrote to Philip Augustus; "up, and aid us in our work of vengeance." His vengeful cries were answered by a general uprising of the chivalry and the bishops of the north of France, who, led by Simon de Montfort, hastened to the plunder of their brethren of the south. An immense army suddenly invaded Languedoc; the war was carried on with a barbarity unfamiliar even to that cruel age, and the Albigenses and the troubadours were almost blotted from existence. No quarter was given, no mercy shown, and the battle-cry of the invading army was, "Slay all, God will know his own." At the capture of Beziers it is estimated that fifty thousand persons perished in the massacre. Harmless men, wailing women, and even babes at the breast fell equally before the monkish rage of Innocent, and the beautiful city was left a smouldering ruin. At the fall of Minerve, a strong-hold in the Cévennes, one hundred and forty women, rather than change their faith, leaped into a blazing pyre and were consumed. When Lavaur, a noted seat of heresy, was taken, a general massacre was allowed, and men, women, and children were cut to pieces, until there was nothing left to kill, except four hundred of the garrison, who were burned in a single pile, which, to the great joy of the victorious Catholics, made a wonderful blaze. After a long and brave resistance the Albigensian armies were destroyed, and the desolate land, once so beautiful, fell wholly into the power of the Catholics. The song of the troubadour was hushed forever, the gay people sank into melancholy under the monkish rule, their very language was proscribed, and a terrible inquisition was established to crush more perfectly the lingering seeds of heresy. Every priest and every lord was appointed an inquisitor, and whoever harbored a heretic was made a slave. Even the house in which a heretic was found was to be razed to the ground; no layman was permitted to possess a Bible; a reward of a mark was set for the head of a heretic; and all caves and hiding-places where the Albigenses might take refuge were to be carefully closed up by the lord of the estate.

Two agents of rare vigor had suddenly appeared to aid Innocent in his conquest of mankind; two men of singular moral and mental strength placed themselves at his command. St. Dominic and St. Francis of Assissi founded, under his supervision, the two great orders of mendicant monks. Dominic was a Spaniard of high birth, fierce, dark, gloomy, unsparing,

the author of the Inquisition. His history is lost in a cloud of miracles, in which it has been enveloped by his devout disciples; he cast out Satan, who ran from him in the form of a great black cat with glittering eyes; he raised the dead, healed the sick, and more than equalled the miracles of the Gospel. Yet the real achievements of Dominic are sufficiently wonderful. He founded the order of preaching friars, who, living upon alms and bound to a perfect self-denial, knew no master but Dominic and the Pope, and before he died he saw a countless host of his disciples spread over every part of Europe. Dominic is chiefly known as the persecutor of the heretics. He infused into the Roman Church that fierce thirst for blood which was exemplified in Philip II. and Alva; he hovered around the armies that blasted and desolated Languedoc, and his miraculous eloquence was aimed with fatal effect against the polished free-thinkers of that unhappy land. His admirers unite in ascribing to him the founding of the Inquisition. "What glory, splendor, and dignity," exclaims one of them, "belongs to the Order of Preachers, words can not express! for the Holy Inquisition owes its origin to St. Dominic, and was propagated by his faithful followers."

St. Francis of Assissi, a gentler madman, was equally successful with Dominic in founding a new order of ascetics. Born of a wealthy parentage, Francis passed his youth in song and revel until a violent fever won him from the world. His mild and generous nature now turned to universal benevolence; he threw aside his rich dress and joined a troop of beggars; he clothed himself in rags and gave all that he had to the poor. His bride he declared was Poverty, and he would only live by mendicancy; he resolved to abase himself below the meanest of his species, and he devoted himself to the care of lepers—the outcasts of mankind; he tended them with affectionate assiduity, washed their feet, and sometimes healed them miraculously with a kiss. This strange and fervent piety, joined to his touching eloquence and poetic fancy, soon won for St. Francis a throng of followers, who imitated his humility and took the vow of perpetual poverty. He now resolved to convert the world; but he must first gain the sanction of the Pope. Innocent III. was walking on the terrace of the splendid Lateran when a mendicant of mean appearance presented himself and proposed to convert mankind through poverty and humility. It was St. Francis. The Pope at first dismissed him with contempt; but a vision warned him not to neglect the pious appeal. The Order of St. Francis was founded, and countless hosts soon took the vow of chastity, poverty, and obedience. The Franciscans were the gentlest of mankind: they lived on alms; if stricken on one cheek they offered the other; if robbed of a part of their dress they gave the whole. Love was to be the binding element of the brotherhood, and the sweet effluence of universal chari-

ty, the poetic dream of the gentle Francis, was to be spread over all mankind.

How rapidly the Franciscans and Dominicans declined from the rigid purity of their founders need scarcely be told. In a few years their monasteries grew splendid, their possessions were vast, their vows of poverty and purity were neglected or forgotten, and the two orders, filled with emulation and spiritual pride, contended with each other for the control of Christendom. Innocent, meantime, died in 1216, in the full strength of manhood, yet having accomplished every object for which his towering spirit had labored so unceasingly. He had crushed and mortified the pride of every European monarch, had exalted the Church upon the wreck of nations, had seemingly extirpated heresy, and was become that Universal Bishop which, to the modest Gregory the Great, had seemed the symbol of Antichrist and the invention of Satanic pride.

The next phase in which the Papacy exhibits itself is the natural result of the possession of absolute temporal and spiritual power; the next representative Pope is a Borgia. In no other place than Rome could a Borgia have arisen; in no other position than that of Pope could so frightful a monster have maintained his power. Alexander VI., or Roderic Borgia, a Spaniard of noble family and nephew to Pope Calixtus III., was early brought to Rome by his uncle, and made a cardinal in spite of his vices and his love of ease. He became Pope in 1492 by the grossest simony. Alexander's only object was the gratification of his own desires and the exaltation of his natural children. Of these, whom he called his nephews, there were five—one son being Cæsar Borgia, and one daughter the infamous Lucrezia. Alexander is represented to have been a poisoner, a robber, a hypocrite, a treacherous friend. His children in all these traits of wickedness surpassed their father. Cæsar Borgia, beautiful in person, and so strong that in a bull-fight he struck off the head of the animal at a single blow—a majestic monster ruled by unbridled passions and stained with blood, now governed Rome and his father by the terror of his crimes. Every night, in the streets of the city, were found the corpses of persons whom he had murdered either for their money or for revenge, yet no one dared to name the assassin. Those whom he could not reach by violence he took off by poison. His first victim was his own elder brother, Francis, Duke of Gandia, whom Alexander loved most of all his children, and whose rapid rise in wealth and station excited the hatred of the fearful Cæsar. Francis had just been appointed Duke of Benevento, and before he set out for Naples there was a family party of the Borgias one evening at the papal palace, where no doubt a strange kind of mirth and hilarity prevailed. The two brothers left together and parted with a pleasant farewell, Cæsar having meantime provided four assassins to waylay his victim that very night. The next morning

the duke was missing; several days passed but he did not return. It was believed that he was murdered; and Alexander, full of grief, ordered the Tiber to be dragged for the body of his favorite child. An enemy, he thought, had made away with him. He little suspected who that enemy was. At length a Slavonian waterman came to the palace with a startling story. He said that on the night when the prince disappeared, while he was watching some timber on the river, he saw two men approach the bank and look cautiously around to see if they were observed. Seeing no one they made a signal to two others, one of whom was on horseback, and who carried a dead body swung carelessly across his horse. He advanced to the river, flung the corpse far into the water, and then rode away. Upon being asked why he had not mentioned this before the waterman replied that it was a common occurrence, and that he had seen more than a hundred bodies thrown into the Tiber in a similar manner. The search was now renewed, and the body of the ill-fated Francis was found pierced by nine mortal wounds. Alexander buried his son with great pomp, and offered large rewards for the discovery of his murderers. At last the terrible secret was revealed to him; he hid himself in his palace, refused food, and abandoned himself to grief. Here he was visited by the mother of his children, who still lived at Rome. What passed at their interview was never known; but all inquiry into the murder ceased, and Alexander was soon again immersed in his pleasures and his ambitious designs.

Cæsar Borgia now ruled unrestrained, and preyed upon the Romans like some fabulous monster of Greek mythology. He would suffer no rival to live, and he made no secret of his murderous designs. His brother-in-law was stabbed by his orders on the steps of the palace. The wounded man was nursed by his wife and his sister, the latter preparing his food lest he might be carried off by poison, while the Pope set a guard around the house to protect his son-in-law from his son. Cæsar laughed at these precautions. "What can not be done in the noonday," he said, "may be brought about in the evening." He broke into the chamber of his brother-in-law, drove out the wife and sister, and had him strangled by the common executioner. He stabbed his father's favorite, Perotto, while he clung to his patron for protection, and the blood of the victim flowed over the face and robes of the Pope. Lucrezia Borgia rivaled, or surpassed, the crimes of her brother; while Alexander himself performed the holy rites of the Church with singular exactness, and in his leisure moments poisoned wealthy cardinals and seized upon their estates. He is said to have been singularly engaging in his manners, and most agreeable in the society of those whom he had resolved to destroy. At length Alexander perished by his own arts. He gave a grand entertainment, at which one or more wealthy cardinals were invited for the purpose

of being poisoned, and Cæsar Borgia was to provide the means. He sent several flasks of poisoned wine to the table, with strict orders not to use them except by his directions. Alexander came early to the banquet, heated with exercise, and called for some refreshment; the servants brought him the poisoned wine, supposing it to be of rare excellence; he drank of it freely, and was soon in the pangs of death. His blackened body was buried with all the pomp of the Roman ritual.

Scarcely is the story of the Borgias to be believed: such a father, such children, have never been known before or since. Yet the accurate historians of Italy, and the careful Ranke, unite in the general outline of their crimes. On no other throne save the temporal empire of Rome has sat such a criminal as Alexander; in no other city but Rome could a Cæsar Borgia have pursued his horrible career; in none other was a Lucrezia Borgia ever known. The Pope was the absolute master of the lives and fortunes of his subjects; he was also the absolute master of their souls; and the union of these two despotisms produced at Rome a form of human wickedness which romance has never imagined, and which history shudders to describe.

We may pause at this era in our review of the representative bishops of Rome, since the Reformation was soon to throw a softening and refining light upon the progress of the papacy. There were to be no more Borgias, no second Innocent; the fresh blasts from the north were to purify in some measure the malarious atmosphere of the Holy City. Yet I trust this brief series of pictures of the early bishops will not have been without interest to the candid reader, and that he will observe that it was only as the Roman Church abandoned the primeval laws of gentleness, humility, and humanity that it ceased to be the benefactor of the barbarous races it had subdued. As the splendid panorama passes before us, and we survey the meek and holy Stephen perishing a sainted martyr in the Catacombs; the modest Gregory, the first singing-master of Europe, soothing the savage world to obedience and order by the sweet influence of his holy songs; the cunning Zacharias winning a temporal crown from the grateful Frank; Hildebrand rising in haughty intellectual pre-eminence above kings and princes; Innocent III. trampling upon the rights of nations, and lifting over Europe his persecuting arm red with the guiltless blood of the troubadours and the Albigenses; or a Borgia, the incarnation of sin—we shall have little difficulty in discovering why it is that the bishops of Rome have faded into a magnificent pageant before the rise of a purer knowledge, and why it is that the Pope of to-day, surrounded by the most splendid of earthly rituals, and pronouncing from the Vatican the anathemas of the Middle Ages, is heard with mingled pity and derision by the vigorous intellect of the nations over which his predecessors once held an undisputed sway.

THE MURDER OF ESCOVEDO.

OF the many eminent men who perished under the jealous suspicions of Philip II., one of the foremost was his brother, Don John of Austria. Between his twenty-first and twenty-sixth years this prince had figured repeatedly as the leader of victorious hosts. Not that he was more than a nominal chief, since the ablest warriors of the day—men like Doria and the Marquis of Santa Cruz—directed his operations, in the guise of lieutenants and advisers. But few people cared to look so deeply; and handsome, valiant, and generous as he was, the renown sat admirably upon him. From the fight of Lepanto to the day of his death he was the idol of the Spaniards, and to a great extent their hope; for the king had then small prospect of male heirs; indeed, Philip III. was not born until 1578, the year of Don John's death. Under these circumstances it would have argued an extraordinary lack of ambition had the prince entertained no hope of the succession. But Don John was one of the most aspiring men of the time: indeed, from his first victory forward, he led the Spanish forces far less in the service of his brother than to carve out a kingdom for himself; and wherever there appeared a prospect of winning a crown, by sword or marriage, thither he turned his attention—intriguing with the Pope, the Guises, the malcontents of England and Flanders—with every one, in fact, who could pretend to further his designs; and in the midst of all he betrayed a still deeper and far more dangerous purpose by hankering after legitimation and the state of an Infant. Philip had long been weary of his brother's foreign intrigues, but he was thoroughly and deeply alarmed so soon as he caught a glimpse of his domestic pretensions. He did not, indeed, cease to employ the prince—that would have been to have given free rein to his ambition—and therefore he ventured to send him to Flanders at a very critical period; but he took good care to place brilliant exploits quite beyond his reach, choosing rather that his own interests should suffer than that Don John should increase his already too great reputation. He surrounded him with spies, instructed his coadjutors to hamper and obstruct him, and starved his means to the last degree. Chafing under such difficulties, the prince lost his temper, and what little prudence he ever had, venting the bitterest complaints against the court and the king, and conceiving the wildest schemes. All this was duly reported to Philip, who in return redoubled his precautions, especially in the matter of espionage. His principal agent in this base business was the Secretary of State, Antonio Perez. Don John and his faithful secretary and counselor, Juan Escovedo, regarded this man as their truest friend. But devoted body and soul to the king, or rather to the crown, he volunteered his services as spy upon them, and for several years he filled the disgraceful office like one to the

manner born—so skillfully, indeed, that to the very last he retained the confidence of his dupes. The better to draw them out, as the phrase goes, he entered warmly into their projects; he sympathized with their difficulties; he even penned boldly those harsh opinions of the King which they scarcely ventured to hint, leaving not one nefarious stratagem in the whole art of treachery untried. Every letter he dispatched was submitted to his master's eye, and so was every one he received. And he took good care that the monarch's interest in his proceedings should not relax through any subsidence of suspicion, dwelling on every imprudence of prince and secretary, until Philip fully believed that they aimed at no less than his life and crown. And the precious pair justified and encouraged one another in their perfidy—the Minister representing his behavior as the perfection of duty and conscientious scruple, and the monarch declaring that he should have considered the Minister wanting in duty to his God, no less than to his sovereign, had he acted otherwise. Finding his position altogether insupportable, Don John dispatched Escovedo to Spain in July, 1577, to further his interests in any way, but if possible to procure his recall. This visit Philip regarded with the gravest suspicion, and even fear, inscribing the first letter he received from Escovedo with the following remark: "The avant-courier has arrived. We must be quick and dispatch him before he can murder us."

So far Perez had no personal animus against Escovedo. Nor had Escovedo any overt reason to distrust Perez. The contrary, indeed, was the fact. They had been brought up together in the house of Ruy Gomez, the most favored and fortunate Minister Philip ever had; they had been introduced together to public life; they belonged to the same political faction—a thing which then bound Spaniards together like brotherhood—and, finally, Escovedo owed his present honorable post to the recommendation of Perez. But matters soon occurred which rendered the destruction of the former indispensable to the safety of the latter.

There was then at the Spanish court one of those dames who appeared with something of heroism and a good deal of romance during the earlier centuries of the Middle Ages, but who degenerated into the mere creatures of show and sense and selfishness during the Renaissance. This lady—the Duchess of Pastrana and Princess of Eboli—was a worthy sister of those "fair and honest" frailties, Diana de Poitiers and Gabrielle d'Estrées. Married at the age of thirteen to Ruy Gomez, then a man of thirty, she was now a widow, the mistress of vast wealth, and her thirty-eight years had merely ripened her singular loveliness. Nor were her charms a whit impaired by a slight defect (*tuerta*) in one of her eyes. Indeed, a good judge of these matters, Henri Quatre, considered it an additional attraction; "for," said he, "the fitful looks and drooping lids, and all the other pretty little stratagems to which

such beauties have recourse, look bewitchingly like modesty." But even gay and gallant princes like Francis I. had failed to secure the fidelity of this particular institution, and it was not likely that better fortune would attend a man like Philip, whose mean and gloomy spirit was incased in a body which a Venetian ambassador of the day describes as "*peloso e calvo, e ha le gambe sottili, ed è piccolo di statura meno che di mezzana, e ha la voce grossa*"*—precisely the terms in which one would sketch a veteran monkey. Accordingly, at the time of Escovedo's reappearance in Spain, the whole court was full of whispers concerning the gay doings of the princess; and the scandal-mongers dwelt with especial unction on her intimacy with Philip's favorite Secretary of State. So far had this been carried that the haughty relatives of the dame—Silvas, Guzmans, and Mendozas, the noblest houses in Spain—seriously meditated the murder of the gallant. And the fondness of the princess was too conspicuous not to give them, in Spanish eyes at least, a reasonable excuse. Mules from her various estates, heavily laden with presents, including money, plate, furniture, and rich stuffs, were continually arriving at the gates of the fortunate Perez. He was her constant attendant at theatre, bull-fight, and auto-da-fé. And in her own palace he was a visitor so frequent and favored that her very servants—folk not too sensitive in these matters—were, or pretended to be, exceedingly scandalized. "One day," said an indignant cousin, the Marquis of Fabrara, "I was stopped at the door and kept waiting among her women because, forsooth, this fellow Perez was with her. My valet, too, has repeatedly seen him leave her palace by stealth at unseasonable hours. Even worse things have been witnessed by myself and others, her relatives. And such effect has all this had upon me, that I have more than once been compelled to retire to the nearest church to beseech God to deliver me from the strong temptation to slay the villain with which the sight of him possessed me." Escovedo, an élève of Ruy Gomez, was devoted with all the enthusiasm of a vassal and a Spaniard to the house of his chief. He was deeply interested in its fortunes, and keenly alive to every thing that touched its honor. One of his first acts was to pay his respects to the princess, and, as his duty required, he was a daily visitor. Of course he soon heard all the gossip, and in a short time he obtained the very strongest confirmation of it. Full of indignation, the worthy secretary hastened to speak his mind to the princess. And, altogether regardless of the presence of a third party—the squire of Antonio Perez, who heard and long remembered every word that passed—he indulged the astonished and indignant lady with a very pretty homily, winding up by declaring that he felt himself obliged to recount the whole affair to the king.

* "Bald and hairy, with attenuated limbs, stunted figure, and harsh voice."

Unacquainted with the relations that subsisted between Philip and the princess, he could not suspect the apprehension which such a threat from a man so blunt, so outspoken, and in all respects so exceedingly likely to carry it out, was certain to excite. Bursting with various passions, the princess replied, in a strain of the coarsest defiance, "Off with you to the king! quick! hide nothing! tell him all! And be sure you add this: *mas quiero el trasero de Antonio Perez que al rey.*" From that time forth Escovedo was doomed. The pair knew the character of Philip well. They could not guess how long their secret would be kept, nor when the vengeance might fall; and a hundred small annoyances were ever recurring to keep their apprehension awake. The princess saw Escovedo in every sneering lip, and heard him in every slighting remark. Nay, even when the preacher happened to inveigh against certain sins in her presence, she returned home full of fury to anathematize "that slanderer of noble ladies, Escovedo, who had incited the monks of St. Mary's to interlard their sermons with spiteful things on purpose to annoy her." But of the two Perez had by far the stronger reasons for arriving at a fell resolve. Her rank, her relatives, and—least consideration with Philip, but still a consideration—her sex, forbade the latter to inflict any severe punishment on the princess. But Perez was altogether a creature of his own. Born in 1640, the natural son of one of Charles's Ministers, and legitimated by a diploma of that Emperor's, Antonio Perez was a man of no fortune, and, apart from his office, of little weight. Introduced early to public life, he had gradually worked his way up to the foremost place. Such men, and under such a government, are sure to make numerous enemies, whatever be their character—and the secretary's was of a kind to make him unusually hated. He was handsome, eloquent, and clever; but, the King aside, he was altogether faithless. And he was, besides, profuse, licentious, insolent, and greedy in no common degree. Many of his coadjutors detested him—among them the Iron Duke of Alva. Perez knew this; he knew the slender tenure of his power, and he knew the terrible advantage which his rivals would derive from such a story as that Escovedo had to tell. For him there was no alternative—the man must die. Nor was the adroit statesman at a loss for most excellent means of effecting his atrocious intent. It was only necessary that Escovedo should be silent a few days longer. And he was sufficiently so for the purpose. He did not hesitate, indeed, to blurt out pretty freely in a good many places all that he had seen; but some lingering respect for the wife of his old master, friendship perhaps for Perez, and, unquestionably, regard for the interests of his master, restrained him from executing his threat. Meanwhile Perez exerted all his keen intellect on the sinister materials at his command to exasperate the King and Council against the unfortunate agent, and with all the effect that even he could de-

sire: for it was solemnly decided by a Cabinet Council, called especially for the purpose, that, as a matter imperatively called for by the welfare of the state, Escovedo must be put to death. And with such malignant skill had Perez manipulated the evidence submitted to the Council that its President, the Marqués de los Velos, affirmed himself ready to pronounce for execution with the host between his lips, so deeply was he impressed with the dangerous character of the man Escovedo, and the necessity for his destruction. But the affairs of state that called thus remorselessly for death were equally urgent in demanding a secret execution—that is to say, an assassination. Philip therefore submitted the decision of his counselors to his excellent confessor the monk Diego Chaves, and that admirable casuist soon removed whatever small scruples might have lain concealed in the narrow heart of his penitent: "For," said he, "the prince who can justly punish his subjects by law may justly punish them without law, since he is above all law. One subject, therefore, may slay another at the command of his prince without any sin."

Perez was pitched upon to execute the sentence, and the moment he received his commission he proceeded to take his measures. Now these measures were very characteristic of the period. Scarce one of those singular crimes was perpetrated without numerous confidants and assistants. Thus a whole troop was employed to murder the Duke of Orleans in 1407, and a still larger number were associated to massacre the Duke of Burgundy some twelve years later. A host of nobles, with one hundred and sixty attendants, assembled to slay Rizzio. The murder of Darnley was confided to half the great men of Scotland. And the whole family of the Hamiltons was privy to the slaughter of the Regent Murray. Certainly Perez did not go quite so far as this, but still he went far enough. His major-duomo Diego Martinez, his squire Rodrigo de Morgado, and that, in those days, inevitable official in the establishment of the ambitious—his astrologer Pedro de la Exa, were his more immediate confidants. With them he discussed the projected murder, and by their aid he selected suitable instruments—not paltry scoundrels these, but bravoos of good birth (*personas de mas partes*), and therefore thoroughly worthy of the respectable office of stabbing a gentleman. It was first resolved to take Escovedo off by poison, and for this they had opportunities in plenty, since the intended victim was a frequent guest of Perez. Nor was the attempt made in the bungling fashion that has become so common of late. It was undertaken as deliberately and elaborately as any other important business. A professional toxicologist—one of a fraternity then very numerous and largely patronized—was fetched all the way from Aragon: an apothecary the witnesses call him—not exactly such a wretch as figures in *Romeo and Juliet*, but a respectable villain. And

neither expense nor trouble was spared to give ample scope and verge enough to his skill. Men were dispatched in all directions to seek out noxious herbs and potent drugs. And by the time he took his departure well rewarded, he had provided his employer with matters poisonous, in the shape of liquid and powder, sufficient to destroy half Madrid. Out of this infernal arsenal a liquid "fit to be given to drink," as the narrator quaintly phrases it, was selected for the first essay. But the page, Antonio Enriquez, who was designated to administer it, was not altogether destitute of conscience. "No," said this good youth, indignantly, "I will not be a murderer. I abhor the idea of dipping my hands in blood, and, so help me Heaven, will have no hand in poisoning any body unless my master give me the order." And give him the order Perez did, accompanied with many promises, sundry politic but very unnecessary reasons, and, what was more to the purpose, "something in hand the whiles." So the conscientious page went away, "much contented," to set about his part of the business. Accordingly, at dinner that very same day he was remarkably assiduous in waiting on Escovedo, and found means to pour a nutshellful of the liquid twice over into the secretary's glass. Dinner over, Escovedo took his leave, and the rest of the company sat down to play—a practice that was indulged in to a scandalous extent by the statesman and his friends. But before Perez could shuffle the cards with any gusto, he had first to be satisfied concerning the administration of the "water fit to be given to drink." This liquid, however, was by no means equal to the *aqua tofana*, afterward so renowned, or, as seems probable, Escovedo had one of those organizations which resist the assaults of poison, for he appeared to sustain no injury. A few days after he dined again with Perez, and this time they mixed him up a certain white powder like flour with a dish of cream, in addition to his quantum of the "water." He fell ill without guessing the reason, and while he kept his bed another respectable emissary, employed by his excellent friend—the son of Captain Juan Rubio, Governor of Malfi—wormed himself into the confidence of his cook, obtained the run of the kitchen, and managed very cleverly to deposit a thimbleful of the powder in Escovedo's broth. On this occasion the poison was detected before the sick man had tasted more than a mouthful of the food; but so cleverly had Perez managed that nobody entertained the slightest suspicion of his share in the work, and a female slave who had been employed to prepare the pottage was arrested and hung up directly—so quick and decided could the law be at times, even in Spain.

Poison having failed, it was now determined to try steel. So the conscientious page was dispatched into his native country, Catalonia, to find "a stiletto with a very thin blade—a weapon far superior to a pistol for murdering a man"—and a sure hand to wield it. And he

discharged the mission with great judgment, re-entering Madrid the very day of the slave's execution with the aforesaid delicate tool and his brother Miguel Bosque. Meanwhile Diego Martinez on his side had procured two determined Aragonese, Gil de Mesa, a devoted adherent of the Secretary's, and another ruffian named Insausti. To these were added the scullion, Juan Rubio, already mentioned, and the band was complete. The very next day, being the 24th of March, 1578, the major-duomo mustered his troop of rascals outside of Madrid, and armed them all with pistol and dagger. In addition to these weapons, Martinez, who seems to have had a decided taste for the artistic in matters murderous, presented them with an interesting instrument in the shape of a sword, broad-bladed and fluted on both sides up to the point. The tragedy was then planned out, and the parts duly apportioned. It was arranged that the whole of the bravos should assemble every evening in the little square of St. Jacobo: from thence they were to go and watch Escovedo's house, and whenever a favorable opportunity offered, do the deed. Insausti, Rubio, and Miguel Bosque were fixed on to strike the stroke, while the other three remained in reserve.

At last, after watching for a week, they met Escovedo, and slew him within twenty yards of his own house, on Easter-Monday evening—Insausti dealing the fatal stab with the aforesaid fluted sword. In less than an hour the murder was known from one end of the city to the other. The assassins escaped much as fugitives from the field of battle, several of them losing their weapons, and two their cloaks. The instrument of death, however, had been carried safely off, and was forthwith flung down a deep well. A messenger was dispatched to apprise Perez, who had gone to spend the holy-week at Alcala. He, when he heard of their success, and especially that nobody had been arrested, rejoiced exceedingly. The next step was to get the murderers out of the way, and that was taken at once. Well supplied with money or the means of obtaining it—Miguel Bosque, for instance, receiving 100 gold crowns, and Gil de Mesa a gold chain, a silver cup, and 400 gold crowns—all but the trusty major-duomo were hurried off to Aragon. There such of them as were not already provided for otherwise received each an ensign's commission and departed, Juan Rubio to Milan, Antonio Enriquez to Naples, and Insausti to Sicily. Nor was the prudence of Perez satisfied even then. Time after time nearly every one upon whom he could not place the thoroughest reliance was put out of the way. The astrologer died suddenly, and very opportunely, and so did the squire. Much about the same time Miguel Bosque gave up the ghost in Aragon, and Insausti in Sicily. In three or four years from the date of the crime but four of those who were immediately privy to it survived. Of these, three were as stanch as blood-hounds; as for the fourth, the conscientious page, he conceived such a terror of the

ubiquitous Perez that he found no rest until he gave himself up in 1584 as an informer.

Escovedo was no more, and Don John did not long survive him, breathing his last exactly six months after, in the centre of his camp, near Namur. He died of plague, said one party; of purple-fever, averred another; worn out with difficulties, disappointment, and vexation, declared a third; of poison, whispered a fourth. And the last opinion is our own. There remain, indeed, to confirm it, no confessions wrung out by torture or remorse, no damning secret instructions, no shameless declarations of defiant wickedness. But there is the character of Philip; there is the good cause which he had to fear and hate his brother; and there is the fact that by the victim's side stood that man of guarded tongue and iron heart, that merciless employer of political assassins, the terrible Duke of Parma. Nor was it merely among the vulgar herd that these dark suspicions flew about. We find them in all the best historians of the day. Bentivoglio mentions the current belief that the prince's death was more speedy than natural: "E quindi nacque l'opinione dispersa allora, ch'egli mancasse di morte aiutata più tosto che naturale." Cabrera details sundry ugly symptoms noticed during the post-mortem examination. And Herrera says, plainly: "Acabo su vida con gran sospecho de veneno"—("he lost his life with great suspicion of poison"). And if it be objected that these writers expressed themselves too obscurely to justify a decided opinion, we reply with an old anecdote: When that queer character, the Abbé Choisy, was writing the life of Charles VI., the Duke of Burgundy, who took some interest in his labors, asked him how he would contrive to express the madness of the king—"Sir, I will just say he was mad," replied the abbé; and his audacity in scorning the euphuisms in which matters like this were usually shrouded, out of respect to royalty, gained him no small credit. Now, if it was a ticklish thing to write a dead king down mad in the days of Louis le Grand, it must have been much more ticklish to write one down a poisoner sixty or seventy years earlier.

Escovedo was dead, but never did blood call for vengeance so pertinaciously as his. Thanks to the indiscretion of all the parties concerned, suspicion was at no loss to fix on the murderers. Every body said at once, Antonio Perez and the Princess of Eboli have done this thing. True, the latter made energetic efforts to turn attention from themselves. They circulated reports to the disadvantage of the slain man. They accused him of low vices, of insulting the wives and daughters of the populace, of indulging in all those propensities that tend to whet the knife of the Spanish plebeian. But to no purpose. Don John's secretary was one of those blunt, straightforward individuals that defy slander. These devices, then, were instantly seen through, and merely tended to strengthen universal opinion. The numerous enemies of the favorites—especially the fellow-Minister of Pe-

rez—were delighted with the affair, and they took good care that it should not be forgotten. Incited and supported by powerful personages—people who as yet kept in the back-ground—the widow and children of Escovedo openly accused Perez and the princess of the murder. They did more. They demanded and obtained an audience of the King, and besought vengeance on the favorites. Callous as was the age, and prolific of sanguinary characters, there were not many who could have acted like Philip. The trial of Bothwell, a few years before, was a very pretty farce in its way; but for consummate hypocrisy there is nothing in history to be compared to the conduct of the Spanish monarch on this occasion. Such a position would have been torture to a generous spirit; but, far from being annoyed, Philip actually appeared to enjoy it. So long as public opinion flowed on like this, he ran no risk of suspicion. That was a great consideration. And another as great lay in the fact that he could use the charge as a sort of mental rack and wheel to lacerate the feelings and break the spirit of these two envied favorites. Obeying the impulses of his mean and cruel nature, he made no attempt to silence the accusers, but listened with deep attention to their complaints, received their memorials, and promised them all that they could fairly demand—the amplest inquiry. For, bold and daring as they were in accusation, as yet they had no other evidence than that suggested by Machiavelli: If you would discover the author of a crime, inquire who was to profit by it.

No greater punishment could well have been inflicted on the pair than the sixteen months which elapsed between their crime and their disgrace. What had they not to bear in that time? Disappointment of every kind; remorse, and fear, and outraged feeling within; odium, and scorn, and degradation without. In vain they struggled to break away from their fate, in vain assailed the throne—the one confident in her rank and her attractions, the other in his precautions, and both in the monarch's complicity. At first they besieged the King for vengeance, then they besought peace; and finally entreated for leave to fly the court—no matter whither. But to every demand their master replied, with his equivocal pledge, "*I will never forsake you.*" Hour by hour their assailants grew bolder—to Philip as well as to themselves; expanding their hints into revelations, and venting their enmity in coarsest insult—like those of Matteo Vasquez, for instance, who scrawled the documents that passed between the offices with denunciations of Perez. And even for this the miserable tool could obtain no redress. He had to bear every thing. He dared not strike, he must not reply; he had not even the power of flight; and the bull was baited not a whit the less because forbidden to use his horns. Truly he must have envied Escovedo in his bloody grave.

At length the whole treacherous story was

unfolded to the royal ear, and what then? What then, when, after days of study, the perfidy of his favorites and the tool they had made him dawned upon the slow understanding of this "king of men?" With most monarchs of the period a short shrift and a sharp axe would have been the secretary's portion. But this one was incapable of manly vengeance. He delighted to kill indeed, but it must be by installments. Besides, policy recommended that the comedy should be played yet a little longer—at least until he had sure intelligence that Don John was no more; and as policy never found any difficulty in controlling those lukewarm passions, so the King went on dissembling to both sides, occasionally interfering to restrain the eagerness of the assailants with hypocritical censure, and to support the assailed with equally hypocritical comfort. The desired intelligence came at last; but even then he was not ready to strike. He could not punish the princess and spare the paramour; and before he could disgrace the latter it was necessary to provide a successor. Nor was this quite so easy as might be supposed. For, though there were many men in Spain fully qualified by ability for the post, there was not one who could adapt himself similarly to the disposition of the King. Therefore, in January, 1579, Cardinal Granville was summoned from Italy; but though he set out at once, he was delayed by various accidents until full six months went by before he set foot in Spain. Meanwhile Philip, with his usual duplicity, set himself to manufacture an excuse sufficiently plausible to account to those not behind the scenes for the disgrace of the favorites when the proper time should come; so, pretending to be wearied out with the everlasting complaints of the contending parties, he commanded them all to be reconciled. This was precisely what Vasquez and his friends did not want. Yet they dared not openly resist the King, who was as much an enigma to them as he was to their opponents. But though they appeared to acquiesce, they abated not one jot of their studied insolence and aggression. As for Perez and the princess, they obstinately refused all reconciliation, as, doubtless, it was intended they should. Indeed, the irritating conduct of their antagonists rendered any other course too humiliating to be thought of, unless in the very last extremity; and, considering that this model king was still in all outward respects the same to both as he had been for years before—still the apparently confiding, caressing master of the secretary, and still—yes, still, astonishing as it may appear—the lover of the princess!—that extremity appeared sufficiently distant. At length some unusual whiff of spite lifted for one short moment the heavy folds of dissimulation that enveloped this strange spirit, and gave the guilty ones a glimpse of the purpose that crouched in its gloomy recesses, and they consented, with much reluctance and many a bitter pang, "to swear a peace." The 29th of July was fixed

upon for this ceremony; and, now that they had subdued their pride so far, the harassed pair felt a relief that must have been something like happiness. But one short step divided them from security, and their feet were lifted to make it, when the ground that looked so firm melted like a mist, and down they went. Granville arrived on the 28th, and at eleven o'clock that night Philip issued his orders for the instant arrest of the princess and the secretary. The latter was at once taken into custody by the court *alcalde*, and the former was seized at the same instant and conveyed to the fortress of Pinto. The King himself, hidden under the porch of a neighboring church, witnessed the capture of his mistress; and when she was borne out of his sight, when the darkness swallowed up the guarded coach, and the trample of the horses died away from his ear, he retired in frowning silence to the palace, and spent the remainder of the night in pacing his cabinet—a demonstration of feeling never observed in him before or after.

From this time forward the princess disappears from the scene, and Perez occupies the whole width of the stage. For no less than twelve years we see him sinking lower and lower under the pertinacious assault of a revenge that loved to linger on its blows, and shrank from striking home. The slow progress of the law in those days, especially when put in motion against the rich and strong, the great events that occurred during the time, and the habits of Philip, who regularly spent twelve hours a day at the desk, reading every dispatch and every petition, and obstructing the multitudinous affairs of his wide dominions by attempting to direct them every one—these may be credited with a portion of this extraordinary delay. But by far the larger part must be ascribed to the skill with which the secretary had entangled his master in their mutual crime, and to the powers of defense, as unexpected as they were formidable, which adversity developed in him. For a long time Philip could not kill without seriously wounding himself; and, when at last his hand was free to stab, the object was no longer within reach. Philip was an inveterate scribe, who discussed *every* subject with his pen, and heaps of documents which committed him in a thousand things, notably in this affair of Escovedo's, were in the possession of Perez. The latter, therefore, was not to be dealt with seriously until they had deprived him of his armor of proof, and that was not the work of a moment. Not knowing well what to do with him, after a confinement of four months in the house of the *alcalde*, they allowed him to return home, and there he remained for the next six years under the very mildest form of arrest; frequenting every place of amusement, receiving visitors, indulging to the top of his bent in all his old profusion, and doing his utmost to work his way back into power. It was at last suggested that the ex-secretary might fairly be prosecuted for malversation: and such an in-

quiry was at once set on foot. It opened in May, 1582, and lasted until January, 1585. During its course it was clearly proved that Perez had been in the pay of most of the petty princes of Italy, that he had sold offices—captaincies, governments, and commissions—innumerable, and that he had received bribes from all sorts of suitors, until he, a man absolutely without any hereditary fortune, came to outshine in all respects—jewels, house, and retinue—the most magnificent of the Spanish nobility. Nor did the commissioners confine their inquiries to matters like these. A great portion of their time was occupied in prying into his connection with the Princess of Eboli; and their labors were concluded by sentencing the ex-Minister to reimburse the Eboli family to the amount of £7000 or £8000, for the presents which he had received from the princess; to pay a fine of equal amount to the King; to be imprisoned for two years in a fortress; and to be banished for ten years from the court. Most people fancied that this was the end of the dreary affair; but it proved to be merely the beginning. The moment the gates of Toruegano closed behind him his foes set to work to secure his papers. These were demanded from his wife; she refused to give them up. They imprisoned her, and as she still refused threatened her with the harshest treatment; but she remained inflexible. Her liberty, however, was indispensable to Perez, for she was his principal agent, and a most enthusiastic and faithful one she remained to the last. So he consented to ransom her by surrendering the coveted documents. Accordingly he obtained a safe-conduct for the trusty Diego Martinez, who had vanished on his master's disgrace; and this man delivered two trunks locked and sealed into the hands of the King's confessor. Great was Philip's triumph. He felt that his vengeance had now at last full scope—not knowing that Martinez had carefully sifted the papers and abstracted the most valuable. He had ruined Perez, but that was nothing to what he meditated. The ex-secretary had served his own purpose in the matter of Escovedo, and now the King would very similarly serve his in this same matter by bringing Perez to the gibbet for it. Never was there a better verification of the text, "With what measure ye mete, it shall be measured unto you again." So it was determined to prosecute Perez at once for the murder. His business done, the major-domo prepared to return to his refuge. But the court had no notion of parting with him so easily. Two years had worn away in this struggle for the documents, and 1587 was drawing to a close. Vasquez and his confederates had already got hold of one formidable witness, the conscientious page. But a second was indispensable to secure conviction, and they had long been in search of one. They knew that the poison-vendor and the scullion were somewhere in Aragon, and they had made many vigorous efforts—some of them not very honor-

able—to get possession of one or other. But the trusty Gil de Meza took good care to frustrate every attempt. Another—and if he would but speak, the most valuable of all—was now within their grasp; and, in spite of the safe-conduct, it closed tightly upon him. But Martinez was a very different sort of man to Enriquez; and when the two were confronted, he assailed the ex-page with such a torrent of invective as absolutely struck him dumb. Threaten, cajole, or torture as they would, they could get nothing out of this faithful man, and so they were again at a stand-still. But neither Philip nor his creatures would accept defeat; and since they could not obtain the requisite testimony by other means, it was determined to extract it by fraud or force from Perez himself. And fraud, as the more congenial engine, was the first to be employed. Accordingly the ever-ready confessor, Chaves, came forward and penned long letters to Perez, full of equivocation, casuistry, every kind of negative falsehood, and all base arguments, as inducements to confession. But Perez was too old a bird to be caught with chaff like that. So another and a deeper scheme was devised to train the unhappy statesman to his ruin. Meanwhile all honorable men revolted at these long and perfidious proceedings. They loved not Perez indeed, but, on the other hand, they hated the means that were being used for his destruction. So, having remonstrated in vain with the King, they put themselves in communication with the Escovedos, and soon induced these people to come to terms with the ex-secretary, the more easily as the former clearly saw that however the case went, it was not likely to benefit them. In consideration, then, of receiving 20,000 ducats they retired from the prosecution, October 2, 1589; and, so far as the principals were concerned, the proceedings were at an end. This event, however, did not influence Philip or his advisers for a moment. Still intent on tempting Perez to criminate himself, they drew up a document to the following effect: "That Antonio Perez acted by the will and consent of his Majesty in the murder of Juan Escovedo; that it was necessary that this consent should be declared and its causes explained *in order to aid the discharge of the prisoner*; and that his Majesty permitted Antonio Perez to declare and explain these things accordingly." This document, signed by the King, and fortified by all the arguments they could devise, was placed before Perez no less than seven different times in January and February, 1590. But he still refused to commit himself. Fraud had failed utterly, and now nothing remained but force. On the 22d of February, therefore, Perez was put to the torture, and that so mercilessly that it was evident they meant to rend him limb from limb should he still refuse to confess. At last, after unusual endurance, he consented to open his stubborn lips and acknowledge the murder; but to the last he represented the deed as a pure affair of state, and himself the docile instrument of the King.

The disgrace of Perez, his ruin, his imprisonment, and finally his torture, might all have been witnessed, not merely without sympathy but even with general approval, had they followed hard upon the heels of his crime. But thus studiously prolonged through half a generation, they begat a general revulsion of feeling which the last act brought to a climax. "What!" said the courtiers, "a noble, a minister of state, an intimate of the King's, tortured like a common thief! and wherefore?" Henceforth no one felt safe. And so boldly were the murmurs uttered that they were heard even from the pulpit of the royal chapel. Indeed from that 22d of February forward, Perez had no enemies in Spain but the King and a few of his Majesty's familiars. Under these circumstances it would have been imprudent to have hurried to the last act of the tragedy. Besides, Perez was prostrated with fever brought on by bodily and mental anguish: and partly in deference to public opinion, partly to preserve him for the gibbet, his wife and friends were allowed access to his cell. Hovering between life and death, as he seemed to be for weeks, the vigilance of his jailers relaxed, and on the night of the 20th of April he managed to escape, like the Earl of Nithsdale and Lavalette, in the dress of his wife. The devoted Gil de Meza was waiting close at hand with horses, and, mounting along with him, Perez never drew bridle until he reached Aragon, after a ride of thirty Spanish leagues. There, thanks to the peculiar laws of the country, he was safe. But he did not rely implicitly upon them, and took sanctuary at Calatayud, in the convent of St. Peter the Martyr. All rejoiced but the King, and he, for once in his life, was furious. He cast the whole of the Perez family into prison, not sparing even the infants, nor did they come out again for many a long year. He dispatched an order into Aragon commanding his officers to seize the fugitive alive or dead. And he hurried on the proceedings of the court at Madrid, which, in the astonishingly short period of three months, published its sentence, condemning Perez to be hanged, his head to be fixed on a spike, and his whole property to be confiscated.

Meanwhile a terrible drama was going on in Aragon. The officers of the King attempted to drag Perez from his asylum; and the officers of the kingdom—a very different body of men—roused by the indefatigable Gil de Meza, marched in hot haste from Saragossa to protect him. Backed by the people, who knew how to value their laws, the latter prevailed, and carrying Perez with them to the capital, immured him, as one charged with high crimes and misdemeanors, but really for his safety, in the public prison. There Philip commenced proceedings against him according to the forms of the country, charging him with murdering Escovedo, betraying state secrets, and breaking out of prison. But Philip soon became aware of two extremely disagreeable things: in the first place, that nobody could be condemned in Ar-

agon without a really fair trial, in open court, and before an independent tribunal; and in the second place, that Perez had withheld a number of terribly significant documents: consequently these charges were soon abandoned. But not so the trial. He was next arraigned for poisoning his squire and his astrologer; and when this charge broke down, as it did speedily for lack of evidence, he was immediately accused of malversation in his office, and application was made to have the trial transferred to the King's court. But Perez had no difficulty in proving that the law under which this application was made applied only to such officers as had been employed at the period of their offense in Aragon, and so this last attempt failed even more signally than the others. But one resort was now left to the vindictive King, and that was to bring Perez under the terrible jurisdiction of the Inquisition. Now Perez, like most men of the South, was accustomed to speak strongly under excitement, dealing with sacred things in a way that is common enough in Spain and Italy, but which bears to us Englishmen a most uncomfortable seeming of blasphemy. And selections from his conversation of this stamp were committed to writing, and transmitted to that master casuist, Chaves, who soon managed to distill from them the rankest heresy, after the form and manner following: Antonio Perez being requested not to speak ill of Don John of Austria, made this reply: "Since the King has accused me of betraying his secrets and garbling his letters, I must justify myself without reference to other people, and if God the Father obstructed me in my way I would cut off his nose." Remarks like this might have been heard a hundred times a day in Madrid, without exciting any sensation. But Chaves cared nothing for that; it was a part of his business to find heresy any where at a moment's notice, and it must be confessed that he was master of his craft. "This proposition," wrote he, "inasmuch as it says, If God the Father was a hindrance he would have his nose cut off, savors of the heresy of the Vaudois, who pretend that God is human and has corporeal members. Nor can it be urged in excuse that Christ has a body and members, since the question here is not concerning Christ, but the first person of the Holy Trinity." In this way Chaves, with the help of some reading, a great want of scruple, and a little ingenuity, soon made out Perez, as he would have made out any one else, a heretic of the very deepest dye. Fortified by this precious opinion the inquisitors of Saragossa decided that Perez should be committed to their private prison; but this was far more easily said than done. The Aragonese had little love for the Inquisition; they were jealous of their boasted *fueros* (laws), and at that particular juncture Perez was everywhere regarded as representing these *fueros* in all their power and purity. Besides, Perez had several old friends in Saragossa, and since his arrival he had made a good many new ones;

and these were always on the watch to rouse the mob on the first indication of treachery or violence on the part of the royal agents. Nor was their care at all superfluous; for Philip had many adroit agents in the city, notably the Marquis of Almenara. Indeed, from the moment Perez set foot in the kingdom the Marquis, as in duty bound, had been busy intriguing against him, and had managed at last to gain over some of the principal magistrates, at least so far as to agree that the fugitive should be handed over to the officers of the Inquisition. They would not, indeed, allow Perez to be spirited away at night, or without the forms of law. But they made the matter nearly as safe. The alguacils came before them at an unusually early hour, got possession of the prisoner, and were in the very act of carrying him off when they were noticed by three gentlemen devoted to Perez. These, however, were not prepared to stay them, and so in a very short time the much-hunted prisoner was secure in the strong fortress of the Aljaferia. The Inquisition had him fast, but it did not keep him long. Meantime Saragossa was all astir as it had not been for many a day before. "Contra fuero," "Liberty," "To the rescue"—well-known signals all of riot and rebellion—rang in every direction, and, with the loud clang of the tocsin, soon roused up the city and filled the market-place in front of the prison with a mighty mob. A few words from one of the adherents of Perez divided this mob into two. The one streamed rapidly out of the city toward the Aljaferia, and the other hurried off to the palace of the Marquis of Almenara, who was rightly credited with the mischief. The Marquis shut his gates, and well he might, for the crowd was about as ugly a one as ever threatened an unpopular gentleman. Great stones, sledge-hammers, and arquebus-shots were hurled in plenty at his doors; but these, constructed in the stormy days of the Beaumonts and Agramonts, resisted the onset well. The mob, however, got in at last by stratagem and seized their prey. With the view of saving his life—not worth many days' purchase just then—somebody proposed that he should be led to prison, and the multitude, as usual, agreed with the last speaker. But the leading rioters did not mean that he should escape, and before they had got a furlong on the way a terrible cry was raised and taken up by nearly every voice: "Body of God, kill him, kill him!" ("*Muera, cuerpo de Dios!*") And no sooner said than done: he was struck and trampled on in an instant, and would have been slain outright but for the gallant interference of a few gentlemen, who charged through the tumult and dragged the Marquis by main force from under the heels of his assailants, all battered and bloody, to die a fortnight after of his wounds. As in all similar cases, the taste of blood rendered the rioters altogether ungovernable. Fortunately for themselves Philip's creatures were soon close in hiding, and, having no one else upon whom to vent their wrath, the mob surrounded the palace

of justice, and, yelling, threatening, brandishing pike and arquebus, and frequently discharging shots in alarming proximity to the ears of those pale and learned pundits, they kept the magistrates in mortal terror for three or four long hours. As for the other division, it had failed to storm the Aljaferia. And there it remained, surging against the massy walls and yelling furiously. But, confident in their strong-hold, the inquisitors within paid them little attention. The leaders of the crowd, indeed, had sent for cart-loads of wood to burn down the gates, but before this expedient could be tried the prisoner was free. Messenger after messenger, each more pressing than the other, galloped from the city and besought his release as the only means of averting a general massacre. And the inquisitors, unwilling to make themselves responsible for such a catastrophe, at last, but very reluctantly and with many anathemas, consented. Perez was borne back to the city in triumph, and deposited in his old quarters, and the mob dispersed without doing further mischief. The magisterial costume, however, stood in sad need of repairs after that day's work.

Philip never did any thing in a hurry, and besides, he had just then quite enough upon his hands—including three great wars, half a dozen little ones, and several rebellions. Neither would it have been wise to have thrown such a people as the Aragonese into the hands of Henry IV., as he might have done very easily had he ventured on strong measures while their blood was up. For he knew right well that Perez—this man whom he himself had rendered so desperate and dangerous—had formed a large party among the younger nobles; that he was plotting to sever Aragon from the Spanish crown—as a republic, a kingdom, any thing so that it should no longer obey the rule of the hated Philip; and that he had already begun to take measures for securing such support as France could give. He resolved, therefore, to compromise matters, and the Aragonese were disposed to meet him at least half-way. The wiser among them were alarmed by the projects of Perez; they knew that during three long, and so far constitutional reigns, the people had lost their warlike habits; and they were perfectly aware of the overwhelming force which Philip could direct against them. But though inclined to overlook the riot, the latter was now more than ever determined to get Perez into his hands, or what was much the same thing, into the claws of the Inquisition. And the Aragonian lawyers, eager to conciliate the monarch, soon found out a way of evading the *fueros*. In vain Perez scattered inflammatory pamphlets and broadsheets by thousands among the people, for he was a ready and trenchant writer; in vain he protested against the legal decision, and appealed to the generous feelings of the people. Fierce feelings had by this time cooled down, and while many of his own adherents fell away altogether, and more became lukewarm, a strong party among the upper

classes declared dead against him. So, paying little attention to his petitions and his pamphlets, the authorities went on with their preparations for transferring him quietly to the Inquisition. Hopeless of all other means, Perez then attempted to break out of prison. He procured a file and worked for three nights at the grating of his cell; but he was betrayed in the very moment of success, and removed to a stronger dungeon. Then, at last, his hitherto irrepressible spirit sank, and for the next few days he sat cowering in a corner, begirt by threatening phantoms. His surrender was fixed for the 24th of September, 1591, and on the 20th one of the inquisitors wrote, exulting, "that there was no longer any danger to be dreaded, since the nobles were mostly gained and the common people would be too busy with the vintage to interfere." At eleven o'clock on the day appointed the authorities, attended by a troop of arquebusiers and the governor at the head of his guards, set out for the prison. At the palace of the viceroy they were joined by a great many lords and gentlemen, with their vassals at their backs, all completely armed. On they went to the market-place, which, as well as the principal streets, had been lined with troops ever since daybreak. As yet all had gone well; the spectators looked calmly on, and neither sign nor sound betokened an outbreak. Perez was being fettered previous to his removal to the carriage that was to carry him off, and the authorities were in the act of congratulating one another on their easy success, when a roar as of many waters burst upon their ears. It grew louder and nearer, and in a twinkling the troops that had guarded the streets were hurled into the square, followed close by a furious mob in full rebellion. The indefatigable Gil de Meza and a few more steady friends were at its head. Without a moment's hesitation they charged the squadrons drawn up before the prison door, and these, Aragonese all, with little heart for the business in hand, took to their heels. Noble and vassal followed their excellent example, some flying through the narrow streets, some over the house-tops, and in ten minutes more Perez was on horseback, riding at top speed for the Pyrenees. He made no attempt, however, to cross, for this last event had given new life to his dark schemes, and so in a day or two he went back to hiding in Saragossa.

The last act of the tragedy began. The authorities hastened to exculpate themselves, enlarging on their devotion to the royal cause and on the risks they had encountered. Philip listened quietly to these excuses. A deputation came to sue for a pardon. He received it without anger and dismissed it without a threat. But he gathered rapidly a powerful force on the frontiers of Aragon, under the command of a thoroughly trusty chief, Don Alonzo de Vargas. Much alarmed, the Cortes met in haste, and if words could avail to avert the perils that threatened, Aragon would have been

safe, for, so far as words could go, the Cortes took every possible precaution. They remonstrated with and threatened the King; preached union and patriotism to the people; and condemned Vargas and his men to death should they dare to enter the kingdom. Philip did not attach much value to all this bluster. But he dissembled and prevaricated, as usual, to the last. The army, he said, was intended for France; their privileges ran no risk; he always meant to maintain their *fueros* strictly inviolate, and so forth. But still the troops marched on. Perez, though in hiding, was not idle, and the Aragonese were not all demented: so the irresolute legislature was at last induced to take some positive measures for defense. But these were precisely such as might have been expected. As Vargas approached Saragossa a small and untrained force under timorous chiefs marched out with faltering steps and slow to oppose him; but as soon as this precious band came in sight of the royal army the captains turned their backs and ran away without ceremony, and as a matter of course the rank and file dispersed in disorder. Vargas occupied the city without opposition on the 12th of November, and Perez, flying over the Pyrenees this time, reached Bearn the same day in company with all those who were not stricken with judicial blindness.

For more than a month every thing apparently went on smoothly. Negotiators passed to and fro, the Aragonese addressing and Philip replying after the old fashion. Meanwhile, not a single arrest was made, though the city was occupied by 15,000 veterans. At last the pent-up torrent of vengeance was let loose. On the 18th of December Don Gomez Vasques, the Royal Commissioner, and his worthy coadjutor Dr. Lanzi, the Jeffries of Aragon, reached Saragossa, and before the day was over every prison in the place was filled to overflowing. And they were emptied just as fast. The commander of the army that did not fight was the first to die, being beheaded without trial within six hours of his arrest, and for days the headsman's axe was never for an instant at rest. Every one, high or low, who could by any quibble be brought within his reach, Lanzi sent to death; the very executioner was hung by his assistant. Royal vengeance was sated at last. And then that of the Inquisition had its turn. But so many of its destined victims had already fallen, that with all their industry its emissaries could condemn no more than a paltry group numbering seventy-nine.

As for the *fueros*, we hear of them no more; they were blotted out with blood. And Antonio Perez? Distrusted wherever he went, pining for his family, loathing exile, hankering to the last after power and always disappointed, never out of penury, sometimes in absolute want, he wandered restlessly to and fro on the face of the earth for another twenty years, dying at last, an utterly broken man, in the arms of the faithful Gil de Meza.

MY ENEMY'S DAUGHTER.

CHAPTER I.

RETROSPECT; AND MIST.

IT is a wet Sunday evening in the leaden heart of London. I am now in the Bloomsbury region; and perhaps I need hardly say that nothing on earth could be more dull, dingy, and unpicturesque in itself than the prospect from my windows. Yet just now, in the deepening gloom of a rainy dusk, I seem to look on something not unlike one of the most picturesque and romantic scenes whereon my eyes have ever rested. "Ich weiss nicht was soll es bedeuten;" but the ridges of the houses opposite begin to show through the steaming mist fantastically like the outlines of the hills I used to see every day years ago, and the broad blank lying between me and over the way may easily enough seem filled by the stretch of bay I have watched when it lay wild and drear on the wet evenings of late autumn like this. The kindly, loving, artistic fog and rain, which now hide all but the faint and softened outlines of our street, have done this for me; and lo! in Bloomsbury I am looking upon sea and hill once more. The very sounds of London city-life come to help out the illusion. That cry of the oysterman below is a good deal more like the scream of some sea-bird than most theatrical imitations are like the reality. The church-bells clinking and tolling for evening service are to me now the bell of the church to which I used to be conducted when a boy on Sundays, and with which so many of the associations of my after-life inevitably connect themselves. It used to be a dreadful ceremonial, that service, to us boys, on the fine Sundays of summer. It was bad enough in winter; but in summer it became unspeakably more torturing. There was a window in the church close to where we used to sit—poor little weary, yawning martyrs—and the branches of an elm flapped unceasingly on the panes. Tantalus-torture was it to watch the tender, lucent leaves, free in the glorious air of May or June, as they flickered across the window, and seemed to whisper of the blue sky and the shingly strand and the waves of transparent emerald which they could see and we could not; while the organ pealed and the clergyman preached the long sermon to which we never listened. I do not know how it is, that when I thus sit alone of nights and do not feel inclined to read, or steadily to go to work at something, every object I see, flame, cloud, or even chimney-pot, reminds me in an indescribable, irresistible way, of some object belonging to the dear, dull little sea-port town where I, Emanuel Temple Banks, was born some five-and-thirty years ago.

I have now written my full name, but it is long since I have been known otherwise than as Emanuel Temple. I pruned my name down to its present brevity for reasons which shall be

explained in due time. I was called "Emanuel Temple" because my mother had a proper womanly objection to commonplace or vulgar names, and since we could call ourselves nothing better than Banks, resolved that we should at least have euphonious and elegant Christian names. Therefore, instead of becoming, as was suggested, John Banks and Peter Banks, my brother and I became Emanuel Temple Banks and Theodore Eustace Banks respectively. I scarcely know by what process Theodore Eustace and myself were brought up. We were the only children—I the elder by a year—and my father died when I was six years old. He had owned fishing-boats, and was doing well, until, at the instigation of my mother, he unfortunately took to immature building speculations, and failed accordingly, fishing-boats and all going down in the land-wreck. Indeed, my poor father did not remain long after the ruin of his venture, and my mother had to live by making gloves and trying to let lodgings. She had been a genteel woman of her class at one time; and being engaged in one of the few pretentious millinery shops in our little town, was regarded by her friends as having made quite a sort of *mésalliance* when she married my father, who was then only a good-looking young boat-builder, with a fine voice for singing. She was very sentimental then, was poor mother—so she has often told me—and those were the days when the heart of sentimental womanhood was divided between the *Corsair* and the *Lady of the Lake*. My mother loved both, but leaned to the *Corsair*; and found a resemblance between that hero and my father. To her latest days she was fond of repeating whole strings of "My own Medora," and Ellen and James Fitzjames—and I doubt much whether *Locksley Hall* and *Maud* are often recited and raved about and glorified in the shops of provincial milliners just now. Poetry and romance seem to have taken a terrible grip of the female heart at that time, and to have released the squeeze in our days.

Besides being romantic, my mother was likewise religious—a combination which also does not seem to flourish in our time. Heaven only knows how painfully she labored and strove to give and get us some education in religion and poetry. She loved her sons dearly, weakly, and her most passionate prayer of nights was that they might never, never leave her. The dearest wish and ambition of her heart would have been that one of the two might become a gentle clergyman, and the other, whatever his ordinary pursuits, a church-warden. If she had lived until now, oh! what a Ritualist she would have been! Her prayers for the future of her sons were not even half granted. One of the sons went, very young, to America, and became a Rationalist. The other came up to London and turned opera-singer.

As soon as I could write a decent hand some good-natured person got me a situation in the office of an attorney and land-agent. I began as the youngest and lowest of clerks—a sort of cross between a messenger and a scrivener's apprentice—never, of course, intended to develop into that pretentious grub the articulated clerk, who in his time develops into the attorney. I had five shillings a week to begin with, and I think the head clerk had a hundred and fifty pounds a year. Perhaps, but for subsequent events, I might have worked up to hold that position, and receive that emolument, in my turn. Indeed, I mounted very steadily up to thirty shillings a week, but there I stopped and got off the ladder. Before I had attained that eminence, however, my brother, who had tried one or two situations unsuccessfully, and was always alarming my mother with his longing and projects for going to sea, compromised matters by resolving to seek his fortune in America. My mother had to consent at last—indeed, hard times allowed her no choice—and some poor outfit was scraped together. It was arranged that I must stay at home and work for mother until her sons should become wealthy men, when we were to live in one country and one home, and she was to keep house for both. We had much crying and feeble keeping-up of each other's spirits, and we parted full of grief, but not without hope. Theodore Eustace took with him the latch-key of our door, with which he used to let himself in of nights, promising himself and us that he would return before long, laden, doubtless, with wealth, arrive unexpectedly, and opening the door softly, steal in upon my mother and me as we sat some evening by the fire and talked of him.

He wrote to us when he got a situation in a dry-goods store, Broadway, New York, and very soon after, when he lost it; when he went out next and became successively a hawker, a railway-clerk, a photographer, an electro-biologist, a newspaper correspondent, and a farmer. In each successive calling he was most positively to succeed, and to make up for all the time—never very much, that was one comfort—which he had lost in the vocation just abandoned. He never remitted any thing except a sketch of a forest clearing, and a dried mosquito as a specimen of the animal life of the New World. I think my mother placed the mosquito's corpse tenderly in her bosom. He has sown all his wild oats long since. He was lately married for the third time, and I believe got money, or property of some sort, with each of the wives. He was just the sort of bright, exuberant, reckless, blundering, soft-hearted fellow whom a certain kind of women, and all dogs, and all animals of tender natures indeed, instinctively take to. He has many children, and is well-to-do now and steady. He still writes, although at long intervals. He says he has the latch-key still, which I doubt—Theodore Eustace was seldom very literal in his statements. But even if he has, it will never open the door for which he

meant to use it. Were he to return to our old street, so sunny and pleasant in summer, with its glimpse of the sea through every lane, he would find no creature there whom once he knew; and the place itself would know him no more. The little row of houses in which we lived has been pulled down long since to make way for more pretentious habitations—marine residences, semi-detached villas, sea-side boarding-houses, and the like. In my own season of success I often contemplated a tour through America as a "star." I thought of setting New York wild with admiration, filling my brother's heart with ecstasy, and cramming his house with presents. Something, however, always intervened to postpone the journey, and before I had finally made up my mind the best of my voice had gone, and my reputation was pulled down, like our old house, to make way for a new erection upon a more secure basis.

From my father I had inherited a good voice, *et præterea nil*. There are families through which a good voice appears to move in order of primogeniture; and I have observed that a fine tenor, thus bequeathed, rarely seems an inheritance which brings much worldly providence or prosperity. My father was always under the impression that he only wanted a lucky chance to have made him another Incledon, who was of course his hero, and whose rolling, quavering, florid style, unknown to this generation, he did his best to imitate. I can not help thinking the fishing-boats and the building speculations would have fared a good deal better if my father had had no more voice than a grasshopper, and had therefore found no admiring idlers to persuade him that he was another Incledon. However, it is quite certain that at an early age my voice became remarkable; and some of my father's whilom admiring idlers did generously take me in hand and provide me with not very inadequate training. My mother's dread of my developing power was turned into confidence and pride when I began to sing in the choir of our church on Sundays. I paused not in my progress until I had actually been promoted to the post of *primo tenore* there, at a remuneration of twenty pounds a year.

This seemed to us what sea-coast people call "the third wave" of promise, on which we were to be safely lifted into prosperity. But it came a little too late. My mother's life had long been on the wane. Grief, anxiety, poverty, late long sewing, had been doing for years their combined best with her, and at last she utterly broke down. I was nineteen-years old when I found myself watching, in the gray of a cold spring morning, with our clergyman and one or two kindly old women, by the side of the bed in which my mother recovered at last from all sickness and all sorrow. A pale, wan ray of the rising sun gleamed upon the cold face whereon so little of the sunshine of happiness had rested. A quaint little burial-ground clings and straggles along the side of one of the hills which rises over the bay. You may count ev-

ery tombstone and grave-hillock from the deck of any of the fishing-boats that toss in the surf beneath. Many a monument is erected there by the widow of some lost skipper or mate in memory of the husband whose bones have been tossed ashore on some Pacific island, or have been gnawed and mumbled by the Arctic bear. There we laid my mother, disturbing for the purpose some of the ashes which had been confined when my father was buried. I came away from the grave alone. The scene I saw as I turned away is before me now. I see it clearly—as clearly as then. The hills—we used to think them mountains—that embraced the long, narrow stretch of bay in their arms; the far line of the horizon; the straggling white town just under my feet; the strand whereon lay the hauled-up fishing-boats; the merchant-brigs and the coal-schooners anchored; the one war-sloop; the tree-tufted summit of one hill, conspicuous among its bare and bald companions; and over all the gray sky breaking faintly into sunlight—as over my own life the mist of sadness and loneliness just breaking a little with the purple light of youth.

I am not going to write of my grief and loneliness. I suffered bitterly and heavily, but the passing away of a year or so softened the grief into a gentle memory. At twenty I was full of hope and spirits again, secretly perhaps even proud of my desolate independence, and believing myself a personage of rare endowments, destined to some special and wonderful career. But because of my mother's death, and other and earlier associations too, the gray days of spring have always worn for me the most melancholy and dispiriting aspect. I see the early spring, not in budding brightness, and beauty, and hope, as poetical people tell me they see it, but dim, dreary, boding, suggestive of loneliness, associated with partings, graves, and death.

CHAPTER II.

CHRISTINA BRAUN.

I WAS, then, an attorney's clerk all the weekdays up to five or six o'clock, and a singer of sacred music every Sunday—a singer in that same little church the sermons and the bough-shaded windows of which used to distract me so when a boy.

I was growing a sort of little celebrity in our small town because of my voice and my supposed musical genius. I mean that I was getting to be known among all that small middle class whose highest reach toward society was the patronage of the clergyman's wife or the attorney and his family. Our town was divided morally, and indeed one might say geographically, into three sections. There were "the townspeople"—ourselves—who lived in the streets on what I may call the middle terrace of the ascent on which chance had placed us. We were all traders, shop-keepers, clerks, mas-

ter carpenters, a few engineers, two or three teachers of French and music, a good many principals of small English schools, a good many civil servants of the unpretending class. Beneath us stretched, reaching to the water's edge, and straggling away rather toward the rising sun, a lower plateau of population, consisting of public house keepers, rope-makers, block-makers, fishermen, sailors, and nondescript poor people of all kinds—poor people avowing and indeed going in for pauperism. Above us, and stretching away westward, were the villas and mansions of the gentry, the swells who only came into the town to buy at the shops, or to reach the sea. Of these it is enough to say—for this story has little to do with the aristocracy of the earth—that a nobleman who owned nearly all the country round and half the town was the apex of the pyramid, and the base was formed by the fashionable doctor of our district, the attorney in whose office I worked, two or three clergymen, the collectors of customs and excise, and a few retired naval officers. Now these three sections were each a world to itself. Nobody on the higher plateau knew any thing about us except as people who made things or had things to sell; we knew little of the lower plateau except in an equally general sort of way. Therefore when I say that I was becoming a sort of small celebrity, I mean of course only in my own middle sphere. The gentlemen and ladies above knew and cared just as much about me and my like as the tarry lads of the lower town did, or indeed as the crabs and star-fish on the beach might have done. If any grand personage or grand personage's wife had been attracted by my singing at church some day, and had been good enough to ask the clergyman who the singer was, the answer would have been, "Only a young man from the town," and that would have settled the matter. That was enough to know; that was all any body could want to know.

But I was getting to be talked about among people of my own world. I used to be invited out to small evening parties, where, lonely as I was—and at this period having reached the cynical stage, and being professedly scornful of earth's joys—I went very delightedly. I bought kid gloves, and wore my collar turned down. Those were not days when even a musical aspirant could venture upon a mustache in a town like ours, or I doubt not that I would have wrestled with Nature to extract by unknown philters and essences the precious ornament from her gift. Of course I was a good deal vain of my voice and my personal appearance. Kind Heaven, which had taken from me so much that was dear, had left me youth's delicious consolation—vanity. Had I not been such a self-conceited ass just then, I must needs have been very unhappy.

We used to practice—we did not call it "rehearsing"—three or four times a week in the choir of the church, the organist being intrusted

with the keys for the purpose. "We" were generally four. First was Miss Griffin, the organist, who could sometimes pipe a flat and feeble note of her own. Miss Griffin was a spinster fast falling into years—nay, it seemed to me then quite stricken in years, although I know now that she could not have been far past thirty. But she was very old-maidenish in appearance, with dull hair done into old-fashioned spiral ringlets; a sharp-nosed and perhaps frosty, but withal very kindly, little dowdy. Next in years—but with such an interval!—came our bass, a stout young fellow, son of a master carpenter. Then came the tenor, Emanuel Temple Banks; and last came the soprano, a girl of German parentage and birth, Christina Braun.

Christina, I should think, was then just a little younger than myself. She was the daughter of a German toy-maker, who—half mechanist, half artist, whole dreamer—had striven to make and sell playthings of a new kind, with a scientific, philosophical, and moral purpose about them, for the æsthetical entertainment and culture of children. The philosophical toy-maker did not succeed in winning much of the sympathy of our town for his refined and lofty purpose. He failed altogether, became bankrupt, gave up all struggle thenceforward, and resigned the conduct of existence into the hands of his daughter, who sang in churches and chapels and elsewhere for the means of living.

I used to think Christina a wonderful young person because she had been born in Germany and could speak German. She had at this time been many years in England, and must have been quite a child when she left her native country. We used to pronounce her name as if it were similar in sound with the name of the familiar substance sold in pork-shops. Being at this time of my life still rather shy so far as girls were concerned, I knew little or nothing of Miss Braun for months and months, but that she had a strong voice and fine eyes, and that she had a happy capacity for talking freely enough when any one chose to speak, and remaining contentedly silent when no one did so choose. She was a remarkable girl to look at. She had a great fleece of fair hair thrown back off her forehead, and only kept up in some way or other from falling about her shoulders and waist, which, indeed, it did more than once in the choir, to the great annoyance and scandal of Miss Griffin, who, I think, by the look that came into her eyes, always regarded this little mischance as a pure piece of coquetry. Christina had beautiful, deep-shining eyes, dark gray in color—much darker, indeed, than the tinge of her hair would have led one to expect. She had a bright complexion and a rather large mouth, from which issued when she sang a strange and almost startling voice: we used to consider it somewhat coarse. I don't think I thought her a handsome girl; I rather fancy she seemed to me all hair and eyes. But I have hardly any distinct impression of our earliest meetings, and I positively can not by any

effort of memory recall my first sight of one who afterward exercised such an influence over my life, and whom I once so deeply loved. There is no mystery about the story I purpose to tell, and I make known at once that every thing in my existence which is worth recording is in some way associated with the memory of Christina Braun.

We four, then—Miss Griffin, our basso, Christina, and I—used to foregather in the church choir of evenings; and after having practiced as we considered long enough, would very often conclude by going to Miss Griffin's to tea, and there compensating ourselves with the newest operatic pieces for our enforced devotion to sacred music. Miss Griffin and her mamma taught music, and some of their pupils used to help us out occasionally with duets, trios, choruses, and the like. I remember nothing particular about the mamma, except that she was an odd, vivacious, flighty little old personage, who could speak French. I don't know why she considered it proper always to address Christina Braun in French, or why she assumed that a German girl must necessarily be able to understand that language. But she always did so. "*Eh bien, Christina, chère petite,*" was her usual greeting; and during the course of any conversation, if she had occasion to address a word to the tall and plump *chère petite*, Mrs. Griffin always lapsed into French, and Christina, with perfect docility and gravity, as regularly replied in the same tongue, which she seemed to speak with fluency.

Sometimes I was the only gentleman among all these ladies; and this, perhaps, may partly account for the slight attention I used to bestow upon Christina Braun. Our bass singer did not always come with us to Miss Griffin's, and even when he did he was not much of a squire of dames or demoiselles. On entering the little drawing-room—first-floor front, over a bonnet-shop—he usually laid his hat somewhere on the ground, sat on the edge of a chair, swallowed his tea, bending far over the table for the purpose, and generally said nothing more than "Yes, miss," or "No, miss," in answer to any question addressed to him. He was a fine-looking young fellow, tall, robust, manly; and, although scarcely older than myself, he had his face already fringed with a luxuriant, soft, black beard, the possession of which I secretly envied him. Silent as he was in general, I could notice that when he got side by side with Christina Braun he could talk well enough to her; and almost always when he came to Miss Griffin's I observed that he took charge of Christina to see her to her home on our early breaking up. I think I was somewhat amused at the time by observing this fact and founding conjectures on it. The polite reader need hardly be told that a much loftier position in society is asserted by a lawyer's clerk than could possibly be claimed even by the most presumptuous carpenter; and I therefore felt myself warranted in taking quite a lordly and patronizing interest in the love-making of my humble acquaintance; for I felt

convinced that our stout basso was in love, and I envied him that privilege. Yes, more even than his beard did I envy him his state of mind and heart. At this season of my life I had begun to long to fall in love. I envied every young man whom I saw on Sunday evening with some girl hanging on his arm or walking with downcast eyes by his side. I trolled out to myself of nights the words of "Sally in our Alley;" and I envied the hero of the ballad, for all his harsh master and his jeering neighbors. If some woman would only love me, walk thus of Sundays with me, lean on my arm, blush when I spoke! Nay, if some woman would even reject my love, blight my young hopes, crush me in the bud, reduce me to despair! At the stage of mental and moral development I had then reached despair and ruin seemed on the whole a finer and more enviable destiny than success and joy. To live in love would be happy; but to die for love would be the lordliest fate.

My life seemed safe enough so far as love's despair could threaten it. I had no one to love. I could not, no, I could not love Miss Griffin, strove I never so wildly. I feel well assured she would have accepted gladly the poorest tribute of homage, even if it lasted but a few short weeks, to cheat her into the belief that she had not quite passed out of date, and could yet move at least one heart. All our literature and our moral lessons now ring the changes upon the nobleness of self-sacrifice. What finer self-sacrifice could any one make than to persuade a kind and true-hearted old maid of a certain age that he had really fallen in love with her, and brighten her life by giving up his own to sustain the beatifying delusion? A more pious fraud could not be accomplished than to practice such a generous piece of cheating on such a woman as poor, elderly, warm-hearted, loving, unloved Miss Griffin. I commend the idea to some novelist. Why not make a story out of it? But I own that, even had the idea occurred to me at the right time, I should not have dreamed of putting it into practice; and even if I had dreamed of it, I should never have done it.

There was none of Miss Griffin's pupils who could have served as an object for my adoration. They were all in trowsers and short frocks; and at that time of my life girls in trowsers were my abhorrence.

When haply my thoughts sometimes turned to Christina Braun, she seemed too calm and silent, and too fond of music. In those days I did not much care for any singing but my own. There are only too many people who, if they would but confess it, are in just the same state of mind—people who have, of course, none of the true artist's love of music, as, honestly, I never had. People like us in that way often delight in our own singing, if we can sing, not out of mere self-conceit and egotism, but because to us that music which our own voices give out is the fullest expression, the strongest invoca-

tion, of feeling and association. Many tenors of the richest tone, and sopranos thrilling up to the ceiling, have I heard without feeling one throb of the emotion which used to swell within me long ago as I sang old church-hymns or new sentimental ballads of love, longing, and despair for my own delight, and quite alone. But it was easy enough even for me then to see that Christina Braun loved music for its own sake, and, like most persons who do thus appreciate and love it, she seemed, to ordinary observers, to care about little else.

Apart from all this, however, I had arranged in my own mind that Christina Braun and the carpenter's son were what we used to call "sweet-hearts."

After some time I began to observe that Christina ceased to make one in our mild gatherings in Miss Griffin's drawing-room. Indeed the latter lady and I sometimes had tea *tête-à-tête*—or nearly so, her mother only flitting lightly in and out—and it was dull entertainment for both parties. I would gladly have evaded all such *soirées*, but that I was ashamed or unwilling to desert poor Miss Griffin, and perhaps did not always know what to do with myself or where else to go. The time for sitting alone in contented gloom, and smoking a pipe long evenings through, had not nearly come as yet.

Sometimes a fearful thought crossed my mind. Could it be possible that Christina imagined Miss Griffin and I were lovers, and liked to be left alone? I tried to shut out this alarming idea. I vowed not to go any more to a *tête-à-tête* tea; I even attempted awkwardly to pay a mild attention to Christina herself in the hope of thus repelling suspicion. I invited her to come with me to a concert somewhere—we had not the rules of Belgravia or even Bloomsbury to govern our social relationships there—but Christina refused in so decided a tone as to make my doubts a dead certainty. I began to feel convinced that I had guessed but too well. Christina must suppose me deeply in love with Miss Griffin—perhaps solemnly engaged to her—to Miss Griffin, whose age was so undeniable, and who carried the stigma of old maid branded on her very skirts and ankles!

One evening we three—we three!—walked home together, as usual, but were unusually dull and silent. Christina declined entering when we arrived at Miss Griffin's door—this time indeed the invitation being very faintly pressed. I was plucking up heart of grace to make my excuses too, when Miss Griffin cut me short by a look of portentous mystery, and the words, "You really must come in, Mr. Banks; I want to speak to you"—words which, however, were not spoken until just after Christina had nodded her head to us and gone on her way.

I followed Miss Griffin up stairs in perhaps something like an agitated condition of mind. I did not quite know whether under certain circumstances strong-minded ladies not young did not think it allowable to interrogate young men touching the nature of their intentions.

Miss Griffin was any thing but a strong-minded woman, and just now did not seem to have been thinking about me at all. She burst out with her communication all at once.

"Oh, Mr. Banks, I must send Christina Braun" (pronounced, as I have said before, "Brawn") "out of the choir. She must not sing with us any more."

Did I feel relieved to hear that the question was of Christina's rejection, and not of my acceptance? Perhaps so. But I certainly felt much surprised.

"What on earth has she been doing?"

"I am so sorry to hear it; indeed, it's quite put me out; you can't think how much."

"Yes; but what is it?"

"I am afraid she is not a good girl. She sings every night at a singing-house!"

"At a singing-house?"

"Yes; a common low singing-house, Mr. Banks—and I don't see what there is to laugh at—a horrid place, where soldiers and sailors and I don't know what—all sorts of low people, in fact—go in and drink and listen to her. It's been all found out; and Mr. Thirlwall (the clergyman) says he can't have a girl in the choir who sings for soldiers and sailors in a common drinking-house. I don't know what to do about it; and I declare it has put me in such a way, you can't think. Perhaps she is not so bad; and then it's all very well for Mr. Thirlwall to talk, but, my goodness! who is to fill her place, with such a voice as she has, and such an ear for music? But I can't keep her unless she promises never to go there any more."

"Then you have not spoken to her yet about it?"

"No, not yet. I thought I would ask you something about it first. I thought perhaps you could advise me; you, who are a man of business and know something about the world."

"Well, I am sure I don't see much harm in the whole affair, and I think Mr. Thirlwall is a venerable goose. Miss Braun seems a very quiet, respectable sort of girl" (I thought of the carpenter's love-suit, and felt quite a lordly spirit of patronizing pity), "and then what can she do if she's very poor and has no other way of living? The reverend man does not expect her to live on fifteen pounds a year, paid in rather irregular installments?"

"Yes, that is all quite true; and indeed it is just what I said myself to Mr. Thirlwall—only of course I put it more politely—and *he* says it is true too; for he's a just man, Mr. Banks, though you always seem inclined to laugh at him. But what can he do? He has been preaching from the pulpit time after time against those very singing-houses, and how can he have people looking up from their seats in the church, and perhaps some of them recognizing a singer from such a place among the faces in our choir? You know yourself that would never do."

It occurred to me at the moment that perhaps the worshiper who visited the wicked

singing-house, and was thereby enabled to recognize one of its performers, would have scarcely a clear right to object to the chorister who sang there. But I saw no use in urging this point to a logical conclusion, and merely suggested that perhaps the place was not so dreadfully bad after all.

"That is what I was just thinking of. I should really like to know something of it. It would never do to give up the poor girl without knowing whether there is any harm in what she is doing. I actually thought of going there myself; I did, really."

"Oh, you can't go, that is quite out of the question; but if you like I'll go, and bring you a faithful report."

"That is what I should like of all things. I can depend upon your judgment. And at all events one ought to know something about the right and wrong of the affair. I believe in law, Mr. Banks, a person is innocent until you can prove her guilty."

"That is considered one of the great principles of British law, Miss Griffin."

"Yes; and I think it's very proper too; and I only wish people would do the same in every thing else as well as law."

It was settled, then, that I was to visit and report on the obnoxious singing-place. I had heard of it once or twice before; and of sundry of its predecessors which had all in succession withered and disappeared. Up to this time I had never been out of my native town, and of course had never been in a singing-saloon. Our town was an unspeakably dull spot. At this time it was not even visited by a railway, and it depended for its sole excitement upon the changing of a regiment in the barracks or the occasional visit of a war-frigate to the harbor. Owing to the social and topographical peculiarities I have already mentioned which divided us, like all Gaul in Cæsar's day, into three parts, any sort of amusement which might be devised for the gratification of the floating population in the lower plateau, was not likely to excite either interest or alarm in the higher regions. Our middle class were little given to revelry. Every window in their quarter was duly shuttered and barred by eleven o'clock, and their warmest stimulant was a controversial sermon. But of late there had unquestionably been some stir created by the successful establishment, after many failures, of a famous singing-saloon, modeled after the fashion of metropolitan dissipation. Not a noisy, harmless "free-and-easy," where Snug the joiner and Quince the carpenter might smoke their pipes and be knocked down in turn for their favorite and special song; where Bottom the weaver might deliver his choicest sentiment, and Starveling the tailor might have the formal permission of his wife to remain half an hour later on the Saturday night. This was not the sort of thing that now invaded us. It was a place where professional singers—women too, look you, nearly as bad as dancers, not to say

actresses—came and sat on a platform and sang for money. This was then a dreadful innovation. The singing-saloon itself is now well-nigh obsolete. The rising generation hardly knows what it was like. The music-hall with its plate-glass, its paintings, its private boxes, its concerted music, and its Champagne, has banished it; and the audacious novelty of my young days is a forgotten, foggy old institution now. But this particular place of which I speak was really creating something like a stir among our quiet and respectable burgesses just then. It was established immediately inside the frontier line of our Alsatia; and it is certain that some of our fathers of families had been to visit it, and had talked with quite a dangerous slyness of its attractions, and had made up parties with some of their friends to go and see it again. All this created naturally a considerable fluttering of angry petticoats in domestic circles, and brought severe and direct condemnation from offended pulpits. And so I had heard of the place in question, and had even been making up my mind to visit it before chance sent me there as the special commissioner of Miss Griffin.

The following night I went alone, and had no difficulty in finding the place. Indeed, when you began to descend from the old square, which was the last strong-hold of respectability and middle class, down a steep street with steps breaking its precipitate fall, a street that was the main artery of the lower town, you came almost at once upon the obnoxious saloon. It was in a large public house, occupying a corner where a cross-street ran off, and showing, like Janus, a double front. The place looked cheery enough from the outside. The night was chill and wet; and the bright crimson curtains draping the windows of the upper room where the musical performances were going on, tempted one with visions of ineffable comfort and warmth out of the wintry plash and drizzle of the sodden streets. I went up stairs. There was no payment at the doors, the musical entertainment being supported in the recognized style by indirect taxation levied upon the "orders." I entered the Circean bower. It was but a small and poor imitation of a Strand or Covent Garden Cave of Harmony, but as it had looking-glasses, crimson curtains, velvet cushions, a platform with foot-lights, and an orchestra, it seemed splendid enough in my confused provincial eyes. I gave an order for something in a rather ineffectual attempt at a careless tone, and dropped into the first available seat. There was rather a numerous audience—including, however, only one or two sailors and no soldiers. Most of the company seemed to me to be smart young artisans, mingled with elderly tradesmen of the unpretentious class; and there were a few young assistants from shops, who looked quite swellish in their well-made clothes and gloves. No ladies were there; Miss Griffin would have presented herself in vain. Most of the company were smoking, by which I was

innocently surprised to find that the singers were not in the least disconcerted. Of the "audience" a very few were actually listening to the music; the greater number were chatting unconcernedly round their little tables; one or two were asleep. I had, however, listened with the gravest appearance of interest to a sentimental and a comic song before I came to myself sufficiently to observe even this much of the aspect of the place.

When I said there were no women present I meant, of course, among the audience. For when I began to look collectedly around me I saw that there were girls on the platform, and that among them was Christina Braun. She was dressed in white—poor white muslin only; but she seemed to my eyes to be wearing a magnificent costume. Her arms and shoulders were bare, and were both white and plump, and her fleece of light hair fell around her. She presently came on to sing, and she seemed to be a favorite, for she was welcomed by a burst of applause, and most of the company stopped their talk, while some demanded silence by tapping their pipe-bowls on the table. Christina sang in clear and strong tones some ballad—not at all a Circean strain, but some good moral-purpose song about universal brotherhood and being kind to our neighbors. She sang it with sweetness and force, but with hardly any indication of feeling, certainly with no gleam of emotion perceptible in her eyes. Being, however, vehemently encored, she chose, as seemed to be expected, a totally different kind of song. It was what we used to call a "nigger melody"—a sort of novelty then, with a refrain about courting down in Tennessee, or Alabama, or some other such place.

I scarcely knew what it was all about; but I soon knew that I had never heard such spirit, such archness, such wild wayward humor, such occasional ebullitions of tender thrilling emotion conveyed in song before. No, never! Night after night had I heard this girl sing her devotional hymns in the clearest tones, vacant of any emotion whatever; but now, as she sang some trumpery little serio-comic love-song, her dark gray eyes gleamed and filled with light; under her shadowy long lashes the eyes sometimes looked so dark and deep as to seem in startling contrast with her bright fair hair; her voice swelled, soared, sank, shaded itself away into an infinite variety of expression; she gave life and speech to the very rattle of her banjo; she made the ballad utter a thousand emotions which were no more in the words she sang than in the instrument she struck, or the smoky, beery crowd, whose glasses jingled with their noisy and honest acclamations. What a soul of feeling, what a capacity—deep, boundless, daring—a capacity for love and triumph, and passion and sorrow—spoke in the tones of that voice and the flash of that eye! For me, I felt partly as I used to feel when sitting alone and singing, only with how much of a difference! With what a change from dreamy, vague, and fluctu-

ating emotions, idly rolling in like the waves on the windless shore, and the warm, tumultuous, passionate rush of the new tide of love and youth and manhood breaking in upon my life at last! I began life, I began love, with the hearing of that song! I dare say it was poor, coarse, untutored singing; untrained, and even in some sense uncouth, it must have been; commonplace it certainly was not. I know that I heard the singer unnumbered times in the prime of her years and her triumph; and I do not believe I ever recognized her genius more clearly than when I heard her sing that poor little ballad in the public house of the old sea-port. My rapture must upon that occasion find some outlet, and I therefore made instant acquaintance with a dull and elderly man near me: he seemed to me, I don't know why, to look like a saddler.

"Splendid!" I exclaimed, addressing him.

"Yes, pretty tidy," rejoined the dull man; and he looked round for the waiter and knocked his empty glass against the table—a signal for a refilling.

"I know her," I added, confidentially.

"Know who?" asked the dull man.

"Her—the singer."

"Ah!" He did not seem to care whether I knew her or not.

"She's a foreigner," I added, especially proud of knowing a foreigner.

"Ah! I never liked the French—I don't believe in 'em. By what I can make out they ain't good for much."

"But she's not French—she's German."

"Don't like Germans, they're a dirty set. They eat candles, I'm told."

This irrelevant and detestable observation so utterly disgusted me that I withdrew at once from the conversation.

I should much have liked to wait for the close of the entertainment and to speak to Christina; but I feared she might suppose I had come as a spy or tell-tale, so I slunk very much indeed as if I were a spy or tell-tale from my seat, which was near the door, and went down stairs. I did not gain much by my caution and my flight, for, descending rapidly, I ran against some one coming as rapidly up, and I recognized my friend the basso, the bearded young carpenter. We saluted each other, but he did not seem particularly glad to see me, and he ran past without staying to speak a word. I wished I had not met him, for I feared that in the too-probable event of poor Christina's dismissal he might regard me and report me as a spy, and I had an instinctive knowledge that he had come to see her home; and I envied him—nay, already I almost hated him.

Drizzling and dismal as the black skies were, sloppy and slushy as the streets were, I did not hurry home. On the contrary, I turned deliberately away from home, and straggled, like the town, down hill to the water. From the door I had just quitted I could hear the creaking of the spars of ships that tossed and dragged at their

anchors, the whistling of the sullen wind through their cordage, the heavy surge of the waves along their sides. A few strides down an oozy lane and I could see the lights at mast-heads, and even discern through the mist and darkness the white tops of the rushing waves. I made my way, stumbling among upturned boats and anchors and chains, down to the very edge of the water. The town was not well-lighted any where; toward the harbor its darkness grew Cimmerian. The inhabitants had all that mysterious objection to seeing their seaward way at night which used to be so common a characteristic of people living in sea-port towns in the years when French treaties were not. Indeed, many of our people would have abolished moonlight if they could, although these very same persons were strangely given to lurking about the shore and staring seaward at extraordinary hours of the night. This night, however, no stealthy figure peered from the strand: I had it all to myself, and I exulted in being alone.

Born as I was within sound of the waves, it has always seemed to me that in any hour of deep emotion I ought to rush to the sea-side and make the noisy water my confidant. This night I felt that I must find the shore, and relieve my new-born passion by mingling its utterances with the roar of the waters. Alone on that strand what strange fooleries I enacted! I stamped up and down the shore, I sang wild snatches of Christina's song, I shouted mad fragments of incoherent melody and semi-articulate words of passion and love. I was mad, and I was happy; this at last was living! All the delight that an explorer may find when he first breaks into a new sea—that a Bedouin may feel when he first mounts an untamed horse—I felt, now that I knew myself to be tossing at last on the waves of passionate love.

Lucky for me that I was alone, and that the night was so dark. Any one seeing my gestures, hearing my cries, must have taken me for a lunatic. I waited on the strand until my emotions had worked off their first vehemence; perhaps I waited too until I thought the entertainment at the singing-saloon must be nearly over. Then I went back to the street whence I had come, and watched the people coming out. After the last of the audience had melted away came out a cluster of the performers; among them I could clearly enough distinguish the figure of Christina—I had keen eyes for her form now—and my friend the basso was escorting her home. A strange, fierce pang shot through me. I had learned to feel two new passions in a few short hours—love and jealousy.

CHAPTER III.

A SEA-FIGHT.

I DID not go near Miss Griffin next day. I postponed making any report of my previous night's visitation. What report could I make but that I had been present at a very dull and

harmless entertainment? unless I chose to add the truth—that I had come away madly in love with the eyes and the voice of a girl whom I had been in the habit of seeing three or four times a week for months and months, and about whom I never before cared a straw. Mine was certainly not love at first sight, but it had all the suddenness and unreasoning fierceness of that romantic form of the passion. I have not read in books much about such a love as mine, which neither flamed out at the first glimpse of the object, nor grew up with the gradual development of intimacy and appreciation. I was as one who walks in the sun of some tropical climate uninjured and unheeding for days, and whom suddenly, in some unexpected moment, a flash, sharp as the cleave of a sabre, strikes and cuts down. Yes, my love was like a sun-stroke. I do not know how to describe it better.

Of course I went again to the music-house; I went the next night. The company was of the same general character; the singers were the same. The moment I entered I saw that Christina's eyes turned on me, and I blushed like a great girl. Some male singer came on with his dreary comic song, and she disappeared from the platform. Had she gone for the night? What a cruel disappointment! I stared disconsolate and confounded into my beer-glass, and was positively pitying myself for my privation, when one of the waiters, who were perpetually buzzing about the tables to remind any laggard guests of the necessity of renewing their orders, came up to me, and leaning over my shoulder, said,

"Lady wants to speak to you, Sir."

I started.

"Lady!—what lady?"

"Profesh'nal lady, Sir. Behind the platform, Sir. This way, please."

I followed him. I was crimson all over, and did not venture to look up, fearing that the eyes of a whole curious company must be fixed on me. As a matter of fact, I don't suppose any body in the room took the slightest notice. I was trembling with anxiety, hope, fear, surprise, excitement of the most complicated kind. The waiter drew aside a curtain for me, and I entered a small sanded room, or rather a mere space, behind the platform; and I saw Christina there alone. She had her head turned away when I came in; at the sound of my entrance she looked quickly round, and there was an angry light in her deep gray eyes.

Her first words utterly abashed me.

"Why do you come here?" she said, in a voice purposely kept low, and with the foreign accent more strongly perceptible than usual, owing to the kind of excitement under which she spoke. "Why do you come here to watch me and tell bad of me? Have I ever done you any harm?"

"Oh, Christina—Miss Braun, I mean—how can you say such a thing?" and I broke down in mere stammering.

"Have you not come here to watch me—to spy on me?"

"No. I have not, indeed."

"It's a lie!" she exclaimed, so loudly that I involuntarily glanced in the direction of the audience, fearing the words must have been heard. "It's an untruth. I know you were sent here."

"I was not sent here. Miss Griffin asked me to come here; and—"

"And you came!"

She made a triumphant gesture expressive of conviction and scorn. I certainly felt not unlike a detected spy; and I looked, no doubt, very foolish.

"Yes, I came; but I did not come to—to find out any thing bad, or to do you harm. I came to do you good; and Miss Griffin only wanted to do you good."

"Thank you both." She laid a malicious emphasis on the word "both." "I am much obliged to you both. Heart-felt thanks to you both. But I don't want any one to try to do me good."

"I wished to be your friend."

"I have not many friends—I am poor and miserable; and I have an old man to support whom I love and whom I would die for; and you come and find out that I am trying to make a living, and without wrong to any one, or myself, or God, and you tell of me at the church. Go away; it is not like a man. It is not like an Englishman."

"But I swear to you, Miss Braun, that you are wrong and unjust. You don't know me, or you never would speak as you have done. I am utterly incapable of the wretched meanness you think me guilty of. I wish I could say all I feel, but I can't—I can't; and I dare say I look to you like a convicted spy, or an idiot, or something equally abominable."

"You came last night to see if I was here?"

"I did."

"So! You saw that I was here?"

"I did."

"Then was that not enough? Why did you come again to night?"

"I came to hear you sing! Heaven knows I came for that and nothing else. It—it delights me. I could not stay away. I will come again and again, unless you bid me not. But do not bid me not to come, for I would rather be dead than not hear you sing."

"Hush," she said, in a low and gentle tone, "they outside may hear us." As I found courage to look up, I saw that her lips were trembling and that her cheeks were crimsoned. Had my burst of sudden eloquence not been interrupted, it would infallibly have ended with a fervent declaration of love then and there. She imposed silence on me by a gesture which had, I thought, as much entreaty as command in it, and then said, "I must go; it is my time to sing. But I believe you; and I was wrong and angry. You don't know what it is to be a poor girl, trying to live honestly, and watched and

suspected. I beg you for pardon. Good-night."

She disappeared; and I heard her voice in a moment thrilling from the platform. I, too, came in front again, and found my way back to the seat I had left.

I would have sat the whole entertainment out, but that I hated the idea of meeting the young carpenter and seeing him give his arm to Christina. I waited and waited, every moment dreading to see him make his appearance. Often as I turned toward the platform, her eyes never met mine. At last I made up my mind and left the room. Luck was against me; at the door below I met my rival. This time he did not pass me with a salute. He looked fiercely at me, and his lips quivered with excitement.

"What d'ye come here for?" he asked.

"What's that to you?" was my school-boyish reply. I was not in years much beyond the school-boy age.

"It's this to me—look here, it's this: you come here to watch that girl, and spy upon her, and fetch and carry stories about her, to get her dismissed from the choir; I dare say that's why you come here."

"You are a liar!" was my fierce reply—"an impertinent liar!"

He turned pale; but not at all with fear.

"Do you mean to say," he asked, "that you've not been sent here as a spy on her?"

"I mean to say nothing to you, or any fellow like you, except just what I have said."

"Yes, you can talk in that way *here*," he said, significantly; "but would you say so any where else?"

"Any where you like; and the sooner the better." My pent-up feelings sought any manner of outburst as a relief.

"Come this way, then."

My rival led the way down the oozy, plashy lane I have already described to the strand. It was nearly as dark as the night before: it was quite as lonely. The few twinkling lights at the far mast-heads of anchored vessels alone broke the gloom. Unless we stood pretty close together we could hardly see each other, and my foe strode on so impatiently that I sometimes lost sight of him altogether for a moment, and I was once or twice almost under the necessity of having to raise an undignified halloo. How he managed to get on without stumbling I can not imagine; every other moment my feet were tripping over huge stones or coils of chain, and once I literally fell forward right over an upturned boat. I began to think the whole proceeding rather an absurd one; but I had been grievously insulted, and although now a minion of the law, professionally bound, one would think, to abstain from deeds of violence, yet it must be remembered that I was the son of a boat-builder who had been a sailor in his day, and that not many months ago I was a school-boy. Yet I much wished the duel to come off quickly, and while my blood was up;

for I felt the ridiculous features of the business becoming every moment more impressive, and I began to think that an attorney's clerk boxing with a carpenter—a poetic and musical young lover fighting a vulgar rival with fists—would be outrageously absurd, unpicturesque, and unheroic.

At last my pertinacious and thrice-accursed tormentor came to a pause on a clear spot, or what seemed clear.

"Now then," he said, "there's nobody here. What have you got to say? Are you not a spy and a sneak?"

This was too much; and as I had given my answer in words before, I thought a repetition of it would be mere tautology. I was glad, too, to bring my scruples and hesitations to a violent end. I simply hit out, and caught my antagonist fairly on the left eyebrow.

Then began the fight. It was hearty, vigorous, and funny. I don't know whether many of my readers have fought a battle on the seashore at an advanced hour of a dark winter night. The sensations it produces are decidedly odd, tantalizing, and bewildering; but it has its peculiar enjoyment too. At least this battle of mine seemed a positively delightful relief from my previous frame of mind. I very soon found that my antagonist was far stronger than I. He had indeed arms of iron; and he took his punishment with unruffled countenance. The punishment was pretty hard, for he had no gleam whatever of scientific knowledge, and exposed himself constantly to a smart blow on the face. But he seemed to care no more for the blows than if they had been the pepperings of a hail-shower, although, dark as it was, I could see that his face was bleeding in many places. His mode of fighting was an odd and self-acquired process altogether. He never hit straight out, but leveled huge, tremendous, swinging blows at the side of the head, literally leaping off his feet at each stroke, so as to lend it a more furious momentum. I was inclined to laugh at first, but I soon found it was no laughing matter, for the first touch I got of one of these odd blows—and I only got a touch, for I sprang aside in time—nearly knocked all my senses clear away. If he had been prompt to follow up his victory, the combat was over there and then! As it was, I felt pretty sure that should I be unlucky enough to come in for the full force and swing of one of those swashing blows, it would be enough for me; and I tried with desperate energy all such resources of science and strength as I had to bring the fight to a conclusion. He bore my hammering as coolly as if he were of iron; and alas! I think he acquired at last a sort of rude notion of stratagem wholly his own. He threw himself quite open in the most tempting fashion to one of my straightforward blows, took it without even shaking his head, and while I was in the very act of giving it, suddenly leaped upright, swung his huge flail of an arm, and crash across the side of my head came all the full fury of his

"SHAME TO YOU—SO STRONG AND HUGE—TO FIGHT WITH HIM!"

blow. Meteors in a moment danced and sparkled all around me; stars, comets, flashes of lightning blazed upon my eyes; thunders indescribable rattled round my ears and brain; the earth heaved beneath me; the dark sky came crashing down upon me. I seemed as if

I were cast loose from all gravitating principle and whirling through space, now head up, now heels up—and at last I came with a cruel bang down to earth again—and then I felt for half a second a soft, sweet, melting sensation of languid rest, like that produced to a bruised man

by the bleeding of a vein, and I just heard something like a shriek, and then I was asleep.

The plain practical English of all my sensations was that I had been fairly knocked off my feet by a stunning blow, had fallen with my head crashing against a stone, and had then and there fainted.

When I opened my eyes I saw at first nothing but the stars. I remained feebly contemplating them a moment, as if that were all I had to do in existence. Then I saw some dark object interpose itself between me and the constellation of Orion, and I recognized the face of my conqueror, and I think I endeavored to frown defiance; but the face was in a moment withdrawn. Then I somehow became conscious that a soft hand was passing along my forehead, that a handkerchief, or something of the kind, was pressed gently but firmly on the place where the stone had cut me; and at last I came to understand that I was lying on the beach with my head in a woman's lap.

Unconsciously I spoke half aloud the word "Christina!"

"Oh, thank God!" said Christina's own voice, "he's alive."

"Yes, thank God!" muttered the deep voice of the poor basso. "I didn't mean to do it, Christina—I didn't indeed. I wish he had done it to me."

"For shame!" replied Christina, still in a sort of whisper. "Shame to you—so strong and huge—to fight with him!"

I began now to see things a little clearer; and I scrambled to my feet, still somewhat staggering, perhaps, but quite able to speak up for myself.

"It's no fault of his," I said; "and I'm quite well able to fight him. Look at his face, Miss Braun, and see if he hasn't got the worst of it. And it was all my fault, too."

Christina rose to her feet. "Now, shake hands," she said, "and don't be fools any more."

My antagonist advanced sheepishly, and held out the brawny fist which had proved such a rough play-fellow.

"I—I hope you'll forgive me," he said, with one glance at me and another at Christina. "I was quite wrong altogether; and I know it now, and I'm sorry. I'm sure I don't bear any malice, if you don't; and—and—how do you feel now?"

I assured him, in all sincerity, that I bore no malice whatever; and I likewise affirmed, perhaps not quite so sincerely, that I felt perfectly well—never better in my life. Indeed, I was recovering fast. I had only had a stunning blow and a cut head. At twenty years one soon gets over such trifles as these.

I then learned that when Christina was leaving the singing-room she inquired for her regular escort, and was told that he had gone down toward the strand with me. Something led her to suspect that we had quarreled, and she followed us, but arrived only in time to witness the ignominious fall and utter defeat of one

combatant. I ought to have been delighted at my defeat, for it brought such tender interest and anxiety about me; but I was not delighted. The one thing present to my mind all through was that I had been "licked," and that *she* saw it. "Earl Percy sees my fall," is the reflection that lends most bitterness to the fate of the old hero in the ballad. What is the humiliation of a chief before any foe compared with that of a youth who is beaten under the very eyes of the girl he loves? The pity and kindness of Christina were bitter to me.

On the other hand, my rival's victory did not seem to have crowned him with joy. He had a crest-fallen, humbled, spaniel-like demeanor. We both walked home with Christina, who insisted on giving me her arm instead of taking mine, on the ground that I must be far too weak not to need support.

When we reached her door I heard my conqueror say to her in a low tone,

"You are not angry with me any more?"

"No," was the answer, given, I am bound to say, in any thing but a forgiving tone. "Why should I be angry? Good-night."

"Ah, but you are angry. Don't, Christina!"

"Good-night."

He was going away, depressed and silent, when she called him back and held out her hand.

"No, Edward, I am not angry. I was, but I am not any more."

"And may I come for you to-morrow night?"

"If you like."

"If I like!"

He turned away rejoicing.

She held out her hand to me without saying a word. But her eyes met mine: and somehow I went away rejoicing too.

Next day I called upon Miss Griffin. I hardly knew what to say to the good spinster, and was much in hope, as I passed up through the bonnet-shop, that the organist might be not at home. She was in. I went up stairs and knocked at the little drawing-room door. Just then I heard voices inside, and I would have retreated; but it was too late. Miss Griffin's shrill tones were heard:

"Is that Mr. Banks?"

"Yes, Miss Griffin."

"Come in, Mr. Banks, please."

I entered. Miss Griffin was standing up near her piano, on which she rested one hand, the fingers of which were excitedly playing an imaginary and rapid tune on the walnut. Christina Braun stood in the middle of the room, and looked flushed and angry. My face flushed more deeply than hers at the mere sight of her. Miss Griffin's mamma was playing with a parrot in a corner. Seeing that Christina and Miss Griffin had evidently been engaged in excited colloquy, I made for the mamma, and would have at once pretended to bury myself in conversation with her, but she waved me off with the back of her hand, and with a warning gesture directed toward the two principal per-

sonages in the room, as one who should say, "Forbear, young man; something highly important is going forward. Disturb it not by idle words." So I stood transfixed and said nothing, and no one said a word to me.

"There's no use in talking, Christina Braun," Miss Griffin went on; "I can't have you singing any longer in my choir unless you give up that horrid, odious, abominable place. Mr. Thirlwall won't have it; he would not allow me to have any one who sings there."

"What harm is that place?" Christina asked, in a tone half pleading, half angry; "I would not go there if I could help it. I go there, believe it, not for my pleasure. I go there because I must live, and my father must live. You have not a father, Miss Griffin."

Mamma pursed her mouth, raised her eyebrows, lifted her hands, and silently appealed, first to me and then to the parrot, against the boldness of this remark. It seemed positively to insinuate a comparison between Christina's father and the late Mr. Griffin.

"And," added Christina, "they pay me more money than the church can give."

"Oh, Christina!"

"I speak to no one there."

"But you must know it is not a proper place for a girl."

"I do not know that it is not a proper place. Did we not often sing songs—yes, well, and also play waltzes, in the choir when there were not people praying below?"

"Christina, it isn't the singing of the songs, as you know very well; it's the people—the kind of people who go there."

"I do not speak to the people, they do not speak to me, except they who sing as myself."

"Really, Miss Griffin," said I, striking in, "there is no harm whatever in the place, and I think it's quite absurd and ridiculous of Mr. Thirlwall to go on in such a way. He's a regular old idiot, I think, and an ancient humbug too."

"Thank you, Mr. Banks; I am much obliged to you for your kind and respectful way of speaking of our clergyman, and the considerate manner in which you assist me in keeping up the discipline of the choir. For you, Christina, you do not know what may become of you."

"Nothing will become of me, God helping—nothing of harm. And I may as well begin, Miss Griffin. Once I shall go upon the theatre and sing there—"

At this point Miss Griffin seemed to think the discussion had gone quite far enough. She ceased to beat her silent tune upon the piano; but she came round to the front of the instrument, deliberately took off the music-book which stood on the little frame, shut the book up, put down the frame, and then closed the piano with a solemn bang. There was no obvious occasion for this performance. I interpreted it to be a sort of formal and ceremonial act of excommunication.

It seemed, however, to have relieved Miss

Griffin's mind of some of its anger. She turned to Christina now with an expression of face rather grieved than severe. The excommunication once fairly done, she seemed stricken with pity for the outcast.

"Well, Christina," she said, "if I am to understand that you will not give up that place—"

"Will not give it up? I can not give it up."

"Then I am very, very sorry; and I would keep you if I could—indeed I would, although perhaps you don't think it now; but I must not do it, for you see, Christina, if you have a father to support, I have a mother, and I can't battle against what people say; and so we must part. I hope you will do well, Christina, wherever you go; only I do hope you will never be tempted to sing in any of those Romanist places, whatever they may offer you; and remember to be a good girl, and never to give up your church."

"The church," said Christina, with a flash of something like scorn crossing her face, "has given me up, I think. But I blame you not at all, Miss Griffin; you were very kind to me always—always."

Poor Miss Griffin was quite dissolved in tears. The very kindest of mortals, she was in anguish at the part she had to play in the transaction, and still more, I fully believe, at the thought of the awful ruin of all heavenly prospects which she clearly saw impending over one who refused to follow the behests of her clergyman, and who sang nigger-melodies for sailors.

Christina bade Miss Griffin good-by; and both were in tears. Then the outcast walked toward Miss Griffin's mamma and held out her hand. But the mamma's dignity was hurt at the disobedience and disrespect, and she drew back, executed the most formal of bows, and said, "Adieu, Mademoiselle."

Then came my turn. Christina held out her hand to me, and her eyes met mine. I took her hand and pressed it to my lips. A slight shriek from mamma testified to her sense of my scandalous conduct. Miss Griffin was absorbed in tears and did not see it.

Christina left the room, and I hurried after her.

"Mr. Banks," I heard Miss Griffin call out, "please don't go yet. I want to speak to you particularly—about the choir."

"In five minutes, two minutes, Miss Griffin," was my retreating answer; and I relieved myself by adding, in a lower tone, "the choir may go to the devil."

I overtook Christina at the door.

She abandoned the choir, then and there, never reappearing within its precincts.

And I went that night, and many nights successively, to the condemned and fatal singing-saloon.

In little more than a week a considerable change was brought about in the relations of the personages of this story. There was first a sort of break-down in the arrangements of the choir, and one Sunday the audience had to be

content with merely an instrumental performance. Soon a new bass, a new tenor, and a new soprano gladdened the pious ears and hearts of the congregation. For immediately on Christina's abandoning the choir Ned Lambert did what I had felt sure he would do—he gave up his post and sang bass for that congregation no more. I had made up my mind never to go near the place again, once Christina abandoned it; and I was only sorry the sacrifice was not a far greater one (really it was not quite insignificant), that I might have had the proud consciousness of voluntary martyrdom.

The affair created quite a little stir in our microcosm. It was talked of for fully three weeks—at least, three Sundays. I attended church the first Sunday, as unprofessional worshiper, in the hope that Mr. Thirlwall might make some allusion to us in his sermon. But he did not, and I was disappointed. Many eyes were turned on me, however; and people coming out of church and passing me whispered and shrugged their shoulders, and I felt rather proud. The general conclusion of the congregation was that we three—Christina Braun, Edward Lambert, and myself—were simply going to the devil.

CHAPTER IV.

“FAR ABOVE SINGING.”

MR. BRAUN and his daughter still occupied the house in which the former had endeavored in vain to win the childhood of our town to philosophy and science by the royal road of amusement. Our childhood absolutely refused even toys, if any manner of instruction and moral purpose were to come with them; and therefore, while Mr. Braun still technically occupied the house, his actual occupancy was confined to three small rooms on the second-floor. He had been driven back in this way from stage to stage, his domain growing gradually smaller and smaller, like the Pope's, until even the little Leonine City now left him seemed itself only the final halting-place before absolute surrender of all temporal endowment. The shop was let to a watch-maker; the first-floor was occupied by a hair-dresser; and as one of the plates on the street-door bore the name of “Miss Muncey, milliner,” and I sometimes did meet lank and lymphatic young women on the stairs, I had to infer that the third-floor—the garrets, in fact—constituted the work-rooms and show-rooms of Miss Muncey.

The little sitting-room occupied by the Brauns was perhaps as poorly furnished an apartment as any could well be which did not proclaim actual destitution. A few of the poorest cane-chairs, and not more than a few; an arm-chair, covered with the cheapest flowered calico; a central table of deal, with a faded, over-washed cover; these and an infirm sofa made up the principal part of the stock of furniture. There was, however, a piano of good

tone—a relic of better days—with which Christina would not part, and which, indeed, was her sole capital and “plant” as a musician. There were always flowers in the room, and botanical specimens carefully pressed and tastefully displayed; there were two or three pretty vases of Bohemian glass; there was Mr. Braun's flute, really a handsome article, with old-fashioned silver keys; there was his pipe, huge, and likewise silver-mounted. These and other stray properties gave an appearance to the room which at least suggested refinement, and something like ornament. And I should not surely omit to mention a beautifully carved and polished book-case, small, but of genuine oak and admirable workmanship; and I knew the moment I saw it whose hand had wrought it, and whose gift it was. “It was given to my father,” said Christina to me afterward, “not to me. I would not have taken it, though I know poor Ned would have been vexed by a refusal; and so I am glad he didn't offer it to me.”

It was easy to understand, after an evening spent in this little room, why the burden of life had fallen so heavily and so early upon my poor Christina. Her father had entirely given up all idea of struggling any longer with the world, although he was far from being too old for stout and stiff exertion. He was the gentlest and the feeblest being I ever met. He was a small, very small man, with a pale, thin, clearly-marked, handsome face; a benevolent, mild, and placid expression; soft, silky, scanty gray hair; and large, dark, gray-blue eyes. His eyes were precisely like his daughter's, much darker than his complexion would have led you to expect; but there the resemblance ceased. Mr. Braun spoke English admirably; he played the piano and the flute well; he was an accomplished botanist, and knew a good deal about chemistry and astronomy. He talked much of flowers, of stars, of the poetry of nature, of shadows and sunrises, of beautiful and gentle things generally; and of the poets and writers who sang and discoursed of such things. When he was not playing his flute he commonly sat and smoked his pipe, the bowl of which rested on the ground, all the evening through. He always rose early, and walked on the hills or by the sea; rose none the less early though he had been out on the strand watching some planet or constellation till long past midnight; and while Christina provided him with the means of living, he repaid her with fresh flowers, and observations on the heavens, and the beauty of life, and the divine purpose in every thing. He was, indeed, a thoroughly impracticable, well-meaning, good-for-nothing, lovable old man. He would have provoked me terribly, I think, if I were his son; but he did not seem to provoke Christina. She appeared to take it as quite a matter of course that her father should smoke his pipe, or botanize, while she toiled to get money and provide dinner, and make the two ends meet. He was always sweet, mild, and happy. He had been blessed, or

cursed, with that calm, light nature which can put away trouble or responsibility in a moment, and find enjoyment any where. He had lost wife and children—six children—all of whom he dearly loved; but he lived on tranquil, and spoke of them as having been happily transferred to amaranthine bowers, where they had only to await his coming. What he had himself done to merit that sure translation to immortal bliss I never could learn; but it was clear that his mind was quite made up on that point. So, too, of his daughter. She revered in him, as pure and lofty religious feeling, that which I always regarded merely as the physical placidity of a temperament not susceptible of any strong or keen emotion. An innocently selfish, mildly egotistic man, you could not help loving him, and I at least could not help sometimes despising him. While the stars shone, while the flowers bloomed, when the snow covered the ground and the frost made the brambles look like sprays and spars of crystal, he was happy, and could not be otherwise. He could forget hunger in the contemplation of a flower; all humanity in the polishing of a stone. He cared as little for active thought as for active pursuits; and knew less of politics than an American infant generally does. The political agitations, struggles, sufferings, aspirations of his own countrymen, inspired him only with a tranquil scorn. He often asked, with utter contempt in his tone, what it mattered who owned the Rhine, so long as men could see its waters shining as brightly as ever in the sun, and darkening as before in the shadows of the everlasting hills.

"German unity!" he would say, scornfully. "Germany has unity. Has she not Goethe and Novalis and Jean Paul? has she not Fichte? Hapsburg owns not less Kant than Brandenburg; Bavaria can sing the songs of Uhland and Arndt, as well as Suabia. Our unity is in our soul, and our language, and our worship of the beautiful and divine. The rest is nothing—no, nothing at all, or mere smoke and cloud veiling the glow of the heaven, as Faust himself has said."

Mr. Braun never looked one moment beyond the present, and was angry in his mild way with any one who did. He was displeased with Christina for singing of nights in the Cave of Harmony, not because he had any objection to the place, or the company, or the kind of life to which it introduced her; not because it overtasked her, or threatened to wear out her voice, or endangered her in any way; but because she had to leave him for some hours every evening, and he was lonely without her. So he was vexed with her, and chafed in his own small way, and was jealous, as if her leaving him was a willful act of neglect, or indifference to his happiness. He did not concern himself to think who would pay the rent if poor Christina had not always had spirit and sense enough to act for herself. A sort of philosopher, he was perhaps wise in his own conceit of life's theory

and purpose; but philosophers of that school ought never to have any children. I have often thought that when Morality blames Rousseau for having abandoned his children to a foundling hospital, it blames him for one of the only wise things he ever did. Better to confide them to the care of any institution, managed by any sane and human creatures, than to keep them under his own melancholy and imbecile charge.

I took lessons in German from Mr. Braun. I really wanted to learn the language, partly for its own sake, and more because it was Christina's native tongue. But of course my chief reason was to have a plausible excuse for coming often to the house. After the lapse of a quarter I paid him some money. He took it passively, and laid it beside him. Christina coming in soon after found the money, made inquiry about it, and gave it back to me. I would have resisted, but she flushed so angrily that I pocketed it without further objection.

"My father knows nothing about money," she said, "and never did. I arrange all that; it is good enough task for women. He was made for something much better, and we always liked to spare him. I know he never meant to take any money from you; *you* have lost enough by us already."

For she would insist upon regarding my withdrawal from the choir as a high, mighty, and chivalrous sacrifice.

"You took this in mistake, father?" she said, appealing to him; "you were not thinking; you took it, not observing?"

"*Versteht sich*," he placidly replied, waving away with his hand a cloud of smoke, and solemnly indifferent to the whole business. I said no more, and what future lessons I received were accepted without talk of payment.

I do not know what was the special charm which made me so suddenly fall in love with Christina Braun. Falling in love is indeed the most exact description of what befell me. From a smooth level of calm indifference I literally fell into a glowing deep of love. Nor did this condition seem likely to change. It was impossible for me not to continue loving her. To begin with, she was intensely, exuberantly, and above all things, feminine. In every glance and movement she now seemed to my opened eyes to diffuse some vague sense of womanhood all around her. As one is conscious of the presence of flowers which he does not see, as one feels the air surcharged with electricity before the thunder-storm, so I always felt the influence, the sensuous influence if you will, of idealized womanhood when Christina was near. I do not know whether this sort of feeling can be made intelligible in any words of mine, but I can not better describe the sensation of delight, refinement, and romantic love which her mere presence awakened in my soul. As I look back now, all the purple light of youth, all the glamour of poetry, all the bewitching illusions of music, seem to glorify that time when first

Christina's presence grew a familiar influence to me.

There was an extraordinary quality of quiet energy in her which amazed me when I came to appreciate it. It was not the energy which fusses and bustles—to most young men a terribly disenchanting and disagreeable quality. It was an energy which made itself silently felt: a great self-sufficing quality. The early necessity of thinking and acting for two, the impossibility of consulting with one who was as useless for consultation as a baby, had doubtless forced this quality into regular action. Christina seemed to be of that class of women who can make something almost out of nothing. For easy and prompt adornment of her graceful figure she had a positive genius. I have often wondered and admired to see what a splendid simulation of imposing concert-cos-tume she could confer upon herself with a little white muslin and a few scraps of ribbon and roses; and she could put on an old shawl in a style that Lady Hamilton might have envied.

I grew into the habit of spending every disengaged hour—and nearly the whole of every Sunday—in the familiar little room over the watch-maker's and under the milliner's. We sang, we played, we read, we recited, we talked German, we had very, very humble and modest suppers; we were immensely sociable, unconstrained, full of sentiment, full of laughter, and happy. Edward Lambert came sometimes and took lessons on the flute from Mr. Braun, for which I know he contrived delicately to make some return in one way or another. A patient, manly creature, he sometimes spent his whole evening at his flute-lesson, while Christina and I talked or sang duets on the nights when she was free. I knew that he loved her, dearly and disinterestedly, without selfishness and without hope. I knew that she regarded him as one might regard a fond and faithful Newfoundland dog. After a while he ceased to come very often, and when he did come he talked chiefly to Mr. Braun.

These were pleasant times, and free. They gave a sort of mild foretaste or breath of the Bohemian life which awaited some of us. Whatever of intellectual culture I have ever had I owe its development to these days and evenings, to that mild old man, to that girl. I learned to read French and Italian and German, and to speak these languages fluently enough, if not always very gracefully and grammatically. Years and years after a Frenchwoman told me I spoke French like a German and not like an Englishman. A more happy, harmless life no youth could well have spent.

Was I very much grieved when Ned Lambert left our little circle and went away to London? This happened when the kind of life,

blended of Arcadia and Bohemia, which I have been describing, had lasted nearly a year. Well, I parted from the good fellow with a pang; but I must assuredly have felt relieved when he went away. He was an ambitious young fellow enough; and his ambition was to become something like an artist. Therefore he made up his mind to be an organ-builder; and a chance opened for him through some friends in London, of which he willingly availed himself. I happened just to come in to Mr. Braun's on the day when Lambert was taking his final leave. He was holding in his hand a little purse, a parting keepsake from Christina, and twisting it awkwardly between his fingers.

"When shall we three meet again?" I began, endeavoring to say something pleasant.

"We three?—we four!" interjected Mr. Braun. "I am not to be left out of the prospect. I hope to be at the next meeting too."

"It must be in London, then," murmured poor Ned, disconsolately. "I sha'n't come back here ever again—ever again."

The last time I saw Lambert—not long since—he told me that through all the intervening years he never did return to the old town, and never would.

"In London, then," said I; "for London we are all bound. We are not going to stop in this old place all our lives, while Ned Lambert becomes a great man, and makes a fortune in London."

"I'm not likely to come to much," said Lambert; "and I don't want to make a fortune—now."

I saw tears sparkle in Christina's eyes.

"Good-by, Edward," she said; "but not forever! Oh no, not forever! You have been kinder and better than a brother to me for ever so long; and I shall never, never forget you."

She put her arm over his shoulder, drew him down toward her, and kissed him twice. Then she turned and went abruptly into her own room. Ned Lambert tossed his hand in the air as a kind of silent parting salute to us, and in a moment we heard his rapid steps descending the stairs.

"He is a good lad, Edward Lambert," said Mr. Braun; "a kind, true-hearted boy. He does remind me of some of our German youth, with his large grave face, and his strong hands, and his soft heart. He is fond of Christina; and he did ask her to marry him—ach, Gott, yes! and last night again. But she could not love him in that way, Emanuel. She could not love him to marry him, as *you* know." And the kind old man looked at me with beaming, gentle eyes.

Yes; I did know it by this time. I must have been stupidly undeserving of any woman's regard if I had not felt before now that Christina Braun loved me.

ABBAS PACHA OF EGYPT.

NOTHING indicates character more strongly and unmistakably than the choice of a residence. "Show me a man's home, and I will tell you what he is!" said an acute judge of human nature; and the test is generally a correct one. Mehemet Ali, that grim old warrior, chose as his favorite resort the gardens of Shoubra, and solaced his hours of leisure in the midst of that fairy scene, lulled by the music of splashing fountains, the songs of birds, and the perfume of flowers; nor were earthly hours wanting to gladden his terrestrial paradise. His garden contained not one but many Eves. His grandson and successor, Abbas Pacha, built himself palaces in the dreary desert which separates Cairo from Suez, where no tree or shrub or blade of grass relieves the barren monotony of the bare, arid soil; where neither flying nor creeping thing is to be found, save the soaring vulture or prowling jackal, lost to sight of man almost as quickly as seen. Here, shrouded from the view of man, and uncheered by the smile of woman, surrounding his dwelling with barracks filled by the most faithful of his soldiery—his Nubian guards—Abbas Pacha passed his joyless hours, suspicious of all mankind. In spite of the many stains on his character, Mehemet Ali had a heart and much native humanity. He loved nature too, and enjoyed it, as most Easterns do; and in life attracted and drew around him many friends of all nationalities, who mourned his loss and cherished his memory. Abbas was as solitary in life as in death; lived unloved and died unmourned; not dissimilar to Nero in his life—unlike him, he found no unknown hand to strew flowers over his grave.

The dreary desolation of the Suez Desert can not be imagined by those who have never seen it. It can only be fitly described in the stern language of the Scripture, as "the abomination of desolation"—a living tomb, over whose dismal wastes of gritty sand the desert wind seems ever sighing a requiem. That a monarch in the prime of life, in the full vigor of health, fabulously rich, and squandering his wealth as though it were water, should voluntarily select such a site for his chosen retreat, and there reside alone, shows a strange perversity of nature, which stamps the person either as a misanthrope or the victim of suspicious fears. Abbas Pacha was both; he loved and trusted no human being, and none loved or trusted him. Solitary in his life, he was as neglected after death, and probably the only creatures which missed or mourned him after death were the beautiful Syrian greyhounds he collected around him in those retreats as pets or playthings. His desert palaces were deserted and allowed to go to ruin after his death, after being pillaged by the domestics, who left his dogs to perish of hunger; and, visiting those palaces, I have often seen those gaunt, half-starved, yet still graceful greyhounds prowling around, with a kind of

dumb entreaty and almost human regret shining out of their sad eyes, as though they missed their master, kind to them alone.

Although Ibrahim Pacha acted for a short time as Regent during the lifetime of his father, owing to the insanity which darkened the last days of Mehemet Ali, yet, dying before him, he never succeeded to the throne of Egypt. Abbas Pacha was therefore the second actual Viceroy of Egypt, being the eldest male of the blood, and a few years older than Said Pacha, his uncle and successor. On my first arrival in Egypt, in 1853, Abbas was reigning Viceroy, and as both his life and death were full of strange romance, I propose briefly to sketch them. Abbas was the son of Toosoom, who was burned alive by the Wahabees while commanding an expedition against that warlike tribe in the Soudan; and, tragic as was the fate of the father, the son's was destined to be more tragic still. More strange still, the hand which was reputed to have given the potion which deprived Mehemet Ali of his reason and his throne was said also to have removed the grandson by a quicker fate. That hand was a kinswoman's. Nezc Khanum, eldest daughter of Mehemet Ali, was an Eastern Lady Macbeth in character and in crime, with the voluptuousness of a Messalina superadded. Wedded to the savage Deftardar, a human Tiger, whose cruelties made his name a terror throughout Egypt, and of whom the tale is told of having ripped open a soldier to see if he had stolen milk from a woman on the march. She proved more than a match for her savage mate, who was believed to have drunk coffee prepared by her hand. All the successive Viceroys of Egypt succumbed to the energy of her will—consulted, hated, and feared her—yet she died quietly in her bed at last, a natural death!

The whole line of Mehemet Ali seems to have been as fated as that of the old classic house of Pelops; and their worst enemies were ever to be found in their own households. Boundless power, and wealth equally boundless, brought nothing but unhappiness and early death to this fated family, once so numerous, now so few; and few of those who perished were believed to have died natural deaths. In the case of Abbas there was no doubt, for the incidents accompanying his death were generally known, though seldom spoken of above a whisper. He always had a presentiment or a fear of a violent end, and took his precautions accordingly, only to secure more surely the realization of his fears.

I saw him for the first time at the presentation of a foreign Consul-General—a ceremonial he could not avoid; and although he was then on his best behavior, the impression he produced was not favorable or agreeable. Richly clad in Oriental dress, with a jewel-hilted cimeter by his side, and a brilliant of price shining like a star in front of his *tarboosh* or fez cap, in imitation of the Sultan, he looked a thorough Turk of the old school,

and, unlike the rest of his family, could never have been mistaken for a European.

His complexion was much darker than that of the majority of Turks, who are generally fair, red-bearded men, our early notions of Blue-beard to the contrary notwithstanding. Abbas was very swarthy, with but little beard, short and stout in figure, with a bloated sensual face, and dull cruel eyes. Yet his manners, like those of all high Turks, were bland and polished; for in courtesy, ease of manner, and all that constitutes good-breeding, the Eastern certainly excels the Western man. My first unfavorable impressions were confirmed on further acquaintance. Utterly destitute of all culture, a bigoted Mussulman, he was fanatical without being religious, and hated all foreigners and all foreign habits. Had he dared to do so, he would have expelled all Europeans from the country; and the improvements in Egypt, during his time, were forced upon him by foreign influences he was afraid to thwart or offend. In his treatment of his own people he was arbitrary, rapacious, and cruel to the last degree. Neither the life nor the property of any of his subjects was held by any surer tenure than his caprice, and as his avarice equaled his cruelty it fared ill with those who awakened either. The possession of wealth, in many instances, was the passport for its owner to banishment to Fazough, in Central Africa (which was certain death), or for its confiscation for some pretended crime against the state. His will was the only law for his unhappy people. Foreigners were protected in their rights by their own representatives. With them he could not meddle; but the cry of the widow and the orphan whom he wronged rose up to heaven against him. With Constantinople he kept his peace by heavy bribes, and worked his wicked will as he listed with his people, who curse his name to this day. In truth, he was a kind of Eastern Tiberius, in his public crimes as in his unnatural private vices—shunning mankind and shrouding himself from the public eye, as that tyrant did—and died the death of a dog at last, in the midst of all his pomp, power, and splendor. It was during his reign that the Crimean war took place, which indirectly exercised considerable influence on Egypt, and paved the way for the independence finally achieved by the reigning Viceroy, Ismail Pacha, for which his predecessors intrigued in vain. The Sultan, sore pressed by his old enemy, temporal and spiritual, the Czar of Russia, and distrusting his European allies, whom he feared and hated only a little less than the Russians, called on his own vassals for aid in men and money. To this appeal Abbas promptly and efficiently responded. He sent both men and money to Constantinople—the former to perish amidst the snowy wastes of the Crimea without winning any military renown, which was monopolized by the French and English; the latter to be absorbed for the private uses of the Sublime Porte, always in need of money for its lavish

expenditures and costly vices. Egyptian blood and treasure were as idly poured out as water on the sands.

At the same time an order came from Constantinople for the expulsion of all the Greeks from Egypt, as sympathizers and allies of the Russians, their co-religionists, and therefore enemies of the Sublime Porte and of Islam. This edict of expulsion fell with crushing and ruinous severity on the heads of the Greek colony in Egypt, numbering many thousands, most of whom had been born and bred in Egypt, amassed wealth, owned property, and controlled the commerce of Alexandria and Cairo. This order of expulsion to them was not only expatriation, but ruin and beggary also, so they refused to leave, and protested against its justice. But Eastern governments use scant ceremony in such cases, and immediately resort to the strong hand. The Greek Consul-General was notified to quit Egypt in twenty-four hours, under penalty of being treated as an alien enemy and a spy, and, in terror for his life, fled away immediately. The unfortunate Greeks, deprived of his protection, were left like so many sheep under the teeth of ravening wolves, stubbornly persisted in remaining, under the piteous plea that they had or could find no other home on earth for themselves and families, and appealed to the representatives of the Christian powers to protect them from the wrongs and outrages to which they were subjected by the fanatical Arabs, now that they were known to be without protection. From motives of policy the representatives of the European Powers in Egypt declined to interfere, and the painful spectacle was witnessed at Alexandria of the forcible expulsion of unoffending people, forced on board of sailing vessels or barks with their families, without money or comforts, under compulsion of bayonets in the hands of ruffianly soldiers, who did not spare blows or violence to compel obedience from the reluctant victims.

License was accorded to pillage and abuse these helpless Greeks, and even their houses afforded no protection, and a carnival of crime was threatened, for the obstinacy of the outlaws was unshaken. They would die of violence, they said, sooner than take their children and wives into exile and starvation, for they were strangers in Greece, whither alone they could go, and the poverty of their compatriots forbade the hope of aid from them.

The American Consul-General came to their rescue. After vainly seeking the co-operation of his colleagues, he took the responsibility of protecting the Greeks under the American flag, which Commodore Ingraham's action in the Koszta case at Smyrna had made a well-known symbol in the East, but a few months before. By a *coup de main* he converted the Greeks into American protégés, gave them papers of protection, and notified the Egyptian Government of the fact, at the same time guaranteeing their good behavior and strict avoidance of any act which could give "aid or comfort" to the ene-

mies of Turkey or the Porte. After much correspondence, and some active intervention to prevent outrage or deportation of this class of people, the Viceroy tacitly gave up the struggle, and the protection accorded, though never formally acknowledged, was substantially, and the Greeks left in peace.

Mr. Marcy, then Secretary of State, some months after informed his representative that the Department approved of his action; and the affair tended greatly to enhance the popularity of the American Government with this impressive population.

In recognition of this intervention King Otho of Greece, after the war was over, tendered the grand cross of the order of Saureur to the Consul-General, who declined accepting it on republican grounds, which the King declared he understood and appreciated.

Hon. Carroll Spence, of Maryland, then United States Minister at Constantinople, also intervened actively in favor of the Greeks there, and secured a mitigation of their treatment. Abbas did not act badly in this affair, at least openly. It is true he told the American agent that the Greeks were pigs, very mischievous fellows, who would be a happy riddance, and that they must go; but, after some rather angry conferences, finally permitted the matter to go by default, after formally notifying the French and English agents of his taking no responsibility for the violation of the orders of the Sublime Porte and the Allies. And having done this, wearied out by the pertinacity of his adversary, he dismissed the subject from his thoughts, and, unlike his predecessor Pharaoh, did not push the persecution to expulsion.

Abbas availed himself of the troubles of his sovereign to intrigue for independence, or a change of the succession in favor of his son El Hami, whom he sent to Constantinople with costly presents or bribes; but the bait, though dangled before his eyes, he never seized. The greatest of the internal improvements of Egypt, before the Suez Canal, was commenced during his reign; for the first railway constructed in the Turkish dominions was the line running from Alexandria to Cairo, now extending to Suez—a distance of two hundred and twenty miles.

To this day the Egyptian railroads are the only ones existing in the East, with the exception of the short line from Smyrna to Aidin, recently constructed—the improvements at Constantinople beginning and ending—on paper.

For large promises and small performances—grand programmes followed by greater fiascos—commend us to your Turk! If civilization could only be propagated by protocols or firmans the East would have outstripped the West long ago. But in this matter of the railways a stronger and more persistent will than that of Abbas Pacha was at work—that of the British Government, whose Indian transit, daily growing more important and more valuable, both in a political and commercial point of view, required this improvement.

The British Government then wrung a reluctant adhesion to its wishes from Abbas, who hated the French, because his predecessor had loved them and leaned on their protection at Constantinople to further his own ambitious projects for himself and his son.

The famous Robert Stephenson, son of the more famous George, the first practical worker of the railway in England—was sent to Egypt with a large staff of English engineers—commenced the work, and the railway from Alexandria was open half-way to Cairo before Abbas died. Before that time the transit had been by steamers up the Nile—a tedious and uncertain transit, dependent on the state of the water. The conveyance by steam adapted itself peculiarly to the lethargic habits and lazy nature of the Oriental, who loves, of all things, to avoid too much exertion of mind or body; and therefore relished immensely the novelty of being transported with the rapidity of his Arab charger, and sleeping, coiled up in the corner of a carriage, all the time. To Abbas it also presented a new advantage. It gave him a means of escaping troublesome interviews with the foreign consuls, who were in chase of him all the time. His movements became as uncertain and erratic as those of a comet, and in proportion to the progress of the railway the difficulty of catching sight of him increased, when he left his desert solitude for the cities. This aversion on the part of Abbas to see the Europeans, and especially the Consul-General, grew upon him and became a kind of mania. When he did see them he was as polite and plausible as ever, but seldom kept the promises he made. He secluded himself from the sight even of his own people, and the rumors in circulation grew worse and worse, while tales of his caprices and cruelties were whispered in the coffee-houses—exaggerated doubtless, yet probably not without foundation in fact. Strange stories were told of his debaucheries in those desert palaces, where no Europeans were admitted—orgies reputed to be worse than those of Caprea, or of Rome in her rottenness. He was accused of those nameless crimes against humanity which have ever had their homes in the East, from the days of Sodom and Gomorrah down to the present. But the hate and terror this man inspired may have breathed in those rumors, whose truth or falsity it were hard to prove.

All this time the administration of his government was intrusted to incompetent and improper hands. The products of Egypt decreased, the receipts dwindled and diminished, the taxation increased, and, from high to low, peculation and extortion characterized the officials. No subject who had the misfortune to be rich felt safe in person or property; for mysterious disappearances or the chances of being spirited away at midnight increased; and the safeguards of the tribunals became nominal. Shrouded in his seclusion, like the Veiled Prophet, Abbas, invisible to the eyes of his

people, was seen and felt only in these outrages, justly or unjustly imputed to him; and, to add to the terror he inspired, the superstitious Arabs declared he possessed the fatal gift of the "Evil-eye"—a power in which every Eastern man believes, and most devoutly dreads.

On the very rare occasions when he was seen in public during his latter days his face and form looked more bloated, his eye duller and more vulture-like, than before. His corpulence increased, until he grew too unwieldy for much locomotion; but he did not "laugh and grow fat," for a smile was never on his lips, and there dwelt no mirth in that shrouded and sullen soul. He trusted but one human being—his mother—a very old woman, who was devoted to him, and was a good son to her. This was his single virtue. His son, El Hami, trembled in his presence. For women he cared little, seldom having his harems in the desert, but the Ghanajee, or dancing-girls, the most depraved of the daughters of night and Venus, were said to have been frequently summoned there, while other stories were whispered unfit to be repeated, or more than hinted at, referring to violations of the laws of God and man.

His way of life was most peculiar, even for the East, where what we call social life is unknown, and a man's house is a private place. Surrounded only by obsequious courtiers and obedient slaves in those desert palaces, into which no European entered, his life was a mystery, and whether he really indulged in the dreadful orgies and sensual license attributed to him will never be fully known. Tales have been told me by natives, who professed to know their truth, which were too horrible to be credited, too loathsome to be repeated or credited.

But his people believed these stories, and regarding him as a kind of "Sheitan," or devil, feared as much as they abhorred him. Yet no hand was ever raised by any of them against his life, and domestic treachery wrought the deed at last. The fear of poison haunted him so strongly that he never ate, when he could avoid it, any food not prepared under the supervision of his old mother, of whom I have already spoken. Yet these presentiments were not prophetic, for it was not his doom thus to die—the danger menaced him from quite another quarter. His aunt, Neze Khanum, then at Constantinople, sent him, as a present, two handsome boys as pipe-bearers, termed "Mamelukes." He was greatly pleased with the gift, and so far relaxed his habitual suspicious caution as to place them near his person to guard his afternoon slumbers. A gross, corpulent man, addicted to excesses of all kinds, his slumbers were heavy, and one afternoon, while he slept, the Mamelukes proceeded to execute their real mission. They suffocated him with the silken pillows of his own divan—so that he passed from the sleep of drunkenness into that of death; and then they fled away—no man could tell whither—for all trace of them was utterly lost. When his death was discovered

by his confidential attendants they were stupefied by terror, but kept the secret.

They shut up the room, and on fleet dromedaries repaired to Cairo, the Governor of which was one of the most trusted adherents of Abbas, and pledged to support the succession of El Hami to the Viceroyalty. The Governor, Elfy Bey, proved equal to the occasion. He did not divulge the tidings, but swiftly repairing to the palace, where the deed had been done, passed into the presence of what had been his master, pretending to have been summoned from Cairo for an interview. Those who knew the truth, and had brought him the intelligence, he left securely guarded at the citadel. He passed from his pretended audience with orders for the preparation of the state carriages, as the Viceroy would accompany him back to Cairo, and placing the dead body in the closed carriage, seated himself beside it, and took a long and ghastly ride of several hours in that strange company.

It required no common nerve and coolness, no small amount of stoicism, to play out successfully so audacious a drama; but it succeeded, and he reached the citadel at Cairo with his precious freight without exciting suspicion. Here, on the very scene of Mehemet Ali's great crime—the massacre of the Mamelukes—was now lying the corpse of his grandson, slain, if not by the hand, at least by the orders of the daughter of the same "man of destiny"—a strange and impressive instance of retribution. Elfy Bey summoned the chief adherents of the murdered man, and announcing the fact to them, at the same time declared his intention of announcing El Hami as his successor, in defiance of the claims of Said Pacha, who was legitimate heir under the law and the treaties. He caused the guns in the citadel to be loaded, and pointed on the town which they commanded, strongly reinforced the garrison, and was ready to act.

It so happened that Sir Frederick Bruce, the British, and his colleague the American Consul-General, were at Cairo at the time (the midsummer of 1854), and immediately were notified of the events transpiring by the terrified residents in a whisper. They immediately took counsel together, for the foreigners in Cairo feared that a general massacre of the Christians would inaugurate the civil war which seemed impending—the character of Said Pacha being such as to satisfy them he would not resign his rights without a struggle. In fact, Said, as soon as he heard the news, set out for Cairo with a large retinue, and the collision seemed imminent. The Consuls-General, after their conference, sent a formal warning to the Governor, that the thing he proposed doing was unwise; that he was needlessly risking his own head in the attempt to set aside the regular succession, and had better abandon it before his intention was publicly known. They advised him at once to notify Said Pacha, and give in his adhesion to the new Viceroy. Reluctantly

persuaded of the force of this warning, Elfy Bey renounced his original purpose, and invited Said Pacha to Cairo to assume the government, and rode out of the city gates to escort him in on his arrival.

Elfy Bey was a very handsome man, and I remember well his brilliant figure, as he sat his Arab steed, whose housings and bridle-rein glittered with cloth of gold and precious stones. Said Pacha, too, was a large, stately man, and they rode in together, side by side, in the most amicable manner. Said Pacha treated the Governor with the most distinguished consideration that evening, placed him at his right hand at table, praised highly his fidelity to his former master and to his son, jested with him over the idea of El Hami's succession, and sent him away rejoicing.

But Elfy Bey did not long survive either his terror or his newly-awakened hopes. By a most remarkable coincidence, though in high health at the time, he died suddenly, within forty-eight hours—of apoplexy it was said—and was honored by a most imposing funeral. El Hami, the innocent cause of his death, was generously treated by Said Pacha, who allow-

ed him to retain the bulk of his father's enormous fortune, much of which was found packed up in boxes in sterling coin at his different palaces. At the palace where he died there was said to be stored away in gold half a million of English sovereigns.

The death of Elfy Bey was never attributed to Said himself, who was of too bold, frank a nature to command or connive at assassination. It was supposed some superserviceable friend or courtier contrived the deed; for the subsequent reign of Said showed him incapable of treachery.

The young Prince El Hami, who inherited none of his father's evil nature, but was amiable to a fault, and rather dull in intellect, went to Constantinople, where his great wealth secured him the doubtful benefit of the hand of one of the Sultan's daughters in marriage. For the rest of his life he was a kind of state prisoner to his royal spouse and father-in-law, and died early from over-indulgence in every species of excess.

With him ended the race of Abbas Pacha, of whose ill-gotten wealth nothing now remains. His life was like a foul exhalation—his death a domestic tragedy—and his memory hateful in Egypt to this day.

Editor's Easy Chair.

IN his preface to the "Marble Faun," as before in that to the "Blithedale Romance," Hawthorne complained that there was no romantic element in American life; or, as he expressed it: "There is as yet no such Faery-Land so like the real world that, in a suitable remoteness, one can not well tell the difference, but with an atmosphere of strange enchantment, beheld through which the inhabitants have a propriety of their own." This he says in the "Blithedale" preface, and then adds that, to obviate this difficulty and supply a proper scene for his figures, "the author has ventured to make free with his old and affectionately remembered home at Brook Farm as being certainly the most romantic episode of his own life—essentially a day-dream, and yet a fact—and thus offering an available foothold between fiction and reality." Probably a genuine Brook Farmer doubts whether Hawthorne remembered the place and his life there very affectionately, in the usual sense of that word; and although in sending the book to one of them, at least, he said that it was not to be considered a picture of actual life or character—"Do not read it as if it had any thing to do with Brook Farm (which essentially it has not), but merely for its own story and characters"—yet it is plain that it is a very faithful picture of the kind of impression that the enterprise made upon him.

Strangely enough, Hawthorne is likely to be the chief future authority upon "the romantic episode" of Brook Farm. Those who had it at heart more than he, whose faith and hope and energy were all devoted to its development, and many of whom have every ability to make a permanent record, have never done so, and it is already so much a thing of the past that it will probably never be done. But the memory of the place

and of the time has been recently pleasantly refreshed by the lecture of Mr. Emerson and the "Note-Book" of Hawthorne. Mr. Emerson, whose mind and heart are ever hospitable, was one of the chief, indeed the chiefest figure in this country of the famous intellectual *Renaissance* of twenty-five years ago, which, as is generally the case, is historically known by its nickname of Transcendentalism—a spiritual fermentation from which some of the best modern influences in this country have proceeded.

In his late lecture upon the general subject Mr. Emerson says that the mental excitement began to take practical form nearly thirty years ago, when Dr. Channing counseled with George Ripley upon the practicability of bringing thoughtful and cultivated people together and forming a society that should be satisfactory. That good attempt, says Emerson, with a sly smile, ended in an oyster supper with excellent wines. But a little later it was revived under better auspices, and as Brook Farm made a name which will not be forgotten. Mr. Emerson was never a resident, but he was sometimes a visitor and guest, and the more ardent minds of the romantic colony were always much under his influence. With his sensitively humorous eye he seizes upon some of the ludicrous aspects of the scene, and reports them with arch gravity. "The ladies again," he says, "took cold on washing-days, and it was ordained that the gentlemen shepherds should hang out the clothes, which they punctually did; but a great anachronism followed in the evening, for when they began to dance the clothes-pins dropped plentifully from their pockets." And again: "One hears the frequent statement of the country members that one man was plowing all day and another was looking out of the win-

dow all day—perhaps drawing his picture—and they both received the same wages.”

In Hawthorne's just-published “Note-Book” he records a great deal of his daily experience at Brook Farm. But he was never truly at home there. Hawthorne lived in the very centre of the Transcendental revival, and he was the friend of many of its leaders, but he was never touched by its spirit. He seems to have been as little affected by the great intellectual influences of his time as Charles Lamb in England. The custom-house had become intolerable to him. He was obliged to do something. The enterprise at Brook Farm seemed to him to promise Arcadia. But he forgot that the kingdom of heaven is within you, and when he went to the tranquil banks of the Charles he found himself in a barn-yard shoveling manure, and not at all in Arcadia. “Before breakfast I went out to the barn and began to chop hay for the cattle, and with such ‘righteous vehemence,’ as Mr. Ripley says, did I labor, that in the space of ten minutes I broke the machine. Then I brought wood and replenished the fires; and finally went down to breakfast and ate up a huge mound of buckwheat cakes. After breakfast Mr. Ripley put a four-pronged instrument into my hands, which he gave me to understand was called a pitchfork, and he and Mr. Farley being armed with similar weapons, we all three commenced a gallant attack upon a heap of manure.”

Hawthorne was a sturdy and resolute man, and any heap of manure that he attacked must yield; but he had not come to Arcadia to sweat and blister his hands, and his blank and amused disappointment is evident. He had a subtle and pervasive humor, but no spirits. He sees the pleasantness of the place and the beauty of the crops, having knowledge of them and a new interest in them; and he has a quiet conscience because he feels that he is really doing some of the manual work of the world; but he is always a spectator, a critic. He went to Brook Farm as he might have gone to an anchorite's cell; but the fervor that warms and adorns the cold, bare rock he does not have, and the mere consciousness of well-doing is a chilly abstraction. “I do not believe that I should be patient here if I were not engaged in a righteous and heaven-blessed way of life.....I fear it is time for me—sod-compelling as I am—to take the field again.Even my custom-house experience was not such a thralldom and weariness; my mind and heart were free. Oh, labor is the curse of the world, and nobody can meddle with it without becoming proportionally brutified!” Very soon, of course, the pilgrim to Arcadia escapes from the manure-yard, and declares as he runs that it was not he, it was a spectre of him, who milked and raked and hoed and toiled in the sun. Hawthorne remained at Brook Farm but a few months, and after he left never returned thither, even for a visit.

The “Blithedale Romance” shows that he was not unmindful of its poetic aspect; but his genius was stirring in him, and he felt that he could not work hard with his hands and write also. So he went off, and never came back; and although he may have remembered certain persons kindly, his memory of the place and of his life there could not have been very affectionate. Probably there

were other diaries kept at Brook Farm; certainly there were many and many letters written thence, in which still lie, and will forever lie, buried the material for its history. But it is likely to become a tradition only, and upon its finer side more and more unreal, because of such sketches as those of Hawthorne. The most comical part of the whole was its impression—that is, such impression as it made, and without exaggerating its extent or importance—upon the steady old conservatism of Boston, which was of the most inflexible and antediluvian type. The enterprise was the more appalling because it seemed somehow to be a natural product of the spirit of society there. The hen of the tri-mountain had herself hatched this inexpressible duckling. Dr. Channing, indeed, was the honored intellectual chief; the culture of Boston had owed much to the liberal theology; old Dr. Beecher had battered that theology in vain; but the liberality of Boston was like the British Whiggery of the last century. It was more intelligent and more patrician than Toryism itself.

Mr. Emerson, as we said, was practically the head, or at least the accepted representative, of the new movement. His discourses before the Phi Beta Kappa Society at Harvard College, his address to the divinity students, and his noble Dartmouth oration, followed by his lectures in Boston and his “Nature,” had set the barn-yard—not offensively to retain the metaphor of the hen—into the most resonant cackle. In the midst came Theodore Parker's South Boston sermon, and there was universal thunder. The pulpits which Dr. Beecher had assaulted, and which had watched him serenely, when they heard Parker thought that the very foundations of things were going. The most distinguished chancicleers went to Mr. Emerson's lectures, and when asked if they understood him, shook their stately combs and replied, with caustic superiority, “No; but our daughters do.” And when the experiment began at Brook Farm there was no doubt in conservative circles that for their sins this offshoot of Bedlam was permitted in the neighborhood. What it was, what it was meant to be, were equally inexplicable. Are they fools, knaves, madmen, or mere sentimentalists? Is this Coleridge and Southey again, with their Pantisocracy and Susquehanna Paradise? Is it a vast nursery of infidelity; and is it true that “the abbé or religieux” sacrifices white oxen to Jupiter in the back parlor? What may not be true, since it is within Theodore Parker's parish, and his house, crammed with books and modest under the singing pines, is only a mile away?

These extraordinary and vague and hostile impressions were not relieved by the appearance of such votaries of the new shrine as appeared in the staid streets and halls of the city. There is always a certain amount of oddity latent in society which rushes to such an enterprise as a natural vent; and in youth itself there is a similar latent and boundless protest against the friction and apparent unreason of the existing order. At the time of the Brook Farm enterprise this was every where observable. The freedom of the anti-slavery reform and its discussions had developed the “come-outers,” who bore testimony in all times and places against church and state. Mr. Emerson mentions an apostle of the gospel of love and no money, who preached zeal-

ously but never gathered a large church of believers. Then there were the protestants against the sin of flesh-eating, refining into curious metaphysics upon milk, eggs, and oysters. To purloin milk from the udder was to injure the maternal affections of the cow; to eat eggs was Feejee cannibalism, and the destruction of the tender germ of life; to swallow an oyster was to mask murder. A still selecter circle denounced the chains that shackled the tongue, and the false delicacy that clothed the body. Profanity, they said, is not the use of forcible and picturesque words; it is the abuse of such to express base passions and emotions. So indecency can not be affirmed of the model of all grace, the human body. The fig-leaf is the sign of the fall. Man returning to Paradise will leave it behind. The priests of this faith, therefore, felt themselves called upon to rebuke true profanity and indecency by sitting at their front-doors upon Sunday mornings with no other clothing than that of the pre-fig-leaf period, tranquilly but loudly conversing in the most stupendous oaths, by way of conversational chiar-oscuro, while a deluded world went shuddering by to church.

These were harmless freaks and individual fantasies. But the time was like the time of witchcraft. The air magnified and multiplied every appearance, and exceptions and idiosyncracies and ludicrous follies were regarded as the rule, and as the logical masquerade of this foul fiend Transcendentalism, which was evidently unappeasable, and was about to devour manners, morals, religion, and common-sense. If Father Lamson or Abby Folsom were borne by main force from an anti-slavery meeting, and the non-resistants pleaded that those protestants had as good right to speak as any body, and that what was called their senseless babble was probably inspired wisdom, if people were only heavenly-minded enough to understand it, it was but another sign of the impending anarchy. And what was to be said—for you could not call them old dotards—when the younger protestants of the time came walking through the sober streets of Boston and seated themselves in concert-halls and lecture-rooms with hair parted in the middle and falling upon their shoulders, and clad in garments such as no known human being ever wore before—garments which seemed to be a compromise between the blouse of the Paris workmen and the *peignoir* of a possible sister? For tailoring underwent the same revision to which the whole philosophy of life was subjected, and one ardent youth, asserting that the human form itself suggested the proper shape of its garments, caused trowsers to be constructed that closely fitted the leg, and bore his testimony to the truth in coarse crash breeches.

These were the ludicrous aspects of the intellectual and moral fermentation or agitation that was called Transcendentalism. And these were foolishly accepted by many as its chief and only signs. It was supposed that the folly was complete at Brook Farm, and it was indescribably ludicrous to observe reverend Doctors and other Dons coming out to gaze upon the extraordinary spectacle, and going about as dainty ladies hold their skirts and daintily step from stone to stone in a muddy street, lest they be soiled. The Dons seemed to doubt whether the mere contact had not smirched them. But droll in itself, it was

a thousandfold droller when Theodore Parker came through the woods and described it. With his head set low upon his gladiatorial shoulders, and his nasal voice in subtle and exquisite mimicry reproducing what was truly laughable, yet all with infinite bonhomie and with a genuine superiority to small malice, he was as humorous as he was learned, and as excellent a mime as he was noble and fervent and humane a preacher. On Sundays a party always went from the Farm to Mr. Parker's little country church. He was there exactly what he was afterward when he preached to thousands of eager people in the Boston Music Hall; the same plain, simple, rustic, racy man. His congregation were his personal friends. They loved him and admired him and were proud of him; and his geniality and tender sympathy, his ample knowledge of things as well as of books, his jovial manliness and sturdy independence, drew to him all ages and sexes and conditions.

The society at Brook Farm was composed of every kind of person. There were the ripest scholars, men and women of the most æsthetic culture and accomplishment, young farmers, seamstresses, mechanics, preachers—the industrious, the lazy, the conceited, the sentimental. But they were associated in such a spirit and under such conditions that, with some extravagance, the best of every body appeared, and there was a kind of high *esprit de corps*—at least in the earlier or golden age of the colony. There was plenty of steady, essential, hard work, for the founding of an earthly Paradise upon a rough New England farm is no pastime. But with the best intention, and much practical knowledge and industry and devotion, there was in the nature of the case an inevitable lack of method, and the economical failure was almost a foregone conclusion. But there were never such witty potato patches and such sparkling corn-fields before or since. The weeds were scratched out of the ground to the music of Tennyson or Browning, and the nooning was an hour as gay and bright as any brilliant midnight at Ambrose's. But in the midst of all was one figure, the practical farmer, an honest neighbor who was not drawn to the enterprise by any spiritual attraction, but was hired at good wages to superintend the work, and who always seemed to be regarding the whole affair with the most good-natured wonder as a prodigious masquerade. Indeed, the description which Hawthorne gives of him at a real masquerade of the farmers in the woods depicts his attitude toward Brook Farm itself: "And apart, with a shrewd Yankee observation of the scene, stands our friend Orange, a thick-set, sturdy figure, enjoying the fun well enough, yet rather laughing with a perception of its nonsensicalness than at all entering into the spirit of the thing." That, indeed, was very much the attitude of Hawthorne himself toward Brook Farm and many other aspects of human life.

But beneath all the glancing colors, the lights and shadows of its surface, it was a simple, honest, practical effort for wiser forms of life than those in which we find ourselves. The criticism of science, the sneer of literature, the complaint of experience, is that man is a miserably half-developed being, the proof of which is the condition of human society, in which the few en-

joy and the many toil. But the enjoyment cloyed and disappoints, and the very want of labor poisons the enjoyment. Man is made body and soul. The health of each requires reasonable exercise. If every man did his share of the muscular work of the world no other man would be overwhelmed by it. The man who does not work imposes the necessity of harder toil upon him who does. Thereby the first steals from the last the opportunity of mental culture—and at last we reach a world of pariahs and patricians, with all the inconceivable sorrow and suffering that surround us. Bound fast by the brazen age, we can see that the way back to the age of gold lies through justice, which will substitute co-operation for competition.

That some such generous and noble thought inspired this effort at practical Christianity is most probable. The Brook Farmers did not interpret the words "the poor ye have always with ye" to mean "ye must always keep some of you poor." They found the practical Christian in him who said to his neighbor, "Friend, come up higher." But apart from any precise and defined intention, it was certainly a very alluring prospect—that of life in a pleasant country, taking exercise in useful toil, and surrounded with the most interesting and accomplished people. Compared with other efforts upon which time and money and industry are lavished, measured by Colorado and Nevada speculations, by California gold-washing, by oil-boring, and by the stock exchange, Brook Farm was certainly a very reasonable and practical enterprise, worthy of the hope and aid of generous men and women. The friendships that were formed there were enduring. The devotion to noble endeavor, the sympathy with all that is most useful to men, the kind patience and constant charity that were fostered there, have been no more lost than grain dropped upon the field. It is to the Transcendentalism that seemed to so many good souls both wicked and absurd that some of the best influences of American life to-day are due. The spirit that was concentrated at Brook Farm is diffused, but it is not lost. As an organized effort, after many downward changes, it failed; but those who remember the Hive, the Eyrie, the Cottage; when Margaret Fuller came and talked, radiant with bright humor; when Emerson and Parker and Hedge joined the circle for a night or a day; when those who may not be publicly named brought beauty and wit and social sympathy to the feast; when the practical possibilities of life seemed fairer, and life and character were touched ineffaceably with good influence, cherish a pleasant vision which no fate can harm, and remember with ceaseless gratitude the blithe days at Brook Farm.

MR. LONGFELLOW'S new poems, "The New England Tragedies," have not satisfied the critics, and have probably disappointed the great multitude of readers. The complaints are various, and sometimes a little unreasonable. Thus it is rather foolish to say that they are not dramas nor tragedies at all. The subjects, not the poems, are the New England Tragedies, namely, Quaker persecution and witch murder; and the poems upon those tragedies are dramatic poems rather than dramas. They do certainly refresh and emphasize the sadness of those tragedies,

and enforce their lesson. They lack, indeed, that moralizing, musing sweetness which is so familiar and so beautiful in Longfellow's poetry; and the dramatic form forbids that vivid narrative which is so delightful in the "Courtship of Miles Standish." Besides, Hawthorne's stories and the "Scarlet Letter" have so marvelously revealed the form and feeling of the earlier New England life that every reader was ready to compare; and Longfellow's poems have not even a charm of story to befriend them, the interest being in the tragedy itself, and that well known. Yet an Easy Chair must confess that any touch of a beloved artist is welcome and pleasant, although every line be not of the finest and best. Even the sculptured bust that tradition attributes to Raphael can not be spared, although it is not a Transfiguration. Can the lover of Thackeray spare *Philip*? In reading these poems who is not aware of the deep human sympathy, the forbearing charity, the tender reflection which belong to the poet's genius, even if, as we said, they are not so fully disclosed as we are used to having them and wish to have them? Every rose upon the bush is not as full and fragrant as every other, but still it is a rose, and from the sweetest tree.

There is one striking criticism and censure upon these poems, which appeared in the *Chicago Tribune*, and is evidently written by one who is wholly, and apparently traditionally, familiar with the subject. He justly says that the point has not been elsewhere suggested. In the first of the poems—"John Endicott"—the scene is laid in Boston, and the preacher who inspires the persecuting Governor is John Norton. Now, says our Chicago critic, unless we are very much mistaken, John Norton was never settled in Boston, and at the time of the poem was a very young man or a boy, and did not die until half a century later, in Hingham, where he long labored, and where his grave-stone still stands. He was not a conspicuous person, but was a liberal and gentle soul, and there is no proof that he even felt unkindly for the Quakers, while the probability is that he did not. If the poet knew of so inconsiderable a person he must have known that he neither lived nor died in the place nor at the time mentioned in the poem, and that neither his age nor his character would have suffered him to take part in the Quaker persecution. It seems unkind, therefore, to the critic, to have cast a stigma upon a blameless man. Nor does he think that such an offense—if so it be—is barred by the poet's plea:

"Nor let the Historian blame the Poet here,
If he perchance misdate the day or year,
And group events together, by his art,
That in the Chronicles lie far apart."

The critic further objects to the poet's picture of the well-known Boston minister, Cotton Mather, the very head and front of the witchcraft persecution. "He was not merely a zealot on this subject, he was a fierce fanatic.....No martyr, no hermit, no devotee whom the Church has ever canonized for works of devotion, of zeal, of self-abnegation done in the flesh, was more earnest, more absorbed, more fanatical than Mather was in fighting the Powers of Darkness in the dark days of New England witchcraft." This man the poet has represented as meek, mild, forgiving, and long-suffering, which he was not;

while poor John Norton, who was all that, is portrayed as a harsh and repulsive persecutor.

It is very possible, however, that Longfellow chose the name John Norton wholly disregarding the actual personality of some obscure person who may have borne it, somewhat as Hawthorne used the name of Miles Coverdale, merely as a name. But however it be, we are very sure that the good John Norton, surveying from his rest the humane genius of the poet who has used his name, gladly acquits him of malevolence, celestially sure that a singer who never spake ill of living man would not malign the dead.

It was a beautiful evening, full of warmth and moonlight and that indescribable tenderness of romance which invests foreign towns in the mind of youth and health and hope, when, not two horsemen, but a single Easy Chair might have been seen entering the ancient city of Antwerp. It was an indescribable number of years ago, but the Cathedral was already built, and the bells were hung in it, and as the traveler passed through the quiet streets they began to ring a delightful chime, which seemed graciously to welcome him to the freedom and hospitalities of the city, and which filled his soul with that delicious reverie in which the soul of the fond artist passed away who sat rocking in a boat upon the Shannon at twilight and heard the chimes ring out from the old Cathedral. The traveler alighted at the hotel, and went to his room, preceded by that celebrated pair of wax-candles which ushers every arriving guest to his chamber in every great hotel in Europe, and which is not forgotten in the bill. There, opening his *malle-post*, and leaning out of the window and watching the ever-fascinating life of every fresh and foreign street, and loitering about the room and listening to the evening bells, he dallied until it was really late, and then descended to the *kalbsbraten* and the festive but solitary wine-cup of the country.

How pleasant those evenings, those arrivals, so often repeated in the years of travel, are! What a good world it seems at those moments, and how romantic the most ordinary events of life! That cigar smoked upon the garden terraces of the *Trois Couronnes* at Vevay, with the Lake of Geneva, "fair, placid Leman," lapping below, and the snowy Alps gleaming spectral through the soft Swiss twilight; that last foaming, gushing bottle of *Asti* upon the Col de Balme, as Mont Blanc unrolled its calm and awful splendor, from the shining dome to the base muffled among the shadows of the valley—what permanent parts of life they are—specks caught in amber! As an Easy Chair writes their names and renews the memory, a hundred days and nights and unimportant scenes and insignificant events return, and the ancient heart is stirred as Sir Philip Sydney's was by the music of Chevy Chase.

But your traveler is a shockingly diffusive preacher. The Easy Chair has a certain text in mind, but its beloved readers will probably not suspect it until it is mentioned. Let us return, therefore, to our *kalbsbraten*. There was the repose of the Continental dining-room, and the exemplary waiter—*kellner* he was called in German—was at his placid post—placid but prompt.

And that name again recalls the fondness for titles which characterizes our excellent German brethren, and which Thackeray so amusingly satirizes. One day, perhaps it was in Berlin, the Easy Chair heard an earnest expostulation just outside the dining-room, and one earnest, pleading, pathetic voice (it was a question of sauces) culminated in the adjuration, "Ach! liebe Herr Ober Kellner!" "Ah, dear Mr. Upper Waiter!" as if the appeal to the majesty of the whole title might be equivalent to an appeal to the full bench of a higher court. The placid *kellner* presided behind the Easy Chair as the *kalbsbraten* was slowly consumed and the pleasant wine-cup drained, and suddenly, in the contemplative moment of tooth-picking and of *schwarz café*, a full military band in the street below the windows broke into the magnificent overture of *Semiramide*. The Easy Chair had easily explained the chimes. They could have intended no especial honor, because although they did most suggestively ring as it was entering the city, yet it was probably a regular evening office. But this late visit of a band, and a marvelous band, bursting out with full clash into *Semiramide*—that could be fairly viewed in no other light than that of a serenade. It was certainly a great compliment, a high honor. But as the Easy Chair was aware of no friend or acquaintance in Antwerp of any degree whatever, certainly of no station, it was fair to suppose that, if a serenade, it was for another guest. And so it proved; for Major-General Van Something, but a very imposing Something, in resplendent epaulets and heavy ringing boots and spurs, just then entered the dining-room, and the *Semiramide* was explained.

Just now that evening and that music are recalled with peculiar vividness as the telegraph says that Rossini is dead. Or that other evening in Florence, at the little, dingy, smelly theatre in the street whose name has slipped into oblivion, and where the gay *Barber* was sung upon such a shabby stage by such poor singers, but with such unction and to such enjoyment of all of us vagabonds in the parquette. It was as much better than the elaborate performance of Verdi's *Macbetto* at the great opera-house, with the ridiculous Italian Highlanders, and the dry and dreary music, as a dinner of herbs with contentment surpasses the enjoyment of the stalled ox without it. What endless fun we had with the "*buona sera*!" How we made the absurd notary, with his conventional comic shovel-hat, come on again and again and say his good-night! and how our blood danced and our eyes sparkled as the merry music bubbled out! and how we all went trilling and rollicking homeward, and sat late at the Doné, and awoke each other the next morning with a musical "Good-night."

But what thousands and thousands, for so many, many years, has not that same music delighted; and what crowds of people all over the world has it not periodically sent humming and smiling to their homes! How the gayety of a young, exuberant, susceptible nature is evident in all of Rossini's music! You fancy the lazy, brilliant good-for-nothing lying horribly late in bed, sleeping off the Champagne and the ortolans—the supper of the nymphs and the gallants—and mindless of the new opera that he has promised, and for which the town and all Europe is agape.

You can see the indignant directors and managers thundering at his door, bursting into his bedroom, rousing him from those warm and necessary slumbers, "And you, Maestro, you have no mercy! You are willing to doom us to disgrace, to the pulling down of our theatres, to the barbarity of a rabble infuriate for more music—*Cospetto!* You have no bowels! We are ruined, we are lost, we are massacred! *Dio mio!*" And sitting up in bed—why not?—and smiling and laughing, the blithe maestro scribbles, scribbles, and *La Gazza Ladra*, *Cenerentola*, *Il Barbiere* come rippling from his pen.

The Rossini music is unique. The excellent Germans, despite the Antwerp serenade, laugh at it, or rather are morally indignant with it. Such frivolity! Such lightness! Such thinness! Such foam! It is shameful! It is unpardonable! *Ach, lieber Gott!* And the ever-smiling youth, who may live to be seventy-seven, but will be a jovial boy on the last day, waves his wand again, and the *Semiramide* and the *William Tell* touch the sympathy of the world. Such sparkle, such smiling grace and gayety, are in no other music. Rossini's fancy is so profuse, so felicitous, so irresistible that we sneer in vain. Rossini undertake to treat *Semiramide*—where is the fitness of things? Sure enough. The fitness of things is going to the dogs; but what delicious strains, and what exquisite effects! The hold which Rossini's *Tancredi* took of the popular heart in 1812 has never been relaxed. It was confirmed by an extraordinary series of works, produced with as extraordinary rapidity.

He was born to music—the son of a strolling horn-player and his singing wife. At seventeen he wanted to begin to compose. Parents do not like children who compose. The parental mind seems to be profoundly depressed by the apprehension that it may have produced a genius. How many of the great painters, of the great poets, or of the lesser ones, were warmly encouraged by the parental influence, especially by the paternal? "If my boy were a Michael Angelo, a Beethoven, a Shakespeare, very well; but I don't want any daubers and rhymsters in my family." Of course, good Paterfamilias, Shakespeare wrote *Hamlet* when he was in clouts. The elder Rossini would hear of no nonsense of composing. Let my Gioacchino blow a horn, and he shall have my blessing. *Per Bacco!* he can become the first horn-blower in Italy! But the father's foot came down about the composing—and the boy's about the horn-blowing. He disobeyed his father. He might have been the first horn-blower in Italy, and he persisted in being—Rossini.

He composed *Tancredi* when he was twenty years old, and it made his fame and his fortune.

Since Mozart there had been no such melody, no such charm. It rang through Europe and bewitched it. Every body hummed, sang, played, whistled, thrummed, and tooted *Tancredi*. It was a universal fame, reaching every class of the people. The street-organs, the hurdy-gurdies, the café bands, the strollers, carried the charm every where. The Pesaro boy was a pied piper, and the whole world followed him merrily dancing. This triumph was the beginning of successes as splendid. There is, indeed, but one first time, but to hit the bull's-eye ten times running is more marvelous than to strike it once. Henry Thoreau wisely says that a man is measured by his average power, not by an extraordinary performance; just as the meadow flowers bloom in that part which is yearly overflowed, and not in the remote points which an exceptional high tide reaches. Rossini showed only his average power in *Tancredi*. He went from year to year writing operas, with a rapidity and an excellence that were amazing. In 1812 he wrote *Tancredi*; in 1816, the *Barber of Seville*; in 1823, the *Semiramide*; and in 1830, the *William Tell*. These are of a uniform, if not of a cumulative excellence; and between them all were composed the other not less memorable and popular operas, such as *L'Italiani in Algieri*, *La Cenerentola*, *La Gazza Ladra*, *Otello*, *La Donna del Lago*, *Mose in Egitto*, and the rest. They were all the works of youth. Rossini is to be added to the list of the young men of the world. At twenty he was as famous as a composer as Alexander Farnese was as a soldier at the same age. And at the age at which Raphael died, a young man, Rossini had done his work. After he was forty he wrote nothing of importance but the *Stabat Mater*, which, although it has none of the solemn grandeur of the older Italian masters of sacred music, was wonderfully popular, and is among the most familiar of modern compositions.

His employments, beside the great work of his life, were directing the operas at Naples, London, and Paris, and his fortune was rapidly and early made. When he withdrew into retirement he was about forty years old, and he lived nearly as many years more in Sybaris; for the famous composer was surrounded by all that was most brilliant and beautiful in Paris; and eating and drinking, and receiving all the young artists, and snuffing up pleasant praise, and genial and sympathetic, the years went by. The details of his last years are yet to come, but they will doubtless show a happy and kindly old Epicurean whom every body was glad to see, and who still retained the freshness of his prime, and to his latest day never regretted that he had not become the greatest horn-blower in Italy.

Editor's Book Table.

IT is never too late to wish our friends a Happy New-Year, and even a Merry Christmas serves as a pleasant reminder, though it be not uttered exactly in the season. So, though our imprint bears date the 1st of January, we can not think it out of season to utter our heartiest wishes for both a Merry Christmas and a Happy New-

Year. And as many of our readers at the time when they open these pages will be beginning to rack their brain with the question, "What shall I give for holiday presents?" we shall hope to serve them usefully by introducing them to some books appropriate for that purpose. If there are some gifts that make Christmas merrier, there

are none that make the New-Year happier than good books rightly used. And though the supply is not so abundant this season as in some others, yet there is enough to give the buyer who possesses a purse less illimitable than that of Fortunatus a good deal of perplexity in his choice.

HOLIDAY BOOKS.

FIRST of all, by right which none will dispute, on the list of holiday books comes DICKENS'S *Christmas Carol*.* A good friend of ours, an orthodox deacon—and would that all orthodox deacons were possessed of as genial a Christianity as his!—declares that he considers it a matter of conscientious duty to read this most inspiring of stories through every fall, a little while before Christmas, as a sort of preparation for the sacred season. We suspect that he finds a good many duties much harder to fulfill, and we are certain that he might find a great many books more religious and less Christian. Hard, indeed, must be the heart that can resist its benign influences, that can breathe in its atmosphere of warmth and love and not say with Tiny Tim at the end, in a real and fervent prayer, “God bless us every one!” Doubly indurated must be the heart that can resist this old favorite in this new attire. If, then, Madame, you are so unfortunate as to have a husband who, through defective education or a surly temper, has no faith in Christmas, who never appreciates its church chimes, who is oblivious of its evergreen, who never trudges home about Christmas-eve laden with mysterious parcels, to be slipped quietly in at the back-door unbeknown to the too-curious children, who never has planted in his parlor that most fruitful of all specimens of vegetation, the Christmas-tree, whose children have never been inducted into the mysteries of stockings, and never made acquaintance with their patron saint—Santa Claus—by all means buy *Christmas Carol*; and cozily ensconced by your blazing fire, the children sharing the evening circle with you, get him to read to you and them the lesson which the spirits read to Scrooge; and if his voice does not grow husky and his eyes dim with tears, and he arise a converted man, to welcome as a Christian should all the joyous festivities of this most festive season of the year, then he must have a harder heart than Scrooge himself, which is saying a great deal, and may well be abandoned as a hopeless and incorrigible sinner.

WHOEVER goes to Europe keeps a journal and writes long letters home to his friends, describing what he sees. As nearly all travelers go over substantially the same course, read the same guide-books, ride in the same diligences, put up at the same hotels, climb the same mountains, visit the same cathedrals, view with reverence, indifference, or ridicule the same relics, and ask the same questions of the same vergers and monks, their narratives are very much of the same pattern, and differ only as the writer infuses something of his own personality into his account. It is rare, therefore, that a book of European travels possesses any considerable interest outside the circle of the author's friends. MR. DARLEY† has not

transfused his letters with any remarkable degree of personality. And so far as the story which he tells with his pen is concerned, it is very much the same story which we have read from scores of his predecessors. His instrument is his pencil. And with this he speaks with his own peculiar power; always making a few brief, nervous lines tell a wonderful story.

MR. HOLLAND is a genuine poet.* More perhaps than any other American writer he grapples with the deepest problems of our interior life. The secret battles of the soul he depicts always graphically. He is sometimes morbid, but he is rarely, if ever, weak. Whether it is desirable to tell the story of such a life as he has undertaken to describe in *Kathrina* we seriously doubt. But no one can doubt that it is powerfully done. Such a poet is exceedingly difficult to illustrate. He is, in truth, a metaphysician, and metaphysics defy the pencil. Yet real genius characterizes many of the designs. In some of them there is a weird and positively ghostly power, as in that of the haunted husband; in others quiet beauty of rare quality, as in the children at play, or the mother and her son. MR. GRISWOLD'S sketches of the scenery of the Connecticut are as true as they are beautiful; and the little symbolical designs of the head and tail pieces are exquisite both in conception and execution.

Is nature nothing more than a vast philosophical apparatus invented and constructed for the special benefit of the savant? Can we do nothing better with our mother than lay her lifeless form on the dissecting-table and study her anatomy? Does he know all the lessons the flower has to teach him who has picked it to pieces and given to its every part its horrid Greek or Latin name? Has he learned all the birds can teach him who has studied their origin and is able to classify them according to their species? Ah no! Nature is more than natural history. She possesses a heart which defies analysis. She must be studied, not always with cold and critical eyes and the cruel scalpel, but with warm, loving, appreciative hearts. A friend of ours, city bound, has made acquaintance with a dove. What was his letter of introduction no one knows. But he comes very regularly to the chamber-window, knocks respectfully for admission, and, if there be no company, hops boldly in; or, if there be, watches them somewhat narrowly before further venturing. This friend has learned more of the domestic pigeon by this familiar acquaintance than Darwin could tell him; as one learns more of father and mother in the home-circle than in any erudite work on moral philosophy. It is in this spirit MONS. MICHELET† writes of the Bird: “to reveal the bird as a soul, to show that it is a person.” He loves the bird enthusiastically. And he writes to impart his enthusiasm to others. The artist has entered with full spirit into the thought and feeling of his author. To both, this book must have been a labor of love. Two hundred and ten illustrations; nearly all portraits of birds; yet no sameness. Like a symphony of an old

* A Christmas Carol in Prose. Being a Ghost Story of Christmas. By CHARLES DICKENS. With Illustrations. Boston: Ticknor and Fields.

† Sketches Abroad with Pen and Pencil. By FELIX O. C. DARLEY. New York: Hard and Houghton.

* *Kathrina—Her Life and Mine; In a Poem.* By J. G. HOLLAND. With Illustrations. New York: Charles Scribner and Co. 1869.

† *The Bird.* By JULES MICHELET. With Illustrations. London: T. Nelson and Sons.

master, that repeats in endless variety of form the same substantial theme, through unending variations the same portraiture is presented. Birds on the nest, birds on the wing, birds in the water, birds breasting the dark storm, birds resting quietly in poise in summer air, birds filling the grove with their melodies, big birds, little birds, birds of prey and birds of song, birds of day and birds of night, birds northern and birds tropical; birds in every conceivable circumstance; birds on almost every page, and birds finally escaping from the book and lighted on the cover; all portrayed with the airiness of touch and the exquisiteness of engraving which belong only to the best French school.

IN *Wood-side and Sea-side** are collected some old friends, both in poetry and picture, and introduced with them some new faces. The book is a quarto of a hundred pages, containing a well-assorted selection of familiar poems from familiar authors on nature. The illustrations, most of them borrowed from English artists, are beautiful of their kind, being altogether portraits of wood and water scenes. As in all such collections, there are some good and some not so good, but there are none mediocre, and many very fine; and the volume, which is admirably printed on tinted paper, will make a popular book of poetry, not only for this but for future seasons. Intermixed with English designs are some very fine original drawings by Hows, so well known as the illustrator of the "Forest Hymn," and other books.

AMONG the gift books which lie upon our table are some advance-sheets from LYMAN ABBOTT's forthcoming *Life of Christ*, from the press of the Harpers. Of the book we shall speak hereafter, but we have already seen enough to warrant the assertion that it will take honorable rank among the illustrated works of the year. The designs are mainly selected from foreign sources. Among them we recognize half a dozen of Doré's best designs. Many of the pictures are admirable. Delaroche's Going to Calvary, the Two Marys at the Tomb, and the Mount Sinai, are admirable specimens of wood-engraving, and the two former are pictures of unusual power.

THREE hundred years have passed away since the death of ALBERT DURER.† His home in Nuremberg is still preserved with religious care, and a monument to his memory is among the objects of interest which are shown to the traveler there. A better monument to his name is the singular folio which Mr. W. C. Prime has introduced to the American public. By a photographic process the original designs are transferred to wood. By careful engravers every line is followed, even such as indicate defects in the original plates—and the reader has thus before him an exact duplicate of Durer's original designs, line for line. *The Little Passion* consists of thirty-seven designs of incidents from the life of Christ, mainly from the last days. It is not necessary to share Mr. Prime's enthusiasm for

his master in order to commend very heartily this republication of his works; nor need we agree that Albert Durer carried the art of engraving to "a perfection never since surpassed," in order to do full honor to his unquestioned genius. He is, indeed, the father of designs on wood. He sustains to that art the same relation that Gutenberg and Faust do to printing, or Stephenson to the steam-carriage. We honor these pioneers. We recognize their genius. But we are not so indifferent to the improvements of later hands and minds as to desire to obliterate from civilization all that the world has learned since. Tried by modern standards the engravings of Durer are often fantastic in design and false in anatomy, and always coarse in execution. We neither desire to ride in Stephenson's carriages, to supplant modern literature with the unwieldy folios of Faust, nor to exalt the first pencillings of a rude and childish age above those of a developed art. And we welcome the "Little Passion" less as a positive contribution to art than as a most valuable contribution to its history, a most worthy memorial of a true genius, and a striking witness to the truth that in art, as in every thing else, the Golden Age is in the future, not in the past.

OF the volumes that are now before us these will be likely to take a leading position, though there are others that are, perhaps, no less beautiful. Ticknor and Fields give us an exquisitely illustrated edition of TENNYSON'S *Locksley Hall*—a gem in its way that any lover of Tennyson will warmly welcome; and a revised edition of the *Poetry of Compliment and Courtship*, with steel plates by the National Bank-Note Company. Bank-notes can not be engraved in haste, and the effect of long years of painstaking work is plainly visible in this very fine, almost microscopic, work. The Appletons announce *The Poet and the Painter*, and *The Schiller Gallery*.

MINISTERIAL PRESENTS.

IN making up your book parcels for Christmas do not forget your pastor. Seed thus sown on the waters will return unto you in fresh thoughts on the Sabbath, not after many days. Without attempting to give a list for your selection, we modestly suggest that you do *not* give him a Bible. The book is, indeed, immeasurably valuable, but there is always a strong presumption that a minister has access to one or more copies. LANGE'S *Commentaries* will not come amiss; nor M'CLINTOCK and STRONG'S *Dictionary*, if you insure payment for the remaining volumes; nor—for a smaller gift—HENRY WARD BEECHER'S *Sermons*; nor *Studies in the Gospels* and *Studies in the Old Testament*, by GEORGE M. JONES; nor SMITH'S *Old Testament History* and *New Testament History*; nor, for that matter, any of the books we have already mentioned above. For, in truth, the ministerial mind—we trust the profession will excuse us—tends too much to professional literature; and we are by no means sure that you will not do better to leave your pastor to select his own tools, and give him something quite distinct from his usual course of studies; or, best of all, give him at the book-store credit for fifty or a hundred dollars, and let him do his own selecting.

* *Wood-side and Sea-side*. Illustrated by Pen and Pencil. New York: D. Appleton and Co. 1869.

† *The Little Passion of Albert Durer*. Reproduced in Fac-simile. Edited by W. C. PRIME. New York: J. M. Bouton.

CHILDREN'S BOOKS.

It is a pity we had not borrowed our celebration of Christmas from Germany. Who knows or cares for Santa Claus or his day, except as he is mysteriously, and no one knows why, associated with our Christmas celebration? But it is a beautiful imagination, that of the Germans, that every year the Christ-child returns to earth again laden with presents for his little brothers and sisters after the flesh. This year he brings his arms full of beautiful books, bewildering in variety; in prose and poetry; pictorial and plain; real and romantic; useful and imaginative; from the midst of which accumulated treasures we can barely select a few samples and types for fathers and mothers, uncles and aunts, studying the wants of their little ones.

Sheldon and Co. announce, besides a quantity of story-books, *Pictures and Stories of Animals for the Little Ones at Home*, in six volumes, by Mrs. SANBORN TANEY. A sample page gives promise of admirable illustration, and if the promise is fulfilled these volumes will be just the thing to set your boy hunting insects or gathering a collection of sea-shells. The collection may not be of the highest scientific value, but the collecting will be. Ticknor and Fields—it will take some time for the public to learn the new name, Fields, Osgood, and Co.—offer some story-books, of which the most notable are *Cast Away in the Cold*, in which Captain Hardy (Dr. ISAAC I. HAYES) takes his young crew through a series of exciting adventures in the Arctic regions, from which they can hardly return without learning, before they are aware of it, more of Greenland and the Northern Sea than they will be apt ever to acquire from their school geographies; and the *Flower and the Star*, in which Mr. LINTON, the famous engraver, wields both pen and pencil in weaving a charming little story for the little folks. *Appleton's Juvenile Annual*, composed of short stories and shorter poems, serious and comic, and ornamented with illustrations of an average merit, will prove a very acceptable gift, especially to those children who, not overfond of reading, are afraid to undertake at once a full volume. The same may be said for the bound volume of *Our Young Folks*, to which our own particular young folks have taken with great zest, and which serves an excellent purpose as a juvenile annual. Some of the illustrations are truly admirable. J. P. Skelly and Co. issue three or four "Juveniles," "with a moral," in which the writers seem to have succeeded in blending excellent moral instruction with pleasant and attractive stories.

TRAVELS.

PAUL DU CHAILLU, who has already introduced himself to the children in the *Gorilla Country*, renews his acquaintance with them in *Wild Life under the Equator*.* It is written for children. It is quite as readable for their parents. There is a charming naïveté in the style; and we can almost fancy we hear the author's broken English, as we have often heard it, as he tells these stories with sparkling eye and

French enthusiasm to a gathered group of friends. It is a book of wild and romantic adventure, that makes a boy's pulse beat quicker, and his eye kindle, and the blood mount to his head as he reads; a book to inspire all the resolute purpose and true courage of the young heart; a book that takes him, too, through an almost unknown wild, from which he can hardly fail to return with a new appreciation of the comforts of his own home; a book quite as interesting and more valuable than any fairy story.

SOUTH AND CENTRAL AMERICA has always been a *terra incognita* to the American public. We have known less of our near neighbor than of more distant ones, and have done less to make her acquaintance than has England, France, or Germany. Even Russia—snow and ice bound Russia—has done as much, if not more, to explore the tropical forests of her cis-Atlantic friend than has her North American companion, mated to her not more by geographical than by political considerations. Of this country, whose mountains are the grandest, whose rivers the largest, whose vegetation the most luxuriant, whose mineral resources the most boundless, and whose earthquakes are the most tremendous of perhaps any continent, the people at large know scarcely any thing more in the nineteenth century than they did in the sixteenth. But now at length public attention is tardily turning to this land, at once the richest and the most poverty-stricken in the world. Agassiz has laid it under contribution, and has compelled it to witness for science. Church has carried thousands of admiring Americans to the very heart of the Andes, and introduced them to the most magnificent mountain and valley scenery in the world. Thanks to the labors of Rev. Mr. Fletcher, Brazil is being brought into commercial relations with its natural ally the United States. And an American company is now in process of organization, to which has already been secured the sole right of steamboat navigation in the Madeira River and its tributaries; a right which may open to the world the now inaccessible wealth of Bolivia.

Harpers by their republication of HELPS's *History of the Spanish Conquest*, Hurd and Houghton in their translation of SARMIENTO's *Life in the Argentine Republic*, Scribner by his new edition for an American market of DON RAMON PAEZ's *Travels and Adventures in South and Central America*, and Lee and Shepard by their publication of BISHOP's *Journal of his Thousand Miles Walk across South America*, are bringing this unknown land before the American public. Of these books of travel we have read with peculiar interest that of Nathaniel H. Bishop. A lad of seventeen years of age, an enthusiast in Natural Science, he starts from Boston to pursue his investigations in South America, his entire capital being forty-five dollars; lands at Buenos Ayres, pushes his way across the plains, winters at the foot of the Andes, crosses this back-bone of the continent, reshops from Valparaiso, and returns to the place of his departure five dollars richer than when he set out. All this he accomplished with no other friends than he secured upon the way, and no previous acquaintance with the country or its language. The story of such a jaunt can scarcely fail to be interesting and instructive; and it is simply and graphically told.

* *Wild Life under the Equator*. Narrated for Young People by PAUL DU CHAILLU. With numerous Engravings. New York: Harper and Brothers.

Monthly Record of Current Events.

UNITED STATES.

OUR Record closes on the 30th of November. The issue of the Presidential election held on the 3d was so clearly indicated by the State elections of the few previous weeks that, however much doubt there might be in regard to a few States, there was none as to the general result. It was tacitly assumed that General Grant, for President, would have a very large electoral majority, and a very considerable popular majority, over Mr. Seymour. The efforts of the Democratic party were accordingly mainly directed to gaining what could be done in regard to local candidates, and especially in members of the Forty-first Congress, which will assemble on the 4th of March, 1869.

Mississippi, Texas, and Virginia having failed to comply with the conditions prescribed by law, only 34 States took part in the election. Of these 26 States, casting 209 electoral votes, went for General Grant; and 8 States, casting 85 electoral votes, for Mr. Seymour. The entire electoral vote being 294, 148 constitutes a majority. The Republican party thus carried nearly three-quarters of the States and of the electoral vote. The popular majority of this party was, however, much less. The definite result has been officially announced in only a little more than half of the States. Putting together the official count as far as declared, and the most reliable estimates from the other States, it appears that the entire vote cast was about 4,000,000, and the excess of the majorities of the Republican candidates over those of the Democratic party was about 300,000, or not far from seven per cent. of the whole vote. Before this Record will be read the precise figures will have been officially announced. We therefore postpone to the next Number a table showing the vote at this election. The following is a list of the States voting, and the number of electoral votes cast by each:

For Grant and Colfax.—Arkansas, 5; California, 5; Connecticut, 6; Florida, 3; Illinois, 16; Indiana, 13; Iowa, 8; Kansas, 3; Maine, 7; Massachusetts, 12; Michigan, 8; Minnesota, 4; Missouri, 11; Nebraska, 3; Nevada, 3; New Hampshire, 5; North Carolina, 9; Ohio, 21; Oregon, 3; Pennsylvania, 26; Rhode Island, 4; South Carolina, 6; Tennessee, 10; Vermont, 5; West Virginia, 5; Wisconsin, 8.—In all, 26 States, having 209 electoral votes.

For Seymour and Blair.—Alabama, 8; Delaware, 3; Georgia, 9; Kentucky, 11; Louisiana, 7; Maryland, 7; New Jersey, 7; New York, 33.—In all, 8 States, having 85 electoral votes.

It will be seen that, with the exception of New York and New Jersey, all of the States formerly designated as "Free," in distinction from those known as "Slave," voted for Grant. To these should be added Missouri, which, though nominally a "Slave" State, had practically become "Free," together with Arkansas, Florida, North Carolina, and South Carolina, where, owing to the exclusion from the polls of the whites who had voluntarily aided in the rebellion, the colored vote was largely in the preponderance.

There can be no doubt that had the votes of Texas and Virginia been allowed to be given they would have been cast for Seymour, adding about 23 to his electoral vote. In respect to Missis-

sipi there is some room for doubt. That State was excluded on the ground that a majority of the registered voters failed to vote upon the question of calling a convention to ratify the Reconstruction Acts of Congress. But it is now affirmed that a majority of the lawfully registered electors did vote on this question, and that the action of Congress was sustained by them. But as no election for President was held in this State, this will not affect the result. The election for members of the next Congress is yet to be held in several States. Thus far the Democrats have gained largely in members of the House; their net increase will be about 30. The next House will consist of 226 members, of whom probably 140 may be set down as Republicans, and 76 Democrats, so that the dominant party will lack considerably of a two-thirds majority. The Senate will remain nearly as at present, the Democrats, however, gaining one or two members.

In *New York* it was evident that the canvass would be very close. It was taken for granted that in the cities, and especially in New York and Brooklyn, the Democratic majority would be large, while in the country the Republicans would have a decided preponderance. It came to be assumed that the issue would be determined by the votes of persons to be naturalized before this election, it being acknowledged that an immense majority of these new voters would cast their ballots in favor of the Democratic candidates. There were several circumstances which rendered the number of naturalizations at this period large beyond precedent. During the four years' war many foreigners refrained from "declaring their intentions," in order to escape the liability of being drafted. Many thousands of these had declared their intentions toward the close of the war, and were now entitled to naturalization. The result was that, within the few weeks immediately preceding the election, there were 40,000 persons naturalized in New York and Brooklyn. That great frauds were committed is beyond question; but it is hardly probable that these were in number sufficient to have changed the result. In the cities of New York and Brooklyn the majorities for Mr. Seymour were nearly 75,000 in a vote of about 160,000. In the remainder of the State the aggregate majorities for General Grant were about 65,000. The general issue was that in the State there were cast 849,751 votes, of which 429,857 were for Seymour and 419,894 for Grant, giving Mr. Seymour a majority of 9963. In round numbers, out of 850,000 votes the Democratic majority was 10,000, only a little more than one per cent. of the whole.—In this State a Governor, Representatives in Congress, and Members of the State Assembly were chosen. For Governor there were local considerations which affected the issue. Mr. Hoffman, the Democratic candidate, was known to be strongly opposed to the present Excise law, and many Republicans voted for him on this account in opposition to Mr. Griswold, his competitor. In New York city and Brooklyn Mr. Hoffman ran quite 15,000

ahead of Mr. Seymour. In the whole State his majority amounted to 28,000.—The Democratic party had thus, upon national questions, a majority of 10,000; but this was comprised in comparatively few districts, while the Republican majorities were more widely diffused. The one party had large majorities in comparatively few districts; the other party had smaller majorities, but in more districts. From this it resulted that of the thirty-one representatives in Congress the Republicans will probably have nineteen. This party also have a majority in both branches of the State Legislature, which will insure to them a United States Senator, to take the place of Mr. Morgan, whose term is about to expire.

Pennsylvania was also considered a somewhat doubtful State. Both parties averred that the October election, in which there was declared a Republican majority of less than 10,000, was no criterion of the result in November. The Democrats affirmed that at least 15,000 Republican votes were fraudulently imported from New York and elsewhere, and that but for these the State would have gone Democratic then, and would in November go that way. The Republicans declared that just about as many similar fraudulent votes were cast on the Democratic side; that this could not be repeated in November, and that in consequence the Republican majority would be more than doubled. The State gave Grant a majority of 29,000.

Connecticut and *New Jersey* were also considered as doubtful States. The former went Republican, the latter Democratic, by small majorities. *California*, *Nevada*, and *Oregon* were likewise claimed by both parties. The small majorities which these States gave to Grant show that these conflicting claims were not without reason.

With the foregoing exceptions there was no reasonable room to doubt as to the votes of any except the Southern States. That all New England and the great States of the West and Northwest would go for Grant was sure. In *Tennessee* so many Democrats were disfranchised for voluntary complicity in the rebellion, that there could be no question that the vote of the State would be Republican. There was just as little doubt that the Border States, *Maryland*, *Kentucky*, and *Delaware* would go Democratic, although probably the majorities were larger than were expected by either party.

In the strictly Southern States there was really room for doubt. A great part of the whites, whose votes would have been cast for Seymour, were excluded from the exercise of the franchise because of their inability to take the oath that they had not voluntarily aided the rebellion. It was assumed by the Republicans that the colored voters would go for them in a mass, and thus give them an overwhelming majority in each of the Southern States. But, on the other hand, it was held that the whites, holding as they did the whole of the wealth of the country, and from their long association with the blacks, would be able to control enough of the colored vote to secure a Democratic majority in most of the Southern States. The Republicans carried *North* and *South Carolina*, *Florida*, and *Arkansas* by majorities much smaller than they had expected. The Democrats carried *Georgia* and *Louisiana* by majorities unexpectedly large.

The initial blow in the Southern political campaign was struck in Georgia, when the Legislature decided that men of color, however eligible they might have been declared as voters, were yet ineligible to hold office, and therefore ousted from their seats all colored men who had been elected as members. This strong measure, followed as it was by armed opposition to political meetings of colored men, convinced these that they were not able to cope with the whites, better armed and more expert in the use of weapons. So it came to pass that only a small part of the colored vote, upon which the Republicans had relied, was cast, and the State of Georgia gave to Mr. Seymour a majority of more than 40,000.

In *Louisiana* the case was still more notable. Every thing there seemed to promise a large Republican majority. We have heretofore given in brief accounts of the political conflicts in and about New Orleans. As a general result, the blacks came off the worse. What followed, immediately preceding the election, is set forth by General Rousseau, Commander of the Department, in his official report to General Grant. General Rousseau says that upon assuming the command of this Department he had to encounter grave difficulties. The Presidential campaign had resolved itself into a contest of races rather than of political parties. The majority of the whites were on one side; the majority of the colored population on the other. Both formed themselves into clubs of a semi-military character; the colored clubs habitually drilled; the white clubs did not, because with a majority of them drill was unnecessary. There was, moreover, a police imbroglio in New Orleans. The control of the police had been taken from the hands of the Mayor and Corporation and given to a Board of Six, of whom three were white and three colored. The police force appointed by this Board numbered 373, of whom 243 were negroes and 130 whites, all, with some exceptions, of wholly unworthy material. The great body of the community refused to recognize the authority of the force thus composed. The authority of the Board was disputed, the Mayor and Corporation insisting upon their right to appoint the police. Finally, at the suggestion of General Rousseau, the question was left to the courts, and in the mean while it was agreed that General Steedman should act as Chief of Police. The real force to be relied upon to keep the peace in and about New Orleans consisted of the military of the United States. When General Rousseau took the command of the Department these numbered 463 men; subsequently a small reinforcement came from Mississippi. With these General Rousseau had but 550 men available for service to keep peace in the city. About this time, in the last days of October, Rousseau consulted with the Republican leaders, and the general opinion, as stated by him, was that "if the excitement continued up to the day of the election there would be fierce fighting at the polls and a general row all over the city." So it was agreed upon all hands that "the better course would be to advise the colored people not to vote." This advice was concurred in, and hence, as stated by General Rousseau, was "the small Republican vote cast in New Orleans and in many parishes of the State. This," says General Rousseau, "was a matter

over which I could exercise no possible control. The leaders of the Republican party having advised the negroes to stay away from the polls, they staid away." The result was a peaceable election. In New Orleans and the parishes closely adjacent the vote for Seymour was more than 20,000, while that for Grant was merely nominal, a few scores at most. In the whole State Seymour's majority amounted to about 40,000. General Rousseau takes occasion to speak strongly in favor of the people of New Orleans. "The great majority are," he says, "law-abiding and entirely friendly to the Government of the United States." This friendly feeling is "evinced in many ways; in none more marked than in the respect shown to the military on all occasions." The "Democratic clubs of the city," says General Rousseau, "numbering, it is said, over 16,000 voters, formally tendered to me their services in aid of the military to preserve the peace."

REPORTS FROM MILITARY DEPARTMENTS.

From the Department of the *Cumberland* General Thomas reports that the necessity for the presence of the military yet continues as the state of society has not improved, and in some parts is much worse. A full account of the "Ku-Klux Klan" is given. "Very great difficulty exists throughout the Department in obtaining justice for Union men even in the United States courts." General Thomas asserts that—

It is mortifying to acknowledge that the State and local laws and the more powerful force of public opinion do not protect the citizens of the Department from violence. In fact, crime is committed because public opinion favors it. A criminal who is popular with the mob can set the law at defiance; but if a man is only suspected of crime, who is inimical to the community, he is likely to be hung to the nearest tree or shot down at his own door. . . . In Tennessee, where a majority of late rebels are disfranchised, they and sympathizers with them have a hatred for State authorities which is unconcealed and aggressive. In localities where the disfranchised element is strong a spirit of persecution toward those in sympathy with the authorities—those who recognize the political rights of the enfranchised negroes and the negroes themselves—especially shows itself in utter contempt of the law, and violence is openly talked of. The editorial articles of the public press are such as to create the most intense hatred in the breasts of ex-rebels and their sympathizers. The effect of this is to cause disturbance throughout the State, by inciting the ruffianly portion of this class of citizens to murder and maltreat white Unionists and colored people in localities where no United States troops are stationed. The local authorities have not the will, and more often have not the power, to suppress or prevent these disturbances. In Kentucky disfranchisement can not be alleged as a reason for these disturbances. There the mass of people are in sympathy with the State authorities, and make no attempt to resist them. The colored people are quiet and peaceable. They have no political rights, not being enfranchised. Yet ruffians are permitted to tyrannize over them without fear of punishment. The testimony of negroes is refused in the State courts, and the United States courts are difficult of access to an ignorant people without friends or influence. In some districts some ex-Union soldiers are persecuted by their more numerous rebel neighbors until they are forced into a resistance, which sometimes ends with the loss of their lives, or they are compelled, in self-defense, to emigrate. An appeal to the courts affords but little hope of redress, as the magistrates and juries too often decide in accordance with their prejudices and without regard to justice. . . . The impoverishment of the South, resulting from war and its concomitants; the emancipation of slaves and consequent loss of substance; the ambiguity and uncertainty of political rights and financial values, as well as personal rivalries, have all combined to strengthen the efforts of pernicious teachers. The evil done has been great, and it is not discernible that an immediate improvement may be expected.

In the Military District of *Virginia*, General Stoneman reports the general condition of affairs to be favorable. He had pursued the general policy inaugurated by General Schofield, his predecessor. It having been held by some that the Fourteenth Article of the Constitution vacated all offices held by persons who come within its provisions. He says that it is found

Impacticable to carry on the government of the State upon the assumption that the thousands of officers in the district, embracing State officers, judges, sheriffs, commissioners, commonwealth attorneys, magistrates, etc., not to speak of the large number of town or municipal officers, such as mayors, councilmen, aldermen, constables, overseers of the poor and others, should suddenly cease in performance of their functions, with no possibility of filling their places under the provisions of the reconstruction laws. In some instances it has been found absolutely impossible to find any person upon whom an appointment could be conferred.

He recommends the repeal of the 9th Section of the law of July 19, 1867, which prescribes that in the States formerly in insurrection, all persons elected or appointed to office shall be required to take the oath prescribed for officers of the United States. Chief-Justice Chase, who is now holding court at Richmond, has decided that this provision does not apply to jurors except when specially directed by the court; he therefore ordered that the regular oath in use before the rebellion should be administered to jurors, upon the ground that it would be impossible to find a sufficient number of jurors otherwise qualified who could take the test oath. General Stoneman says, in conclusion, that—

The affairs connected with the Bureau of Refugees, Freedmen, and Abandoned Lands in Virginia have been managed with ability and discretion. The officials have performed their thankless duties to the general satisfaction of those concerned, and have sought, as far as in their power, to see that justice was done and the rights of the negroes protected. In doing this, they had on one hand ignorance and on the other prejudice to contend against and overcome. Instances, though rare, have been brought to his attention where violence has been used toward them; but those cases have been confined to individuals, and were not chargeable to communities. The abuses practiced toward negroes which have been reported by the Bureau agents have, in all instances, been investigated by military commissions, and the civil authorities have been required to see that justice was administered. As the law now stands, and in accordance with its requirements, many of the functions of the Bureau will cease on the 1st of January. In consideration of the unreconstructed condition of the State—with no Legislature to make laws or regulations, or appropriations of money; with an exhausted treasury and an apathetic people—its further continuance, in some modified form, became an important matter, worthy of the early attention of Congress. The officers, both civil and military, have, in general, performed their duties with willingness worthy of commendation; and to this, together with the respect for law and justice manifested by the people, white and black, is due the quiet and good order that reign throughout the Commonwealth.

General Meade reports at length on the condition of the *Department of the South*, embracing the States of Georgia, Alabama, and Florida. He details the occurrences which have taken place there, most of which were noted at the time in this Record. In conclusion, he says:

No army in all previous history was ever called on to discharge such delicate and responsible duties, involving powers that if abused might have led to the most serious consequences; and yet the transition from military to civil power was so imperceptible as to have passed unnoticed, but for the special means by way of proclamation, orders, etc., to make it public. I do not mean to deny but that there were indi-

vidual exceptions, and that in some cases bad judgment, political bias, or personal feelings may have influenced the course of some individual officer or soldier. This is no more than is to be expected from our nature; but I do maintain that, taking the large force extending over such an extent of territory and vested with supreme power, instead of the few instances where, perhaps, criticism might be appropriate, the wonder was—and it is to be said to the credit of the army—that so little abuse was made of a power by those who might very readily be supposed difficult to be restrained and controlled.

For the *Department of Missouri*, Generals Sherman and Sheridan give full details of the Indian War of the past year. Sheridan, in actual command in the field, states that his entire force consisted of 1200 cavalry and 1400 infantry; but after distributing these so as to guard the railroads he had at his disposal for offensive operations only about 800 men. "With this small force it was impossible to accomplish a great deal in so extensive a country. The Indian, mounted on his hardy pony and familiar with the country, was about as hard to find, so long as the grass lasted, as the *Alabama* on the ocean." The details of the various expeditions since August show that in all, of soldiers and scouts, 11 have been killed, and 26 wounded; of the Indians 92 have been killed and an unknown number wounded. No villages have been destroyed, and no large amount of stock captured. Of citizens 75 have been killed and 9 wounded by the Indians. In nearly all cases the most horrible barbarities were perpetrated on the bodies of the victims. These Indian outrages have rendered a large tract of country almost uninhabitable; and, says Sheridan—

Unless the Indians are crushed out, and made to obey the authority of the Government, there will be a total paralysis of some of the best interests of this section of the country. No peace which will give confidence can hereafter be made by paying tribute to these savage bands of cruel marauders. Indian tribes should not be dealt with as independent nations. They are wards of the Government, and should be made to respect the lives and property of citizens. The Indian history of this country for the last three hundred years shows that of all the great nations of Indians only the remnants have been saved. The same fate awaits those now hostile; and the best way for the Government is to now make them poor by the destruction of their stock, and then settle them on the lands allotted to them. There was an error in judgment in making peace with these Indians last fall. They should have been punished, and made to give up the plunder captured, and which they now hold. The present system of dealing with the Indians I think is an error. There are too many fingers in the pie, too many ends to be subserved, and too much money to be made.

General Sheridan recommends that the management of the Indians should be transferred to the War Department, that the Lieutenant-General should have the sole charge of them, and that each Department Commander, under him, should have entire charge of the Indians in his Department. He closes his report, dated November 15, by announcing that

Arrangements are now being made for active operations against their villages and stock. As soon as the failure of the grass and the cold weather forces the scattered bands to come together to winter in the milder latitudes south of the Arkansas, a movement of troops will then take place from Bascon, Lyon, Dodge, and Arbuckle, which I hope will be successful in gaining a permanent peace.

Generals Sherman and Grant both indorse the recommendation of Sheridan that the control of the Indians be vested in the War Department. Sherman says:

It is idle for us longer to attempt to occupy the Plains in common with these Indians, for the country is not susceptible of close settlement with farms like Missouri and Iowa, and is solely adapted to grazing. All of our people are necessarily scattered, and have more or less cattle and horses, which tempt the Indians, hungry, and it may be starving, for the want of his accustomed game, and he will steal rather than starve, and to steal he will not hesitate to kill. Therefore, a joint occupation of that district of the country by these two classes of people with such opposing interests is a simple impossibility, and the Indians must yield. The Peace Commission has assigned them a reservation, which, if held for fifty years, will make their descendants rich, and in the mean time they are promised food while they are learning to cultivate the earth and to rear tame stock. It was for this reason the Peace Commission, at its Chicago session, in October, was forced to the conclusion that the management of Indian affairs should be transferred back to the War Department, where it belonged prior to 1849. That Department of our Government is the only one that can use force promptly without the circumlocution now necessary; and no other Department of our Government can act with promptness and vigor enough to give any hope that the plans and purposes of the Peace Commission will be carried out. Even then, there is doubt that the Indians themselves will make the necessary personal efforts to succeed. And I fear that they will at last fall back upon our hands a mere mass of helpless paupers. I am fully aware that many of our good people, far removed from contact with these Indians, and dwelling with a painful interest on the past events, such as are described to have occurred in Minnesota in 1863, and at the Chivington massacre of 1864, believe that the whites are always in the wrong, and that the Indians have been forced to resort to war in self-defense by actual want or by reason of our selfishness. I am more than convinced that such is not the case in the present instance. I further believe that the only hope of saving any part of these Indians from utter annihilation is by a fair and prompt execution of the scheme suggested by the Peace Commission, which can alone be done by Congress, with the concurrence of the Indians themselves. Even then it will require much patience and hard labor on the part of the officers who execute the plan, which I do not wish to assume myself or impose on other army officers; but it is certain that the only hope to find any end of this eternal Indian war is in the transfer of the entire business to the War Department, and for Congress to enact the laws and provide the necessary money at least a year before it is required to be expended. This is especially necessary in the case of the Sioux, because the Missouri River is only navigable in early summer.

SOUTHERN AMERICA.

Insurrections, apparently quite local and speedily suppressed, broke out in *Colombia* and the *Argentine Confederation*.—The war on the River Plata still continues; the Paraguayans have been forced from their strong position at Humaita, and have fallen back into the jungles, and at the latest dates an expedition had been fitted out against them.—A dispute, the full particulars of which have not been published, sprung up between Mr. Washburne, our Minister to Paraguay, and President Lopez.

In *Cuba* an insurrection, apparently of a serious character, has broken out. The Spanish Government having control of all means of information suffers very little to transpire; but from the best accessible reports, the real object is the separation of the island from Spain, with a view to its ultimate annexation to the United States.

EUROPE.

From *Great Britain*, the leading topic of interest is the result of the recent Parliamentary elections. The "Liberal" party, under the lead of Mr. Gladstone, have succeeded in carrying a very large majority in the Commons, sufficient it is assumed not only to overthrow the Disraeli Ministry, but to compel the Lords to accede to

the proposed Reform measures, especially those relating to the Irish Church.—Mr. Reverdy Johnson, our Minister to England, has made a large number of speeches on various occasions. He announces that all causes of dispute are in a fair way of settlement. As reported, the basis is that two commissioners from each nation are to meet at Washington to consider the respective claims advanced by the two Governments. The precise limits of the authority of these commissioners do not appear to have been definitely agreed upon; at all events they have not been made public.

THE SPANISH REVOLUTION.

Now that the Queen has been finally expelled, the course of the revolution remains wholly undecided. One party are in favor of a republic, and have made strong public demonstrations in the cities. The Provisional Government, the real head of which is General Prim, are clearly

in favor of a monarchy. It is announced that the question will be decided by the Cortes, members of which are soon to be chosen. An electoral law has been proclaimed, the leading feature of which is, that all male Spaniards of 25 years, not convicted of crime, may be enrolled as voters. It does not appear that Cuba is to participate in this election, although the right is extended to other Spanish dependencies. The main obstacle in the way of a monarchy appears to be the difficulty of fixing upon a sovereign. It is hardly possible that any one of the royal family will be accepted. Among those suggested are the King of Portugal, and the Duke of Montpensier, son of Louis Philippe and husband of a daughter of the late Queen. Prince Alfred of England, second son of Queen Victoria, has been mentioned; but it is hardly possible that any except a Catholic will be chosen King of Spain. It has even been surmised that General Prim is aiming at the Sovereignty.

Editor's Drawer.

CONCERNING New-Year's Charles Lamb begins one of his delightful papers with:

"Every man hath two birthdays; two days, at least, in every year which set him upon revolving the lapse of time as it affects his mortal duration. The one is that which in an especial manner he termeth *his*. In the gradual desuetude of old observances, this custom of solemnizing our proper birthday hath nearly passed away, or is left to children, who reflect nothing at all about the matter, nor understand any thing beyond the cake and orange. But the birthday of a new year is of an interest too wide to be pre-empted by king or cobbler. No one ever regarded the First of January with indifference. It is that from which all date their time, and count upon what is left. It is the nativity of our common Adam."

WHEN was it that the custom originated of making visits and presents on New-Year's Day? A gentleman curious in antiquarian matters has traced it to the times of Romulus and Tatius, and that the usual presents were figs and dates, covered with leaf-gold, and sent by clients to patrons, accompanied with a piece of money which was expended to purchase the statues of deities. The custom was continued under the Roman emperors until prohibited by Claudius. Yet in the early ages of the Church the Christian emperors received them; nor did they wholly cease, although condemned by ecclesiastical councils on account of the pagan ceremonies at their presentation. The old Saxons observed the new year as a high festival, and indulged in more than ordinary feasting and jollity. They also made presents.

Thomas Navgeorgus, in "The Popish Kingdom," a Latin poem written in 1553, after remarking on days of the old year, says:

"The next to this is Newe yeares day,
whereon to every frende
They costly presents in do bring,
and Newe yeares giftes do sende.
These giftes the husband gives his wife,
and father eke the childe,
And maister on his men bestowes
the like, with favour milde."

A noted antiquarian, Dr. Drake, has expressed the opinion that the wardrobe and jewelry of Queen Elizabeth were principally supported by these annual contributions on New-Year's Day. He cites lists of the New-Year's gifts presented to her, and from these it appears that the greater part, if not all, the peers and peeresses of the realm, all the bishops, the chief officers of state, and several of the queen's household servants, even down to her apothecaries, master-cook, sergeant of the pastry, etc., gave New-Year's gifts to her majesty—consisting, in general, either of a sum of money, trinkets, wearing apparel, etc. The peeresses gave rich gowns, petticoats, shifts, silk stockings, garters, sweet-bags, doublets, mantles, etc. Although the queen made presents in return, she took sufficient care that the balance should be in her own favor.

An old writer—Bourne—hath an amiable word or two concerning gifts on New-Year's which we commend to the kind-hearted reader: "If I send a New-Year's gift to my friend, it shall be a token of my friendship; if to my benefactor, a token of my gratitude; if to the poor, which at this season must never be forgot, it shall be to make their hearts sing for joy, and give praise and adoration to the Giver of all good gifts."

THIS instance of Biblical criticism comes from Pleasantville, Pennsylvania:

At a Sabbath-school meeting recently held in that town, after the recitations had been concluded, this dialogue occurred:

SUPERINTENDENT. "Well, children, what is the subject of your lesson to-day?"

CHILDREN. "Judas Iscariot, Sir."

SUPERINTENDENT. "What kind of a man do you think he was, children?"

SMALL BOY (*quickly*). "I think he was a dead beat, Sir!"

THERE was a man who lived in Cass County, Georgia, many years ago, who had once been in the State Legislature, and never neglected an opportunity to emphasize the fact. He was a perfect infidel as to new discoveries and new sciences,

being perfectly satisfied that if the world should turn over all the water would spill out of his well; and only giving in to steam cars by slow degrees. But all the vials of his contempt were poured out upon the idea of a telegraph, and he was wont to say that nobody need try to come "the green" over him in that way, for he had been in the Legislature. Finally, the State road was built, and one day workmen began to put up telegraph posts right in front of his house, and to stretch the wire. His exultant neighbors thought they had him on that occasion, and asked: "Well, old fellow! what do you think of telegraphs now?" He was cornered, but died game. Drawing himself up an inch taller, he said: "Gentlemen, when I was in the Legislature I gave this subject my very attentive consideration. And I said then, as I say now, that it may do for letters and small bundles, but it *never will* take a cotton bale, *never!*"

It was from the same county that a man went all the way from Cassville to Atlanta. On his return he looked solemn with the weight of garnered wisdom, and said, "If the world was as big t'other way as it was that, it was a whopper!"

THE rapid increase of "tanneries" during the past season recalls to the memory of a Virginia correspondent a scene that occurred not many months since in the "Mother of States." The proprietor of one of those institutions having erected a building on the main street for the sale of his leather, the purchase of hides, etc., began to consider what kind of sign would be most attractive. At last what he thought a happy idea struck him. He bored an auger-hole through the door-post and stuck a calf's tail into it, with the bushy end flaunting out. After a while he noticed a grave-looking person standing near the door, with spectacles on, gazing intently at the sign. So long did he gaze that finally the tanner stepped out and addressed the individual:

"Good-morning!"

"Morning!" replied the man, without moving his eyes from the sign.

"You want to buy leather?"—"No."

"Want to sell hides?"—"No."

"Are you a farmer?"—"No."

"Are you a merchant?"—"No."

"Lawyer?"—"No."

"Doctor?"—"No."

"What in thunder are you?"—"I'm a philosopher. I've been standing here half an hour trying to decide how that calf got through that auger-hole, and for the life of me I can't make it out!"

A CITIZEN of Essex County, Massachusetts, who evidently reveres the institutions of that State, writes that a few years ago, when Justices of the Peace in Massachusetts were made "sort of spontaneous," it was remarked to him by a friend that "Governor Boutwell came the nearest to the Great Creator of any man living." Asking for an explanation, he said: "God made the world out of nothing; and Governor Boutwell made a Justice of the Peace out of the nearest to nothing possible."

Obviously the remark of an irreverent party.

AN Illinois correspondent, by way of illustrat-

ing the spirit of independence that dwells in the bosom of the "girl of the period" in that State, mentions that two of Illinois's beautiful daughters, driving out on the plank-road near Chicago, were stopped at the toll-gate and asked for toll.

"How much is it?"

"For a man and horse," replied the gate-keeper, "the charge is fifteen cents."

"Well, then, git out of the way, for we are two gals and a mare. Git up, Jenny!"

And those two cheery young females dashed by the man of toll without disbursing the paltry sum which it was his duty to solicit.

THE following is said to have been told by a prominent Southern orator for the benefit of Mr. B. H. H——, of Georgia, during a political canvass. Said the speaker: "The ambition and the uniform bad luck of Mr. H—— remind me of a little incident. A worthy but poor farmer paid a visit to a sister of more means, and somewhat astonished her by his breakfast appetite. When some twenty of the inevitable Georgia biscuit had disappeared without satisfying him, she gently said, 'You seem fond of wheat biscuit, George.' 'Yes,' said he, reaching for another, 'I likes um as well as any body you ever saw, and gets um as seldom!'"

WE have a fresh anecdote of the late Commodore Porter, father of our present Rear-Admiral. At the close of the war he was in the habit of spending much of his time at the hospitable mansion of General Morton, in this city. The General's library was graced with portraits of distinguished naval officers—Decatur, Bainbridge, Perry, Morris, and others. The Commodore expressed his admiration of the fidelity and effect of these, but said they were too large. "Now I intend to add my portrait to your collection shortly, but it shall be done in quite a different style." "Then you do not like these?" said the gentleman. "Not exactly," replied the Commodore; "there's entirely too much canvas." "That's a very singular objection for you to make," said the General, directing the attention of his guest to a small picture representing the engagement of the *Essex* with a frigate and sloop of war off Valparaiso, which hung in one corner of the room—"a very singular objection indeed, when we have before us an evidence that it will require double the usual quantity of canvas to take you!"

DURING the contest between the American and Democratic parties, some years since, Colonel Andrew H. H. Dawson, then a young lawyer, had the nerve to meet the great Georgia orator, Stephens. In reply to the earnest appeal of the great statesman that the South should support Mr. Buchanan, Mr. Dawson said: "My friends, we once had a great Whig party, and in this State Mr. Stephens was its great leader. The Whig party has gone to Hades. We have now the great Democratic party, and in this State Mr. Stephens is its great leader. If he will only lead the Democratic party *where he led* the Whig party I shall be perfectly satisfied!"

LET it not be supposed that the "friend and brother," under the new construction, South, is not disposed to invest the marriage service with all the solemnity which so important a ceremo-

nial commands in more cultivated society. Nothing, "we calculate," could be more edifying to our dusky-hued friends than the remarks made by a sable parson at a negro wedding which took place recently near Montgomery, Alabama. Thus spake he:

"Here is a couple who have walked out to-night, wishing to be jined in, and thro' love, and wishing all dem dat have any ting twixt dem come forward and speak now; if not, let dem hold dar peace now and for evermore. I wants every ear to hear, and every heart to enjoy.

"Mr. Jim Thompson, whomsoever stands fastly by your left side, do you take her for your beloved wife, to wait on her through sickness and through health, safe and be safe, holy and be holy, loving and be loving; do you love her mother, do you love her father, do you love her brothers, do you love her sisters, do you love her master, do you love her mistress, but do you love God de best?"

Answer: "I do."

"Miss Mary Thompson, whomsoever stands fastly by your right side, do you take to be your dear beloved husband, to wait on him through health and through conflation, safe and be safe, holy and be holy; do you love his mother, do you love his father, do you love his brothers, do you love his sisters, do you love God de best?"

Answer: "I will."

"I shall pronounce Mr. Jim to hold Miss Mary fastly by the right hand, and shall pronounce you both to be man and wife, by the commandments of God. We shall hope, and trusting through God, that you may live right, that you may die right, now and for evermore. Now, Mr. Jim, *slew* your bride. Let us sing a hime:

"Plunged in a gulf of dark despair," etc.

ODDLY enough, on the very day in October last on which news came by telegraph of the earthquake in San Francisco (Oct. 21), we received a letter from a San Francisco correspondent, dated October 8, inclosing the following anecdote: This is the anniversary of the great earthquake which occurred in this city October 8, 1865, and reminds me of a remark of our youngest, then a boy of six years. He was playing in the yard at the time, and at the first shock started for the house, much excited. Meeting his mother, he asked: "Mamma, who makes earthquakes?" She answered, "God makes them, my child." "Well, mamma, don't you think He made that a little harder than He meant to?—don't you think it slipped a little?"

A CORRESPONDENT informs us that the *gamin* of Atlanta, Georgia, are sadly in need of reconstruction—both in morals and pantaloons. One of them approached him "edgeways" with the polite question, "Mister, does your bees do well this year?" He replied, "I have no bees, my son; why do you ask?" The boy glanced at his shining beaver, and exclaimed, "Oh, I thort that were a bee-gum!" Another said, in a sympathetic tone, "Mister, your cows is all dead, isn't they?" He remembered the other, and answered, "No, you little rat." "I thort they were," said the boy, "becase you had put your churn in meurnin'!"

THE recent session in this city of the Triennial

General Convention of the Protestant Episcopal Church in the United States brought with it a little crop of clerical anecdotes, some of which may be new to the readers of the Drawer. The Episcopal Convention, however, is not so old an institution as is the Baptist Association of Philadelphia, which held its one hundred and sixty-first annual session in October last. Many ministers come to these gatherings, and, as a matter of course, much poultry is consumed. In one instance this predilection for fowl was charged upon a Methodist brother who stopped with a farmer in Sugar Valley, Clinton County. He was posted on "Gray's Elegy," and especially admired one of its stanzas in which occur the words:

"The breezy call of incense-breathing morn,
The swallow twitt'ring from the straw-built shed,
The cock's shrill clarion, or the echoing horn."

The good man was dressed before the sun had risen, and realized every thing of which Mr. Gray wrote, the rooster-crowing excepted. As he walked out across the dewy lawn he met the little boy of Mr. Ferguson, his host. He asked the urchin why the roosters on the place differed from others, and did not crow. "Ah!" said the urchin, "they've got to know when ministers come along. They saw you coming up the lane yesterday. They're all gone under the barn, and nary one of 'em 'll come until you're gone. They've lost so many relations on account of ministers' visits that they've got shy. Whenever a preacher comes mother kills chickens, and the roosters always come first!"

OF a little different sort is one from Pittsfield, Massachusetts, where a certain clever divine had been employed to supply the pulpit of a neighboring town for several weeks. At the conclusion of the afternoon service on Sundays he was in the habit of driving back to Pittsfield. This not being exactly in accordance with the notions of the congregation, a delegation was appointed to call on him and remonstrate. Somewhat astonished by the moral light thus gratuitously shed upon him, he said: "Why, my family live in Pittsfield; I have nothing to stay here for, and," continued he, with a twinkle, as if he saw a solution of the difficulty, "it won't do any harm, will it, if I drive s-l-o-w?"

THE latest story in reference to Regeneration was given not long since at a public dinner in Edinburgh, by Professor Blackie:

A boy at a Presbytery examination was asked, "What is the meaning of regeneration?" "Oh, to be born again," he replied. "Quite right, Tommy; you're a very good boy. Would you not like to be born again?" Tommy gave no reply; but on being pressed for an answer, at last said, "No." "Why, Tommy?" Tommy replied, "For fear I might be born a lassie."

A YOUNG gentleman who has doubtless in prospect the higher honors of the bar or senate is laying the foundations therefor at Genesee College, Lima, New York, which he thinks has awakened into fresh life under the new administration of Dr. Steele. The class in Mental Philosophy occasionally find their instructor not so dry as he looks to be. Not long since the Doctor remarked that "The result of study is to find

out that we know nothing. The Delphic oracle declared Socrates to be the wisest man," which he explained by saying that "He knew his own ignorance, while others imagined themselves wise. The more we study, the firmer will be our conviction that we know nothing."

"If that is the case," said a senior, "I think I am prepared to take my diploma now."

The smile was at the Doctor's expense until he replied, "Perhaps you are not so thoroughly convinced as you will be *after* examination."

THE following is told of Judge Cone, of Georgia, and the candidate for door-keeper of the State Senate:

[Enter Candidate, who supposes the Judge to be a member of the Legislature.]

CANDIDATE. "If you please, Sir, I wish to be elected door-keeper of the Senate, and if you will be so good as to vote for me I will try to—"

JUDGE. "Take a seat, Sir, and I will examine you."

CANDIDATE. "Yes, Sir, if you please."

JUDGE (*gravely*). "Have you ever been a door-keeper?"

CANDIDATE. "No, Sir; but I trust, by your vote and—"

JUDGE. "Have you ever been instructed in the responsible and arduous duties of door-keeping?"

CANDIDATE. "No, Sir, but I would seek to be."

JUDGE. "Have you ever attended lectures on door-keeping?"

CANDIDATE. "Why, no; I never heard of any."

JUDGE (*sternly*). "Have you ever read a book on the science of door-keeping?"

CANDIDATE. "I never did, Sir, but I would if—"

JUDGE. "Have you ever conversed with one who has read such a book?"

CANDIDATE. "No, Sir, but I certainly will."

JUDGE (*solemnly*). "Do you not see, Sir, that you have not a single qualification for the office?"

[Exit Candidate, resolved to go home and give it up.]

HARRY M'ARTHY used to tell of an Irishman who was seen at the trenches of Yorktown holding his hand above the earth-work. His Captain asked: "What are you doing that for, Pat?" He replied, with a grin and a working of his fingers: "I am feelin' for a furlough, sure!" Just then a Minié ball struck his arm just below the wrist. Slowly drawing it down, and grasping it with the other hand to restrain the blood, a queer expression of pain and of humor passed over his face as he exclaimed: "An' faith, I think it's a discharge!"

GEORGETOWN, Essex County, Massachusetts, has a memorial church, the gift of Mr. George Peabody, which stands in about the same relation to the people of that town that the great organ does to the people of Boston. The incident that follows, however, relates more to Mr. Peabody himself than it does to his vital piety or his church. A few years ago, when Mr. P. was on a visit to Georgetown, the Essex County Agricultural Fair was held in the neighboring city of Newburyport. The managers of the plowing-match had it so arranged that upon the appear-

ance of Mr. Peabody upon the field the teams should start simultaneously, giving the scene a fine dramatic effect. Owing to the lateness of the train on which Mr. P. was to arrive, the plowmen and spectators became impatient, and sauntered about to kill time. While thus occupied an old gentleman inquired, "John, what are they waiting for?"

To which the intelligent John replied that they were waiting for Mr. Peabody to arrive; for, says he, "*Peabody is going to plow!*"

Whether George arrived in time to gratify the people by putting his hand to that noble implement is not communicated.

A LITTLE incident illustrating the humorous side of politics comes to us from West Virginia:

Colonel Watson, a well-known politician of that State, enjoyed great personal popularity on account of his affable manners, and whenever he was a candidate for office ran ahead of the ticket. He generally spoke to every body he met, professing to know them. On one occasion, during the last Presidential campaign, he met a countryman, whom he shook by the hand, and commenced:

"Why, how do you do, thir? I am very glad to thee you; a fine day, thir; I thee you thtill ride your fine old gray, thir."

"No, Sir; this horse is one I borrowed this morning."

"Oh! ah! well, thir, how are the old gentleman and lady?"

"My parents have been dead about three years, Sir."

"But how ith your wife, thir, and the children?"

"I am an unmarried man, Sir."

"Thure enough. Do you thtill live on the old farm?"

"No, Sir; I have just arrived from Ohio, where I was born."

"Well, thir, I gueth I don't know you, afther all. Good-morning, thir!"

IN Georgetown, Colorado Territory, where silver and silver ore are "the chief end of man," there exists a mining superintendent who mingles digging with divinity—indulging in the latter on the "day of rest." Not long since this worthy person delivered a sermon, in which, exhorting his hearers to prepare for the life to come, he said: "My brethren, Georgetown is a very healthy place. Men don't often die here. Once in a while, however, a rock rolls down from the mountain and kills a fellar. Once in a while, too, a shaft caves in and kills a fellar. My brethren, we have started, down yonder at the forks of the creek, a little grave-yard; and though we had to start it with a man who was hung, and though, as I said before, Georgetown is a healthy place, nevertheless, if you live here *long* enough, my brethren, some of you may live to be *buried thar*: so prepare for the life to come!"

THE recent decease of "Jacob Omnium" (Mr. Matthew James Higgins), who for twenty years was a constant contributor to the *London Times*, and a frequent contributor to the *Edinburgh* and *Quarterly Reviews*, recalls to mind one of Thackeray's humorous poems, written over the signature of "Pleacemen X.," on a horse of

Mr. Higgins's, which had been stolen. A verse or two will give an idea of the "chaunt:"

One sees in Viteall Yard,
Vere pleacemen do resort;
A venerable hinstitute,
'Tis called the Pallis Court;
A gent 'as got his i on it;
I think 'twill make some sport.

The judge of this year Court
Is a mellitary beak;
He knows no more of Lor
Than praps he does of Greek,
And provides hisself a deputy,
Because he can not speak.

It is now some monce since,
A gent both good and trew
Possest an ansum oss, with vich
He didn't know what to do;
Peraps he did not like the oss,
Peraps he was a scru.

This gentleman his oss
At Tattersall's did lodge;
There came a wulgar oss-dealer,
This gentleman's name did fodge,
And took the oss from Tattersall's:
Wasn't that a artful dodge?

[The horse is recovered.]

And phansy with what joy
The master did regard
His dearly bludv lost oss again
Trot in the stable yard!

Who was this master good,
Of whomb I make these rhymes?
His name is Jacob Homnium, Exquire;
And if I'd committed crimes,
Good Lord! I wouldn't ave that man
Attack me in the *Times*!

Now shortly after the groomb
His master's oss did take up,
There came a liveryman
This gentleman to wake up;
And he handed in a little bill,
Which hanger'd Mr. Jacob.

For two pound seventeen
This liveryman eplied,
For the keep of Mr. Jacob's oss,
Which the thief had took to ride.
"Do you see any think green in me?"
Mr. Jacob Homnium cried.

"Because a raskle chews
My oss away to robb,
And goes tick at your Mews
For seven-and-fifty bobb,
Shall I be called to pay? It is
A iniquitous Jobb."

Thus Mr. Jacob cut
The conwasation short;
The liveryman went ome
Detummingd to ave sport,
And summingsd Jacob Homnium, Exquire,
Into the Pallis Court.

[The case was taken to court; "the debt was two seventeen;" "the plaintive's costs eleven pound six and two;" Mr. Jacob's costs]

"The lawyers they did fix
At the very moderit figgar
Of ten pound one and six."

I can not settingly tell
If Jacob swaw and cast
At aving for to pay this sumb,
But I should think he must,
And av drawn a check for £24 4s. 8d.
With most igstreme disgust!
Oh, Pallis Court, you move
My pity most profound!
A most emusing sport
You thought it, I'll be bound,
To saddle up a three-pound debt
With two-and-twenty pound.

THE Rev. Dr. W. F. B——, of Virginia, an aged and venerable minister of the Baptist de-

nomination, is one of the few examples that this world affords of a successful compound of the wag and the saint. In his early life he lived and labored in the State of Kentucky, where an incident occurred which runs thus:

It may be necessary to premise that the country churches in the South and West were at that time very feeble bodies, a little inclined to be stingy, and so easily satisfied with sanctuary privileges that four of them generally combined to support one pastor, whose services they were content to enjoy one Sabbath in the month.

Dr. B—— had been unanimously called to preach to one of these societies, and had accepted the call; but, as usual, nothing had yet been said about his salary, or the time of his monthly visit; and to arrange these matters he attended the next business-meeting of the body.

When the meeting had been organized a prominent member of the church arose, and after congratulating the brethren on having secured the valuable services of Dr. B——, proceeded to say that, as his pay would necessarily be small, it ought at least to be paid regularly, and that the church should now pledge to him some definite amount. He acknowledged that it was something of an innovation, but gave several good reasons why it should be done, and resumed his seat.

Another brother then took the floor, who, after surpassing the first in his compliments to Dr. B——, recurred to the subject of salary. For his part, he said, he could not see the necessity nor the propriety of paying the brother's salary in this methodical way. He thought it much better that the whole matter should be left *open*, perfectly open. He thought it would answer to pay the money whenever it should happen to be in the treasury; that it was unnecessary to say now when the payments would be made, or to pay the same amount every time. Some months the brother would be paid much, some little, and some nothing, perhaps; but he thought this way had a less sordid and worldly appearance, and he did not doubt that in the long-run the pastor would receive more by this method than any other.

This talk struck the brethren present so favorably that, after a little vacillation, they adopted the views of the speaker unanimously. The next business in order was the choice of a Sabbath on which to have preaching, and this they agreed to submit entirely to the convenience of their pastor. Dr. B——, who had been an attentive listener to the whole of the debate concerning his salary, now rose to state on what Sabbath in the month he proposed to visit them.

After expressing great love for his new charge, and an ardent desire to be useful to them, he remarked that as to the day on which he should preach to them he deemed it unnecessary to speak very definitely. Some months he would come on the first Sabbath, some on the second, some on a week-day, and some not at all. There was no use in having cast-iron rules about a matter of this kind; it was inconvenient and, he thought, unprofitable. They had proposed to leave the matter *open* as regarded his salary, to which he had no objection; and, for his part, he really thought it best to leave it open at *both ends*—*entirely open*. Having thus amazed and horrified his auditors, he quietly sat down.

This speech wounded the feelings of the brethren

ren beyond measure. They sat still for some time, overcome with pique and mortification. But at last they acknowledged the corn, and agreed to pay the Doctor one hundred dollars per annum, and he agreed to preach every second Sabbath; and good feeling was restored.

MANY of the New York mercantile agents who were in the South at any period from 1856 to 1860 will remember old David Westfield, the rich planter, who had charge of the turnpike leading over the Cohutta Mountains, in Murray County, Georgia. "Once upon a time," as the storytellers say, there was an unusually large assemblage of drummers, hunters, travelers, and the like, before the cavernous fire-place of old Davy—who was not only a great planter but a great hotel-keeper, and had been a famous hunter. After supper there seemed a general disposition to tell marvelous tales, and each one endeavored to surpass the other in the marvelous. They told of perils by shipwreck, by bears, by wild-cats and wolves, by storm and lightning, by rattlesnakes, by revolvers and bowie-knives, until all hands were slightly nervous from horror, and prepared to believe any thing. Old Davy roused up from his great chair in the warm corner, and said: "Did I ever tell any of you of my bear scrape up in these mountains?" Every body knew that the old man was not likely to tell a story unless it surpassed all that had been told, and a dozen voices exclaimed, "No! tell it—tell it!" He slowly filled his pipe and began:

"It was a cold, sharp winter morning, and I took my gun and dogs to go for a deer up the Cohutta. I took my axe along too; not that I expected to find a bear, but just from habit. The snow lay pretty deep on the slope of the mountain, but I wasn't thinkin' about bear, and so I didn't notice for sign. On top of the mountain the sun had melted the snow, and I come to a hollow log—a big one. I set down my gun by a tree, and that was foolish; but you see I didn't expect bear. I took my axe and cut into the old log, just to see what was in it. I cut away for a while, never once thinkin' of them varmints, bears, and I found I had cut too high up, and was above the hollow. Then I cut lower down, still not suspecting that a bear was in it; and I soon had a hole that I could have got into myself. Then I just laid my axe down and turned my back to fill my pipe and rest a minute and smoke—" Here the old man paused, and illustrated by drawing vigorously at the old pipe. The listeners were all excited, and twenty voices began at once—"Go on!" "Don't stop!" "Did you kill it?" "How did you get to your gun?" "Did it hurt you?" "Was it a she with cubs?" "Was it a big one?" "What was it?" etc., etc. Old Davy blew the cloud away from his face, and waiting for all the questions to cease, replied: "*There wasn't a thing there!*"

When the magnitude of the sell dawned on the minds of those present they all laughed, and said it must be bedtime.

OUR boys are furious for practical jokes, and are constantly on the look-out for subjects. One of the latter was recently found in the person of a new teamster, who had charge of six large, shaggy mules. Jehu was discovered to be the proprietor of two bottles of old Bourbon—a con-

traband article in camp—which a wag was determined to possess himself of. Aware that the teamster's presence was the great obstacle to the consummation of his desire, he devised the following plan to get him out of the way. Approaching the man, who was busy currying his mule, he accosted him with:

"I say, what are you doing there?"

"Can't you see?" replied Jehu, gruffly.

"Certainly; but this isn't your business. It's after tattoo now, and there is a fellow right here hired by the Government on purpose to curry all the teams that come in late."

The driver bit at once, and wanted to know where the aforesaid "hair-dresser" kept himself; whereupon he was pointed to General Nelson's tent, with the assurance that there was where "the fellow hung out."

"You can't mistake him," said the wag; "he is a large fellow, and puts on a thundering sight of airs for a man in his business. He will probably refuse to do it, and tell you to go to the devil. (He has been drinking some to-day.) But don't you mind that; make him come out, sure!"

Off went Jehu, and entering the tent where our Napoleon of the Fourth Division sat in a deep reverie, gave him a slap on the back sufficient to annihilate a man of ordinary size. Springing to his feet, the General confronted his uninvited guest in a moment.

"Well, Sir, who the devil are you, and what do you want, Sir?"

"Old chap, I've got a job for you—six mules to be curried, and right away too," said he, nothing daunted by the flashing eye of the General.

"D—— you, Sir, what do you mean? Do you know who I am, Sir?"

"Yes, Sir-ee!" replied Jehu, elevating his voice to a pitch that rendered the words audible a square off; "you are the fellow that Uncle Sam has hired to curry the mules. Come now; I don't want any foolishness about it. Just clean them three mules, and I'll give you a drink of 'bust-head.'"

"You infernal villain!" roared Nelson, now furious. "I am General Nelson, commander of this division!"

Jehu placed the thumb of his right hand against his nose, and, extending his fingers, waved them slowly, in a manner intended to indicate great wisdom. The General's sword leaped from its scabbard, and Jehu put from the tent just in time to save his head. By this time the Bourbon had been duly cared for, and in it the boys drank the "big mule-driver's" health with a gusto.

ON one occasion, when General Nelson was marching through the mountains of Eastern Kentucky, we halted for the night in a narrow valley between two mountains. The roads were very bad, and the trains continued coming in at all hours of the night. The General had gone to bed—not, however, until he had abused things in general, as was his custom when men and movements were not on time. A wagoner who had just got in espied, sitting before a camp-fire, Mr. Sam Owens, a man of talent and infinite fun withal, then serving as volunteer aid on Nelson's staff (and at that moment upon the stool of repentance for having sat down upon the General's hat a little while before). The driver inquired

of him where he should leave his team. "Just beyond you there," pointing to a spot as he spoke; "and when you have taken care of your horses go to that tent yonder, the second one from here, and there you will find a big, fat man sleeping on a lounge. Wake him up, and he will give you some hot coffee. The Quarter-Master thought you drivers would need it, and he has left him here to attend to it. He is hard to wake, though; you'll have to grab him right tight, and give him a good pull, then a push, and then roll him quick and fast, like you would a barrel. He swears a good deal when he is first waked up, and will try to frighten you away; but just you hold on to him till he is fairly awake, and he will give up."

The driver obeyed instructions to the letter. After a firm grab, a decided pull, and a vigorous push, with a "roll like a barrel," "Come, old chap," said he, "I want that coffee. It's no use to swear and bluster; *it's got to come!*"

Hardly were the words uttered when General Nelson sprang from his couch, and the volley of oaths that then ensued so terrified the poor driver that, it is said, his hair turned gray.

THEY have in Dublin a sort of *Police Gazette* called the *Hue-and-Cry*, which, besides containing the style of matter usually to be found in such journals, gives various items of information that are very Irish. Instance:

"Mr. Gregg, of Armah, has lost a horse with a white star on his forehead, which is very heavily shod."

"Wanted to know of Patrick Quinn, which has brown eyes, which lost the toes off his right *foot*: and of John White, whom has gray eyes, which wore a fustian jacket."

The *Hue-and-Cry* copies from other Irish papers, without change of orthography or punctuation, the following notices:

White, a tailor's apprentice, who absconded from his master at Phippsborough Road, taking with him £7 15s., is said to have worn "a cord trowsers, and also a pair of black cloth trowsers, a striped shirt shoes!"

Some of the E division of police found straying at Crumlin "a red cow, with white back and belly."

Annagh.—Mary Macdonald stands charged "with having deserted her male child two months in a potato field." Her "hair cut short behind her hazle eyes."

One of two cows stolen from James Com, of Lislea, is described as "red color, with a white back and flat ribs on the hind quarters."

James Smith, of Dungarvan, lost a cow of a "pale yellow color, having on the back a white stripe and very broad horns!"

Clare.—Edward Torpey, of Cloughsheen, lost a black horse with a white head. The *Hue-and-Cry* states that "the thief will give a reward of £1 on reference to him!"

Cork.—Michael Hounigart, of Munree Abeby, lost a horse with "one hind leg white which had a long switch tail!"

Dublin.—An ass, the property of Isaac Field, Esq., was stolen from Bray; the animal is said to be "very gentle and willing!"

Galway.—John Kilkenny, of Ballynauly, lost a "yellow cow with a black mouth six years old!"

Kildare.—Peter Rafter, of Rathangan, lost "a red cow within five days of giving a calf nine or ten years old!"

If the following description of William Field Simmons, who deserted from the 88th Regiment, at Kilkenny, on the 23d of July, leads not to his apprehension, we can not tell what will: "The belt and bayonet worn by the deserter were found in a field adjoining the Record Buildings. His father resides in Dublin, and is a painter by trade; and his brother-in-law lives at Phippsborough Road."

From Kildare there is a notice relative to a horse, which is described as a black mare! From the same locality was stolen a black horse, described as having a great many white marks.

John Sexton appears to have had particular attention paid to him. He is described as one of the Ballingarry rebels, with "two blue eyes, but blind of one of them," and "by trade a laborer," supposed to be about Kilkenny at present, or gone to England or Scotland to reap the harvest.

Another of the rebels, named Patrick O'Donnell, is described by the following, among other marks and tokens, "by trade a jobber and great politician!"

At an early period of the career of Elliott, the artist, while he was still studying under Trumbull and Quidor, he dwelt at the old Franklin House, at the corner of Broadway and Dey Street. At that time, like most young artists, he was a "picker up of unconsidered trifles," and among other "properties" came in possession of a small but beautiful head, which was attributed by connoisseurs to the pencil of Vandyck, and was coveted by many picture buyers, especially by Daniel Jackson Seward. The young painter, however, would not part with his treasure, and refused many offers of twice its original cost.

In consequence partly of this collecting mania, when spring came round Elliott found himself considerably in debt, and was obliged to put off his good-natured landlords with a "promise to pay" for an amount which they had little hope of ever realizing.

Shortly afterward Addison G. Jerome, who was well known as one of the artist's old chums, happening in at the Franklin House, was accosted by Treadwell with:

"I say, Jerome, don't you want to buy a note?"

"A note—whose?"

"Oh, a friend of yours."

"A friend of mine—who?"

"Why, Charley Elliott."

"Indeed! What's the figure?"

"Three hundred dollars."

"H'm!" ruminated the future banker, remembering the coveted "Vandyck." "What will you take for it?"

"What will you give?"

"Fifty cents on the dollar."

"Done!" was the reply.

The money was paid down, and the note carefully folded away in a capacious pocket-book for future use. Jerome was just starting on a business tour to the West, and arriving at Syracuse hunted up the artist, whom he found hard at work in his studio.

"I say, Charley," began the wily financier, glancing cautiously around the room until his eye

rested on a small, dingy frame, "I was sorry to find a note of yours hawking about the streets the other day; and, as I always like to shield a friend, I paid it for you."

"Did you?" answered Elliott, with an incredulous smile; "that was very kind of you, but I'm afraid it will be a good while before you get your money back."

"Oh, never mind the money! you'll paint me something for it, won't you?"

"Only too glad of the chance."

"Or, let me see. Perhaps you have something already finished! Why, yes; there's that head in the old frame yonder. Give me that, and we'll call it quits!"

"Oh, pshaw! you don't want that old thing!"

"Why, yes I do—come to look at it, I rather fancy it."

"Do you? Well, *so do I*. You'll have to choose something else."

Many arguments were tried, but all in vain; and finally the baffled broker left, with many protestations of friendship, and dropping into a lawyer's office left the note with orders to "*put it through*," and special directions on what particular picture to levy as soon as judgment should be obtained.

A month or two later, he returned, and in a dusty corner of the lawyer's office found a dingy frame and a dingier picture awaiting him. With a satisfied chuckle he seized on the prize, and soon after reaching New York called upon Seward.

"Well, Jackson, old fellow, I've got that picture for you?"

"What picture?"

"Why, that 'Vandyck' of Charley Elliott's."

"Have you indeed!—for how much?"

"Dirt cheap—only three hundred dollars."

"Where is it?"

"Here it is, frame and all!"

"Ah!" exclaimed the connoisseur, looking at the frame, glancing suspiciously at the face of the picture, and smiling as he examined its back.

"Well, after all, I guess I don't want it."

"Don't want it! Why, you were crazy for it a month or two ago!"

"Why, the fact is, Jérôme, you've been taken in."

"Taken in!"

"Yes. This is the original frame, but the picture is only a copy, and a poor one at that."

What became of the picture we do not know; but it is said that the future millionaire ever after fought shy of the "Old Masters."

"TERMS are things," was once said by John Wilkes, and the remark has come down to our day. A new and it seems to us satisfactory definition of the difference between two prominent religious societies of the day, comes from a Buffalo correspondent, who gives it as a dialogue that occurred between two little five-year-old misses:

"Anna, you are a Unitarian."

"Yes; and you are a Presbyterian."

"Now, I should like to know what is the difference."

"Oh, I don't know. All the difference *I* can see is, one is a 'tarian and the other is a 'terian."

Such is the wisdom of children!

Is there, can there be, any thing more grateful to a public speaker than an expression of ap-

proval of his efforts which he knows is prompted by the most perfect sincerity? This gratification was recently experienced by a young gentleman in South Carolina—whether a valise-bearer or not is left unexplained—who had addressed with great fervor a Grant and Colfax ratification meeting in Beaufort, the audience being largely composed of freedmen. After the meeting one of the aged "uncles" approached the speaker and congratulated him upon his effort. "Dat," said he, "was a grand speech, massa; a brave speech; de best speech I ever *did* hear; but I's an old man and ha'n't got no larning, and I *didn't un'stan' a word you said*; but, golly, 'twas a brave speech, Sah, *suah*!"

A CONFEDERATE Captain and A. Q. M. was one day talking to a mixed crowd of officers and privates. To illustrate the depreciation of currency he took out his "Frodsham" watch, and said: "That cost me twenty-five hundred dollars!" A soldier said: "Mister, you uns *didn't* pay twenty-five hundred dollars for that are watch, did you?" "I did that," was the reply. Soldier continued: "Would you uns let us see it?" It was handed over. After a close examination the soldier again asked: "Mister, you is jokin', isn't you?" "Not a bit of it," said the A. Q. M. With an expression of resignation and despair the soldier handed it back, saying: "Well, Mister, you uns must be a darned fool—or a Quarter-Master!"

WE believe that the following is the only case on record where a gentleman was so drunk as to take a *man* for a *town*. Be it known, to begin with, that there is a pretty little village in Georgia, and in sending letters to it, in order that they may not go to the national capital, it is customary to mark them very plainly—"Washington, Wilkes County," etc.

Major M——, of the Ordnance Bureau, was one day at the table of the Pulaski House, in Savannah, and amidst the delights of iced Champagne had lingered until General Jackson and the others of the State Division Staff had left the table. The only person remaining besides the waiters was a stranger, who sat directly opposite Major M——. Raising his eyes the Major beheld him, and at once, with rather a thick utterance, accosted him with: "Sir, I like your looks; I would like to know you, Sir. I will take a glass of wine with you, Sir. I am Major M——, of Georgia; what is your name, Sir?" The stranger replied: "My name is Mr. Washington." "Ah!" ejaculated the Major, "Washington, Wilkes County!"

The joke got out; but the Major says it was all made up.

JUDGE THOMAS W. THOMAS, of Georgia, was quite a wit, and one night, in 1857, after a wine party at M'Comb's hotel, in Milledgeville, Georgia, he approached the head waiter (colored) as he left the room, and said: "I donate to you this silver dollar, in token of my appreciation of your services to-night. You are now in a humble position, but the time may soon come for our positions to be reversed, or at least made equal. I give you this to-night, but when thou comest to thy kingdom I pray thee remember me."

Time has passed. The Judge is dead; the waiter-boy is a voter and a juror.

HARPER'S NEW MONTHLY MAGAZINE.

No. CCXXV.—FEBRUARY, 1869.—VOL. XXXVIII.

A SLEIGH-RIDE THROUGH EASTERN RUSSIA.

WESTERN SLOPE OF URAL MOUNTAINS.

AFTER passing the boundary between Europe and Asia we dashed away over the undulating road, and made a steady though imperceptible descent into the valley of the Kama. As I commenced my first day in Europe the sunbeams wavered and glistened on the frost-crystals that covered the trees, and the flood of light that poured full into my opening eyes was painfully dazzling. When we halted for breakfast I found the station neat and commodious, and its rooms well furnished. We fared sumptuously on cutlets and eggs, with excellent bread. Just as we were seated in the sleigh a beggar

Entered according to Act of Congress, in the year 1869, by Harper and Brothers, in the Clerk's Office of the District Court of the United States, for the Southern District of New York.

VOL. XXXVIII.—No. 225.—19

BEGGING FOR ELIAS.

made a touching appeal, as explained by my companion, the doctor, "on behalf of the prophet Elias." The prophet's financial agent was of so unprepossessing appearance that we declined investing. Beggars in Russia frequently ask alms in the interest of particular saints, and this one had attached himself to Elias.

During the day we encountered two merchants on their way to the fair at Minalinsk; they were drinking tea at a station where we changed horses, and I verily believe they swallowed more than a dozen cups apiece. We met many sledges laden with goods *en route* to the fair, which takes place every February at Irbit. This fair is of great importance to Siberia, and frequented by merchants from all the region west of Tomsk. From forty to fifty million rubles' worth of goods are exchanged there during the four weeks devoted to traffic. The commodities from Siberia are chiefly furs and tea; those from Europe comprise a great many articles. Irbit is on the Asiatic side of the Ural Mountains, about two hundred versts northeast of Ekaterinburg; it is a place of little consequence except during the time of the fair.

After entering Europe we relied upon the stations for our meals, carrying no provision with us except tea and sugar. We knew the peasants would be well supplied with edibles during the Christmas holidays, and were quite safe in depending upon them. A traveler in Russia must consult the calendar before starting on a journey if he would ascertain what provi-

sion he may or may not find among the people.

In twenty-four hours after leaving Ekaterinburg we made only a hundred and seventy versts; the worst day's travel since the beginning of the journey. The roads were rough and full of drifts, and the country more undulating than in Siberia.

Congour was the first town of importance that we reached; it has an unenviable reputation for its numerous thieves. They do not molest the post vehicles unless the opportunity is very favorable, their accomplishments being specially exercised upon merchandise trains. Sometimes when the trains pass through Congour at night the natives manage to steal one or more vehicles with their loads. The operation is facilitated by there being only one driver to five or six teams. This town is also famous for its tanneries, the leather from Congour having a high reputation throughout Russia. Peter the Great was at much pains to teach the art of tanning to his subjects; at present they have very little to learn from others on that score. Peter introduced tanning from Holland and Germany, and when the first piece of leather tanned in Russia was brought to him he took it between his teeth and exerted all the strength of his jaws to bite through it. The leather resisted his efforts, and so delighted the monarch that he decreed a pension to the successful tanner. The specimen, with the marks of his teeth upon it, is still preserved at St. Petersburg.

While waiting for dinner at Congour I con-

templated some engravings hanging in the public-room at the station. Four of them represented scenes in "Elizabeth; or, the Exiles of Siberia"—a story which has been translated into most modern languages. These engravings were made in Moscow several years ago, and illustrate the most prominent incidents in the narrative. Artistically they were far behind the steel engravings of Paris, Berlin, or London, and reminded me of English engravings of fifty or sixty years ago. Muscovite art has not yet reached its highest development; a great many of the Russian wood-cuts and steel-plates are sadly deficient in perspective and very rudely done. The Russians, especially the peasant class, are fond of pictures, and the walls of the humblest houses are generally decorated with wood-cuts and cheap lithographs. Battle-scenes appear to be most popular, and next to them are illustrations of leave-takings, courtships, and love matters in general. Portraits of the Emperor and Empress are in almost every house, and the prominent positions they occupy are indicative of the loyalty of the owners.

There were many things to remind me I was no longer in Siberia, and especially on the Baraba Steppe. Snows were deeper, and the sky less clear. The level country was replaced by a broken one. Forests of pine and fir displayed regular clearings and evinced careful attention. Villages were more numerous, larger, and of greater antiquity. Stations were better kept, and had more the air of hotels. Churches appeared more venerable, and, alas! less venerated. Beggars increased in number and importunity. In Asia the driver was the only man at a station who asked "na vodku;" but in Europe the *chelavek* (waiter) or *starost* (chief-hostler) expected to be remembered. In Asia the gratuity was called *na vodku*, or "whisky-money;" in Europe it was *na chi*, "tea-money."

During the second night we reached Perm, and halted long enough to eat a supper that made me dream of tigers and polar bears during my first sleep. In entering we drove along a

lighted street with substantial houses on either side, but without meeting man or beast. This street and the station were all I saw of a city of 25,000 inhabitants. In summer travelers for Siberia usually leave the steamboat at this point and begin their land journey, the Kama being navigable thus far in ordinary water. Perm is an important mining centre, and contains several foundries and manufactories on an extensive scale. The doctor assured me that after the places I had visited in Siberia there was nothing to be seen there—and I saw it.

A deep snow had been trodden into an uneven road in this part of the journey. At times it seemed to me as if the sleigh and all it contained would go to pieces in the terrible thumps we received. We descended hills as if pursued by wolves or a guilty conscience, and it was generally our fate to find a huge *oukhaba*, or cradle-hollow, just when the horses were doing their best. I think the sleigh sometimes made a clear leap of six or eight feet from the crest of a ridge to the bottom of a hollow. The leaping was not very objectionable, but the impact made every thing rattle. I could say, like the Irishman who fell from the house-top, "Twas not the fall, darling, that hurt me, but stopping so quick at the end."

In a country like Russia, where snow lies on the ground nearly half the year, and railways are few, it may be readily expected that the sleigh is an important vehicle of locomotion. The best time for travel is in the winter, and most of the freighting is done upon the snow-roads. This is particularly the case in Siberia, where nearly all merchandise waits for the winter, when it can be carried for about one-half the cost of summer transport. Tea from Kiachta, on its way to European Russia, is brought to Irkutsk in the autumn, where it is packed upon sledges, to be ready for starting at the proper moment. With the first snow-storm of importance long trains are started westward, and the traveler who goes over the great road at that time is certain to be bumped against sleds

JUMPING THE PITCH-HOLES.

innumerable. The Russian traveling sleighs are the most agreeable in the world, for the natural reason that the people are compelled to use them very often, and have set their wits at work to make something containing the maximum of comfort. In a previous article I have described the various kinds of sleighs in general use, and the peculiarities of their management.

When the summer roads follow the banks of rivers the winter roads are located upon the ice after the frost has made it safe. The post stations are where they can be readily accessible from the river, and generally a short distance up the bank. Very often travelers are left with their sleighs upon the ice while the driver goes to the station with his team and orders out a fresh one. In some localities, owing to climatic reasons, little or no snow falls during the entire winter. In such case there are often two roads kept open and stocked with horses—one for sleighs following the surface of the river, and another for wheeled vehicles keeping to the summer track.

The Russians have several popular songs that celebrate the glories of sleigh-riding. I give a translation of a portion of one of them, a song that is frequently repeated by the peasants in the vicinity of Moscow and Nijne Novgorod. It is proper to explain that a *troika* is a team of three horses abreast, the *douga* is the yoke above the shaft-horse's neck, and Valдай is the town on the Moscow and St. Petersburg road where the best and most famous bells of Russia are made:

A RUSSIAN SLEIGHING SONG.

Away, away, along the road
The fiery troika bounds,
While 'neath the douga, sadly sweet,
The Valдай bell resounds.

Away, away, we leave the town,
Its roofs and spires behind,
The crystal snow-flakes dance around
As o'er the steppe we wind.

Away, away, the glittering stars
Shine greeting from above,
Our hearts beat fast as on we glide,
Swift as the flying dove.

When the roads are rough the continual jolting of the sleigh is very fatiguing to a traveler, and frequently, during the first two or three days of his journey, throws him into what is very properly designated the road-fever. His

DESCENDING HILL-SIDE.

pulse is quick, his blood warm, his head aches, his whole frame becomes sore and stiff, and his mind is far from being serene and amiable. In the first part of my land journey I had the satisfaction of ascertaining by practical experience the exact character of the road-fever. My brain seemed ready to burst, and appeared to my excited imagination about as large as a barrel; every fresh jolt and thump of the vehicle gave me a sensation as if somebody were driving a tenpenny nail into my skull: as for good-nature under such circumstances that was out of the question, and I am free to confess that my temper was not unlike that of a bear with a sore head. Happily, however, I kept it pretty well to myself, and as my companion was affected about as I was we managed not to disagree.

Where the roads are good, or if the speed is not great, one can sleep very well in a Russian sleigh; I succeeded in extracting a great deal of slumber from my vehicle, and sometimes did not wake for three or four hours. The government couriers often suffer much from loss of sleep, as they are compelled to maintain the utmost limit of speed without regard to their own

convenience. Sometimes the roads are in such wretched condition that one is tossed in his vehicle to the height of discomfort, and can be very well likened to a lump of butter in a revolving churn. In such cases sleep is almost, if not wholly, impossible, and the traveler, proceeding at courier speed, must take advantage of the few moments' halt at the stations while the horses are being changed. As he has but ten or fifteen minutes for the change he makes good use of his time and sleeps very soundly until his team is ready.

During the Crimean war, while the Emperor Nicholas was temporarily sojourning at Moscow, a courier arrived one day with important dispatches from Sebastopol. He was commissioned to deliver them to no one but his Majesty, and waited in the ante-room of the palace while his name and business were announced. Overcome by fatigue he fell asleep; when the chamberlains came to take him to the imperial presence they were quite unable to rouse him. The attendants shook him and shouted, but to no purpose beyond making so much disturbance as to bring the Emperor to the ante-room. Nicholas ordered them to desist, and then, standing near the officer, said, in an ordinary voice, "*Vashe prevoschoditelstvo, loshadi gotovey*" (Your horses are ready, your Excellency). The officer sprang to his feet in an instant, greatly to the delight of the Emperor and to his own confusion when he discovered where he was.

We found the road much better after leaving the government of Perm and entering that of Viatka. The drivers we took in this region

were "Votiaks," the descendants of the Finnish races that dwelt there before the Russian conquest. They had the dark physiognomy of the Finns, and spoke a mixture of their own language and Russian. They are said to be industrious and faithful, and live in perfect harmony with their Russian neighbors. They have been generally baptized and brought into the Greek Church, though they still adhere to some of their ancient forms of worship. They pay taxes to the crown, but their local administration is left to themselves.

Approaching Malmouish we had a sullen driver, who insisted upon going slowly, even while descending hills. Indignantly I suggested giving the fellow a kick for his drink-money. The doctor attempted to be stern, and reproved the delinquent, but ended with giving him five copecks and an injunction to do better in future. I opposed making undeserved gratuities, and after this occurrence determined to say no more about rewards to drivers during the rest of the journey. [Memorandum for travelers making the Siberian tour.]

An irritable disposition (like mine) should not be placed with an amiable one (like the doctor's). If misery loves company, so does anger; and a petulant man should have an associate who *can* be ruffled.

After leaving the Votiaks we entered the country of the Tartars, the descendants of the followers of Genghis Khan, who carried the Mongol standard into Central Europe. Russia remained long under their yoke, and the Tartars of the present day live as a distinct people in various parts of the empire. They are nearly all Mohammedans, and the conversion of one of them to Christianity is a very rare occurrence. My attention was called to their mosques in the villages we passed, the construction being quite unlike that of the Russian churches. A tall spire or minaret, somewhat like the steeple of an American church, rises in the centre of a Tartar mosque, and generally overlooks the whole village. No bells are used, the people being called to prayer by the voice of a crier.

These Tartars have none of the warlike spirit of their ancestors, and are among the most peaceful subjects of the Russian Emperor. They are industrious and enterprising, and manage to live comfortably. Their reputation for shrewdness, and their wonderful keenness in matters of traffic, doubtless gave rise to the well-known story about catching a Tartar.

At the stations we generally found Russian *smotretals* (keepers), with Tartar attendants, Blacksmiths, looking for jobs, carefully examined our sleighs. One found my shafts badly chafed where they touched the runners, and offered to iron the weak points for sixty copecks. I objected to the delay for preparing the irons. "*Gotovey, Gotovey; piet minute*," said the man, producing the ready-prepared irons from one pocket, and a hammer and nails from another. By the time the horses were led out the job was completed; I should have been better sat-

RUSSIAN PRIEST.

isfied if one iron had not come off within two hours, and left the shaft as bare as ever.

These Tartars speak Russian very fairly, but use the Mongol language among themselves. They dress like the Russians, or very nearly so, the most distinguishing feature being a sort of skull-cap like the one worn by the Chinese. Their hair is cut like a prize-fighter's, excepting a little tuft on the crown. Out of doors they wear the Russian cap over their Moham-medan—a symbol (though they may not so consider it) of their subjection to Muscovite rule.

These Tartars drove horses of the same race as those on the Baraba Steppe. They carried us finely where the road permitted, and I had equal admiration for the powers of the horses and the skill of their drivers.

In the night after passing Malmouish the weather became warm; I laid aside my outer coat only a half hour before the thermometer fell and set me shivering. About daybreak it was warmer, and the increasing temperature ushered in a violent storm. It snowed and it blowed, and it was cold, frosty weather all day and all night. We closed the sleigh and attempted to exclude the snow, but our efforts were vain. The little crevices admitted enough to cover us in a short time, and we very soon concluded to let the wind have its own way. The road was filled, and in many places we had hard work to get through. How the drivers found their way was a mystery. Once at a station, when the *smotretal* announced "Gotovey," I was actually unable to find the sleigh, though it stood not twenty feet from the door. The drivers said they were guided by the telegraph-posts, which followed the line of the road.

We were four hours making twenty-five versts to the last station before reaching Kazan. We took a hearty supper of soup, eggs, and bread, under a suspicion that we might remain out all night. Soon after we started the mammoth sleigh came up with us in the snow-cloud and darkness, and its shafts nearly ran us through. Collisions of this kind happened occasionally on the road, but were scarcely as forcible as this one. We were twice on our beam ends and nearly overturned, and on several occasions stuck in the snow. By good luck we managed to arrive at Kazan about 2 A.M. On reaching the hotel we were confronted by what I thought a snow-statue, but which proved to be the *dvornik* or watchman. Our baggage was taken up stairs while we shook the snow from our furs. The samovar shortened our visages and filled our stomachs with tea, and we retired to rest upon sofas, and did not rise until a late hour.

It happened to be New-Year's, and the fashionable society of Kazan was doing its congratulations. I drove through the principal part of the city and found an animated scene. Hundreds, and it seemed to me thousands, of droskies were darting through the streets carrying gayly-dressed officers making their ceremonious calls. Soldiers were parading with bands of

POLICEMAN.

music, and the lower classes were out in large numbers. The storm had ceased; the weather was warm, and every thing was propitious for outdoor exercise.

The soldiers were the first I had seen since entering Europe, and impressed me favorably with the Russian army. They wore the gray uniforms like those I saw in Siberia, and marched with a regular and steady stride. It was not till I reached St. Petersburg that I saw the *élite* of the Emperor's military forces. The reforms of Alexander have not left the army untouched, and I was told that a great improvement had been made during the ten years just ended. More attention has been given to the private soldiers than heretofore, their pay being increased and the time of service lessened. The Imperial family preserves its military character, and the present Emperor allows no laxity of discipline in his efforts to elevate the men in the ranks.

It is said of the Grand Duke Michel, uncle of Alexander II., that he was the most rigid disciplinarian ever known. His great delight was in parades, and he never overlooked the least irregularity. Not a button, not a mustache even, escaped his notice; and whoever was not *en règle* was certain to be punished. He is reported to have said:

"I detest war; it breaks the ranks, deranges the soldiers, and soils their uniforms."

I had a letter to Colonel Molostoff, the brother of a Siberian friend and *compagnon du voyage*, but I knew he would not be at home on the first day of the year, as he had many relatives and friends to visit. So I sent the letter to his

nouse, and accompanied my companion on a call upon Dr. Freeze, a prominent physician of Kazan. Madam Freeze was a native of Heidelberg, and evidently loved the Rhine better than the Volga. She gave me a letter to her brother in Moscow, where she promised me an introduction to a niece of Goethe.

In the evening Colonel Molostoff called at the hotel and took me to the New-Year's ball of the nobility of Kazan. I found a maze of apartments belonging to the Nobility Club—the dancing-room being quite as elegant and spacious as the large hall of the Fifth Avenue Hotel. I found files of English, French, and German papers in the reading-room, and spent a little time over the latest news from America. The male portion of the assemblage consisted of officers and civilians, the former in the majority. There was a perfect blaze of stars and gay uniforms that quite outshone the evening dress of the civilians. As Kazan is old, populous, and wealthy, it is needless to add that the ladies were dressed just like those of St. Petersburg or Paris.

I was introduced to several officials, among them the Governor, who had recently assumed command. Colonel Molostoff introduced me to three ladies who spoke English, but hardly had I opened conversation with the first before she was whisked away into the dance. The second and the third followed the same fate, and I began to look upon ball-room acquaintance as an affair of uncertainty. "Now," said the Colonel, "I will present you to one who is not young, but she is charming and does not dance." We went to seek her, but she was in the midst of a gay party just preparing for a visit to the lunch-room.

I was so utterly wearied after my long ride

that conversation was a great effort, and I could hardly keep my eyes from closing. I had promised to join a supper-party at three o'clock, but midnight found me just able to stand. Fearful that I might bring discredit upon America by going to sleep during the festivities, I begged an excuse and returned to my hotel. Five minutes after entering my room I was in the land of dreams.

In the treasury of the Kremlin of Moscow the royal crown of Kazan is preserved. The descendants of Genghis Khan founded the city and made it the seat of their European power. For three centuries it remained a menace to Russia, and held the princes of Muscovy in fear and dread. But as the Russians grew in strength, Kazan became weaker, and ultimately fell under Muscovite control. Ivan the Terrible determined to drive the Tartars from the banks of the Volga. After three severe and disastrous campaigns and a siege, in which assailant and assailed displayed prodigies of valor, Kazan was stormed and captured. The kingdom was overthrown, and the Russian power extended to the Urals. The cruelties of Ivan the Terrible are partially forgiven in return for his breaking the Tartar yoke.

A pyramidal monument marks the burial-place of the Russians who fell at the capture of the city. The positions of the besiegers are still pointed out, but I believe no traces of the circumvallation are visible. The walls of the Tartar fortress form a part of the present Kremlin, but have been so rebuilt and enlarged that their distinctive character is gone.

Nicholas called Kazan the third capital of his empire, and the city is generally admitted to be first in importance after St. Petersburg and Moscow. Its position is well chosen on the banks

SOLDIERS OFF DUTY.

of a small river, the Kazanka, which joins the Volga six versts away. On a high bluff stretching into a plateau in rear of the city, and frowning defiantly toward the west, its position is a commanding one. On the edge of this bluff is the Kremlin, with its thick and high walls inclosing the Governor's palace and other public buildings, all overlooked by a lofty bell-tower. Every part of the city gives evidence of wealth.

The population is about sixty thousand, including, I presume, the military garrison. There are twelve to fifteen thousand Tartars who live in a quarter of the city specially assigned them. They are said to be industrious and peaceful, and some of them have amassed great wealth. I saw a Tartar merchant at the ball on New-Year's-eve, and was told that his fortune was one of the largest in Kazan. I can testify personally to the energy of Tartar peddlers. On my first morning at the hotel I was visited by itinerant dealers in hats, boots, dressing-gowns, and other articles of wear. I bought nothing, but for two days was frequently accosted and urged to trade. The Tartars at Moscow are no less active than their brethren of Kazan, and very shrewd in their dealings. Every one of them appears to believe that strangers visit Russia for the sole purpose of buying dressing-gowns and hats.

I took a drive through the Tartar quarter, or *Kitai Gorod* of Kazan, and inspected without reading the signs over the shops. The houses were little different from those in the Russian quarter, and the general appearance of the streets was the same. I glanced at several female faces, in defiance of Mohammedan law, which forbids women unveiling before strangers. On one occasion, when no Tartar men were visible, a young and pretty woman removed her veil, and evidently desired to be looked at. I satisfied her desire and my curiosity, and expressed admiration in brief Russian.

As we passed a butcher's shop my *isvoshchik* intimated that horse-meat was sold there. The Tartars are fond of equine flesh, and prefer it to beef. On the Kirghese steppes the horse is prominent in gastronomic festivities.

Kazan is famous throughout Russia for the extent and variety of its manufactures. Russians and Tartars are alike engaged in them, and the products of their industry bear a good reputation. The city has printing establishments on an extensive scale, one of them devoted to Tartar literature. Several editions of the Koran have been printed here for the faithful in Northern and Central Asia.

The university of Kazan is one of the most celebrated institutions of learning in Russia, and has an excellent board of professors. Special attention is devoted to Asiatic languages and literature, but no other branch of knowledge is neglected. I met the professor of Persian literature, and found him speaking English and French fluently. I was invited to look through the museum and cabinet attached to the uni-

versity, but time did not permit. There is a ladies' seminary in equally good repute for its educational facilities.

One morning about two weeks before my arrival at Kazan the early risers passing this seminary discovered the body of a young man hanging upon the iron fence. It was clad only in a shirt, and no other clothing could be found. No one recognized the features of the individual, and the occupants of the seminary professed utter ignorance of the affair. As might be expected, great excitement followed the discovery. Visits of the sterner sex were absolutely forbidden, and the young maidens in the building were placed under surveillance. The gentleman who told me the story said:

"It is very strange, especially as the police can learn nothing about the man's identity."

While conversing with a high official at Nijne Novgorod a few days later I referred to this affair, and expressed my surprise that the police could not trace it out.

"That is to say," he replied, with a shrug of the shoulder, "that the police has suppressed the particulars. It is a scandalous occurrence that may as well be kept from the public." One thing was quite certain, if the police thought proper to conceal the details of this affair there was no likelihood of their publication. In Russia the police exercises a power much greater than in the United States. Those who have visited France and Austria can form a pretty correct idea of the Russian system, the three countries being nearly alike in this respect. The police has supervision over the people in a variety of ways; controls the fire department; looks after the general health; and provides for the well-being of society. Every man, woman, and child is considered under its surveillance and accounted for by some member of the force. Passports are examined by the police, and if *en règle* the owners are not likely to be troubled. Taxes are collected, quarrels adjusted, and debts paid through its agency.

I have heard many traveled Americans declaim violently against the foreign police system and visit it with maledictions. I may be expected to follow their example and indulge in complaints, but I can not do so, as I have no complaint to make. In a year's travel in despotic countries of Europe I never suffered the least detention at the hands of those terrible pests of society! I carried a passport properly indorsed, surrendered it to those authorized to receive it, paid whatever fees were demanded—none of them exorbitant—and went about my business *sans peur et sans reproche*. I have to thank the police of most European cities for a feeling of security not enjoyed to an equal extent in London or New York. I think my countrymen who have visited Paris, Vienna, or St. Petersburg will agree with me that these cities are safer to a pedestrian at night than the commercial capitals of England and America.

Almost every body has heard of the secret police of Russia, and many questions have been

JAM AT KAZAN.

asked me about it. I can not throw much light upon it, and if I could it would not be a secret police. I never knowingly came in contact with the shadow, neither did I have the slightest reason to fear it. If my letters were opened and read, those familiar with my manuscript will agree that the police had a hard time of it. If any body dogged my steps or drew me into conversation to report my opinions at the *bureau secret*, I never knew it. The servants who brought my cutlets and tea, the woman who washed my linen, or the *dvornik* who guarded the door, may have been spies upon me, but if so I didn't see it. Where ignorance is bliss 'tis folly to be wise.

People talk politics in Russia with apparent freedom, more so than I expected to find. Men and women expressed their opinions with candor (as I believe), and criticised what they saw wrong in their government. The Russian journals possess more freedom than those of Paris, and the theatres can play pretty nearly what they like. Official tyranny or dishonesty can be shown up by the press or satirized on the stage more freely and safely than in the country of Napoleon III., with all its boasted freedom.

I once read a story in which an Englishman in Austria is represented saying to his companion, "No gentleman meddles with the politics of the countries he visits." I made it my rule in Russia never to start the subject of politics in conversation with any body. Very often it was started, and I then spoke as freely as

I would have spoken in New York. If my opinion was asked upon any point I gave it frankly, but never volunteered it. I believe the Golden Rule a good one for a traveler. We Americans would think it very rude for a foreigner to come here and point out to us our faults. But for all that a great many of us visit Europe, and have no hesitation in telling the subjects of the various monarchies a variety of impolite truths.

During the reign of Nicholas the secret police was much more extensive than at present. The occurrences of 1825 and subsequent years led to a close surveillance of men in all stations of life. It was said, under Nicholas, that when three men were assembled one was a spy, and another might be. Doubtless the espionage was rigid; but I never heard that it affected those who said or did nothing objectionable. Under Alexander II. the stability of the throne hardly requires the aid of a detective force, and if what I was told be true, it receives very little.

The police have a standing order to arrest any person who speaks to the Emperor on the promenade at the Public Garden. One day Nicholas recognized in the crowd a favorite comedian, and accosted him with a few words of encouragement. The latter thanked his Majesty for his approval, and the two separated. A stupid policeman arrested the actor, and hurried him to prison on the charge of violating the law.

"But the Emperor spoke to me first," was the apology.

"No matter," replied the policeman, "you spoke to the Emperor, and must be arrested."

At the theatre that evening Nicholas was in the Imperial box utterly ignorant of what had occurred to his favorite. The performance was delayed, the audience impatient, manager frantic, and the Emperor finally sent to know the cause of the curtain remaining down. The actor did not come, and after waiting some time his Majesty went home. Next morning the prisoner was released, and during the day the Emperor learned what had occurred. Sending for the victim of police stupidity, he asked what reparation could be made for his night in prison.

"I beg your Majesty," was the frank request, "never to speak to me again in the Public Garden."

Nicholas promised compliance. He also made a pecuniary testimonial at the comedian's next benefit.

Dr. Schmidt, my companion, sold his sleigh and left Kazan by diligence the day after our arrival. I remained four days, and, when ready to start, managed to pick up a young Russian who was going to Nijne Novgorod. Each of us spoke two languages, but we had no com-

mon tongue. I brushed up all the Russian I had learned, and compelled it to perform very active service. Before our companionship ended I was astonished to find what an extensive business of conversation could be conducted with a limited capital of words.

Our communications were fragmentary and sometimes obscure, but we rarely became "hopelessly stuck." When my knowledge of spoken words failed I had recourse to a "Manual of Russian-English conversation," in which there were phrases on all sorts of topics. Examining the book at leisure one would think it abundantly fertile; but when I desired a particular phrase it was rarely to be found. As a last resource we tried Latin, but I could not remember a hundred words out of all my classics.

A regular thaw had set in, and the streets were in a condition of "slosh" that reminded me of Broadway in spring time. When we left the hotel a crowd of attendants gathered to be remembered pecuniarily. The yemshick tied his horses' tails in the tightest of knots to prevent their filling with snow and water. At the eastern gate we found a jam of sleds and sleighs, where we stuck for nearly half an hour, despite the efforts of the soldier-policemen. When

able to proceed, we traversed a high causeway spanning the Kazanka valley, and emerged into a suburb containing a large foundry. A mosque and a church, side by side, symbolized the harmony between Tartar and Russian.

Passing this suburb we reached the winter station of many steamboats and barges, among which we threaded our way. Seven versts from Kazan we reached the bank of the Volga.

The first view of the road upon the river was not inviting. There were many pools of surface water, and the continuous travel had worn deep hollows in the snow and ice. Some of the pools into which our yemshick drove appeared about as safe as a mill-pond in August; but as the fellow ought to know the route I said nothing, and let him have his own way. We met a great many sleds carrying merchandise, and passed a train going in our direction. One driver carelessly riding on his load was rolled overboard, and fell sidewise into a deep mass of snow and water. He uttered an imprecation, and rose dripping like a boiled cabbage when lifted from a dinner-pot.

We headed obliquely across

A SLIGHT MISHAP.

PITY THE POOR.

the river toward a dozen tow-boats frozen in the ice. The navigation of the Volga employs more than four hundred steamers, three-fourths of which are tows. Dead-walls in Kazan frequently displayed flaming announcements that reminded me of St. Louis and New Orleans. The companies run a sharp rivalry in freight and passenger traffic, their season lasting from April to October. The gross receipts for 1866 of one company owning thirty-four boats was 1,253,000 rubles. This, after deducting running expenses, would not leave a large amount of profit. The surplus, in the case of that company, was to be applied to paying debts. "Not a copeck," said my informant, "will the stockholders receive in the shape of dividends." I did not obtain any full and clear information touching the navigation of the Volga. The steamboats run from Tver, on the Moscow and St. Petersburg Railway, to Astrachan, at the mouth of the river. The best part of their business is the transport of goods and passengers (chiefly the former) to the fair at Nijne Novgorod. The river is full of shifting sand-bars, and the channel is very tortuous, especially at low-water. The first company to intro-

duce steam on the Volga was an English one; its success induced many Russians to follow its example, so that the business is now overdone.

Here, as on the Siberian rivers, the custom prevails of carrying freight in barges which are towed by tugs. Among the steamers I saw I did not find a single stern-wheeler.

We changed horses on the south bank of the Volga, only twelve versts from Kazan. The right bank of the river presents an unbroken line of hills or bluffs, while the opposite one is generally low. The summer road from Kazan westward follows the high ground in the vicinity of the river, but often several versts away. The winter road is over the ice of the Volga, keeping generally pretty near the bank. A double line of pine or other boughs set in the ice marks the route. The boughs are placed by the Administration of Roads, under whose supervision the way is daily examined and maintained. No one is allowed to travel on the ice until the officials declare it safe.

Night came upon us soon after passing the first station, so that I had little opportunity to study Volga scenery. The road was a combination of pitch-holes, water, soft snow, and

detours to avoid dangerous places. The most unpleasant drives were when we left the river to change horses at the villages on the high bank. It was well enough going up, but in descending the sleigh sometimes endeavored to go ahead of the horses. Once we came near going over a perpendicular bank sixty or eighty feet high. Had we done so, our whole establishment would have lost its value.

Back from the Volga, on this part of the route, there are many villages of Cheramess, a people of Tartar descent, who preserve many of their ancient customs. They are thoroughly loyal to Russia, and keep the portrait of the Emperor and Empress in nearly every cottage. In accordance with their custom of veiling women, they hang a piece of gauze over the picture of the Empress.

While changing horses we were beset by many beggars, whose forlorn appearance entitled them to sympathy. I purchased a fair number of blessings, as each beggar made the sign of the cross over me on receiving a copeck. Russian beggars are the most devout I ever saw, and display great familiarity with the calendar of saints. One morning in Kazan I stood at my hotel-window watching a woman soliciting alms. Several poorly-dressed peasants gave her each a copeck or two, and both giver and receiver made the sign of the cross. One decrepit old man gave her half a loaf of bread, blessing it devoutly as he passed it into her hands. So far as I saw not a single well-dressed person paid any attention to the mendicant. Only the poor can feel for the poor!

We encountered a great deal of merchandise, carried invariably upon one-horse sleds. Cotton and wool, in large sacks, were the principal freight going westward, while that moving toward Kazan was of miscellaneous character. The yemshicks were the worst I found on the whole extent of my sleigh-ride. They generally contented themselves with the regulation-speed, and it was not often that the promise of drink-money affected them. I concluded that money was more easily obtained there than elsewhere on my route. Ten copecks were an important item to a yemshick in Siberia, but of little consequence along the Volga.

Villages are numerous along the Volga, and most of them are very liberally supplied with churches. We passed Makarieff, which was for many years the scene of the great fair of European Russia. Fire and flood alike visited the place, and in 1816 the fair was transferred to Nijne Novgorod. One of the villages has a church-spire that leans considerably toward the edge of the river.

About fifty versts from Nijne Novgorod the population of a large village was gathered in Sunday dress upon the ice. A baptism was in progress, and as we drove past the assemblage I caught a glimpse of a man plunging through a freshly cut hole. Half a minute later he emerged from the crowd and ran toward the nearest house, the water dripping from his garments and hair. As we passed around the end of the village I looked back and saw another person running in the same direction.

Converts to the Russian Church are baptized

BAPTIZING THROUGH THE ICE.

by immersion, and once received in its bosom they continue members until death do them part. The Government is far more tolerant in its matters of religion than that of any Roman Catholic country in Europe; I think it might even reprove Great Britain pretty sharply for its religious tyranny in unhappy Ireland. Every man in Russia can worship God according to the dictates of his own conscience, provided he does not shock the moral sense of civilization in so doing. Every respectable form of Christian worship enjoys full liberty, and so does every respectable form of Paganism and Antichristianity. The Greek faith is the acknowledged religion of the Government, and the priests, by virtue of their partly official character, naturally wield considerable power. The abuse or undue employment of that power is not (theoretically) permitted, however much the Church may manifest its zeal. Every effort is made to convert unbelievers, but no man is forced to accept the Greek faith.

Traveling through Russia one may see many forms of worship. He will find the altars of Shamanism, the temples of Bhudda, the mosques of Islam, and the synagogues of Israel. On one single avenue of the Russian capital he will pass in succession the churches of the Greek, the Catholic, the Armenian, the Lutheran, and the Episcopal faith. He will be told that among the native Russians there are nearly fifty sects of greater or less importance. There are some advantages in belonging to the Church of State, just as in England, but they are not essential. I am acquainted with officers in the military, naval, and civil service of the Government who are not, and never have been, members of the Greek Church. I never heard any intimation that their religion had been the least bar to their progress.

The Pope, in his Encyclical of October, 1867, complains of the conduct of the Russian Government toward the Catholics in Poland. No doubt Alexander has played the mischief with the Pope's faithful in that quarter, but not on account of their religion. In Warsaw a Russian officer, a Pole by birth, told me of the misfortunes that had fallen upon the Catholic monastery and college in that city. "We found in the insurrection," said this officer, "that the monks were engaged in making knives, daggers, cartridges, and other weapons. The priests were the active men of the rebellion, and did more than any other class to urge it forward. And here is a specimen of iron-mongery from the hands of the monks. We found two hundred of these in the college recently suppressed. Many more were distributed and used."

As he spoke he opened a drawer, and showed me a short dagger, fitting into a small handle. The point of the blade had been dipped in poison, and was carefully wrapped in paper. The instrument was to have been used by sticking it into somebody in a crowd, and allowing it to remain. Death was pretty certain from a very slight scratch of this weapon.

If this gentleman's story is correct, and it was corroborated by others, the Russian "persecution" of the Polish Catholics is not entirely without reason.

Among the dissenters in the Greek Church there is a body called *Staroviersty* (old believers). The difference between them and the adherents to the orthodox faith is more ritualistic than doctrinal. Both make the sign of the cross, though each has its own way of holding the fingers in the operation. The *Staroviersty* do not use tobacco in any form, and their mode of life is generally quite rigid. Under Catharine and Paul they were persecuted, and, as a matter of course, increased their numbers rapidly. For the past sixty years oppression has been removed, and they have done pretty nearly as they liked. They are found in all parts of the empire, but are most numerous in the vicinity of the Ural Mountains. Russia has its share of fanatical sects, some of whom push their religion to a wonderful extreme. One sect has a way of sacrificing children by a sort of slow torture in no way commendable. Another sect makes a burnt-offering of some of its adherents, who are selected by lot. These enter a house prepared for the occasion, and begin a service of singing and prayer. After a time spent in devotions the building is set on fire, and consumed with its occupants. Another sect practices the mutilation of masculine believers, and steals children for adoption into their families. Against all these fanatics the Government exercises its despotic power. The peasants are generally very devout, and keep all the days of the Church with becoming reverence. There is a story that a peasant waylaid and killed a traveler, and while rifling the pockets of his victim found a cake containing meat. Though very hungry he could not eat it, because meat was forbidden in the fast then in force.

The Government is endeavoring to diminish the power and influence of the priests, and the number of saints'-days when men must abstain from labor. Heretofore the priests have enjoyed the privilege of recruiting the clergy from their own numbers. When a village priest died his office fell to his eldest son; or, if he had no male issue, the revenues went to his eldest daughter, until some priest married her and took charge of the parish. By special order of the Emperor any vacancy is hereafter to be filled by the most deserving candidate.

It is said that during the Crimean war the Governor of Moscow notified the pastor of the English church in that city that the prayer for the success of her Britannic Majesty's arms must be omitted. The pastor appealed to the Emperor, who replied that prayers of the regular form might continue to be read, no matter what they contained. The Governor made no further interference.

About three o'clock in the afternoon of the second day from Kazan the yemshick pointed out the spires of Nijne Novgorod, on the

END OF SLEIGH-RIDE.

southern bank of the Volga. A fleet of steamers and barges lay sealed in the ice along the shore, waiting for the moving of the waters. The road to the north bank was marked with pine boughs that fringed the moving line of sleighs and sledges. We threaded our way among the stationary vessels, and at length came before the town. A friend had commended me to the *Hôtel de la Poste*, and I ordered the yemshick to drive there. With an eye to his pocket the fellow carried me to an establishment of the same name on the other side of the Oka. I had a suspicion that I was being swindled, but as they blandly informed me that no other hotel with that title existed, I alighted and ordered my baggage up.

This was the end of my sleigh-ride. I passed two hundred and nine stations, with as many changes of horses and drivers. Nearly seven hundred horses had been attached to my sleigh, and drawn me over a road of greatly varied character. Out of forty days from Irkutsk I spent sixteen at the cities and towns on the way. I slept twenty-six nights in my sleigh, with the thermometer varying from thirty-five degrees above zero to forty-five below, and encountered four severe storms and a variety of smaller ones. Including a detour to the Altai Mountains my sleigh-ride was about thirty-six hundred miles long. From Stratensk, by way of Kiachta to Irkutsk, I traveled not far from fourteen hundred miles with wheeled vehicles, and made ninety-three changes. My whole ride from steam navigation on the Amoor to the railway at Nijne Novgorod was very nearly five thousand miles.

There was a manifest desire to swindle me at the bogus *Hôtel de la Poste*. Half a dozen attendants carried my baggage to my room and each demanded a reward. When I gave the yemshick his "na vodka" an officious attendant suggested that the gentleman should be very liberal at the end of his ride. I asked for a bath, and a sleigh was ordered to take me to a bathing establishment several squares away.

My proposition to be content for the present with a wash-basin was pronounced impossible until I finished the argument with my left boot. The waiter finally became affectionate, and when I ordered supper he suggested comforts not on the printed bill of fare. The landlord proposed to purchase my sleigh and superfluous furs, and we concluded a bargain at less than a twelfth of their cost.

After a night's rest I recrossed the Oka and drove to the town, where I found the veritable *Hôtel de la Poste*, to which I immediately changed my quarters. It was a large, comfortable, and well-kept house, and boasted a land-

MONUMENT OF MININ POJARSKI.

NIJNE NOVGOROD DURING THE FAIR.

lord of as unbounded stomach as Cardinal Wolsey. On learning my nationality he informed me, with evident pride, that he had the honor of lodging my countryman of *Miantonomah* celebrity several months before. The house overlooked a little park inclosing a pond where a hundred or more persons were skating. The park was well shaded, and must be quite pleasant in summer.

The town hardly deserves the name of Nijne (Lower) Novgorod as it stands on a bluff nearly two hundred feet above the river. Its lower town contains little else than small shops, storehouses, poor hotels, and steamboat offices. The

Kremlin or fortress looks down from a very picturesque position, and its strong walls have a defiant air. From the edge of the bluff the view is wide, and I greatly regretted my inability to enjoy it in summer. The low field and forest land on the opposite side of the river, the sinuous Volga and its tributary the Oka, are all visible for a long distance. Opposite, on a tongue of land between the Volga and the Oka, is the scene of the fair of Nijne Novgorod, the greatest, I believe, in the whole world.

There are many fine houses in the upper town, with indications of considerable wealth. I had a letter of introduction to the Chief of

NIJNE NOVGOROD AFTER THE FAIR.

INHABITANTS OF NIJNE NOVGOROD.

Police, Colonel Kretegin, who kindly showed me the principal objects of interest in and around the Kremlin. The monument to the memory of Minin Pojarski possessed the greatest historical importance. This man, a peasant and butcher, believed himself called to deliver Russia from the Poles in 1612. He awakened his countrymen, and joined a Russian noble in leading them to expel the invaders. A bronze monument at Moscow represents Minin starting upon his mission. The memorial at Nijne is of a less elaborate character.

We drove through the fair-ground, which was as empty of occupants as Goldsmith's deserted

village; it is laid out like a regular town or city, and most of its houses are substantially built. So much has been written about this commercial centre that I will not attempt its description, especially as I was not there in the fair season. The population of the town—ordinarily forty thousand—becomes three hundred thousand during the fair, and more than half a million persons have visited the city in a single summer. The value of goods sold or exchanged during each fair is about two hundred millions of rubles.

Colonel Kretegin told me that the members of the Fox embassy were much astonished at finding American goods for sale at Nijne Novgorod. It would be difficult to find any part of the civilized world where some article of our manufacture has not penetrated.

At the close of my second day at Nijne I started for Moscow. As I drove from the hotel to the railway the jackdaws, perched every where on the roofs, were unusually noisy. As I left Asia and entered Europe, the magpie appeared to give place to the jackdaw. The latter bird inhabits the towns and cities west of the Ural Mountains, and I frequently saw large

flocks searching the débris along the Volga road. He associates freely with the pigeon, and appears equally well protected by public sentiment. Possibly his inedible character assists his preservation. Pigeons are very abundant in all Russian cities, and their tameness is a matter of remark among foreign visitors. The peasants consider them sacred, and never molest them; the pigeon—or dove—brought the olive-branch to the ark, and so they aver that his descendants are entitled to the respect and veneration of man. The birds appreciate their security, and move about among men and horses with the utmost unconcern, only taking care to avoid the feet of the latter.

At the railway station I fell to the charge of two porters who carried my baggage while I sought the ticket-office. A young woman speaking French officiated at the desk, and furnished me with a *billet de voyage* to Moscow. My baggage arranged I sought the waiting-room, where a hundred or more persons were gathered. The men were well wrapped in furs, and among the ladies I found hoods more numerous than bonnets. Three-fourths of the males and a third of the females were smoking cigarettes, and there was no prohibition visible. In accordance with the national taste the

chief article sold at the *buffet* was hot tea in tumblers. There is an adage in Germany that three kinds of people—fools, princes, and Americans—travel first-class. Pretending to be Russian in my mode of traveling, and by the advice of a friend, I took a second-class ticket, and found the accommodation better than the average of first-class cars in America.

How strange was the sensation of railway travel! Since I last experienced it I had journeyed more than half around the globe. I had been tossed on the Pacific and adjacent waters, had ascended the great river of Northeastern Asia, had found the rough way of life along the frozen roads beyond the Baikal, and ended with that long, long ride over Siberian snows. I looked back through a long vista of earth and snow, storm and sunshine, starlight and darkness, rolling sea and placid river, rugged mountains and extended plains. The hardships of travel were ended as I reached the land of railways, and our motion as we sped along the track seemed more luxurious than ever before. Contrasted with the cramped and narrow sleigh, pitching over ridges and into hollows, the carriage where I sat appeared the perfection of locomotive skill.

SPENT AND MIS-SPENT.

STAY yet a little longer in the sky,
 O golden color of the evening sun!
 Let not the sweet day in its sweetness die,
 While my day's work is only just begun.

Counting the happy chances strown about
 Thick as the leaves, and saying which was best,
 The rosy lights of morning all went out,
 And it was burning noon, and time to rest.

Then leaning low upon a piece of shade,
 Fringed round with violets and pansies sweet,
 My heart and I, I said, will be delayed,
 And plan our work while cools the sultry heat.

Deep in the hills, and out of silence vast,
 A waterfall played up his silver tune—
 My plans lost purpose, fell to dreams at last,
 And held me late into the afternoon.

But when the idle pleasure ceased to please,
 And I awoke, and not a plan was planned,
 Just as a drowning man, at what he sees
 Catches for life, I caught the thing at hand.

And so life's little work-day hour has all
 Been spent, and mis-spent doing what I could,
 And in regrets and efforts to recall
 The chance of having, being, what I would.

And so sometimes I can not choose but cry,
 Seeing my late-sown flowers are hardly set—
 O darkening color of the evening sky,
 Spare me the day a little longer yet!

ALICE CARY.

ZANZIBAR—THE ARISTOCRATIC QUARTER.

ZANZIBAR.

THERE was not much that was striking in our voyage to the Mozambique, where we arrived about the middle of September, 1865. Every one who has made a long sea-voyage knows how trivial events assume importance when we are for weeks shut out from any other prospect than that of the monotonous and barren sea. We saw sun-fish and squid, and caught several sea-birds, one of which resented Baby's finger-thrust down his throat by giving it a hearty bite. Then there was a quarrel, or rather a series of quarrels, between the sailors and one of their number, a Portuguese, who made use of a knife on these occasions. One sad occurrence impressed itself on my memory. It happened on the 7th of August. There was a fearful storm. I had been feeling nervous all day; and when in the evening Ansel (my husband, and the captain of our vessel) came down to look after me, I told him that I kept imagining that some one had fallen overboard. He went on deck, and had been gone scarcely two minutes when I heard a confusion of voices, and felt as certain as if I had seen it that some one had gone over. In fact, I called to Pauline to come and pray with me for the soul in danger, for I knew that in such a storm a life exposed to that peril could not be saved. My husband soon informed me that my apprehension was realized; one of the men had fallen from the top-mast into the sea. He was heard to groan as he struck the water, and the blow probably killed him. Letters were found in his chest from his mother in Scotland and a sister at Leeds.

For a month previous to our arrival at the Mozambique the storm continued with fearful gales; the vessel sprung a leak, and two pumps were kept in operation night and day.

On the 15th of September we were at anchor in Zanzibar Bay. Before it was dawn I was on

deck with Baby, watching where the silvery sand and white sponge coral could be seen under the water. At sunlight there approached three or four canoes, small and extremely primitive in their appearance; across them poles were tied with cocoa-nut fibre, having heavy planks at the end (out-riggers) by way of balance, I suppose. The paddles were short, flat, and spoon-shaped, handled by negroes whose only garments consisted of pieces of cotton stuff hanging from their waists, with the exception of a few who wore coral bracelets or cotton handkerchiefs of red or white twisted about their heads, and containing betel-nuts, leaves, and boxes full of lime which they chew with the nut. They offered this lime to one another, as we would snuff. Their faces reminded me of those belonging to some of the slaves in the frescoes of Ancient Egypt. The protuberance of the lower lip in one case was something hideous. They soon boarded us, and offered to pilot us in. One of our boats was sent off with an anchor and line to within three-quarters of a mile from shore, and then our vessel was hauled in by the sailors, the latter giving a sort of refrain without which they never do any kind of work. They will sometimes for a whole hour repeat the same three or four words, dividing the sentence among them, and occasionally changing the air, if I may call it so. The nearest idea of it that I can give is the old Italian catch:

"Sant Antonio
Campanaro,
Suoni bene
Le compagne
Dong, dong, dong."

The regular pilot boarded us after these strange fellows, and chose to accompany us. He spoke English fluently, and acted as interpreter, besides replenishing our provisions. Though of dark skin he was not a negro. His costume consisted of a parti-colored turban, a dark blue vest braided with gold, and beneath

this one of Solferino pink braided near the breast-pockets, and a short petticoat of white with a colored one beneath. His feet were bare. He brought with him several men, some of whom wore a red fez and a white or buff-colored kind of night-gown. When Baby first saw the blacks she said to one of them "Pretty boy!" though he was awful to behold; but one of them more "toothy" than the rest (indeed his under-lip was completely eclipsed) happening to smile on her, she remained for some moments in a state of open-mouthed petrification with horror.

The pilot, who had gone off just before our dinner-time, returned bringing me bananas and oranges—some of the Mandarin sort, very sweet, with a loose, red skin—each kind of fruit being presented in a barrel-shaped basket made of loosely-plaited cocoa-nut leaves. He brought word that the consignee, Taria Tophan, a Hindoo merchant, presented his compliments, and would be pleased to see the captain at his house. Then a man with delicate, long features and a flowing dark beard, wearing a turban and white robes, came to inquire if we needed fresh meat. Picture to yourself, if you can, this anomalous, romantic-looking butcher!

The town of Zanzibar, capital of the island of the same name, seen from the vessel, seemed to consist principally of white houses, built in squares, with flat roofs and castellated tops; the mosques, the rude mud-huts thatched with cocoa-nut leaves, the groves of cocoa, plantains, bananas, palms, and pomegranate—with huts here and there peeping out of them—furnish prominent features in the picture. The houses of the various consuls are on the white-sanded beach, and their flags give a lively effect to the view. In sight there are also many dhows, some of which, together with the war-ship *Shah Allum*, belong to the King of Zanzibar—Syed Madjid Ben Syed, a young Arab greatly beloved by his people. He was at the time of which I am writing absent at Bombay. We could also see two English vessels—a gun-boat and a merchantman.

Ansel went off to Taria Tophan's, a Hindoo, as I have said, but one who retained few of the prejudices of his people. He dined at the American consul's. In the mean time, while the vessel was being unloaded, eight blacks were hired to work at the pumps at the rate of 6*d.* per day or night, with rice and

molasses. They must be allowed to sing, the interpreter said, otherwise they would not work. Fearing lest their noise might prevent sleep during the night, Ansel asked them to let him hear how softly they could sing, whereupon they began such an unearthly chant and sang so vociferously that we all roared with laughter. "That will do!" my husband shouted. "For Heaven's sake stop, or you'll drive me mad! No, you must manage to do without that, for the pump is just at the foot of our berth." It was well that the window was closed that night, for by degrees the low hum of the laborers grew into a loud song, and they forgot all restraint. The words of their refrain sounded like,

"Alemam bara. Alemam bara
Maree a marre a O maree-ee-ee."

This looks like an attempt to put the nightingale's song into words! You can have no idea of the effect this refrain has upon one's nerves. One hard-working little fellow named Punch sang as happily, with the perspiration rolling down his face, and with no cap on in the heat of the sun's rays as if he had been a salamander, though I am not sure that the latter really ever does sing. You should have seen how amused

TARIA TOPHAN, HINDOO MERCHANT OF ZANZIBAR.

NATIVE WATER-CARRIER.

the blacks were at the sight of my Ethel's rag-doll "Judy." They evidently thought that its style of nose must be common in those parts whence we came.

On this day several canoes came off with fruit, shells, nuts, corals, and monkeys. Ethel called one of the latter "Poor Puss!" considering him an improvement on our black cat. In the evening the breeze came from the shore, and we could clearly distinguish the voices of the natives, talking, singing, and shouting; the beating of the tum-tums, to which they were dancing; the clapping of hands, and the barking of dogs.

On the 17th my husband and myself visited the American consul. His house is delightfully eastern in style. There are Moorish arches in the court-yard, where two goats and a gazelle were then at play; men wearing the fez and turbans were seated or lying on stone couches that were covered with matting and built near the doors, which are heavy and of dark color, carved down the centre. The walls are very thick and the windows large.

We ascended by a wooden staircase, and were

ushered into a large sitting-room, in which were light easy-chairs, tables, and cane sofas with flag-shaped fans lying on them. The white walls were adorned with pictures, the windows were not glazed, and the upper slats of the dark green blinds were closed, making the rooms shady and cool. We were received by Mr. R——, the consul—a fine, gentlemanly young man. Soon after Captain Dow entered together with Taria Tophan, who is called "the honest Hindoo of Zanzibar." He was picturesque attired, and left his slippers outside. We had a pleasant half-hour's chat, and the gentlemen, with the exception of Taria Tophan (who, by-the-way, did not seem to know English), took vermuth before the four o'clock dinner, which was served in an airy room with white walls and massive square-cut pillars. There was a swing-fan in this room, and two blacks in a sort of white night-gown waited upon the table, and fanned the flies away from us with flags made of cloth, embroidered in floss silk. Taria Tophan did not eat with us.

We had soup and fish, with some yellow pungent sauce that looked like custard, beef, chicken-pie, baked bananas, a kind of green pea, small pickled oranges, plantains, sweet-potatoes, fried mince-meat cakes, asafœtida cakes, or rather wafers (for which I really think I could *in time* acquire a taste!), a rice curry, a salad of small green leaves and cucumbers, grown and sent by the French Mission Society, a Welsh rarebit, a sponge-cake in custard, and oranges, with sherry and claret plentifully watered from white earthen coolers.

After dinner we returned to the sitting-room, where *café au lait* was served by an Arab. A walk out was proposed and assented to. We passed through narrow ways over white sand and clinkers. I asked when we should come to the streets, and was told that this was their "West-end" or "Broadway." But how can I describe what I saw during that walk: the variety of color, form, dress, and manner, the beauty of some of the old houses, or the dirt and obscurity of the huts, under the thatched verandas of which the natives plied their trades as tailors, tinkers, and sellers of betel, plantains, pots, and fruit? How picturesque appeared the half-naked girls with their bead necklets, and poising round water-pots on their heads as they came to and from a rocky well! Some of the children we saw were perfectly naked, and made their "Yambos" (How do you do's) to us, one of them looking at my hoop-skirts and then at my face, and then running in terror up to his mother, screaming, "Oh! oh! The white woman!" His eyelids had been painted a deep black. Stumbling over some unusually large clinkers among the thistles, I was told that they had marked the graves of natives; and on each side of the way I saw stone or composite tombs, covered with cocoanut leaf thatching, all the way to the Mussulman burying-ground. In one of the head-stones had been inserted two willow-pattern cheese-

plates and a glass preserve-dish. We met some "Isle of Bourbon" Sisters of Mercy, followed by a school of black girls wearing white tippets, like English charity-children. On our way we saw small light-colored bullocks which the Hindoos hold as sacred, also many light-gray donkeys and long-legged fowls. The pomegranates added a charming feature to the scene.

As we returned we observed people going into the mosques and prostrating themselves, after having removed their sandals. There are here an English Church, a large square building, comprising the Bishop's Palace and a Roman Catholic Mission Society, a very energetic and useful body of men, who teach the young natives various trades.

The Arab women are kept strictly retired. Out of doors they wear masks. I noticed at a window opposite an Arab lady who wore no mask, reading an Arabic manuscript. She wore ear-drops, and I was informed that she was a sister of the King's secretary.

In the evening we took tea in the open air, seated on a lower roof, from which we watched the natives on the beach and in their boats. We had been joined in our walk by Mr. Goodhue, an American. I was told that in the hot season (I considered it "hot" enough *then*) it was next to impossible to sleep night or day. The people are three hundred years behindhand in every thing; they have little variety in their ways of passing the time, and their chief excitement is the arrival of the mail. The English vice-consul, Dr. Seward, resides here; also Dr. —, a Frenchman, who superintends the hospital connected with the Roman Catholic Mission.

My husband, Ethel, and myself were staying at the American consul's from the 20th to the 28th of September. We were treated with so much courtesy and kindness that we could not feel that we were with a stranger. On one side our sleeping-room looked out upon the beach, and on the other upon the residence of the King's secretary, where the ladies often appeared at the windows and talked to Baby, showing her various toys, with which indeed they appeared to be more pleased than she was.

On the 22d we rowed out with Captain Dow, in his "trim little gig," to the east end of the town Kinain. On our left, as we landed, several graves were scattered nearly down to the

sea among the cocoa-nut trees, the plantains, mangoes, etc. On the right was a pretty white house with a sloping, thatched roof, belonging to an Arab, Sillamun Ben Abdullah. Sillamun means Solomon, as Moussi means Moses. Many persons are named Josa (Jesus). Passing by this house, we walked for some distance between two rows of mud huts, where the natives, in every variety of undress, were squatted on the ground behind mats of dyed plaited grass, generally round, on which were exposed for sale, in small lots, vegetables, fish, rice, etc. The black men and women wear ear-rings, bead necklaces, and bracelets, and stick a wafer on one side of their flat noses. They also shave away their woolly hair in stripes like a plowed field, or leaving little irregular tufts. The masks or bercoas of the Arab women are of white gauze, striped and edged with tinsel. Those of the Hindoos and Banyans are various in style. It appeared wonderful to me that mere infants were able to support the weight of the silver manacles that surrounded their necks, arms, and legs. As I paused to admire the large black eyes of a Hindoo baby his mother brought out a seat for me to rest on; her husband, a jeweler, showed me his stock in trade, which was contained in a small leather trunk that he drew forth from a dark recess in his hut. I noticed, on our way, stone wells shaped like sarcophagi, and beautifully carved. We stopped again when we returned, to listen to some negroes under a tree, seated on small drums made from casks, "tum-tumming" loud enough to deafen one. There was soon collected together a crowd of more appreciative listeners than ourselves.

The next day we went on board His Highness's war ship *Shah Allum* to call on the J—s, who resided there, it being considered more healthy than on shore, where they had two residences.

SISTER OF THE KING'S SECRETARY READING AN ARABIC MANUSCRIPT.

RUINED PALACE OF SYED SAAID BEN SULTAN AT MTONY.

A group of us in two boats (one of them presented by the King to the consulate under the name of a loan) rowed out to Mtony on the 24th. We landed near the palace of Syed Saaïd Ben Sultan, the late Sultan. It is now partly in ruins and deserted. Behind it is a park of orange, lime, and cocoa-nut trees, bananas, and sugar-canes, through which camels were being led, and a pretty waterfall branching out into long and narrow channels. Mud-huts thatched with cocoa-nut leaves are dotted about here and there, some of them guarded by a species of wolf-dog. It becomes dark soon after sunset, and we had a trifling collision with another boat in returning; but the moon and stars soon made the evening lovely. Along a portion of the shore a very offensive odor arises from putrescent vegetables or fruit thrown there by the natives. It forced us to close at night our windows looking toward the beach; besides, whenever these were open, swarms of mosquitoes attacked us, and bats flitted in the most disagreeable manner about our bar curtains.

The insects here are peculiar. I have been pinched by a centipede that was so much the color of the straw matting that I inadvertently stepped upon it. To say that a cockroach here is of the size of a young mouse would not be an exaggeration, and the spiders all seem to have tails or stings like scorpions.

The heat of the climate told on Ethel, who grew extremely thin, languid, and feverish. I did not entirely escape myself. One morning my husband and I climbed the steps leading from the different roofs of the house to the Observatory to watch for vessels coming in. I had been complaining of a feeling of lightness, as though when I walked or lay down I was un-

conscious of touching any thing, and now I begged my husband to be sure and hold me tight, for I felt that I was losing my senses. How he got me down all those steps I know not. I remained very quiet all day, and in the evening felt as well as usual. I was told that this had been a slight attack of the fever of the country.

The only idea of coolness one gets here is early in the morning when the black boys jump into the sea and swim and dive and splash water over each other, or walk up to the beach, sending the spray before them in showers. We arose every morning at six o'clock and between us three ate dozens of oranges. We then bathed and dressed, after which we watched the people on the beach and in our vessel. At nine o'clock we took breakfast, during which Taria Tophan usually made his appearance, but never ate with us, that being forbidden by his religious customs. At twelve o'clock there was tiffin (fruit for me and milk for Baby); at four o'clock we dined, and two hours later had tea. Before retiring to rest the gentlemen took vermouth and water. There was a table in the vestibule on which were placed numbers of earthen coolers, principally white, containing water.

In response to an invitation we again visited the *Shah Allum*, to dine with the J——s. Ethel was very friendly with Baby Honora J——, and with the Ayah, a graceful creature, half Hindoo, half Portuguese, named Emily Pinta, who wore white muslin edged with blue and scarlet flowers in her hair. There were other guests at dinner, among them Lieutenant G—— of H. M. S. *Pantaboon*.

A few days later we walked out in the even-

ing and saw part of the Bazar—a collection of dirty huts with various edibles for sale. The Sultan's stable rather interested me, though I saw no horses as beautiful as some I have seen in Europe. Most of them had their hind feet tied to the ground, and several had the tips of their long tails dyed red. In the court-yard were several dogs and playful kids, and a young antelope, very tame, which gambled about me. We passed through an old Moorish-looking fort. The last place which we visited was the slave market, and that I shall not easily forget. There were groups of black men and women, crouched on the ground, looking scarcely human; some of the women held in their arms apparently new-born infants naked and horribly meagre like themselves. The older children were high-stomached and ill-formed, and not a spark of intelligence brightened their features, which were so repulsive that one could scarcely look on them without feeling as much disgust as pity. Two boys of about ten years old were offered to my husband for five dollars apiece. It seems to me that slavery *must* better the condition of such as these, at least for a time. They will not work of their own accord. After remaining here a few weeks their appearance improves, and they become fat and lively. These slaves are mostly what might be termed the refuse, the better kind being, I believe, sold by private contract. They come from the interior and adjacent posts, chiefly from Kiloa and Quiloa. I should mention that beyond certain limits trading in slaves is illegal; therefore the traders are obliged to "run" them, as the phrase is. Within the prescribed limits, however, the business is practiced as a matter of course, and the slaves are regularly entered through the Custom-house. I have been told that they are so weak and reduced by the time they arrive that frequently on landing they drop down dead. This does not, however, create any sensation. I frequently from my window watched the crowded slave dhows go by. Mr. J—— said that, some weeks before, he had seen a slave bound hand and foot floating in the water.

Walking out the next evening our course lay among some huts where we saw groups of Banyans playing cards, and then among the graves of the natives, which are made either near their own houses, or in the middle of a pathway on the borders of the sea, or wherever else the survivors may choose, until, at length, we reached the beach, where, at some distance, might be seen the corpses of natives that had been exhumed by wild dogs and partly devoured.

On the last of September I went on board to visit some of our sick ones. In the course of the day Bibi Ayshe came to her window to inquire of me by signs as to what use might be made of a waist-band and buckle which she had in her possession. This was the wife of the King's secretary, and formerly the wife of the late King. It was only on the death of her son that she was permitted to marry again. I had

sent her my card on the previous day with many thanks and salaams in return for a present from her of some new-laid eggs. In reply to her inquisitive gesticulations as to the belt I shook my head negatively when she put the article up to her turban as if asking, "Might it be an ornament for the head?" Then placing an imaginary band around my waist I proceeded to fasten an imaginary buckle, when I saw gliding behind her the secretary's second wife, or rather his slave—a most handsome, dauntless-looking black woman, who dressed as much like Bibi as possible. With laughing eyes she pointed to Bibi's corpulent waist, extended her hands and turned up the whites of her eyes, showing every one of her teeth in a broad grin. She then whispered to Afrani—a native Ayah—who, turning to me with a sly laugh, said in English, "He" (this pronoun is applied indiscriminately to both sexes) "say that he too very fat." Bibi Ayshe, in her innocent ignorance of what was being said, smiled complacently and retired, buckle in hand, having signified her wish that I would visit her.

In the evening we went to Nazimoia, or "Place of one cocoa-nut-tree" (there are

EMILY PINTA, AYAH.

AYAH BEARING THE INFANT DAUGHTER OF TARIA TOPHAN.

plenty of them there now, however). Skeletons of camels lay bleaching near the beach; on the beach (though I did not look on it) was the corpse of a native horribly mutilated by wild dogs. My husband received quite a shock, he came upon it so suddenly. I saw an instrument played by a native which consisted of a gourd with two strings stretched across it. You can imagine how monotonous such music must have been, and yet they will keep up these two sounds for hours together.

The next day we attended the church of the English Mission, which boasted a harmonium. The bishop preached. Numbers of sailors were present; outside I noticed two black girls who had painted their woolly hair with red ochre. Taria Tophan sent his little girl Mongy for me to see. Such black eyes! and, to add to the effect, her eyebrows were enlarged with paint. She wore rings and bracelets of gold, besides a flat collar of gold and heavy silver anklets with little bells; and on her head was a kind of helmet made of red satin, embroidered with spangles and bordered with silver and gold lace and little balls of solid gold. Well might little Mongy look pale and tired under her weight of dress! She was only thirteen months old, and

had not a tooth. She and Ethel exchanged pokes and snatches as well as kisses. The slave who brought her to me was named Faïda, or "Profit" (as some are named "Loss," "Sugar," "Rice," etc.); as she left she covered little Mongy with a crimson satin wrapper, edged with gold and silver lace and innumerable solid balls of gold.

After dinner we visited a portion of the beach where, in the midst of bright foliage, seemed to arise the ruins of an abbey—an aggregation of quartz blocks. Near this spot I picked up some pieces of pink rock coral from the sands.

I wish to tell you now about my visit with Ethel one or two days later to the house of the King's secretary. The Consul's slave accompanied me to the entrance, and spoke with some one who took my card. I was then led up the dirty wooden stairs into a gallery crowded with slaves, who in their turn showed me into a long room lined with mirrors and shelves covered with china-ware and common artificial flowers under glass shades. On a centre-table were decanters and goblets. In one corner of the room was a high-legged bedstead. There were chairs and tables, a book-case and a

chiffonnier, with a handsome clock; lamps hung from the ceiling. Bibi Ayshe advanced toward us, accompanied by one of her visitors—a very pretty woman with loving dark eyes, a modulated voice, and a ring with pearl drops in her nose; her fingers, palms, and toes were dyed red, and her smile was perfectly enchanting. I observed a Circassian slave, with a pale and withered face, which wore a sly and cowed, and withal a restless expression, as though she lived under a yoke which she detested. I had heard that her mistress frequently kept her sewing all night upon coats such as are worn by Arabs, and the proceeds of which at the Bazar were pocketed by Bibi Ayshe herself. The latter was also a good disciplinarian, and many a time blows and shrieks were heard proceeding from her house. After chairs had been placed for Baby and me we were surrounded by handsomely-dressed women. Bibi Ayshe presently led me up to a full-length portrait in oil-colors of the present Sultan, and then drew forth from a recess several other portraits of former Sultans. Pointing to a large turquoise ring on her finger she made me understand that it was a gift from one of these whose wife she had been.

When I was again seated Bibi Ayshe filled

two blue glass goblets with rose sherbet. They talked to Ethel, and would have caressed her, but she drew back with great reserve from their nose-rings and red-stained fingers. Now and then she would smile and imitate the voices of various animals, and repeat "Tambo sano" and "salaam" after me. Rose-water was sprinkled over her from a filigree silver vase with slender neck; but to this she strongly objected, though she laughed when she saw me submit to a similar operation. Coffee was served in little cups placed in sockets of gold. Then my pocket-handkerchief was perfumed with attar of roses. I was told that a beautiful girl at my side was the present Sultan's sister, Shamboa. Bibi Ayshe informed me by signs that her only child, the son of the late Sultan, had died: as she spoke she rubbed her eyes with her head-dress, and all the women sighed in concert. Conversation by signs at length became tiresome, and an interpreter was sent for. Through him I ascertained the names of the ladies present, and the age of Shamboa, which was fourteen years. I inquired if the heavy ear-rings and anklets were not very painful to wear, and was answered: "The Arab, he think it proper." Asking after Sillamun Ben Alis's sister I was informed that she was shortly to be married, and therefore saw no one. They, however, sent a message to her, and brought back word that she was coming. I asked them if we could do any thing for them in London, but could only un-

AFRANI.

derstand them to say something about needles. I promised to send them some from on board.

Seeing that Sillimun's sister did not make her appearance, and that I had already prolonged my call, I again expressed a desire to take my leave. They seemed in no hurry to let me go, for on leaving this room they showed me a beautiful garden and another room containing pictures, among which were a portrait of Ali Pacha and his wife (cut from the *London Illustrated News*), another of Queen Victoria, and one of Francis Joseph and his wife, besides an oil-print just published of a girl in pink seated on a window-ledge kissing a love-bird. They then took me to see the bride elect, whom we discovered lying at full length on a mat, entirely hidden in the folds of a large crimson wrapper. As I

SHAMBOA, SISTER TO THE KING OF ZANZIBAR.

BANYAN MERCHANT "EN TOILETTE."

drew near she sat up, half uncovered her face, looked foolish, simpered, blushed, and hung her head. She had been divested of her numerous ear-rings. By-the-way, I have forgotten to mention that the ears are pierced not only at the lobes but all the way round. The bride had been stained with saffron, her fingers and toes were dyed red, and the soles of her feet were darkened so as to resemble sandals. She had altogether a very disheveled appearance. The other women on entering began to rally her, laughing, screaming, and even slapping my arms in their excitement. I was told that she was always crying and would not eat. On my asking the cause of this I was answered: "He (she) very young and he (she) not know why he (she) afraid." I asked whether her intended was very much attached to her, and was told that he had never seen her. I looked surprised, and said that in my country the gentle-

man had the privilege of seeing his betrothed as often as possible, and that she might even permit him to caress her. Upon this they redoubled their screams of laughter, in which the bride also joined. They informed me that the bridegroom was an Arab, that he wore a mustache and beard, and that he had four or five wives already. They said that when he came again they would send for me, as I was "only a white woman;" adding that by dropping a curtain he would be prevented from seeing the bride, and then it would be "all right." I told them that if I were the fortunate gentleman I should cut a hole through the tapestry and take a peep. They then chatted away to me in their own language, forgetting that I did not comprehend it, and on my departure all the ladies joined in enthusiastically shaking and kissing my hand. The last glimpse I had of them they were discussing some dark blue dye which a woman had brought in a little cup to beautify the eyelids of the *fiancée*.

The next day I saw Shamboa sitting at her window with a wax doll in red velvet dress, ringlets, and blue leather arms. The

coppering and calking of our vessel meanwhile had been finished, and we were soon to load her with a cargo of ivory, pitti-pitti (a red pepper), orchilla weed, cloves, and a gum copal. The latter looks like lumps of amber, and often flies, leaves, and beetles can be seen imbedded under its transparent surface. The cloves grow on stems like fuschias.

The evening of October 4 was full of excitement. The bride over the way was married,

ZANZIBAR LAMB.

HAREM IN THE HOUSE OF SILIANUN BEN ALI, SECRETARY TO THE KING OF ZANZIBAR.

and in addition to the wedding there was an eclipse of the moon. Nearly the whole population was in the streets, singing, screaming, beating drums, etc., to frighten away the serpent who, as they believe, keeps back the moon and covers it, preventing its revolution. They called to prayers, saying the old formula, "There is but one God, and Mohammed is his Prophet." Unless they can frighten away the serpent they apprehend that some awful calamity will befall the world.

Two or three days later we again visited the Bazar. We saw Hindoo and African women in their stalls seated upon low stools, some of them holding children in their arms with no other covering than a bead necklace or an armlet; herbalists' stalls, where were baskets filled with dried rose-leaves, odorous gums, and beans, and blocks of fragrant woods; stalls that reminded me of little chandlers' stores, with their balls of cotton, strings of beads, and buttons, mixed up with all kinds of eatables; stalls where cheese, salted or smoked meat, fish, beans, and pease were for sale; vegetable and fruit stalls. The Banyans were the chief cloth and clothes dealers—their stalls were piled up with ready-made clothing of gay colors—with the exception of the gown

worn by Arab women, which is generally of black cloth, edged, or rather seamed, with gold braid or yellow cloth. The Banyans do not bring their wives to this country, and some do not even return to them for twenty years or more. Their youths have very handsome, regular features; the whites of their eyes are so blue that they have the effect of dark blue eyes, but their skin is of a bright buff color. When well dressed they wear a rich crimson turban, shaped somewhat like a Roman helmet; a short white gown, and an under-skirt, which, looped up, forms the short drawers. A scarf or sash is twisted about their shoulders and waists. Half of the head is shaved.

The people of Zanzibar, on visiting a house, leave their sandals without in the court-yard or on the threshold of the room which they are about to enter. They regard a woman with contempt, never making her a companion or friend.

Bibi Ayshe determined to keep up an acquaintance. I saw her one day at her window making a variety of signs that I could not comprehend, until one of her slaves appeared at my room door and ushered in a lamb and its dam—a present to Baby. I felt as though I had

won an elephant in a lottery. Between Baby and the sheep there was an unlimited amount of baaing and trotting about the room for an hour or two. Our friend Mr. R— was kind enough to let the animals remain with his goats and gazelles until they should be taken on board. His gazelle was very timid and often ate roses from the hands of his servant, Salie Ben Bambamba, a native of Comoro Island. This servant wore a silver ring of a Byzantine pattern, in which was set a carnelian bearing some Arabic inscription from the Koran. The Zanzibar sheep is peculiar; it has no wool, but a tan-colored coat like a dog's, with ears like a mastiff's but rather narrower, and a tail very broad at the top but narrowing abruptly; it has the prettiest and most innocent of sheep's faces.

SALIE BEN BAMBAMBA.

Soon we paid a visit to Shamboa, the newly married bride to whom I have already alluded. I was accompanied by Mrs. J—— and our respective babies. Little Honora on beholding such an assemblage of dark ladies gave vent to her feelings in a succession of screams. The Arab ladies made quite as much noise in their unsuccessful attempts to pacify her, while, with the same end in view, an old bent-up negress performed some dance, noisily clapping her hands. The Princess Shamboa would not move from her chair, being afraid of Mrs. J——, who was occupied in vainly attempting to converse with Bibi Ayshe, through the medium of Afrani. She left before I did, for, as she afterward said, she was completely extinguished by this bevy of ladies. Ethel during our visit was on her dignity. Bibi Salha had to take out her nose jewels and (for safety I suppose) hook them on to her turban before the child would receive a kiss, though she did not hesitate to accept a goblet of orange-flower sherbet. The bride was not looking to advantage, having been painted without taste. Her eyebrows were made to meet and were surmounted by a row of small black stars. Several smudges of black graced her cheeks. She wore a black velvet paletot (which is the fashion here), and a light green gauze turban and veil that did not suit her complexion, which rejecting the aid of saffron had resumed its primitive brown sienna. Nor was she in good spirits; she received my congratulations with a lift of her eyebrows and a shrug of her shoulders that were meant to convey to me the idea that she was any thing but happy; but her husband being present she could not enter into details. When I asked Afrani if the bride was happy, her reply was: "Oh, he marry plenty gold—much money—very rich. He want to come back here, but him brother away she must stay where he have husband." She afterward told me of the grossness and want of sensibility or genuine affection of the Arab husbands. I remained until six o'clock, which is their prayer time. I noticed a gilt basin and ewer in a door-way, and I supposed that ablutions were then about to be performed.

Afrani afterward came to see me with her boy. Her husband is a Sepoy. All her children except the last had died from pressure on the brain; and this one had a singular formation of the head, and was very precocious.

MTOTO, CHILD OF AFRANI.

Afrani told me that the children of blacks are not born with that color, but acquire it gradually!

The 19th of October was a great day with the Banyans—being the Feast of the Eclipse of the Sun; they had music, singing, and dancing. When they see the eclipse all the earthen-ware utensils in their houses are broken, and they use copper ones. They borrow on this occasion all the musical instruments they can procure, and pictures to adorn their houses and shops. In the morning I heard sounds that resembled those of a venerable and feeble old barrel organ, and on looking out I descried the rounded form of Bibi Ayshe standing at an open window, and turning "for dear life" at one of those instruments which might have been a 'prentice experiment of Gavioli's. Perhaps it was because she had not the knack of shifting the instrument to change the tune; but certain it is that she steadfastly adhered to the first air with a perseverance worthy of a better cause. I was told that the way in which an Arab enjoys music is to put one musical box on the top of another and set them both playing at once. In the evening the streets were enlivened by a display of lights and pictures, and guns and squibs

were let off; then there was a "Nautch dance" at the house of one of the Banyans. I should have gone to the Bazar to see the "goings on;" but it was represented to me that, what with the mud after the rain, and the filth and bad odor of the crowd, it would not be fit for me to go—so I staid at home. Two gentlemen went, accompanied by the Consul; they nearly spoiled their clothes against the newly-painted doors of the house where the Nautch dance was being performed; they were nearly ready to faint on account of the ill-odored, disagreeable crowd that almost crushed them, and were glad at length to get away. They said that the Nautch girl seemed like one possessed, and that it was amusing in the extreme to see some of the men watching her in open-mouthed astonishment. They brought me as a souvenir one of the grass flag fans that are handed about the streets on these occasions.

We left Zanzibar about the end of October. I will conclude this sketch of our life there with a description of our visit to Kinain just before our departure. As we passed through a mahogo (cassava) plantation we saw a negro girl about thirteen years of age (evidently newly imported) whose bones seemed ready to pierce through her skin. She was squatting down as though too weak to stand. Our friend, the Consul, gave her a piece of money, at which she looked in a vacant manner that showed her to be unacquainted with its use or value; but a black boy, younger than herself, soon came forward to instruct her, and perhaps helped her to practically illustrate the use of the money at some fruit-stall in the village. We observed several huts that, at the apex of their standing roofs, were not six feet in height. My husband,

kneeling down before one of these humble domiciles, peeped through the door and said, "How are you, old lady?" I looked in and saw a black woman with her children. There was a sort of trough or bunk on one side, where I suppose they slept. The interior was quite dark, there being no window.

Soon after we came upon a party of black people performing a native dance. You must imagine a glowing sunset; luxuriant tropical vegetation; low huts with cocoa-nut thatching; the fragrance of burning incense; and negroes bearing on their heads earthen vases, and holding staves, to which were attached cocoa-nut shells with which to scoop up water from the wells. And then the dance! A man was standing by the stump of a tree which contained in its hollowed top a drum. Around him, at the distance of a few yards, moved a circle of dancers, who could hardly be said to dance, their step consisting of a mock-tragedy stride followed by a pause. It was impossible to restrain our laughter at the sight of the two quite aged women who led the dance, dressed in gaudy tartan wrappers, and extremely comical in their ugliness blended with pomposity. There were those who, walking backward, beating small drums or gourds, advanced and withdrew them constantly before the faces of the next in succession. We remained long enough to see them all advance toward the drum in the centre, upon which they deposited their *pessas*, or copper coins, as contributions toward a supper. I was told that they will leap and fling themselves until, after a time, they appear demented, frequently continuing these wild movements all night. Under these circumstances I must say that I pity the old ladies!

SPAIN.

A TIME of stately stepping on the shore,
A time of glorious triumph on the main,
And centuries of nothingness—what more
Is in the book of Spain?

Life—death—the world has read the frightful book
With blinded eyes; death—life—were better read:
When the proud-stepping Moor and Inca shook
The heart of Spain was dead.

And when the unsearched ocean wide unrolled
Its awful mysteries before her ships,
Whose magnet and whose polar star were gold,
Death closed her yellow lips.

Pride, greed, intolerance, are forms of death
In men and nations: pulseless corpses tread
The streets; and thousands yield their human breath
Years after they are dead.

And grand, historic names of states yet hold
Place on wide tracts where death's galvanic strife—
Hideous contortions of a rank corpse cold—
Is all the sign of life.

Such was Spain's history. Put the false thing by.
Shame masked her degradation. Vineyards grew
To deeper blushes while the unwearied sky
Watched the life breaking through.

Dumb motions, blind as night; uncaptured hands
Of forces, scattered and without a name:
And unfelt impulses in unstirred hands
Beneath their shroud of shame.

Lower and lower yet the dead weight pressed
Upon the under-motions, dull and slow,
Until spasmodic heavings of the breast
Showed something stirred below.

A throb of life. The life of buried states
Draws slowly! Spain's was but a deathly gloom
Three centuries before it reached the gates
That stood before her tomb.

But hark! with sudden blow snaps every band;
Forth bursts a risen people, strong and free.
Spain! Spain! the nations grasp thy living hand,
And welcome give to thee!

THE EXECUTIVE DEPARTMENTS AND SEALS.

A BELIEF prevails that all knowledge of the origin of the seal of our National Treasury Department is lost. This is a mistake. Inquiries have been made along a line of search extending back only to the period of the formation of the Constitution, or about eighty years ago, when the imperfect Confederation or League of States was developed into a perfect National Government. Stopping there, without desired results, inquirers have concluded that the end of hopeful search had been reached, and that no man could tell when and how the device and legend of the Treasury seal that is impressed on the millions of notes and coupons appended to our National bonds originated. Even Dr. Francis Lieber, the careful explorer of the hidden things of history and its relations, after patient search, was compelled to rest upon the inference that the seal was devised by Alexander Hamilton, the first Secretary of the National Treasury. In his recently published tract, entitled "Nationalism and Inter-nationalism," Dr. Lieber says: "If this seal is not of Hamilton's devising it must come from Robert Morris; but Morris was 'Superintendent of the Finances;' there was no Treasury before the year 1789, and it was in 1781 that the office of the 'Superintendent of the Finances' was created." Had such painstaking inquirers gone back a little further they might have discovered that not only our Treasury seal, but that of our War Department also, in device and legend, is older than the National Government—older, possibly, than the Great Seal of the Republic, which existed six years before the Constitution became the "supreme law of the land."

I propose in this paper to give a brief historical sketch of the origin and organization of our National Executive Departments, and of the official seals of those departments.

The subject of seals in general offers a very tempting field of research and speculation, involving developments in chronology, history, jurisprudence, social changes, and epochs of civilization. We may not enter it now any further than we may be led in searches concerning the specific subject of this paper. It seems relevant, however, to say that seals have been used as emblems of assent, confirmation, and authority, supreme or secondary, from prehistoric times. If you doubt it, go to Abbott's collection of Egyptian antiquities in possession of the New York Historical Society, and there you may look upon a signet-ring used, according to the Catalogue, six hundred years before the grateful Pharaoh "took off his ring from his hand and put it upon Joseph's hand, and arrayed him in vestures of fine linen, and put a gold chain about his neck, and made him to ride in the second chariot;" in other words, gave to the Hebrew slave his seal-ring in token of the delegation of royal authority to him as viceroy

of "the land of Ham." If we may believe the Catalogue, that signet-ring—the *jus annuli aurei* of the old Romans—bearing a seal in the form of what the French call a *cartouche*, with hieroglyphics exquisitely wrought in intaglio all over its surface, may have belonged to Arphaxad, the first patriarch after the flood, or even to either Shem, Ham, or Japheth, princes from the loins of Noah.

The Roman emperors, like the Egyptian Pharaohs, used the signets of their rings as seals of state—emblems of supreme authority—and from their time until now, seals in the various forms of stamps have been the symbols of the sovereignty and authority of all civilized nations. On the day when the representatives of the Anglo-American colonies, in council assembled at Philadelphia, declared those colonies to be free and independent States, they also felt the necessity of a symbol of sovereignty, and resolved "that Dr. Franklin, Mr. J. Adams, and Mr. Jefferson be a committee to prepare a device for a seal for the United States of America." There were delays. Other delegates took the matter in hand. It was considered occasionally; but for six years the colonists fought for independence without the usual token of sovereignty for the use of the new empire their grand Declaration had decreed, unless the little oval signet of the President of the Continental Congress, here delineated, bearing thirteen stars in the midst of breaking clouds, as an emblem of Union, with the National motto, *E PLURIBUS UNUM*, may be regarded as such symbol. How early this little seal was used we may not now exactly determine. The impression from which the writer made the sketch

PRESIDENT'S SEAL.

here given was upon a document signed by President Mifflin in 1784. The Great Seal had been adopted by Congress two years earlier. It, too, has the motto, *E PLURIBUS UNUM*, which, in our colonial days, formed a portion of the epigraph on the title-page of the *Gentleman's Magazine*, a work with which the leaders of the Revolution were familiar. The attention of the writer has been called to this fact by Dr. Lieber, who believes, with good reason, that the appearance of the motto on that magazine suggested its use on our National seal.*

* Dr. Lieber, in a note to the writer, says: "The Committee on the Great Seal, to whom the idea of the *oneness* of our country, and of the many colonies forming one nation, was plainly and constantly present, as you well know, was doubtless familiar with the motto, *E Pluribus Unum*, from the title-page of the *Gentleman's Magazine*, a periodical read all over the American colonies. When, some ten or twelve years ago, I was looking, in the Yale College Libra-

In our day the extraordinary spectacle has been seen of the efforts of an oligarchy, small in numbers but powerful in influence, to establish another nation within the bounds of the Republic—*imperium in imperio*—and to give to it the symbol of sovereignty in the form of a Great Seal. The youngest of us old enough to reflect and reason have seen that “nation,” so-called, spring up from the late slave-labor States which formed the northern portion of the great Golden Circle of empire devised by conspirators. It was a Caliban in features; barbaric in its proclivities; awfully potential in mischievous works; protesting with fire, sword, and torture against the civilization of the age; and yet impudently insisting upon its recognition as one of the family of legitimate and respectable sovereignties. Its titular initials were “C. S. A.” Its fathers resolved that it, like the nation it was attempting to overthrow by internal convulsions, should have a Great Seal, and in “Congress” resolved, in the spring of 1863, that it should bear “a device representing an equestrian statue of Washington (after the statue which surmounts his monument in the Capitol Square at Richmond), surrounded with a wreath composed of the principal products of

PROPOSED "CONFEDERATE STATES" SEAL.

the Confederacy, and having around its margin the words CONFEDERATE STATES OF AMERICA, FEB. 22, 1862, with the following motto: DEO VINDICE"—God, the protector, defender, deliverer, or ruler—indicative of the expected longevity of the “nation” because of Divine protection and sustenance. Alas! that “nation,” so notably “conceived in sin and born in iniquity,” died of political and moral marasmus in its infancy, unhonored by any recognition of its existence excepting by a Latin ghost of sovereignty. It had repeated history by a delay in

ry, at the earlier volumes of this ancient magazine, it struck me, for the first time, that *E pluribus unum* must have suggested itself to Franklin, Adams, and others on the committee, through this work. The first volume (1731) has the words, *E pluribus unum*, with two hands joining, and a wreath around the whole. On the title of the second volume, January, 1732, is this motto: *Prodesse et delectare e pluribus unum De Amicitia*. If I recollect aright, all the later volumes have this motto, down to December, 1833.”

providing itself with the usual symbol of nationality. That symbol—the Great Seal of the infant Confederacy—sent to it by its nurse, England, reached the appointed seat of the empire of the “C. S. A.” just as its self-constituted guardians were flying from the wrath of God, whose protection they had impiously invoked. The ill-favored bantling died, and was left to decay, without real mourners, without burial, and without a monument, for no true man desired to perpetuate its memory. Antiquaries, in the future, will search in vain for any impression of an emblem of sovereignty of the “C. S. A.” None was ever made. The broad seal of the Republic kindly covers the dishonored ashes of that child of sin.

Turning from this natural digression, let us observe that the origin and history of the Great Seal of the Republic, and those of the several executive departments of its government, are not obscure.*

The germ of the Post-office Department was first planted on the 26th of July, 1775, when the Continental Congress resolved “that a Postmaster-General be appointed for the United Colonies, who shall hold his office at Philadelphia;” and that he should have a secretary and controller; and that a line of posts should be established “from Falmouth [now Portland] in New England to Savannah in Georgia, with as many cross posts as the Postmaster-General shall think fit.” The colonists were then without a general postal system, Dr. Franklin, who had for several years been Postmaster-General of the colonies, having been spitefully removed from that office eighteen months before by the British Ministry, who neglected to appoint another. After the battle of Lexington, when it was evident that there was little ground for hope of relief from oppression at the hands of that Ministry, William Goddard, an active patriot, made earnest and successful efforts toward the establishment of a postal system on what he termed “constitutional principles.” He soon induced the provincial authorities of New Hampshire, Massachusetts Bay, Rhode Island, and Connecticut to agree on the establishment of a postal system; and when the battle of Bunker Hill had been fought, in June, post-offices, postmasters, riders, and rates of postage had been established throughout those colonies. Their action was brought to the notice of the Continental Congress, and led to the adoption of the resolution above cited.

Congress first appointed a committee composed of six delegates, of which Dr. Franklin was chairman, to “consider the best means of establishing posts for conveying letters and intelligence throughout this continent.” Franklin’s experience and ability enabled the committee to submit an admirable plan, essentially the same as that upon which the General Post-office of the Republic has always been conducted.

* In this Magazine for July, 1856, may be found a history of the origin of the Great Seal of the United States, by the author of this paper.

ed. When the resolution which followed was adopted, Dr. Franklin, by the unanimous vote of the delegates, was chosen "Postmaster-General for one year, and until another is appointed by a future Congress," at "a salary of one thousand dollars per annum for himself, and three hundred and forty dollars per annum for a secretary and controller." He entered upon his duties at once, with his usual skill, method, and vigor. He issued a circular letter on the subject, which was sent throughout the colonies, on which was a rude wood-cut of a post-rider

FRANKLIN'S POST-RIDER.

on horseback, with saddle-bags behind him for carrying mail matter, a fac-simile of which is here given; and it was not long before a regular postal system was in operation along the sea-board from the Kennebec to the Savannah rivers, and to many places in the interior of the country. The official frank of the Postmaster-General, in colonial times, which was "*Free, B. FRANKLIN,*" was now changed by the patriot, who was ever seeking to make good impressions on his countrymen, to "*B. Free, FRANKLIN,*" and so conveyed an injunction of universal application.

During his faithful services for a little more than a year Franklin's secretary filled about

two quires of foolscap paper with the records of the Post-office Department. The business of that department continued to be comparatively light through all the gloomy years of the weak Confederacy; and when, in 1789, it was placed under the exclusive control of Congress, there were only about seventy post-offices in the whole country, with an aggregate annual revenue of about thirty thousand dollars. Under the National Government Samuel Osgood, of Massachusetts, was appointed the first Postmaster-General. Franklin's picture of a post-rider became the device on the seal of the Department, and it is retained to this day as such, with the words around it, "POST OFFICE DEPARTMENT. UNITED STATES OF AMERICA."

The germ of the Naval Department was next planted. Soon after taking command of the Continental army at Cambridge, in the summer of 1775, Washington perceived the necessity for armed cruisers off the New England coast, to prevent supplies reaching the British army in Boston. Five or six vessels were soon put afloat as privateers, and their success directed the attention of Congress early in the autumn to the necessity of a navy. On the 13th of October that body resolved that "a swift-sailing vessel, to carry ten carriage-guns and a proportionate number of swivels, with eighty men," should be fitted out for a cruise of three months eastward, for the purpose of intercepting British transports. Another was ordered, with fourteen guns; and delegates Silas Deane, John Langdon, and Christopher Gadsden were appointed a committee to direct naval affairs. About a fortnight later it was resolved to fit out two more vessels, one of twenty and the other of thirty-six guns; and delegates Stephen Hopkins, Joseph Hewes, Richard Henry Lee, and John Adams were added to the Naval Committee. On the 13th of December Congress ordered the construction of thirteen additional vessels of war; and the "Marine Committee," as the naval commissioners were now termed, was enlarged so as to embrace one delegate from each colony, to be appointed by ballot. This first general Naval Committee, or Board of Admiralty, was composed of delegates Bartlett, Hancock, Hopkins, Deane, Crane, R. Morris, Read, Chase, R. H. Lee, Hewes, Gadsden, and Houstoun.

The "Marine Committee" possessed very little executive power, for Congress was sparing in its delegation of authority. The committee was the recipient and examiner of matters for investigation, but Congress alone, to whom the commissioners reported, exercised administrative functions. The committee had the privilege of appointing all officers below the rank of third lieutenant, and had the general control, under the immediate sanction of Congress, of all the naval operations. But it was soon discovered that a committee so large and so constituted was incompetent to perform the required duties properly. Want of professional skill made those duties very vexatious and un-

SEAL OF THE POST-OFFICE DEPARTMENT.

satisfactory, and Congress finally resolved to select three persons well skilled in maritime affairs to execute the business of the Navy, under the general supervision of the "Marine Committee." For this purpose John Nixon, John Wharton, and Francis Hopkinson were appointed, and these constituted what was known as "The Continental Navy Board, or Board of Assistants to the Marine Committee." For convenience another organization known as the "Eastern Board" was established, when the original one at Philadelphia was called the "Board of the Middle Department." These two boards performed nearly the whole of the executive functions of the "Marine Committee" of Congress, and were in active operation until near the close of October, 1779, when a "Board of Admiralty" was established, consisting of three commissioners, not members of Congress, and two members of Congress, any three to form a board for the dispatch of business, but to be subject, at all times, to the control of Congress. The board was allowed a secretary, and John Brown, an efficient and industrious worker, was appointed to that office. On the 4th of May following the board reported a device for a seal, which business had been intrusted to a committee of Congress twenty months before, when that body, on the 26th of September, 1778, resolved "that a committee of three be appointed to prepare a seal for the Treasury and for the Navy," and chose delegates John Witherspoon, Gouverneur Morris, and Richard Henry Lee as such committee. A seal was prepared, bearing an escutcheon on which was a chevron with a blue field and thirteen perpendicular and mutually supporting bars, alternate red and white. Below the chevron was a reclining anchor, proper. The

Navy of the Republic. He entered upon his duties in June.

In the month of January, 1781, there was another change in the administration of naval affairs. General James Reed was invested by Congress with the power, now delegated to the Secretary of the Navy, to conduct the business of the "Middle Department," and Major-General Alexander M'Dougal, of New York, was chosen to be "Secretary of Marine." In August following there was another change, when an "Agent of Marine" was appointed, who had full control of the service under the direction of Congress, the duties of which were mostly performed by the eminent financier Robert Morris, who was largely interested throughout the war in privateering. Both self-interest and patriotism made him a most efficient "Agent of Marine."

During the dreary days of the Confederation, when each State had its own navy, and in nearly all things acted independently of all others, and the inchoate Republic was rapidly lapsing into a dependency of Great Britain or some other European power, there was no necessity for a general naval establishment; and it was not until the expanding commerce of the United States under the National Government began to suffer from the Mediterranean corsairs, and war with France seemed inevitable, that a navy was built, and, as we have observed, a Navy Department was established. Then the old Continental Naval Seal was laid aside, and another, delineated in the engraving, similar in device to that now used, was adopted. In place of the chevron with bars, a large space of the face of the seal is covered by a spread eagle. The anchor and ship are retained, but not in heraldic posture. The motto is omitted, and

NAVAL SEAL MADE IN 1779.

crest was a ship under sail. The motto, "*Sustentans et Sustentatum*"—Sustaining and Sustained. The legend, "U. S. A. SIGIL. NAVAL." This seal was used until 1798, when, in the spring of that year, a regular Navy Department was established, and Benjamin Stodert, of Maryland, was appointed the first Secretary of the

SEAL OF THE NAVY DEPARTMENT.

the legend is, "NAVY DEPARTMENT. UNITED STATES OF AMERICA."

The germ of our War Department was planted when, on the 12th of June, 1776, Congress resolved "that a committee be appointed by the name of the Board of War and Ordnance, to consist of five members," who should have a

secretary and one or more clerks. John Adams, Roger Sherman, Benjamin Harrison, James Wilson, and Edward Rutledge were chosen as such commissioners, and Richard Peters was appointed secretary. To these commissioners ample powers were delegated. Its duties consisted in obtaining and keeping an alphabetical register of all officers of the land forces in the service of the United States, with their rank and date of commissions; an account of the state and disposition of the troops in the respective colonies, through regular periodical returns to the War-office; to keep an exact account of all the artillery and military stores, and the manner in which and places where the same should, from time to time, be lodged and employed; to forward all dispatches from Congress to the colonies and the armies; to superintend the raising, fitting out, and dispatching all land forces, under the general direction of Congress; to have charge of all prisoners of war; and to keep correct copies, in books, of all the correspondence and dispatches of the board. The secretary and clerks were required to make oath, before entering upon their duties, that they would not, directly or indirectly, divulge any matter or thing which should come to their knowledge as such officers without the leave of the Board of War and Ordnance.

Additions were given to the number of the commissioners, and changes were made in the administration of the affairs of the office, as the exigencies of the service seemed to require. In February, 1778, subordinate boards were authorized, owing to the extension of the field of strife. These were to consist of the commanding officers of artillery in any division of the grand army, the oldest colonel in the camp, and the chief-engineer. These were to have the general supervision of the ordnance department of the camp and field under the commander-in-chief of the division.

A new Board of War and Ordnance was authorized in October, 1777, to consist of three persons not members of Congress. These were chosen on the 7th of November, and consisted of General Thomas Mifflin, Colonel Timothy Pickering, and Colonel Robert H. Harrison. The two first-named soon entered upon their duties, and on the 17th of the same month Messrs. Dana and J. B. Smith were added to the members of the board. A few weeks later a seal for the use of the board was adopted, having for its device a group of military trophies, with the Phrygian cap, the emblem of Freedom, between a spear and a musket. Over this was a serpent. Beneath the trophies was the date, "MDCCLXXVIII." Around the seal were the words, "BOARD OF WAR AND ORDNANCE. UNITED STATES OF AMERICA." This was the origin of the present seal of our War Department, which yet bears precisely the same device. The date is omitted. Within the curve of the serpent are the words, "WILL DEFEND;" and around the seal the legend, "UNITED STATES OF AMERICA. WAR OFFICE."

SEAL OF THE BOARD OF WAR.

Colonel Harrison declined to serve on the board, and at near the close of November General Gates, Colonel Joseph Trumbull, and Richard Peters were elected additional commissioners. Gates was chosen President of the board, but retained his rank and pay of Major-General in the army. Pickering and Peters were the "acting members" of the board. For nearly a year after this arrangement there was no change, but in October, 1778, the board was reorganized, and was composed of two members of Congress and three persons not members. Their powers and duties were largely increased; and the labors of the secretary, Mr. Peters, were faithfully performed until some time after a new organization of the department under the *Articles of Confederation*, early in 1781. On the 7th of February of that year Congress resolved "that there be a Superintendent of Finance, a Secretary of War, and a Secretary of Marine." The powers and duties of the Secretary of War were prescribed at the same time. He was directed to ascertain the then state of the troops, ordnance, arms, ammunition, clothing, and supplies of the armies of the United States, and report the same to Congress; to obtain and keep an exact return of all the military forces, and the munitions of war in the magazines of the Union or other places, and to take care of all not in actual service; to form estimates of stores, equipments, and supplies that might be requisite; to keep up competent magazines; to prepare estimates for paying and recruiting the armies, and lay the same seasonably before the Superintendent of Finance; to execute all resolutions of Congress respecting military affairs; to make out and sign all military commissions; and to perform various other prescribed minor duties.

The office of Secretary of War was not filled until the 30th of October, 1781, when General Benjamin Lincoln was elected to the important post, and, under the authority of Congress, chose an assistant secretary and clerk. He was the first Secretary of War, with powers and duties similar to those exercised by the head of the War Department at the present time. He carried into the office a thorough practical knowledge of military affairs, having served with dis-

tion from the beginning of the war; and the routine of the office was made plain to him by Mr. Peters (afterward the eminent jurist of Pennsylvania), who performed the functions of Secretary until the time when General Lincoln entered upon his duties, in December, 1781. For his faithfulness Peters received the thanks of Congress.

Lincoln held the office of Secretary of War until the close of the strife and the departure of the British soldiery, or about two years, when he retired to private life, bearing the honors of a true champion of freedom, and receiving the warm commendations of Congress for his "perseverance, fortitude, activity, and meritorious services in the field, as well as his diligence, fidelity, and capacity in the execution of the office of Secretary of War." The army was now disbanded. Less than seven hundred men were retained, under General Knox, and these were speedily discharged, excepting twenty-five men to guard the stores at Pittsburg, and fifty-five for West Point and the other magazines. There was no officer above a captain. The Continental Army disappeared as an organization. Yet for eighty-four years longer there was a living member of it on the earth. The last surviving soldier of the Revolution, who was a pensioner, died in the year of grace 1868. He was born on Washington's Mount Vernon estate; his residence was at Hirambsburg, Ohio; his name was John Gray; and his age when he died was a few weeks more than 104 years.

On the dissolution of the army there was no longer a necessity for a Secretary of War. For a while Joseph Carleton, Lincoln's assistant, performed the functions of the office, and it remained without an incumbent until the National Government was organized, six years later, with Washington at its head, when General Henry Knox was appointed by him the first Secretary of War of the new nation. The Continental Seal of the Department continued in use, and, as we have observed, its device is retained to this day.

The germ of the Treasury Department was planted almost at the very beginning of the old war for independence. The finances of the confederated colonies were, like other interests connected with the struggle, managed for a time by committees. This department of the revolutionary government proved to be the most difficult of management, as well as the most important, for without funds for prosecuting the war the revolt must have been a most disastrous failure. The Congress at Philadelphia, first a simple deliberative body, gathered for the purpose of considering the general good of the colonies, had, by the pressure of startling events, been forced to assume executive functions, with little other authority than the tacit consent of the people. But so well did the delegates chosen to represent the people in that general council understand the temper of their constituents that they proceeded to the execution of the boldest measures, satisfied that their acts

would be sanctioned by the public voice. And so they were. Still there was no controlling power that promised to be permanent when the bond of union formed of common dangers and common political interests should be loosened by a cessation of war; and the most difficult of all questions that were then forced upon the attention of Congress was, How shall funds be raised to carry on the war and the independent government we propose to establish if our grievances shall not be redressed? There was no power vested in Congress to lay taxes, or enforce their collection in any of the provinces; and there was no tangible government with credit sufficient to allow the patriots to borrow from foreign capitalists or nations.

In this dilemma—with troops in the field and the smoke of battle already darkening the firmament—Congress resorted to that quickest, yet generally the most dangerous method of finance—the creation of paper-money in the form of bills of credit, or promises to pay, in an amount equal to present demands, and pledging, with very little warrant, the faith of the inhabitants of the several colonies for its redemption in coin. Already the people were suffering from the effects of the depreciated paper currency of the several colonies; yet, inspired by great zeal for the cause of liberty, they cheerfully accepted the plan as an inevitable necessity, and yielded their full assent to the pledges of the delegates of the "twelve confederated colonies," given by a resolution of Congress adopted on the 23d of June, 1775, or a few days after the battle of Bunker Hill, when an emission of bills to the nominal amount of two million dollars was authorized. Richard Bache, Stephen Pascall, and Michael Hillegas were appointed a committee to superintend the printing of the bills; and twenty-eight citizens of Philadelphia were authorized and employed by Congress to sign and number them.

By the plan adopted by Congress every colony was bound to discharge its proportion of the public debt thus incurred; and on the face of each bill was a promise that its holder should receive for it "Spanish milled dollars, or the value thereof in gold or silver," equivalent to its nominal value. Toward the close of 1775 a census of the inhabitants of each colony was ordered, so that a just apportionment of the burden of each in the redemption of the bills in coin might be determined.*

The direct management of the finances of the revolutionary government was intrusted, by a resolution of Congress on the 29th of July, to two Treasurers, namely, Michael Hillegas and George Clymer, both citizens of Philadelphia, who gave bonds for the faithful discharge of their duties in the sum of one hundred thousand dollars to delegates John Hancock, Henry Middleton, John Dickinson, John Alsop, Thomas Lynch, Richard Henry Lee, and James Wil-

* In the Twenty-sixth Volume of this Magazine may be found a history of Continental money, by the author of this paper.

son, "in trust for the United Colonies." It was also resolved that "the provincial assemblies or conventions do each choose a treasurer for their respective colonies;" that each should take measures for sinking its proportion of the bills ordered; and each to pay its respective quota in four annual payments. In December following, when other issues of bills had been ordered, these pledges of a sort of national faith were renewed by Congress.

Wise men clearly saw the vital defects of the loose system of government under which war was to be waged with a powerful enemy, and the precarious nature of the sources of supply of money—the "sinews of war"—for the Treasury, and indulged the most gloomy apprehensions. They were anxious for the establishment of a National Government. So early as the 21st of July Dr. Franklin, who, more than twenty years before, had framed a plan of government having many features in common with that established in 1789, submitted an outline of a confederation of the colonies under a federal head; and in November following the clear-sighted Massachusetts patriot, Joseph Hawley, wrote to Samuel Adams, in Congress, saying, in view of the certainty that reconciliation with Great Britain on terms honorable to the colonists was out of the question: "It is time for your body to fix on periodical annual elections—nay, to form into a parliament of two houses."

Desires for an efficient government, thus expressed, were almost universal, and increased with the exigencies of the public service as the war went on. The subject of ways and means for waging the war pressed more and more heavily upon the attention of Congress, until it was apparent that some more efficient system of finance than had been employed should be adopted. Accordingly, on the 17th of February, 1776, a standing committee of five was appointed for superintending the Treasury. That committee was composed of James Duane, Thomas Nelson, Elbridge Gerry, Richard Smith, and Thomas Willing. They were invested with ample discretionary powers to provide for all the wants of the Treasury; and in April following a "Treasury-office of accounts" was instituted, to be kept in such place where Congress should from time to time be assembled and hold session. This office was under the direction of the standing committee for the Treasury. An auditor-general and a competent number of assistants and clerks were appointed, and Congress directed that "all accounts and claims against the United Colonies for service or supplies" should be presented at the Treasury-office; that "all contracts, securities, and obligations for the use and benefit of the United Colonies" should be lodged in that office; that "all assemblies, conventions, councils, committees of safety, commissaries, paymasters, and others intrusted with public moneys" should, when called upon by the Committee of the Treasury, produce their accounts, with vouchers, at the Treasury-office for adjustment

and settlement. Such was the germ of the Treasury Department of the Republic, as it appeared when the declaration of the independence of the colonies was made at midsummer, 1776.

The colonies now having assumed a national character, imitated predecessors of the family of kingdoms and commonwealths by offering their government as a borrower in the markets of the world. In the autumn the Committee on Finance, or Board of Treasury, as it was now called, recommended the borrowing of "five hundred thousand dollars for the use of the United States." Congress, on the 3d of October, resolved to do it, at the rate of four per cent. a year; and for that purpose a loan-office was established in each State, with a commissioner for its management appointed by each State. Certificates were issued by the Treasury Department to the amount of five million dollars, in sums of three hundred, four hundred, five hundred, six hundred, and one thousand dollars, in the following form:

"The United States of America acknowledge the receipt of — dollars from —, which they promise to pay to the said —, or bearer, on the — day of —, with interest annually, at the rate of four per cent. per annum, agreeable to a resolution of the United States, passed the 3d day of October, 1776. Witness the hand of the Treasurer, this — day of —, A.D. —."

The respective States were recommended to annex such penalties, by law, to the crime of counterfeiting these certificates as were annexed to the crime of counterfeiting the Continental currency.

Not long after the authorization of the loan-offices the Committee of Ways and Means, consisting of delegates Johnson, Hewes, Gerry, R. Morris, Ward, and Wythe, recommended another scheme for raising money. Congress approved it, and on the 1st of November, 1776, resolved "that a sum of money be raised, by way of lottery, for defraying the expenses of the next campaign, the lottery to be drawn in Philadelphia." The Committee of Ways and Means were ordered to prepare the plan of a lottery. They did so, reported it to Congress, and the following scheme was adopted:

That it consist of one hundred thousand tickets, each ticket to be divided into four billets, and to be drawn in four classes.

FIRST CLASS, at \$10 each billet.....	\$1,000,000
Deduction at 15 per cent.	150,000
	<u>850,000</u>

Prizes.	1 of \$10,000.....	\$10,000
	2 of 5,000.....	10,000
	30 of 1,000.....	30,000
	400 of 500.....	200,000
	20,000 of 20.....	400,000
	Carried to the 4th Class...	200,000.....
		<u>\$850,000</u>

SECOND CLASS, 100,000 billets at \$20 each ..	\$2,000,000
Deduction at 15 per cent.	300,000
	<u>1,700,000</u>

Prizes.	1 of \$20,000.....	\$20,000
	2 of 10,000.....	20,000
	10 of 5,000.....	50,000
	100 of 1,000.....	100,000
	820 of 500.....	410,000
	20,000 of 30.....	600,000
	Carried to the 4th Class...	500,000.....
		<u>\$1,700,000</u>

THIRD CLASS, 100,000 at \$30 each			\$3,000,000
Deduction at 15 per cent.			450,000
			2,550,000
<i>Prizes.</i>			
1 of	\$30,000.....	\$30,000	
1 of	20,000.....	20,000	
2 of	15,000.....	30,000

20,000 of	65.....	1,300,000	
		 \$5,000,000

This lottery was intended to raise a sum of money, on loan, bearing an annual interest of four per cent. The adventurers in the first class who should draw more than twenty dollars, and so in the second and third classes who should draw more than thirty or forty dollars, were to receive either a Treasury bank-note, payable in five years, with an annual interest at four per cent., or the pre-emption of such billets in the next succeeding class. This was optional with the adventurers. Those who should not call for their prizes within six weeks after the end of the drawing were considered adventurers in the next succeeding class.

The first day of the ensuing March (1777) was appointed as the time, and Philadelphia the place, for the first drawing of the lottery, but it was then found that few tickets had been sold. The drawing was postponed. Other postponements ensued for the same reason. The Continental currency was beginning to depreciate. It was nine per cent. below par on the day appointed for the first drawing of the lottery, and at the close of the year it was two hundred and twenty-five per cent. below par—three hundred and twenty-five dollars in Con-

tinental bills being worth only one hundred dollars in specie. Congress, at the beginning of the year, perceiving depreciation to be inevitable, tried to support the credit of the currency by making it a legal tender, and the penalty for refusing to accept it as such, the extinguishment of the debt for the payment of which it was offered. But these efforts were unavailing. The people lost faith in the financial strength of the Continental government, and the bills fell in value every hour. This ruined the lottery scheme, for the people were unwilling to risk more than they were compelled to in the continual use of the paper currency. The lottery was a failure. Many persons lost money by its operations; but a descendant of an adventurer to-day feels rich with one of the tickets in his collection of historical antiquities. A fac-simile of one of these, in the possession of the writer, is here given.

The failure of this, as well as other financial schemes of the Continental Congress, was productive of much hard feeling among holders of promises; yet the patriotic people, with fortitude unparalleled, stood by their chosen representatives at that perilous hour in whatever they undertook for the public good. There was no blighting Peace Faction working in secret to thwart their efforts. Their domestic enemies were the outspoken Tories, who had much in reason and conscience to excuse their acts.

In the mean time Congress had been making overtures to foreign courts for political alliance and pecuniary assistance. In the spring of 1776 delegate Silas Deane, of Connecticut, was sent to France as an agent of the revolutionary government, with instructions to make the wants of Americans officially known to that court. Already the germ of our State Department had been planted by the appointment, at the close of November, 1775, of Benjamin Harrison, Dr. Franklin, Thomas Johnson, John Dickenson, and John Jay to be a committee for the purpose of carrying on foreign correspondence through friends of America in Europe. It was called the "Committee of Secret Correspondence." In the spring of 1777 the title was changed to that of "Committee of

United States Lottery. N. 7m 411.

CONTINENTAL LOTTERY TICKET.

Foreign Affairs," with Thomas Paine as secretary. The business of foreign correspondence was carried on through committees until 1781, when, under the Articles of Confederation, a "Department of Foreign Affairs," answering to our present Department of State, was established, with Robert R. Livingston (afterward Chancellor of the State of New York) at its head.

Arthur Lee, of Virginia, then living in London, and who for some time had been in confidential correspondence with the Secret Committee, had, at about the time of Deane's appointment, been instrumental in opening a way for the success of that commissioner's labors in a financial way. The good-natured French monarch, inspired by the sagacity of his able Ministers, had gladly seen the revolt of the American colonies against his traditional enemy, the crown of Great Britain, and was very willing to assist the insurgents, not out of love for their principles of action (for who ever heard of a Bourbon who believed that "*all men were created equal, and were endowed with certain inalienable rights?*"), but with a desire to damage that enemy. He sent a secret agent, named Beaumarchais, to Lee, in London, with the information that the King desired to send arms, ammunition, and specie to the struggling colonists, but in the most secret manner. A plan for the purpose was arranged so early as April, 1776, in which Beaumarchais, the agent of the King, was to play the part of a representative of a commercial house in conveying such supplies from the royal arsenals and treasury to the Continental Congress, and receiving in return, as a mask to the real character of the transaction, some tobacco. Beaumarchais and Lee corresponded in cipher, the former with the signature of "Roderique Hortales and Co.," and the latter as "Mary Johnson." They perfected the arrangement. The plan was approved by the King at the beginning of May, who ordered his Treasurer to hold a million livres, or about two hundred thousand dollars, subject to the particular order of his Minister for Foreign Affairs. This amount was intended for the Americans. When Deane arrived, in July, he was satisfied with the transaction, and in August he ratified Lee's unofficial arrangement. Beaumarchais opened correspondence, as "Roderique Hortales and Co.," with the Secret Committee, and money and arms were sent, not as a loan, but as a gift, for which no repayment was expected. This was the first financial arrangement made by Congress with Europeans, and was eventually the source of more evil than good for the Americans.

The overtures of the French monarch encouraged Congress to seek aid from other European powers, and a political alliance with France, Spain, and Holland. For that purpose a plan of action was drawn up and adopted by Congress on the 17th of September, 1776, and Dr. Franklin, Silas Deane, and Ar-

thur Lee were appointed diplomatic agents, with instructions to proceed to France and negotiate a commercial treaty with that government, and attempt to gain its recognition of the independence of the United States. The latter part of the mission was distasteful to Dr. Franklin. "A virgin state," he wrote, "should possess a virgin character, and not go about suitoring for alliances, but wait with decent dignity for the application of others."

The virgin state continued its suitings, and won not only political alliances, but pecuniary aid.

But that pecuniary aid was slow in coming. Meanwhile the war was rapidly exhausting the resources of the country. In the last month of 1776 its hopes were well-nigh extinguished. Washington and his dwindling army were flying for life across New Jersey before the flushed troops of Cornwallis. Very soon the pursued commander turned and struck his pursuer a stunning blow. To repeat it required money, wherewith to pay bounties to induce men to enlist and re-enlist. The money-chest of the army was empty, and the commander had no means for replenishing it. The public credit was excessively weak. Congress, in desperate strait, authorized a new issue of bills of credit to the amount of five million dollars. But Washington would be penniless, even of paper-money, until the new issue could be printed. Something must be done instantly or the army would dissolve. He turned to the ever-ready and ever-willing financier Robert Morris, and asked for a large sum in specie, wherewith to pay promised bounties. Morris had not the means. Sadly he went musing from his counting-room, thinking where and how he might raise the money. He met a wealthy Quaker, and made his wants known to him.

"Robert," said the man, "what security canst thou give?"

"My note and my honor," was Morris's prompt reply.

"Thou shalt have it," was the answer; and twelve hours afterward the generous merchant wrote to Washington, saying: "I was up early this morning to dispatch a supply of fifty thousand dollars to your Excellency," and told him to call for more if he wanted it.

The bounties were paid. The army was strengthened. Cornwallis was soon defeated at Princeton, and driven out of New Jersey; and the sun of hope beamed out brightly from among the dark clouds that overshadowed the land.

Congress now authorized its commissioners abroad to negotiate a loan in France of two million pounds sterling, at six per cent. per annum. In the business of obtaining material aid Dr. Franklin became chief actor. The other two commissioners were almost ciphers. The philosopher was chiefly instrumental in negotiating the treaty of alliance with France, early in 1778, which was followed by the sending of

armies and navies to assist the struggling Americans.

The character of the Treasury Department was very little changed from the close of 1776 until after the *Articles of Confederation* became the supreme law of the land. There were some new functions created and new officers appointed. For example, Francis Hopkinson was appointed a Treasurer of Loans in July, 1778, and in September following Congress, after hearing the report of a committee on the arrangement of the Treasury, resolved:

"That a house be provided, at the city or place where Congress shall sit, wherein shall be held the several offices of the Treasury; that there shall be the following officers, to wit, controllers, auditors, treasurers, and two chambers of accounts; that each chamber of accounts consist of three commissioners and two clerks, to be appointed by Congress; that in the treasurer's office there be a treasurer, annually appointed, and one clerk appointed by the treasurer; that in the auditor's office there be an auditor annually appointed by Congress, and two clerks appointed by the auditor; that in the controller's office there be a controller annually appointed by Congress, and two clerks appointed by the controller; that the auditor, treasurer, and controller shall not be appointed unless by the votes of nine States, and they be accountable for the conduct of their clerks respectively."

The specific duties of each officer were then prescribed. And it was on the same day, as we have observed, that Congress appointed a committee to devise a seal for the Treasury and Naval departments. This was done; and the seal—a delineation of which, the exact size of the original, is here given, drawn from an impression upon a document before the writer, dated March, 1782—was engraved and used.

THE CONTINENTAL TREASURY SEAL.

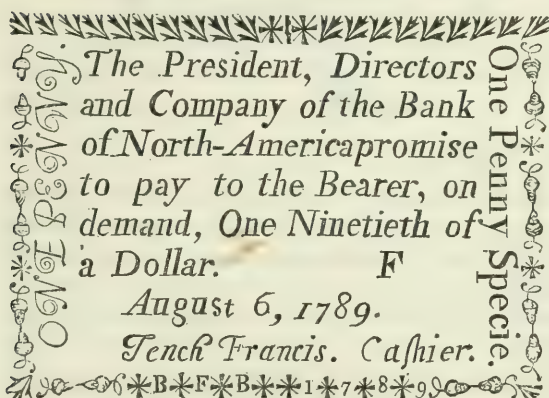

This seal, as we have observed, is precisely the same in device and legend as the seal of our Treasury Department at this day. The piece of paper on which the seal is impressed, with its serrated and lozenge-shaped points, is also pictured.

On the 13th of February, 1779, Congress resolved "that a Secretary of the Treasury be appointed;" but the choice was not made until near the close of the following May, when Robert

Troup was appointed to fill that important office. From that time the method of managing the national finances was very similar to that of our Treasury Department now. At the close of the ensuing July there was a reorganization of the Treasury Board, when the principal supervising officers were made to consist of three commissioners not members of Congress, and two members of that body. The executive officers and their duties remained about the same. This order of things in the financial department of the government continued until early in 1781, when such was the depreciation of the paper-money that Congress recommended the repeal of all laws in the several States making bills of any sort a legal tender; and also made a requisition upon the States for money raised by them for carrying on the campaign that year, to be paid in coin. After much discussion it was also determined to abandon the old system of boards and committees in the management of the various departments of the government, and to put each under the control of a single head. A Superintendent of Finance, answering to our present Secretary of the Treasury, was accordingly chosen on the 20th of February, 1781, in the person of Robert Morris. He accepted it on condition that all transactions of his department should be in specie value, and that he should not be compelled to relinquish commercial arrangements he had entered into. He was also invested, a few months later, with the powers and duties of Agent of Marine, or Secretary of the Navy, as we have already observed. With the greatest industry, skill, and vigor he exercised the functions of his offices.

Mr. Morris conceived the idea of a national bank as a means for facilitating the financial operations of the government; and three months after he was appointed Superintendent of Finance he laid before Congress (May 26, 1781) a plan for such an institution, contained in eighteen propositions, which embraced all the leading details of securities, management, and operations. The scheme was approved by Congress, and on the 31st of December following a bank was incorporated—the first in the United States—with the title of the *Bank of North America*. Its capital at first was \$400,000, supplied from abroad and by Morris's particular friends. It was finally increased to \$2,000,000. Its notes were made lawful tender in payment of all government dues, and were redeemable in specie on demand at the bank, which was established at Philadelphia, and was the pioneer and model of all its multitudinous successors in the Republic. Under the able management of its projector and others it contributed materially to the relief of the financial distress which weighed heavily upon the country after the downfall of the Continental money; and it gave a reliable currency to the people. It issued notes in denominations equal to the smallest coins in value, excepting the cent. In 1789 it had bills prepared of the nominal value of the ninetieth part of a dollar, or one penny

Pennsylvania currency, of which a fac-simile is here given. These were never issued.

FRACTIONAL PAPER CURRENCY.

In his efforts as Superintendent of Finance, to sustain the public credit, Morris strained the powers of the bank to the utmost, obtaining from it advances to the amount of three-fourths of its capital, or \$300,000. In these operations his motives were misunderstood and his acts were misconstrued; and he was so assailed with reproaches, in and out of Congress, that his great heart nearly failed him at times. But his patriotism, sturdy as his will, caused him to persevere; and he bravely held his private fortune responsible for the integrity of his conduct and the skill and fidelity of his management. In the great struggle he issued his own notes to the amount of \$1,400,000, and these passed freely at the value of specie, while the Continental money was nine hundred per cent. below par. By his skillful management he brought the annual expenditures of the government down from \$18,000,000 to \$5,000,000; and he kept the Continental army from starving and disbanding before its mighty work could be achieved. And so it was that that great and good man successfully carried his country through that terrible financial crisis when there appeared no other human arm competent to save.

Only a few years later Robert Morris, the princely merchant and unselfish patriot, who was ever willing to spend and be spent for his country, and who was the equal with Washington in giving sustaining strength to the armies that achieved the independence of that country, might have been seen literally without a

place of his own whereon to lay his head, in the Prune Street Jail in Philadelphia, a prisoner for debt. When that head was wearing the white crown of almost seventy years his great wealth had been swept away by successive gales of what men call ill fortune, and he lay, a helpless wreck on the sands of poverty. Four years he was in that debtors' prison, and was relieved only by the beneficence of a general bankrupt law in the year 1802. Sadly do we read in a letter from his prison to a friend, soon after he was put in it: "My confinement has so far been attended with disagreeable and uncomfortable circumstances; for, having no particular place allotted for me, I feel myself an intruder in every place in which I go. I sleep on other persons' beds; I occupy other peoples' rooms; and if I attempt to sit down to write, it is at the interruption and inconvenience of some one who has acquired a prior right to the place." Of him Whittier might have written his touching lines, saying:

"What hath the gray-haired patriot done?
Hath murder stained his hands with gore?
Ah, no! his crime's a fouler one—
God made the old man poor!"

Three years after he left his prison Robert Morris died in poverty. Such was the fate of the man who laid the broad foundation on which Alexander Hamilton built so grandly the superstructure of our national financial system eighty years ago.

Wearied with the cares and labors of public life, Mr. Morris gave notice, in the spring of 1784, of his intention to resign the office of Superintendent of Finance. There being no man found who was willing or competent to be his successor, Congress, late in May, passed an ordinance for "putting the Department of Finance into commission" again. The new Board of Finance was to consist of three commissioners, chosen for a service of three years, unless otherwise ordered by Congress. These were not appointed until early the following year, when John Lewis Gervais, Samuel Osgood, and Walter Livingston were elected. Morris had resigned on the 1st of November previous.

The Finance Department of the government was managed by commissioners from January, 1785, until the autumn of 1789, when Congress created a Treasury Department, with its head as a cabinet officer, bearing the title of Secretary of the Treasury. For this important post Alexander Hamilton was called by Washington, the President having the right to make all cabinet appointments, "by and with the advice and consent of the Senate," of the then consolidated nation. At the ensuing session of Congress Hamilton submitted to that body his famous plan for reviving the public credit; and he soon perfected that scheme which has ever since been the method, substantially, of conducting the fiscal affairs of the Republic.

The seal of the Treasury Department now in use was cut in cast steel, in 1849, by Edward Stabler, of Sandy Springs, Montgomery

County, Maryland. He was ordered to make a fac-simile of the old one, which was nearly worn out. Mr. Stabler suggested some minor changes, as improvements, but was informed that the design must be copied exactly "in accordance with the law."

Only three Executive Departments were established during the first session of the First National Congress, in 1789, namely, Treasury, War, and Foreign Affairs, or Department of State; and the heads of these were called Secretaries. Naval matters, as we have observed, were under the control of the Secretary of War until 1798. The Postmaster-General was not made a cabinet officer until the beginning of President Jackson's first term, in 1829, when William T. Barry took his seat as such in the advisory council of the Chief Magistrate. The Home, or Interior Department, was established in the spring of 1849, with its chief, called Secretary of the Interior, as a cabinet officer. The first incumbent was Thomas Ewing, of Ohio. At the same time the Attorney-General was also made a cabinet officer, and the first who took his seat as such was Reverdy Johnson, of Maryland, who entered the cabinet in March, 1849. The first Attorney-General of the Republic was Edmund Randolph, of Virginia, who was appointed in September, 1789.

SEAL OF THE DEPARTMENT OF STATE.

The device on the seals of the State and Interior Departments, and of the office of the Attorney-General, consists simply of the eagle and its usual symbolical accompaniments. That of the Department of State has the spread eagle, with the national shield upon its breast, and the arrows of war and the olive branch of peace in its talons. Over it the words, "DEPARTMENT OF STATE." That of the Department of the Interior is the eagle just ready to soar, resting on a

sheaf of grain, with arrows and olive branch in its talons; and over it the words, "DEPARTMENT OF THE INTERIOR." That of the Attorney-Gen-

SEAL OF DEPARTMENT OF THE INTERIOR.

eral is the eagle in another position at the instant of soaring, resting on a prone national shield, and arrows and olive branch in its talons. Below it, in a semicircle, are the words, "QUI PRO DOMINA JUSTITIA SEQUITUR;"

ATTORNEY-GENERAL'S SEAL.

and around the margin of the seal the legend, "ATTORNEY-GENERAL OF THE UNITED STATES."

Such is the story, briefly told, of the origin of the several Executive Departments of the Republic, and of the official seal used by each. The device of the seal of the Post-office Department, and the devices and legends of the seals of the Treasury and War Departments, are proven to be older than the National Government.

GRANDPAPA'S BABY.

IT was the early dawn of a glorious summer's morning; the light night breezes (if there had been any) had fallen asleep amidst the leafy trees; soft, fleecy clouds of pure, creamy white drifted slowly away from the eastern quarter of the heavens, till the soft, grayish blue of the sky was all unshadowed. Silently, almost imperceptibly, the first, long, delicately penciled rays of rosy light crept up from the horizon; then gradually fusing and blending together, changed the clear, uniform blue to a soft violet. Brighter and brighter grew the rich suffusion of "celestial rosy red," for the day-king was rising in all his royal magnificence, and, like the haughty Assyrian invader, "his cohorts were gleaming in purple and gold"—brighter and brighter, till all the eastern sky grew opalescent in splendor. Another moment and the majestic eye of Day had opened widely, and the glad Earth awoke to light and melody.

As the pure effulgence of the risen day broke over "Morville Place," the stately, well-kept, but somewhat old-fashioned garden, with its vases and statues, its terraces and flower-beds, seemed to awaken from sleep and take on new beauty; the waters of the quiet and beautiful little lake which bounded it upon the western side lapsed idly to the pebbly shore, with scarce ripple enough to lift the broad lily leaves which floated upon its brimming surface, or sway the matchless flowers which held up their pure chalices of white and gold to the rising sun, and poured out the libation of their odorous perfume on the warm, sweet air. There was not wind enough to lift the light, feathery ferns which fringed the water's brink, or swing the slightly-hung foliage which rimmed the mirror-like lake with a wreath of tender green; the stately flowers in the formal garden-beds stood up in their gay luxuriance of bloom and sweetness; birds were singing cheerily in its wide domain; the graceful, diamond-like waters of the fountain rose up, flashing gayly on the clear blue air, and fell in sparkling mist on the emerald turf. It was a fair scene of peaceful luxuriance and serene beauty.

But the fine old house at Morville Place, usually so full of quiet enjoyment and refined hospitality, stood hushed and desolate amidst the morning smile of Nature; the gladdening sunshine for once sought admission there in vain; for closed doors and darkened windows shut out the streaming radiance with jealous care.

The house was very still now. Yesterday all had been hope, suspense, anxiety, dread, terror, and despair, growing darker and more dread with every passing hour; hope that would not despair gradually giving way to despair that dared not hope, until night closed in with the dread certainty of all that anxiety had foreboded. For, hand in hand, but all unseen, the two angels of Life and Death had entered the

house together, each to bear an immortal spirit to new and untried scenes of existence.

Life and Death! twin sisters and copartners! holding a common interest in the venture of every human life! portresses at the two different doors of the vast amphitheatre of Earth! so widely separated, yet so often jostling each other in the closest juxtaposition, they had met for a moment by a silent pillow. No word was exchanged, no greeting given, but each passed on upon a separate way, and each had performed a separate mission, and brought a separate gift. Death for the fair young mother, so full of life, and health, and hope, and happiness; to whose quick perceptions the very sense of being was enjoyment; for whom life had so much to offer; and whose glad heart had for months looked forward lovingly to the new hope this hour was to have realized! Life to the poor, feeble, unconscious babe, who could not recognize the value of the gift bestowed upon it; to whose weak sense the very sunlight was an annoyance; and the fresh air of the world a positive suffering, and to whose dull incomprehension death would have been a boon as welcome!

Sad indeed for the young mother to turn away from earth just as earth grew radiant with the trembling light of the new star just dawning on her horizon, which was to have shed over her path of life a new glory and a holier happiness, and to make earth a paradise around her. Sad indeed for her to turn away, and never look upon the little face of the child for whose life she must lay down her own! But sadder still, perhaps, for the little lonely child to enter upon life just as earth had been made desolate by the removal of her who would have been to it through all time the truest, tenderest, most faithful of human friends; never to catch one glance of that sweet face, not even to hear the sound of the departing footsteps or the trailing garments of the beatified one; but doomed to wander on through life alone, knowing only by imagination the priceless blessing of a mother's love!

And there they lay—mother and child—in life and death alike unconscious of the sad, pitying tears, which rained down all the more tenderly because they were both so unconscious of the love that shed them! Yet such is Life! and not even the wisdom of Solomon could avail to penetrate its mysteries and give us a satisfactory solution of its meaning; and it remained for a greater than Solomon to teach us to say, "Even so, Father; for so it seemeth good in thy sight!"

The house was very still now. All night long it had been feverish in unrest—closing doors, hasty steps, muffled voices, sad questionings, and sadder answers. But that was over now. Morning had come, and the household had regained something outwardly of its wonted condition, although the closed doors and darkened windows told that death and sorrow held their place there.

The chief mourner and only relative by the bed of sudden death was Colonel Morville, the master and owner of Morville Place. He was now an old man and a widower; but long before the lamented death of his wife, who had no children, they had adopted the orphan only child of his only brother—the little girl being only eight or ten years old at the time of her adoption—and had tenderly reared and educated her as his own child. With his full consent and approval, Gertrude had married a young and promising physician, and had removed with him from her home in Morville Place to a new home in the neighboring city, which the paternal liberality of her uncle had provided for her. But when the late cruel war rent the bosom of our distracted country, and the rich young blood and the strong right arms of her patriot sons were freely offered upon her altar, the young husband felt himself called upon to rally round the flag he loved and honored.

Colonel Morville, who would gladly have proffered his own services, had not his age precluded him, would not check the young man's ardor; but at his earnest request the town house was relinquished for a time, and the young wife came home to pass the time of her husband's absence under her uncle's protection, and beneath the dear old roof which had sheltered her in her happy but orphaned girlhood.

When the terrible announcement of his niece's death was made to him, as soon as the first shock was over, Colonel Morville felt it to be his first duty to dispatch a missive to the absent husband and father, tenderly informing him of the birth of his child and the death of his wife. But the sad intelligence never reached the hands it was intended for; on its way to the seat of war it was met and crossed by a telegram which conveyed the official news of the young hero's death upon his first battlefield. Thus spared the terrible blow which seemed impending over each of them, neither of these devoted hearts knew the bitter pang of the final separation, and their first glad reunion was the blissful and eternal one! But by this strange dispensation of Providence Colonel Morville found himself, at the advanced age of more than threescore, for the second time in his life, the sole guardian of a little helpless girl. What wonder if his tears fell fast as summer rain, as he turned from the pale, fair face of her whose loving care he had hoped would perform the last sad offices for him in his old age, to the frail little infant thus cast in its doubly orphaned birth upon his protection and care! But the Colonel was not a man to give way to gloomy despondency, or to shrink from responsibilities however burdensome; whatever might be the occasion, the hour found him ready.

The obsequies of the mother and the baptism of the child were his first duties. By the customs of the family and the neighborhood the

former were to be performed at the church, immediately after the morning services; and it had been arranged by the clergyman, and acceded to by the Colonel, that the baptism should be at the same place and hour.

It was a touchingly sad sight to the crowded congregation, nearly all of whom were personal friends and mourners (for the dead wife had been widely known and beloved), when, after the benediction had hushed them into reverent silence, the flower-decked coffin was borne up the broad aisle and placed before the altar; and alone, and following closely behind it, with slow, noiseless steps and grief-bowed head, came the bereaved old man, bearing in his arms the tiny infant, half hidden in its voluminous robes of delicate lace and rich embroidery—themselves the sole representatives and relatives of the dead; and when, standing by the open coffin of her who had been as a daughter to him, the man of many years held up the child of a few days over the sweet, calm face of her dead mother, to offer her by solemn act to God, and claim for her the consecration and the blessing of the holy rite, a sob of deep feeling ran through the house, and spoke the universal sympathy that might not find expression in words.

When the blessing had been given the old man silently and reverently kissed the water of baptism from the child's brow, and handing her to the nurse to be taken home, addressed himself to the funeral ceremonies. When these were over, and the coffin was borne from the church, it was noticed that every person present followed it to the burial-place in sad procession, and reverently waiting until the last rites were ended, escorted the Colonel back to his desolated home, in mute token of sympathy and respect.

Probably no man living could have been more alive than Colonel Morville was to the fact that his advancing age rendered him a very precarious support for the coming years of a little child; but the choice was not his own, and he entered upon the duty intrusted to him, not presumptuously, but in cheerful faith; he made immediate arrangements in regard to his property, securing it to her in such form as would be most for her interest; he chose executors and trustees and guardians with vigilant care; he wrote minute directions in respect to her education and training, and marked out, as far as human foresight could do, her course to womanhood; and then, having accomplished all that was in his power, and hedged her in on every hand and in every way that the tenderest love and care could devise, he rested content, trusting that He who had called him to the duty would sustain him in its performance.

It was singular to see how soon the doubly orphaned and helpless little one became a source of interest and pleasure to her kind paternal friend; he made only one stipulation in regard to her—it was that her long, sweeping robes of

babyhood should be curtailed of their "fair proportions" in such a manner as not to trip him up when he carried her. This was complied with, of course, and he kept her with him nearly all the time. If he drove out, or walked in the garden or grounds, she was carried in his arms; if he sat reading on the piazza, she lay cradled on his knee; if he wrote in the library, she was rolling on the carpet or sleeping on one of the lounges by his side. Every day some unfolding grace or newly awakened power filled him with delight and astonishment. Of course he fully believed there never was a baby so wonderful as "My Baby!" He had given her the name of her mother in baptism, for he felt she had a right to it; but he never called her by it—to him that name was sacred to her sweet mother, to his *first* little Gertrude. He always called the child "My Baby;" the females of the household called her "*The* Baby;" and the men-servants, "Little Miss."

They were, nearly all of them, long and attached members of the Colonel's family. They had known and loved the baby's sweet mother, and mourned the early death of her gallant young father, and they took an honest pride and pleasure in doing all in their power to add to the old gentleman's enjoyment in his little charge. Before the baby had ended her third year, the Colonel, on entering the dining-room upon the recurrence of his birthday, found the little creature (who had had her own simple dinner hours before) perched up upon a pile of embroidered sofa-cushions in the great arm-chair at the head of the table, with Martha, her own attendant, upon one side of her chair, and the Colonel's waiter upon the other.

The Colonel was charmed; and when the little laughing Hebe, who had been carefully drilled for the occasion, lisped out, with her baby grace, the pretty hospitalities of her end of the table, "If you p'ease, Gan'pa, will you take a 'ittle thoup?" and, "Gan'pa, may I gib you a tustard?" the delight of the old man was unbounded! Under the watchful care of her two sponsors, Baby behaved with great propriety. Only once, when the dessert appeared, at sight of the grapes and peaches Baby threw up both hands and feet in a sudden burst of admiration, more demonstrative than is usually exhibited at the head of the table, and broke into a ringing peal of laughter; but a warning look, and a finger lightly laid upon each shoulder, subdued her to instant propriety again, and she helped her Grandfather to fruit very sweetly, and was allowed some herself as a reward of good behavior upon her first "coming out."

But the two kind prime movers in this pretty tribute of respect had to pay for their experiment, for from that day the delighted Colonel demanded the presence of his little favorite at every dinner, whether alone or with company at his table.

But the greatest treat of all was to hear Grandpapa and Baby at their lessons. The Colonel had his pet theories upon the subject

of education, as most men have, and it was his express intention to lure Baby on along a flowery path of literature, and to blend instruction with amusement. This was the theory; but in practice he made the path so very flowery that the baby's feet were rather impeded in the race, and the instruction was apt to melt away and leave only amusement as the residuum. Let us take an illustration of this peculiar but possibly not entirely unrecognized method of instruction.

One fine day, after dinner, the loving pair walked hand in hand, as usual, down the broad garden-walk which led from the steps of the southern piazza to the summer-house, which the Colonel mentally regarded as the lyceum where Baby was being instructed, but which the little girl had converted into the play-house where Baby was to play.

Now it so chanced that our dear little heroine, though gifted by Nature with a full share of mother-wit, ready tact, and retentive memory, had not a natural leaning toward literature. She was content to learn, and apt to acquire, but not from books. She went cheerfully through all her little store of accomplishments as Grandpapa demanded them. She told her name and age correctly; gave the names of her native Town, County, State, and Country without mistake; she told, in their proper order, the names of all the Presidents of the United States, from "Ossington to Donson." To be sure, some of these great men might not have recognized themselves in Baby's nomenclature, but Grandpapa knew whom she meant, and as the President and ex-Presidents were not there to hear their good names thus lightly taken in vain, it did not matter much. Then she counted ten upon her own dimpled fingers; told all the days of the week; named all the months in the year, beginning with "Jebbery, Febbery, Mars, Apple, May."

Next, Baby repeated that touching episode in our national history which seems to be regarded as the needful pabulum or bee-bread of the mind of "Young America," in which two Washingtons, a hatchet, and a pear-tree make up the interesting quartette; bringing out the brave avowal of the incipient Father of his Country, "I can't tell a lie, father; you know I can't!" with the "extreme unction" of infant school declamation; and illustrating the grand finale of "Come to my arms, my dear boy!" by flinging her own white arms around the old gentleman's neck, and nearly smothering him in an ardent caress.

When order was somewhat restored, and the "dear boy" had smoothed his ruffled plumage a little, she sung the alphabet to the tune of "Auld lang syne," Grandpapa and herself beating time conjointly; and another pretty, but rather pointless ditty, about a little lamb that seemed to be rather intrusive in its habits, as "every where that Mary went the lamb was sure to go;" which must have been inconvenient, especially at bedtime. Next she favored her delighted hearer with the poetical version of the

audacious, but it is feared not singular, man who

"Thought he could do more work in one day
Than his wife could do in three!"

Two hymns (with variations) concluded this part of the performance. Now this was all very well, and very satisfactory to both parties. But this was only the light skirmishing; the heavy work was not yet begun; but when Grandpapa produced the dreaded book, which was to be to Baby the first step on the ladder of learning, her fair brow flushed and grew clouded, a haze stole over the pretty blue eyes, and her whole manner became constrained and abstracted.

She did, even then, make one effort at self-defense: glancing furtively up at her Grandfather's face, she suggested that she "'posed it was time her hens was feeded."

"No." Grandpapa was very decided upon that point; the hens and chickens must wait until Baby's lessons were over; indeed, he felt sure they would prefer to be fed by a good little child who had said her letters. There was no escape for her, the little one saw, and resigned herself with a sigh. Still, with Grandpapa looking over her, and by the aid of his ever-pointing gold pencil, she did manage to name the three leaders of Cadmus's troop, A, B, and C, the three representative men of their party; persisting, however, in calling the latter consonant "shee;" but that was a trifle; at D she made a long halt, and sighed deeply; and it was only by Grandpapa's forming the letter with his mouth, and almost articulating it, that she conquered at last. But at the letter E she came to a full stop. Grandpapa urged and tempted and pointed in vain; he put the curls back from her puzzled eyes, and patted her encouragingly on the back, and offered her every delicate assistance in his power, but the dormant memory refused to be aroused.

"Baby *knows* it, I am sure," said the teacher, encouragingly, to try to lure her on; "Baby *knows* what it is."

Now the truth was, Baby did *not* know it—had not the least idea what it was; but if Grandpapa said she did, of course he must know best; she was not the Baby to contradict him. So when he repeated the flattering assurance, "My Baby *knows* what it is," the child innocently assented, "Yes, Baby knows him," thinking probably to get rid of the troublesome vowel by that method.

But the way of the transgressors is proverbially hard, and a hard one it proved in this case. Baby was like the child who swallows the hot pudding which burns its mouth, in hopes to be rid of it; for Grandpapa immediately added, "I thought you did; now tell me what it is." There was no escape for her; so, glancing up at her Grandfather's earnest face, Baby said, demurely, "I *knows* him, Gan'pa, vezzy vell; but I can't 'member the *name* of him!"

"Oh, Baby! Baby! you little sinner! that won't do; now tell me what it is." Baby

gave a weary yawn, and holding on by the lappets of her Grandfather's coat she threw herself backward over the arm of his chair, and lying thus she looked up at the heavens; as the old song says, "she looked east, she looked west;" she looked every where but into her Grandfather's face, and then said, abstractedly, as if pondering upon some abstruse question which ought to be settled, but in which *she* (Baby) had no personal interest whatever, "I vonder if Gan'pa has dot any tandy in his pocket?"

"No!" said Grandpapa, very decidedly. "I have not got any; and if I had I should not give it to you, because you are a little dunce, and I don't like dunces."

Baby's brow reddened, and her rose-bud lips trembled, and Grandpapa hastened to add, "But I am going to town this evening, and I mean to buy a great deal of candy; and *then*, if I should happen to meet any good little child who had learned her letters well, I *think*—" Here the Colonel paused; but an expressive look and gesture told more plainly than words could have done how liberally in such a case he should be prepared to reward the clever little aspirant to literary success.

"A word to the wise is sufficient." Baby heard, and comprehended; her bright eyes flashed back a quick response; she straightened up immediately; seated herself more squarely upon Grandpapa's knees, as if she knew there was hard work before her; shook back her curls, snapped her eyes hard to waken them up, swallowed very hard, screwed up her rosy mouth, resumed the book, folded her hands, and tried again; and she really did try her very best, partly for love of Grandpapa, and partly (for all human motives are of a mixed nature) for the love of candy.

But poor little Baby was not meant for a scholar, and the missing name would not come to her. Then she tried viewing "the pestilent fellow" from different points of view; she drew back, and looked at him from a distance; she hung her head sideways, and looked at him with her left eye; she turned her head the other way, and examined him with her right eye. No better success: it was a very hard child to christen. Then she grew desperate, and hurled at him the names of all the letters she *did* know: she called him "round O," and "crooked S," and "I all alone," and "T with his arms up!" But it would not do; Grandpapa would have none of them. At last the poor child's mother-wit came to her aid; and when the Colonel asked again, rather more impatiently than before, "Baby! don't you know what it is?" she answered, meekly, "Oh yes; *I* knows him; don't Dan'pa know him?"

"I? Yes, of course I know."

"Well, den," said Baby, sagely and triumphantly, "if Gan'pa knows him, an' I knows him, *dat's nuff*—needn't tell nobody else nossing 'bout him;" and with a merry peal of laughter she closed the hated book and flung it from her,

throwing her arms coaxingly round the old man's neck, as if she had found a very satisfactory way out of her troubles.

"Oh, Baby! Baby!" said the Colonel, giving the child a loving little shake, and laughing in spite of his efforts to be grave; "I do believe you will be a little dunce after all, and I can't help it; it is all play, play, play with you. Now what have you been about all this long day?"

Then Baby, standing upon his knee, gave him a detailed and rather desultory account of her day. It is not necessary to follow her through all her experiences as given by herself; it is enough to say that the recital ended in these remarkable words:

"Den Baby goed down to de lake; dare seed drate, big, black el'pant, and dear 'tittle baby el'pant; comed yite up out of de water, and say, 'How do, Baby Morville!'" And here the little story-teller nodded her curly head in a sociable way, intended to show the charming familiarity with which these amphibious elephants had treated her.

Grandpapa was horrified. If there was a virtue he most prized and practiced it was the virtue of truthfulness; if there was a sin which he particularly hated and scorned it was the opposite sin of falsehood. He had often said that profanity was the silliest, most vulgar, and most gratuitous of vices, periling every thing to gain nothing; but that lying was meaner and more contemptible, as it was more cowardly and more mercenary; and now, here was *his* Baby, his own darling, the creature whose mind and morals he felt had been his own work, whom he himself had so carefully trained in the way in which she should go, looking up into his face with her sweet, innocent blue eyes, honest and fearless in their soft, clear light, and this most palpable and enormous falsehood upon her fresh, rosy lips! What should he do?—the offense so hated—the offender so beloved! Alas! poor Grandpapa!

The fact was, that Colonel Morville was too unused to the ways of little children to know that there is a short period in the life of nearly all healthy, happy, and intelligent children when they invariably tell the most enormous falsehoods without disguise and without shame. And this is no argument, either, in favor of the doctrine of original sin in the race, or a proof of natural depravity in the individual; it is simply because the child's mental powers are as untrained as his physical ones, and he has not yet learned to use them. We all know that a perfectly well-balanced mind is a rare attainment even in mature life; how then can we look for it in childhood? The powers of imagination are undoubtedly stronger in youth than at more advanced periods of life, and the self-rectifying powers of reflection and judgment are not yet developed; consequently the child speaks out the vague and brilliant images which throng his fancy, but which older persons have learned to conceal; and he does it, too, with perfect

transparency, with no attempt at disguise, and is just as unconscious of sin, probably, as was the man at Bethsaida, who, bewildered by the exercise of his newly bestowed eyesight, said, naïvely, "I behold men as trees—walking."

But of all this the Colonel was profoundly ignorant; he knew only that his Baby had told an untruth, and he must notice it—but how?

"Baby!" he said, in tones of gentle, grave reproof, "you did *not* see two elephants at the lake; you *know* you did not."

"Did, too!" said the child, with playful pertinacity.

"No, Baby; you *could* not; you *know* there are no elephants there."

"No!" said Baby, reflectively.

"Then how came you to say you saw them? That was a *fib*, Baby!"

"Yes," said Baby, assentingly, "*dat was fib*."

"But, Baby," said the Grandfather, rather taken back by her calm composure, "my little girl must not tell fibs. You never tell fibs, I hope?"

"Yes, do," said the child, with perfect complacency. "Baby tells lots, evezzy day—lots!" she repeated, impressively.

"Tell lots of fibs? Oh, Baby, you *don't* tell fibs, I am sure; that is very bad!"

"Do!" repeated Baby, with serene indifference. "Lots, evezzy day, Gan'pa!"

"But you must not, darling! I sha'n't love my little girl if she tells fibs."

"Won't, den, if Gan'pa don't want her to," said the child, with sweet docility.

"Want you to? No, indeed! It will make Grandpapa feel very unhappy."

"Won't, den; won't neber tell anoder; not forebber—nebbber!"

And here the Colonel thought it best to let the matter drop; but it made a strong impression on his mind, and recurred to him painfully afterward.

"And now, Baby," said the Grandfather, "I think it is quite time for you to go into the house. I am going to ride into town, you know."

"Baby too?" inquired the child.

"Oh no; not to-night; I can't take you; I am going with Dr. Williamson, in his coupé, and he would not have room for my Baby. Besides, I shall not come home till these little blue peepers are fast asleep. So give me a good-night kiss, and then go straight into the house to Martha. Good-night!"

The little girl hesitated. "Baby go see the white birdies first," she said.

"What! down to the lake? No, indeed! Baby must *never* go there alone. You must go right into the house to Martha."

Baby did not answer, but she looked a little disappointed.

"Here, Baby," said Grandpapa, noticing the look, and thinking that the dignity of a commission might encourage her to keep in the right path; "here is my straw-hat; I want you to take it in and leave it in my dressing-

room, will you? That's my nice, useful little girl! What should I do without my darling Baby? Now remember—go straight home to Martha;" and he kissed her, and set her out in the right direction.

With head erect, and slow, devious steps, Baby, carrying the great shade hat before her, and humming to herself, went on her way; and Grandpapa stood watching her while he pulled on his gloves. Baby sauntered on until she had accomplished half her journey; then she stopped, irresolutely, as it seemed. She had reached the diverging path which led to the lake, whose silver waters she could see from the point where she stood.

"She who deliberates is lost," quoted the Colonel, and he clapped his hands. Baby turned her bright face toward him. "Go on, Baby!" said her Grandfather, waving his hand in the direction of the house; "go on; don't stop;" and the child went on obediently.

"I wonder if she meant to disobey me," thought the Colonel, as the "lots of fibs" rose to his mind. "I can not think she did." But he watched her little retreating figure till she reached the house and began to ascend the steps. Then Philip, the gardener, came to say Dr. Williamson's carriage was at the garden-gate, and he left the garden and joined his friend.

There was a turn in the road which commanded a view of the southern piazza, and as the carriage approached it the Colonel reached out. Baby was standing upon the top of the steps, her sweet face turned toward the road, watching for them, her fairy-like figure illuminated by the rays of the descending sun, which rested on her golden head like a nimbus of glory. When the old man saw her standing thus he raised his hat and bowed to her, with the stately courtesy of his day, and quick as thought the little one responded with a low courtesy and a kiss of her little hand. The carriage rolled on; but the Grandfather long remembered the little figure thus daguerreo-typed upon his heart and brain.

It was late in the evening when the gentlemen returned from town; and as their carriage drove up the avenue and stopped at the hall-door, a sense of something strange and unnatural, though unrecognized, in the appearance of the place struck the owner's eye, and filled him with a sense of coming ill. He did not at first discover that it was owing to the house being all unlighted.

"What is the matter, James?" he said, as his own man came out to open the door of the carriage and help him out. "Something is amiss, I know. Speak, man! tell me at once what it is."

"You did not take little Miss with you, Sir, did you?" faltered the man, peering into the carriage as he spoke.

"Take her? No. Why? Where is she?"

"That's just it, Sir! We can't find her. But don't you be frightened, Colonel; she can't

be gone far; we'll find her, sure enough. Martha hoped that you had took her with you; but Philip said he knowed you didn't."

"Where is Martha?" asked the trembling old man as he stepped heavily to the ground. "Call Martha; I want to speak with her."

"She is out, Sir, looking for little Miss."

"Good Heavens! When did she miss the child?"

"Well! she never come in, Sir, after you left. And Martha she waited, and waited and kept fussing, 'cause it was so late; and at last she went out to bring her in to her supper, and Philip said how you had been gone two hours; and then Martha she was just crazy like; and she went out and is out now, and so is John, and half the others. But don't be scared, Sir; we shall find her, sure enough."

"Oh! but the lake, James," suggested the Colonel, in low, terrified tones, as he thought of the child's disappointed intentions.

"Oh no, Sir," said the man, decidedly; "I don't think it's *that*. I thought of that, too, the very first thing, of course, myself. But Philip says he was at work in that part of the garden after you went, and he never see her, and he is *sure* he would if she come down that way; and if any thing had happened he would have heard her, he says; and in course he would, you know, if any thing had happened."

If *any thing had happened!* Oh! how those words sounded in the ears of the distressed listener! He entered the unlighted house, and tried to gain farther information; but there was nothing more to be learned. The house-keeper told him the child had never been seen at the house since he himself had led her into the garden; and she knew no more.

In a very few moments (for bad news flies fast, proverbially and in fact) the news had spread through the neighborhood. The Colonel was well known and widely respected; and the little girl's constant companionship with him, either walking or driving, had made her far more known than children of her age usually are; and as there is no sound which appeals to the warm sympathy of all hearts like the cry of "Lost child," people gathered from all quarters to make inquiries, to offer sympathy, and join in the search.

Toiling, weary men, tired and dusty from the long, sunny day's labor, heard, and glancing at their own safe-sheltered little flock, rose up from the untasted supper, and went forth with willing feet to seek for the Colonel's stray lamb; hard-working mothers, with tears and sobs, turned from their own cradled babes, and with heads shrouded in shawls and aprons went out into the starry night, feeling as if some unnamed motherly instinct stirring in their breasts must guide their uncertain footsteps to the little wanderer.

Fortunately it was a clear, warm, summer night, and the solemn radiance of the full moon was showered on green-sward and on tree. Poor little Baby would not perish of cold; there was

comfort in that, at least. And still they came and went, and more came and went, until hundreds were on the move; and as the search was unsuccessful the leaders returned, and organized in regular bands; and gathering horns and bells and drums and lanterns, went forth again for a wider and more thorough range of exploration.

Nearly all the servants of the house had gone out; Martha, the little girl's nurse and personal attendant, frantic with alarm, had been out ever since the child had been known to be missing; and gradually, as the alarm increased, one after another had stolen out, until only the old housekeeper remained, and the house stood with its doors and windows all open, but all unlighted, except by the streaming effulgence of the moon.

The miserable Grandfather, not daring to leave his home, where he was constantly called upon for consultation and direction as to the best means to be employed in prosecuting the search, wandered restlessly about the garden and grounds, in the vain hope that he might yet find his darling safe and asleep in some sheltered nook or corner. There is a strange and mysterious power in the full light of the moon's beams (*felt*, perhaps, by many who may have never consciously acknowledged or analyzed the feeling), a power of strongly intensifying the emotions either of joy or sorrow pervading the mind of the beholder. In the gay and merry scene, surrounded by friends and festive mirth, when gladness rules the hour, "and all goes merry as a marriage bell," the gayly shimmering light, glancing on all around us, and touching every thing with its own mysterious loveliness and beauty, seems to enfold us as a visible sense of the sympathy of universal nature, and excites and elevates the spirits like a glass of generous old wine. But in more pensive moods, in seasons of sorrow or loneliness, the clear, solemn effulgence falls cold and chilling around us; the starry heaven above us seems so far remote, so distant, that our hopes and faith falter on their way; the dimly-seen earth so chill and silent that the heart feels crushed and orphaned—a desolate, and it may be a forgotten, atom in the brilliant but unsympathizing immensity of space.

Something of this weighed heavily upon the old Colonel's spirits as he passed up and down the broad, trimly-kept paths, where the soft and scarcely moving shadows of the blossoming shrubs and tall trees lay in fair tracery upon the smooth gravel. Now and again, as the faint night-breeze freshened, there came to his ear, from hill-side or glen, the beating of drums, the barking of dogs, or the voices of the men, as they called aloud to each other to encourage themselves in their unsuccessful search; and here and there, in the groves and wooded hollows, he could catch the gleam of the lanterns, not needed in the more open places.

"Oh! my Baby, my Baby!" cried the old man, tremulously, as he listened to all this un-

wonted stir upon the night's stillness, "If they find her, and wake her suddenly with all these rude noises, they will frighten her out of her sweet senses!" and he wrung his hands in impotent terror.

Two or three times in his weary wanderings Colonel Morville had visited the lake-side, in fearful apprehension; and now it seemed as if some strange fatality attracted him there again. The little sheet of water lay calm and still, the bright moonbeams showering down on lake and tree, not a breath of wind ruffled the glittering surface, which lay like a burnished mirror in its light frame-work of green foliage.

As his heavy step sounded upon the gravel of the little beach a slight noise from the opposite bank startled him: surely something white was stirring there. His heart gave a great, bounding throb, and then fell like lead in his bosom. It was only the swans, Baby's "white birdies," whom his step had aroused. Accustomed to be fed by persons on the shore, they came sailing, stately in their serene magnificence, across the still waters, leaving a gleam of brightness on their trail; and coming up to his very feet, lifted their long, graceful necks, and looked at him with their bright, inquiring eyes; they were expecting their usual largess of food from his hands. But as the Grandfather met the gaze of those expectant eyes a sudden horror fell upon him. What might not those mute, inquiring eyes have seen? Those stately watchers, sitting there in their glossy plumage, white and silvery as angel wings, might they not be silent depositaries of a fearful secret? Pure as they looked, sailing round and round in their stately grace, might they not have lured his darling to her death-doom? Might they not know where down, down, deep on the pebbly bottom, where in the still moonlight their soft shadows were floating, there, still and ghastly, lay *something*!

In nameless dread and loathing (for his nerves were all unstrung) the Colonel raised his hand and drove them from the shore. Disappointed and alarmed, the creatures arched their long necks, turned their heads sideways, and uttered their low, peculiar cry, so plaintive now on the night air, and turning, sailed proudly and silently away, so apparently motionless that only two long, rippling lines of brightness, lengthening and widening behind them, showed that the winged voyagers had moved at all.

As the birds receded to the other side of the water a light cloud passed over the moon, and the waters of the lake grew black beneath the momentary shadow. An irrepressible shudder, which was not of the night air, shook the Colonel's frame with a fearful chill, and burying his face in his hands, the bereaved old man wailed forth, "Oh! my Baby, my Baby! shall I never behold your sweet blue eyes again!" He turned, and left the lake an aged man, bent and stooping, as if the weight of many years had fallen upon him in that one night of suspense and agony.

As he turned he saw that the summer night was nearly spent. It was the most cheerless hour in the whole twenty-four—the cold, cheerless hour of early dawn. Already the east was beginning to flush with the advent of a new day—a day that could bring no brightness to him!

He walked down the broad central walk of the garden, and entered again the little summer-house, where he had last held his darling in his loving arms. All was still and lonely there, and for a moment he stood gazing round him, stunned and bewildered by his grief, conscious of missing something, yet scarcely knowing what it was he missed. Then in the early gray light of the morning he saw the discarded lesson-book lying upon the floor, just where the frolic hands had tossed it; he gathered it up, kissed it reverently (for it was the last thing that he could remember which those dear hands had touched), and placed it in his bosom; then he sat down by the little study-table, and covering his face with his hands, prayed long and fervently. He rose at length, somewhat calmed and composed by this holy communing with "Him who doeth all things well," and returned to the house.

As he drew near the steps he saw one of the servants returning from the search, and called to him. It was James, his own man. There was no need of question or reply; each knew the other would have shouted out the glad news had there been any to tell.

"James!" The man started as the Colonel spoke—the voice was so broken; the clear, hearty, resonant voice, military in its tone of command, but ever courteous, was shrunk to a childish, piping treble. "James," it said, "have the horses saddled at once. I must ride to the village to make arrangements for having the lake—" He could not finish the sentence, but with a bitter sob passed on toward the house.

"God help him, poor old gentleman!" said the man, looking sorrowfully after him. "It will kill him, sure as fate!"

Slowly and painfully Colonel Morville ascended the steps—those steps where he had last beheld his darling, her sweet face and fairy figure all flushed and glorified by the slant beams of the setting sun as she kissed her little hand in farewell to him. Ah, was that parting their final one? As he entered the hall-door the housekeeper met him, and with silent thoughtfulness handed him a cup of strong coffee. The old man received it mechanically, and drank it off in silence, handing back the cup, for the first time in many years, without his old-fashioned, courteous "Thank you!"

Then he ascended to his own apartment. As he entered his dressing-room his eye was caught by seeing upon the lounge the shade-hat he had given Baby to take to his room for him. The child had then returned to the house, as he had bidden her to. As he sprung forward to grasp the hat, mute evidence of Baby's obedience, he knocked a book from the table in his

eager haste; it fell with a loud noise. What was that? Surely something stirred in the dimly lighted room. A little playful cry, and out from under the sheltering lounge, smiling, all flushed and dewy with her long night's rest, rolled his living darling—safe, safe! not a hair of her dear head injured!

With a loud cry of joy he snatched her to his breast, and sprung through the low, open window out on to the balcony. "*Found! Found! Found!*" he shouted, in clarion tones. Ah, the voice was not broken now! Loud, clear, and sonorous, it had the ring of a battle-trumpet! "*Found! Found! Found!*"

In another moment James had sprung upon one of the saddled horses, and galloped to the village, shouting as he went, "*Found! Found! Found!*" and in less than five minutes more the glad joy-bell, peal on peal, sent out the tidings on the fresh morning air.

As the gladdening chimes rang out their welcome message over wood and dale, joyful answering shouts arose from the weary seekers over hill and plain; shout after shout went welling up; from north and south, from east and west, came the hearty response from hundreds of eager voices. Then the stragglers began to come in, by twos, by threes, by tens, by scores, till the lawn was crowded with them. Baby, all bright and smiling, with her blue ribbons a little the worse for wear, and her soft golden hair all a mass of loose, tangled curls, stood upon a table by the side of her Grandfather, whose loving arm encircled her, as if he could not trust his treasure out of his grasp again.

Tears in Grandpapa's eyes, smiles on Baby's lips; they stood thus together to receive the heart-felt congratulations of their friends. Hard hands that had guided the plow and dug the soil trembled as they brushed away the unwonted tears, and came up silently to wring the Colonel's hand with a hearty grasp, or bestow a fatherly blessing on the little one; while hard-working mothers, more demonstrative, perhaps, but not less sincere, loudly congratulated the Colonel and caressed the child.

The wondering Baby, profoundly unconscious of the meaning of all this strange excitement, but delighted as much as surprised at finding herself the central object of all this interest and attention, nevertheless "accepted the situation" with childhood's beautiful facility; she bowed and nodded, and lavished her innocent smiles on all around her, and held out her little dimpled hand to be kissed, with a grace and a baby dignity that the imperial Baby of France, with all his court training, could never have exceeded; then, lifted high in her Grandfather's arms, the little one lisped out her general invitation to all their good friends who had been out in her service the past night to visit Grandpapa and herself at four o'clock the next afternoon.

Three hearty, wide-ringing cheers for the beautiful little speaker, and then three more for the happy Grandfather, and the little crowd

dispersed; Martha bore away her little charge to be washed and dressed and have her breakfast, and the Colonel retired to his own room.

The next day there was a great amount of stir at Morville Place; the lawn was mowed, tents were pitched, and tables set up; dispatches went off to town and village; great hampers arrived, and were opened in haste, and their contents hurriedly unpacked and spread by busy hands upon the long tables; but by four o'clock all was in readiness, and Colonel Morville in his best suit, and Baby in a flutter of rose-colored ribbons, stood hand in hand at

the top of the steps to receive their guests. There was eating and drinking; toasting and speech-making; music and dancing; feasting and fun, and lavish gifts—all went off just as it should do. But if you would know more in detail of the varied enjoyments of that memorable day, go into any house within five miles of Morville Place, and lead the conversation to the day when the Colonel's child was missing, and you may hear a story bounded only by the speaker's want of breath, or the listener's want of patience; and the little heroine of all that long story will be—Grandpapa's Baby.

CHIVALROUS AND SEMI-CHIVALROUS SOUTHRONS.

By J. W. DE FORREST.

II.

PROCEEDING with my sketches of our Southern and very nearly torrid brethren, I come to:

POLITICAL FEELING.

Walking the streets of Greenville I met a child of six or seven—a blonde, blue-eyed girl with cheeks of faint rose—who, in return for my look of interest, greeted me with a smile. Surprised at the hospitable expression, and remembering my popularly abhorred blue uniform, I said, "Are you not afraid of me?"

"No," she answered; "I am not afraid. I met three Yankees the other day, and they didn't hurt me."

We of the North can but faintly imagine the alarm and hate which have trembled through millions of hearts at the South at the phrase, "The Yankees are coming!" The words meant war, the fall of loved ones, the burning of homes, the wasting of property, flight, poverty, subjugation, humiliation, a thousand evils, and a thousand sorrows. The Southern people had never before suffered any thing a tenth part so horrible as what befell them in consequence of this awful formula, this summons to the Afrites and Furies of desolation, this declaration of ruin. Where the conquering army sought to be gentlest it still devoured the land like locusts; where it came not at all it nevertheless brought social revolution, bankruptcy of investments, and consequently indigence. A population of bereaved parents, of widows, and of orphans, steeped in sudden poverty, can hardly love the cause of its woes. The great majority of the Southerners, denying that they provoked the war, looking upon us not as the saviours of a common country, but as the subjugators of their sovereign States, regard us with detestation.

I speak of the "chivalrous Southrons," the gentry, the educated, the socially influential, the class which before the war governed the South, the class which may soon govern it again. Even if these people knew that they had been in the wrong they would still be apt to feel that their punishment has exceeded their crime, be-

cause it has been truly tremendous and has reached many who could not be guilty. I remember a widowed grandmother of eighty and an orphan grand-daughter of seven from each of whom a large estate on the Sea Islands had passed beyond redemption, and who were in dire poverty. When the elder read aloud from a newspaper a description of some hundreds of acres which had been divided among negroes, and said, "Chattie, that is your plantation," the child burst into tears. I believe that it is unnatural not to sympathize with this little plundered princess, weeping for her lost domains in fairy-land.

Imagine the wrath of a fine gentleman, once the representative of his country abroad, who finds himself driven to open a beer saloon. Imagine the indignation of a fine lady who must keep boarders; of another who must go out to service little less than menial; of another who must beg rations with low-downers and negroes. During the war I saw women of good families at the South who had no stockings; and here I beg leave to stop and ask the reader to conceive fully, if he can, the sense of degradation which must accompany such poverty; a degradation of dirt and nakedness, and slaternly uncomeliness, be it observed; a degradation which seemed to place them beside the negro. Let us imagine the prosperous ladies of our civilization prevented only from wearing the latest fashions; what manliest man of us all would like to assume the responsibility of such a piece of tyranny?

Moreover, "Our Lady of Tears," the terrible *Mater Lachrymarum* of De Quincey's visions, fills the whole South with her outcries for the dead. It is not so much a wonder as a pity that the women are bitter, and teach bitterness to their children.

Of course there are lower and more ridiculous motives for this hate. Non-combatants, sure of at least bodily safety, are apt to be warlike, and to blow cheap trumpets of mock heroism. Furthermore, it is aristocratic to keep aloof from Yankees; and what woman does not desire to have the tone of grand society?

When will this sectional aversion end? I

can only offer the obvious reflection that it is desirable for both North and South, but especially for the weaker of the two, that it should end as quickly as possible. For the sake of the entire republic we should endeavor to make all our citizens feel that they are Americans, and nothing but Americans. If we do not accomplish this end, we shall not rival the greatness of the Romans. It was not patricianism which made Rome great so much as the vast community and bonded strength of Roman citizenship. Let us remember in our legislation the law of solidarity: the fact that no section of a community can be injured without injuring the other sections; that the perfect prosperity of the whole depends upon the prosperity of all the parts.

This idea should be kept in view despite of provocations; this policy will in the end produce broad and sound national unity. As the Southerners find that the republic brings them prosperity they will, little by little, and one by one, become as loyal as the people of other sections.

FINANCIAL CONDITION.

In Naples and Syria I have seen more beggarly communities than the South, but never one more bankrupt. Judging from what I learned in my own district I should say that the great majority of planters owed to the full extent of their property, and that, but for stay-laws and stay-orders, all Dixie would have been brought to the hammer without meeting its liabilities. When I left Greenville there were something like a thousand executions awaiting action; and, had the Commanding General allowed their collection, another thousand would have been added to the docket. I have known land to go at auction for a dollar and twelve cents an acre, which before the war was valued, I was told, at seven or eight dollars the acre. Labor was equally depreciated, able-bodied men hiring out at seventy-five cents a day if they found themselves; at twenty-five cents if found by their employers. The great mass of the farmers could not pay even these wretched wages, and were forced to plant upon shares, a system unsuited to a laboring class so ignorant and thoughtless as the negroes.

It seemed unjust that debts should retain their full valuation when all other property was thus depreciated. Yet I doubt the practical wisdom of the stay-orders. I think it would have been better to let the whole row of staggering bricks go over; then every one would have known where he was, and industry would have resumed its life. As it was, there was a prolonged crisis of bankruptcy, in which neither debtor nor creditor dared or could take a step. It was a carnival of Micawberism; hundreds of thousands of people were waiting to see what would turn up; they were living on what remained of their property without working to increase it; why should they accumulate when the creditor might seize the accumulation?

This financial and moral paralysis was fostering dishonesty. People who had in other days been honorable descended to all sorts of trickeries, in the hope of saving property which did not seem to be covered by the stay-orders. I was teased with applications to use my authority in preventing the collection of debts, the administration of estates, and the levying of taxes. In short, the stay-system was transforming the chivalrous Southrons into a race of—Micawbers.

There would have been more hope in the future of my district but for the exhausted soil and the wretched agriculture which had been bequeathed to it by slavery. Land which, under proper cultivation, will produce two generous crops a year, had been reduced, by lack of manure and of management, to one crop, varying from ten to two bushels the acre. The common plow-share of the country is about six inches wide by ten long, and this is used until it is worn into what is called a "bull-tongue," a phrase which aptly describes its shape and size. This triviality does not turn a furrow; it scratches the earth like a harrow.

Here and there, at monstrous intervals, a planter uses Northern plows and manure, gathering his forty and eighty bushels of corn to the acre. His neighbors look on with astonishment, but without imitating him, as if his results were magic, and beyond merely human accomplishment. A German colony, planted at Walhalla, in the northwestern corner of South Carolina, has converted a tract of some thousands of acres into a garden of fertility. Among their Anglo-Saxon neighbors you can not discover a sign of their influence. What is to become of this bull-tongued and bull-headed race? I sometimes thought that there was no hope of the physical regeneration of the South until immigration should have rooted out and replaced its present population.

In this same land numberless water-privileges send their ungathered riches to the sea, and the earth is crowded with underground palaces of mineral wealth. The climate, too, is unrivalled: the summer heat in Greenville was rarely too great for walking, its highest point being usually eighty-four; while the winter brought at the worst two or three falls of snow, which melted in two or three days. Neither in Europe, nor along the shores of the Mediterranean, have I found a temperature which, during the year round, was so agreeable and healthful. You can see what it is in the remarkable stature of the men, and in the height, fullness of form, and beauty of the women. My impression is that the entire Alleghany region, from Maryland down into the north of Georgia, is a paradise for the growth of the human plant. If bodily comforts and intellectual pleasures existed there, I should advise all New England to emigrate to it.

Yet it is poorer than Naples, and before the war it was not richer. So much for the political economy of the chivalrous Southron, and

so much for his rule-or-ruin statesmanship, and, in one word, so much for slavery!

SOUTHERN LOYALISTS.

I class the loyalists of my district under the head of "semi-chivalrous Southrons," because, being seldom large planters or even slaveholders, they do not exhibit all the characteristics of the "high-toned" population. They are mostly small farmers, inhabiting the mountains of Pickens and of a certain portion of Greenville known as the Dark Corner. I did not always find it easy to distinguish them from rebels. One gaunt old female laid claim to Bureau rations on the double ground that she was a good Union woman, and that she had lost two sons in the Confederate army. This story was so contradictory that I believed it, remembering first that truth is often much more improbable than falsehood; and, second, that many loyal families saw their children carried off by rebel press-gangs.

These poor, uncultured, and, in some cases, half-wild people have always been true to the United States Government. In the days of Nullification, and in other subsequent disunion excitements, when Governor Perry (or, as they called him, Ben Perry) fought a good fight against Calhounism, they were his firmest supporters, and regarded him with something like adoration. As a Greenvilleite said to me, "They believed they would go to him when they died."

"But now," in the words of one of their patriarchs, "Ben Perry has fallen from the faith;" and consequently the mountaineers have deserted him in a body, and stigmatize him as "the biggest reb agoing." One of the prime staples of the Republican speeches which I heard in that region was the showing up of the apostasy of this distinguished "central monkey."

THE MOUNTAINEERS DURING THE WAR.

It is a striking instance of the reliability of history that I never learned to my satisfaction the date or manner of the famous advance of the mountaineers upon Greenville during the war. One informant assured me that it took place before Bull Run; that the loyal men of the Dark Corner and vicinity mustered six hundred strong; that they marched toward the low-country with the intention of forcing South Carolina back into the Union; that Greenville, unable to meet such a host in the field, sent forth Governor Perry to dissipate it by the breath of his eloquence. This dramatic informant, rising from his chair and extending his arm, proceeded to deliver with flashing eye and thunderous tongue a fragment of the Governor's oration:

"Men of Greenville," he represented him as saying, "the government under which you were born no longer exists; and that loyalty which you formerly owed it, and which you rendered so nobly, is now due to the Confederate States." Whereupon the invaders separated into two bo-

dies, one of which went back to its mountains in wrath and discouragement, while the other formed two companies for the rebel army and fought heroically at Bull Run.

The other version of this affair is, that it took place late in the struggle; that there was no advance upon the low-country, but only a general marauding of deserters and other desperadoes; that the Confederate authorities offered them pardon in case they would surrender and agree to lead peaceful lives; that sixty or seventy of them were got together, and that Governor Perry was induced to make them a pacificatory speech; the result being that the majority of them laid down their bushwhacking rifles and resumed the ways of peace. As I had both these tales from good local authority the reader will be justified in believing them both. My own opinion inclines to accept the latter of the two as the most probable.

It is certain that the majority of the able-bodied men of the mountains were eventually bullied or dragged by main force into the rebel army. They sought to remain loyal; there is no reasonable doubt of that; but the conscription details were too much for them. Long lines of videttes were run clear through the mountains, and the distances between the lines were traversed by relentless patrols. Men who fled on being summoned to surrender were shot at once; they were massacred in their own door-yards in the presence of their families. It must be understood that by the Conscription Act every male Southerner was placed on the rolls of the Confederate army, and thus was constituted a deserter in case he failed to repair to the dépôt of the regiment to which he had been assigned. It was nominally as deserters, and not as Unionists, that these victims were murdered.

The rebel authorities even used blood-hounds to aid their troops in scouring the refractory mountains. "But that didn't amount to much," said a stalwart old mountaineer to me, with a chuckle. "The dawgs would run ahead yelping, and the boys would take a crack or two at 'em with a rifle, and that would be the end of the dawgs."

It took at least two lowlanders to catch one highlander, and when caught he was very nearly worthless as a soldier. He seldom fired a gun at the Yankees; if there was a chance to desert he improved it; if he got back to his native rocks he was a bigger pest than ever. Nearly all the youth of the Dark Corner were at one time or another chased into the rebel army, without doing it a particle of benefit.

Meantime, the elders of the mountains harbored such of our men as escaped to them from Columbia or Andersonville, and acted as guides in running them through the rebel lines to Eastern Tennessee. Several of them have shown me certificates to this effect from Union officers whom they had thus befriended.

"I tell you this paper was a mighty big scare to me as long as the war lasted," said a stoop-

ing, meagre farmer, in a threadbare suit of yellowish homespun. "If it had been found on me it would have cost me my life. I walked five miles and back for an auger to bore a hiding hole. I bored the hole in one of the inside beams of my house, put the certificate into it, and then drove a wooden hat-pin on top of it. The very next day there was a rebel detail along to search me for signs of Yankees. They looked me all through, but they didn't find nothin'. The captain hung his cloak up on that very hat-pin. When I see that, stranger, I could hardly help a-smilin'."

Solomon Jones, the Union patriarch of the mountains, a tall, robust, florid, hale man of over sixty, as alert and healthy as humanity can be at thirty, a kindly, generous, fair-minded, honorable though uncultured spirit, was persecuted during the war as the upright are persecuted in civil times. He was hunted from his house; he lay out for weeks in the forests, fed in secret by his family and friends; caught at last, he was thrown into Greenville jail with felons. His sole crime consisted in speaking against a rebel government, and for the government of his country. To the honor of Mr. Perry it must be mentioned that he procured the liberation of this martyr, and that he declared, with his accustomed courage, "If Jones deserves prison I deserve it, for he has said no more than I." To the bank credit of the Governor it must be added that he charged and collected a hundred dollars for the service. However, there were few men in the South who would have had the will or the fearlessness to do it at any price.

A UNION SOLDIER OF THE MOUNTAINS.

One drizzly autumn morning Solomon Jones brought into my office a man of about twenty, a lean, leathery, wild-looking youth, with a curiously stealthy and springy gait, like that of a panther, whom he introduced to me as John M'Lean.

"He's in trouble," said the patriarch, in his quick, jerky style of speaking. "Some of these rebels have got after him with the law. He's been a soldier in your army. He's your brother. See if you can help him."

My pantherish brother proceeded to state that he had been arrested on a charge of horse-stealing, at the suit of a "reb" neighbor, and that his case was to come off before the District Court then in session.

"You know what the penalty for horse-stealing is, I s'pose?" he said, with a wild grimace, at the same time pointing to his left ear in token of hanging.

His discharge from the army was perfectly regular in form, and showed that he had been private in a loyal North Carolina regiment.

"Yes, I run the lines and joined our folks in East Tennessee," loudly declaimed John, whom I now discovered to be under the influence of liquor. "Then I enlisted with a heap more of our mountain folks; and they put us

into the North Carolina regiments. And we did heaps of fighting, Major, I can tell you. We took to it. I say, uncle Sol, can't the mountain men fight?"

"Yes, they can fight," returned Jones. "Go on with your story; show the Major your other paper."

The other paper turned out to be a permit from the chief of some hospital in the West, giving John M'Lean leave of absence for four days. The date was important; it was very nearly the date of the alleged theft; if genuine, the paper proved an alibi. Documents in hand, I bade John M'Lean follow me, repaired to the private room of the Solicitor, and stated the case.

"I shall drop the prosecution," said the Solicitor. "These papers seem to be genuine and to the point. Moreover, the prosecutor has failed to bring his witnesses. John M'Lean can go home."

"And how about my witnesses?" respectfully whispered John, as two long, lean North Carolinians, his former comrades in arms, presented themselves at the door.

"They can all go," said the legal official. "I sha'n't want them."

"I want to discourage these suits," observed the Solicitor to me in private. "They are mostly vindictive results of the war. They tend to keep up bad blood, and I am anxious to escape them." Shortly after my return to my office John M'Lean appeared, drunker than ever.

"I say, Major, you've got to take something for this," he insisted, loudly. "Come down on me for any thing I've got. That's what I want. Just come down on me."

When I refused pay, presents, and drinks, he rushed to his wagon, picked out a dozen superb apples, and persisted in leaving them on my table.

During the day I saw him staggering about among numerous other staggerers. There was the usual crowd in attendance on court, and it had drunk its lawful allowance of whisky.

Next morning John was again on hand, sick and sorry by this time, with a bend toward the maudlin. Twisting his face into the pucker of an aggrieved child he let fall a couple of manly, mountain tears, and whimpered, "Major, I wish I had my me—wl."

"What has become of your mule?"

"Major, a nigger has got him. He says I swapped a horse for him. God Almighty knows I wouldn't swap away my mawl for sech a horse."

So I went out anew to investigate the troubles of John M'Lean. I found that he had swapped his mule for a horse with a white man, who had immediately turned the animal over to a negro by means of another swap.

"Well, John," I said in substance, "you made your bed when you were drunk, and you must lie upon it now that you are sober."

Puckering his face up to a maudlin whimper,

he sobbed out, "Major, I wish I was in Nor—th Carliny."

"I wish to Heaven you were!" was my impatient answer.

Eventually all the bargaining parties reversed their barter, and John M'Lean drove off with his mawl to North Carliny.

A PLANTER UNIONIST.

He was not a mountaineer, but lived a few miles from the base of the hills, where he owned thousands of acres of fat bottom and fair upland. He was a man, I suppose, of fifty, but in some respects he did not seem over forty. His beard of a day's growth showed grizzly, but his long dark brown hair had scarcely a trace of silver. Unlike the majority of the lengthy-limbed population of the Alleghany slopes, he was short and broadly built. His face was very red, and his eyes a little bloodshot. He bore unmistakable signs of being a regular and by no means stingy drinker of his own excellent white whisky. But he was an honest, worthy, generous, hospitable, honorable nature. I had heard of him, and of his tribe and set, as determined Unionists. Loopers and Durhams. "Gualandi con Sismondi e Lanfranchi." Yet, stubborn as they were, the Confederacy had known how to make them bend.

"My son went into their army," he said to me. "It was go in or be shot. I never went in. I furnished a substitute, and did every thing under God's heaven to escape it. Yet they were always after me. I was open-mouthed. Every body knew what Looper thought.

"They took every cow that I had, curse me if they didn't! One day a party of twenty came, with a lieutenant at their head. I saw them at my barn, and went out to meet them. Said they, 'Have you any claims on these cattle?' Says I, 'By —, they are mine.' Says they, 'We are going to take them for the Government to help carry on the war. What are your opinions of the war?' Says I, 'It's a dam wicked war, and you are a dam set of fools for trying it.' Says the Lieutenant, 'You say another word, and we'll hang you to the next tree.' 'By —, you may hang me,' says I; 'but as long as I live you can't shut my mouth.' I tell you I cursed them as long as they staid. If you doubt what sort of a man I am ask any body in Pickens District. Every body knows me. Every body knows what Looper is.

"Ah, those dam scoundrels have robbed me cruelly! Every one of my cattle, and every horse except an old broken-down critter! But it can't be helped now. My son never went into your army, but he has done service for your side; he has helped your runaways through the lines. There was Adjutant Johnson; write to him if you don't believe it. Write to Captain Bray; he knows us.

"And now they've got my son, just for killing a dam rebel named Miller, who was passing himself off for the bushwhacker Largent, and insulting our women and children—just for

shooting that dam scoundrel they've got him shut up in the penitentiary, curse me if they haven't! Why, Sir, that Miller had been threatening to plunder me and kill me for harboring your men. He knew about my ways; every body knows Looper. My door had been broken in by the bushwhackers two nights before. I suppose I came near being shot. That was a way they had: make a noise at your door, perhaps call you to it; then if you opened it, fire! Off rides the bushwhacker in the dark, and nobody ever knows who he is. More than a dozen men in our district had been killed that way.

"I've got up a petition for my son's release. He ought not to be shut up there with thieves and rascals. He's as amiable and good and gentlemanly a boy of his age as there is, I don't care where. I'll show you the paper."

The document had a long list of signers, many of them, to my surprise, leading secessionists. But Looper was a man of property, influence, energy, and courage; and when Southern public feeling does not forcibly rid itself of such an antagonist it will treat him fairly. If it does not blow his brains out, it will subscribe his petitions. It has a certain martial respect for a courageous opponent.

The case of young Looper, a lad of only eighteen, by-the-way, was as follows: A North Carolinian named Miller, said to be one of the desperadoes who were set loose by the surrender of the Confederate armies, came to the house of one of the Durhams of Pickens District, and was entertained there. On his departure the son of the family sought out young Looper and an uncle of his own, named Andrew Durham, informed them that Miller was Largent, and induced them to join in an attempt to arrest him. When they found the North Carolinian he had fallen from his horse intoxicated, and was lying in the road. It was dusk; none of them knew Largent well; the drunken man raised himself on his elbow; the younger Durham whispered, "Take care!" Looper, aware of Largent's quickness with the pistol, fired, as he supposed, in self-defense, and with fatal effect.

Will it be credited that Largent visited Pickens jail to look at the two men who had sought to kill him, and that the jailer was so polite as to show him about the establishment without broaching the idea of arresting him? Young Durham stared in alarm through his grated door at the renowned desperado, and pacifically, meekly, humbly asked him for a chew of tobacco, as a vanquished Indian might request the pipe of peace.

"No," replied Largent; "I don't mean to be stingy of my tobacco, but d—d if I give chaws to men who try to bushwhack me!"

Such is the sublime indignation of injured innocence—in Pickens District!

On the trial it appeared that young Durham knew Miller, and could not have mistaken him for Largent; also that he had seen a roll of currency in Miller's possession, and had subse-

quently transferred it to his own pockets, whence it was inferred that he had instigated the assassination for the sake of robbery. He was found guilty of murder, and condemned to death; young Looper was found guilty of manslaughter, and condemned to seven years in the penitentiary; Andrew Durham was acquitted. After a few months Governor Orr pardoned Looper, and commuted the punishment of Durham to imprisonment for life.

A UNIONIST WIDOW.

She was a woman I suppose of thirty-eight, but looking forty-five. Her form was middle-sized, square, and thin; her sallow face square, with strong jaws and large dark gray eyes; her expression uncultured, and—but for a certain earnestness—commonplace. When she came to Greenville, riding sometimes in an ox-cart and sometimes in an open farm-wagon, she always wore her best dress of blue checked homespun, narrow in the skirt—no crinoline, no gewgaws. At home her attire was probably of tow-cloth, or coarse, unbleached cotton. Her invariable head-dress was the old-fashioned coal-scuttle bonnet, made of strips of pasteboard covered with calico, and having a cape to shield the neck and shoulders.

She had visited all my predecessors; she came repeatedly to see me; she called on the magistrates, the Solicitor, the United States Commissioner, the Collector of the Internal Revenue; always with the same grim purpose—vengeance on the murderers of her husband. She staid whole days in the village, going about from office to office, detailing her wrongs and asking counsel.

"My husband was drawn for the war," she narrated to me. "He was a good Union man, and wouldn't go to fight agin the Government. Besides, what was to come of his family if he went off to the army? So they sent a detail after him. I know several of the men in the detail; I can give their names when they are wanted; but one of them I'll tell you now, because you know him. It was James Parsons, of our settlement; he was one of the first and fastest to kill my poor man; and since the war they've made him a Square!

"Well, they come down upon us before we knew it. My old man was out in the yard; he run a little ways, but they caught him. They took him into a holler where thar was a piece of woods, and there they set him up against a tree, some say, and shot him; others say they shot him as he was running—I don't know; I was in the house and didn't see it, but I heard the firing. Yes, I heard the firing! When I run out to see what was the matter some of 'em met me, and says they, 'Your old man is dead; we shot him for a deserter; you'll find him down there a piece!' Well, I ran down to the holler, but when I got thar it was over."

Such was the tragedy. Was it legally a crime? Two or three similar cases had been already presented to me, and I had in vain at-

tempted to bring them before the local courts, the complainants alleging that it would be useless to appeal to a "reb jury." As for military action, General Sickles had by order forbidden that, except where the civil authorities had refused to prosecute. So far as I knew no case like this one had any where been brought before a military commission. Thus I had no precedents to guide me.

"If I could git it before the United States Court I could git justice," continued the woman, in her dreary monotone.

As the Commissioner was next door, I took her in to him. He stated that the affair was not between citizens of different States, and that consequently he had no manner of jurisdiction over it.

"You must bring your complaint as other people bring theirs," I then said. "You must make your affidavit before a magistrate, and thus have it presented to the grand jury. If the magistrate, or the jury, or the court refuses to act, then you can appeal to the military authority."

"But our Square is one of the very men who killed my husband," she replied, raising her voice in natural indignation at such a state of things.

"Then go to the next Squire. Try it. It is the only way. Let me know what the result is."

Over and over she returned to me; she absolutely haunted the district in search of justice; yet she could not be induced to make her complaint legally. "What was the use of going before reb Square and a reb jury?"

Once she informed me that several of those concerned in the tragedy had proposed to pay her a moneyed compensation, in case she would agree not to bring suit against them.

"By all means accept the offer," I counseled. "Even if you could get your suit before an unprejudiced court, it is not certain that these men would be found guilty of murder."

"What! didn't they kill my old man?"

"Yes; but they killed him as soldiers; they were acting under the orders of superiors; it will be hard to fix the responsibility on any individual. Moreover, if they can be tried for shooting him, other Confederates can be tried for shooting other loyal citizens. All the deaths of all the Union soldiers during the war might be brought into court. You are poor; you need money to enable you to live; if you can get it, give up the vengeance which you probably can not get."

Her reply was worthy of the hot blood and pugnacious education of the Southron, whether chivalrous or semi-chivalrous.

"Stranger," she said, "I would rather see the men hung that shot my old man than have lots to eat and wear. I want justice more than money."

I asked Parsons the magistrate for his version of this bloody story. He was, as I have

described him in another article, a plain and poor farmer, dressed in homespun, mild in expression, quiet in manner, with a slow, soft utterance, and evidently in feeble health. He showed me his right arm, withered to the shoulder by rheumatism.

"I was drawn for the army, and sent to Virginia," he told me. "Then the surgeons rejected me as unfit for field-duty on account of this arm. After that I was put into the home guards. Almost every body was put into the home guards who couldn't do full service; it was made up of old fellows, boys, sick men, and wounded. Their duty was to keep order around home, collect stuff for the army, and hunt deserters. It was a detail of the home guard that went after this man. He had been summoned, and he had failed to join his company, and so they posted him as a deserter. I didn't make the law, and I couldn't help executing it. I was as much under orders as if I had been in the regular army. If I didn't shoot I might be shot myself. It would be hard to say who killed him. Several men fired as he was running, and he fell. I didn't want to hurt him; I had nothing against him. It was the war that did it."

Yes, it was the war that did it; and that palpable monster will probably be the only one who will ever answer for it; there is no likelihood that the case will come before a court of justice. It is better so; let us bury the bloody past as deep as we can; the present has better and more pressing work on hand than vengeance.

THE UNIONISTS AS A PARTY.

"Why don't you extend your operations into other districts?" I sometimes asked of the loyalists of Greenville.

"Yes, and run a mighty smart chance of being bushwhacked," was the usual answer.

Even the pugnacious mountaineers of the Alleghany ranges had not thrown off the terrorism of the Confederacy and the domination of the "chivalry." Notwithstanding its military and financial overthrow, the old planter class, with its superior education, its experience in politics, and its habit of authority, is still the most potent moral force of the South. It is the high crime and misdemeanor of President Johnson that he has so managed matters as to re-consolidate this lately shattered class into a party, the same old party that it was before the war, a purely sectional party, a Southern party. Justice, however, compels me to add that this unfortunate result is partly due to the suspicions, fears, and prejudices of the Southern Unionists.

"I want to join the League," said more than one intelligent citizen of Greenville to me, or to others whom I knew. "But the Leaguers won't have me; they blackballed my application. Some of them tell me that I have too much land to get in. You know they are still in hopes of confiscation."

When I spoke to the Leaguers about such an

applicant, their reply was usually to this effect: "We can't trust him. He has been too good a reb; he served in the Confederate army. He's no true man, all he wants is to save his land or get office; if he should get in, he would betray us."

"But your party won't fill an omnibus if you go on in this style," I expostulated. "Of course, some people are guided by their own interests; but they may be valuable members of society notwithstanding. Here you go, rejecting men of education, political experience, social influence; you won't have a convert unless he is poor, ignorant, stupid, and of no value; you are making a party without money and without brains. You are turning lukewarm friends into open enemies, who in less than four years will outmanœuvre you and beat you. It looks as if you were afraid of clever recruits, lest they should seize upon the offices."

The invariable stubborn response was, "Well, we don't want no rebs."

The result was that the Union party of Greenville District contained, so far as my knowledge extended, but one planter of family and culture; and that its next best man was a circuit preacher blessed with a common school education and an experience of living on three hundred dollars a year. Having heard him speak, I believe him to be a good preacher; but he is no fit opponent for Wade Hampton or Governor Perry. As a Republican and a lover of the Union I am filled with wrath when I think of the men who might have been and should have been in his place.

Solomon Jones, the sheik of the mountains, a man of unusual "horse sense" and moral vigor, the projector and builder of one of the best roads over the Blue Ridge spurs, writes with so much difficulty that when he was president of a board for enrolling electors his signatures were all made for him by the secretary. In other words, he did not set pen to a single one of the hundreds of official papers which exhibit his name. Yet so bare is the Union party of character, talent, and education, so successfully has it repelled the penitent rebels of the higher class who at one time would have rejoiced to join it—in short, so deficient is it in the proper material wherewith to fill responsible offices, that Solomon Jones was at one time spoken of as candidate for Governor! Knowing the man's superior natural abilities, I have no doubt that, with a good secretary, he would have made a fair chief magistrate; but in this century one recoils from the idea of a Governor who needs as much time to sign his name as Dexter needed to trot a mile.

Of carpet-baggers, that is Northern adventurers hunting office, we had none in Greenville. They flourished in the low-country, where the native Unionists were few and the negroes were many and ignorant. Judging from what I heard of them and read of their effusions, I am forced to agree with rebels and Copperheads that they are a poor lot and a bad lot. It is a

pity that revolutions, even the noblest of revolutions in cause and effect, will fling so much scum to the surface. However, the carpet-baggers are not "Southrons," and this article has nothing to do with them.

I have made a doleful exhibit of the Union party in Dixie. If any one thinks it exaggerated let him write to the military commandants of the Southern districts, and ask them how easy it was to find men for inspectors of elections who could both take the oath of loyalty and produce a decently spelled letter. From Virginia to Texas it is a party of the most excellent principles, except in the matters of murdering our mother English, and of committing political suicide. If the Republicans of the North can not renovate it, and if it does not draw over recruits from the educated classes of the South, how long will it continue to rule? I leave the response to a people which believes in free schools and in the power of education. Within the narrow limits of a city, where combinations of masses are easily effected, an ignorant populace may permanently govern a cultured class; but I do not know that this has ever been done, and I do not believe that it can be done, where such an antagonism is spread over a broad range of country.

SOUTHERN INDIVIDUALITY.

Whether chivalrous or semi-chivalrous, the Southerner has more individuality of character than the Northerner, and is one of the most interesting, or, at all events, one of the most amusing, personages on this continent, if not in the world. He has salient virtues, vices, and oddities; he has that rich, practical humor which is totally unconscious of being humorous; he in the gravest manner decorates his life with ludicrous and romantic adventures; in short, he is a prize for the anecdotist and novelist. Dixie has thousands of high-toned gentlemen who suppose themselves to be patterns of solemn and staid propriety, but who would be fit to associate with the Caxtons and Doctor Riccabocca. In that land of romance you will find Uncle Toby and Squire Western and Sir Pitt Crawley and Colonel Newcome and Mr. Pickwick and Le Chourineur, all moving in the best society and quite sure that they are Admirable Crichtons.

In what other part of the civilized earth would a leading statesman write a ponderous political work in dialogue, after the fashion of the essays of Plato and Cicero? Such a gusto of classical imitation might possibly be found in a Harvard Sophomore; but at the South we discover it in an ex-United States Congressman and ex-Vice-President of the Confederacy. Alexander H. Stephens is as redolent of Greeks and Romans, as verdant with lore, as Keitt or Pryor.

Where else could you meet such a curious incarnation of the apostolic character as ———, a planter by profession and habitude, but a preacher by mission? He was a passionate religionist; if he met you in the street he but-

tonholed you and vented upon you his dogmas; chance passers-by were beckoned to until he had a circle; you listened because you dared not run away. One Sunday, exhorting in a little cross-roads church, and having been annoyed by two negroes stealing out of the house, he came to a solemn pause in his service, and then spoke as follows: "Next Lord's day I shall hold worship in this same place. I shall bring my double-barreled gun; I shall stand that gun, brethren, in the pulpit, alongside of me; and, if any man gets up and goes out while I am preaching, by ——! I'll shoot him."

A half-fuddled planter called on me one evening and invited me out to a treat of stewed oysters. The restaurant was the back-room of a bakery; we sat on broken chairs, among sticky pans, spilled flour, and loaves of dough; the oyster-cans were opened with an old bowie-knife. When the stews were before us my friend observed: "Come, don't let's eat this like savages. Major, can't you ask a blessing?" As I declined, he pulled his broad-brimmed felt from his muddled cranium and said grace himself.

I knew a worthy old South Carolinian, bearing a name of Revolutionary notoriety, who would not invest his money at high profits, holding that "six per cent., my dear Sir, is the interest of a gentleman."

I knew another worthy old person who raised a set of white and a set of black children, treated both with generosity and affection, maintained an excellent character in his church, and died in the odor of public esteem.

I knew a planter who, having said in a drunken spree that he would sell his plantation for twenty thousand dollars, would not revoke his words when sober, although it was worth thirty thousand.

I knew of another planter who beat his beautiful wife as long as he lived, and at his death willed her a considerable property, on condition that she should never quit the State, he knowing that her chiefest desire was to remove to the North.

I knew Southerners who taught their slaves to read in spite of severe prohibitory laws, and who labored for their growth in morality and piety as missionaries labor for the conversion of the heathen.

I knew of a Louisiana lady who flogged a negro woman with her own hands until the sufferer's back was a vast sore of bruised and bloody flesh.

Audacity, vehemence, recklessness, passion, sentiment, prejudice, vanity, whims, absurdities, culture, ignorance, courtliness, barbarism! The individual has plenty of elbow-room at the South; he kicks out of the traces with a freedom unknown to our steady-pulling society; he is a bull in Mrs. Grundy's china-shop. Strangest of all, he believes that he is like the rest of the world, or, more accurately, that the rest of the world should be like him.

This remarkable personage, more striking in character and habits than the strange people whom the Brontë girls brought out of the depths of Yorkshire, has hitherto found no worthy painter. Even Mrs. Stowe has but faintly sketched two or three Southern portraits: a Louisianian—the type of languid gentility, without a vice, without a shadow; a Virginian—the type of well-bred jollity and good-nature, also without a shadow; a field-preacher—shrewd, coarse, humorous, and well enough. Her Eva is no more distinctively Southern than her Uncle Tom is honestly African. Her Mrs. St. Clair I consider a libel on the hard-working, careful, Southern housewife and mistress of a plantation.

The chivalrous Southron has been too positively and authoritatively a political power to get fair treatment in literature. People have not described him; they have felt driven to declaim about him; they have preached for him or preached against him. Northern pens have not done justice to his virtues, nor Southern pens to his vices.

The romances of Dixie, produced under a mixed inspiration of pamby-pambyism and provincial vanity, strong in polysyllables and feeble in perception of character, deserve better than any other results of human labor that I am aware of the native epithet of "powerful weak." The novelist evidently has but two objects in view: First, to present the Southron as the flower of gentility; second, to do some fine writing for his own glory. Two or three works by Kennedy and by the authoress of "Marion Harland" are the only exceptions to this rule. Not until the Southerners get rid of some of their local vanity, not until they cease talking of themselves only in a spirit of self-adulation, not until they drop the idea that they are Romans and must write in the style of Cicero, will they be able to so paint their life as that the world shall crowd to see the picture. Meantime let us pray that a true Southern novelist may soon arise, for he will be able to furnish us vast amusement and some instruction. His day is passing; in another generation his material will be gone; the "chivalrous Southron" will be as dead as the slavery that created him.

How shall we manage this eccentric creature? We have been ruled by him; we have fought him, beaten him, made him captive; now what treatment shall we allot him? My opinion is, that it would be good both for him and for us if we should perseveringly attempt to put up with his oddities and handle him as a pet. He resembles the ideal white bears described in the "Pearl of Orr's Island;" "there ain't no kinder creetur in the whole world if you'll only get the right side of him." It is true that he has wanted to eat us, which is exasperating; it is true that he still talks of eating us at some convenient season, which is ridiculous; but I believe that he suffered too much in our late struggle to seriously think of

renewing it; I hold that his war snorts are mere election buncombe.

A little letting alone, a little conciliation, a little flattery even, would soothe him amazingly; and if united with good government would in the end be sure to reconstruct him as a quiet citizen and sound patriot. The Republican party, while firmly maintaining the integrity of the country and the great results of the war in the advancement of human freedom, ought to labor zealously for the prosperity of the South, treat tenderly its wounded pride, forget the angry past, be patient with the perturbed present, and so create a true, heart-felt national unity.

ISABELLA II., EX-QUEEN OF SPAIN.

SOON after the battle of Leipsic, in 1813, when the throne of Napoleon was crumbling, Ferdinand VII., by the treaty of Valençay, was restored to the kingdom of Spain. He had spent several years, with his two younger brothers, Carlos and Francisco, in entire devotion to pleasure, in the luxurious château of Valençay and in its spacious hunting-grounds. The armies of England, aided by the Spanish peasantry, having driven Joseph Bonaparte and the French troops from the Peninsula, Napoleon was forced to restore the crown to Ferdinand.

The Spanish Cortes, assembled at Cadiz, composed almost exclusively of delegates from the cities, had formed a Constitution highly democratic in its character. This Cortes, re-assembled at Madrid, refused to ratify the treaty into which Ferdinand had entered with Napoleon. They consequently did not advance to meet their returning sovereign, and manifested their displeasure by very decisive words and deeds. They loudly demanded that the king should accept the Constitution; forbidding him, until he should do so, to adopt the title or exercise the functions of King of Spain.

Ferdinand, wedded to the doctrine of absolute power, under these circumstances hesitated to trust himself with the Cortes; and after having, by slow journeys, reached the provincial town of Valencia, remained there for a whole month, fearing to proceed to Madrid. The Cortes, it is said, represented but about five hundred thousand persons, who, residing in the large cities, had adopted democratic principles. The peasantry, numbering twelve millions, who were dispersed in the villages, were very unintelligent. Being almost entirely under the dominion of the priests, they were bitterly opposed to the Constitution. Strange as it may seem, the proof is unequivocal that they rallied around the king, received him with great enthusiasm, and clamored loudly for the re-establishment of the old régime of civil and ecclesiastical despotism. From the moment he entered the frontiers of Catalonia he was greeted with cries, in every town or village through which he passed, of "Down with the Cortes!" "Long live our absolute king!" Petitions were crowded upon him to reverse all the liberal decrees which had

been enacted during his absence, and to reign in the spirit of his ancestors. It will be so difficult for an American reader to credit this that we give the statement of Alison, corroborated by abundant Spanish and French testimony:

"The king was literally besieged with petitions, addresses, and memorials, in which he was supplicated, in the most earnest terms, to annul all that had been done during his captivity, and to reign as his ancestors had done before him. The Constitution was represented, and with truth, as the work of a mere revolutionary junta in Cadiz, in a great measure self-elected, and never convoked either from the whole country, or according to the ancient Constitution of the kingdom. There was not a municipality which did not hold this language as he passed through their walls; not a village which did not present to him a petition, signed by the most respectable inhabitants, to the same effect.

"The generals, the army, the garrisons besieged him with addresses of the same description. The minority of the Cortes, consisting of sixty-nine members, presented a supplication beseeching the king to annul the whole proceedings of their body, and to reign as his fathers had done. From one end of the kingdom to the other but one voice was heard—that of reprobation of the Cortes and of the Constitution, and prayers to the king to resume the unfettered functions of royalty."

These voices were in entire harmony with the secret inclinations of the king. Accordingly, on the 4th of May, 1814, he issued from Valencia a decree annulling every act of the Cortes, and restoring the government of absolute power to Spain. This decree was received with boundless enthusiasm. The advance from Valencia to Madrid was a continued triumph. The Cortes passed violent resolutions, and made a show of resistance. They sent out troops to oppose the approach of the king. These troops, instead of opposing Ferdinand, opened their ranks to receive him with shouts of "Long live our absolute king!" It is a saddening thought that a whole nation may become so debased as to co-operate eagerly in riveting the chains with which they are bound.

The Cortes, abandoned by all, fled in dismay across the country from Madrid to Cadiz. On the 13th of May the king entered Madrid in triumph. A cortège of over one hundred thousand persons crowded around him, filling the air with their acclamations. The few members of the Cortes who remained behind were arrested and thrown into prison. Ferdinand took his seat upon the throne of his Bourbon ancestors untrammelled by any Constitution, and swaying the sceptre of absolute power. He was a very weak man, thoroughly depraved in heart and corrupt in life, with scarcely a redeeming quality. His mother, Louisa, the wife of Charles IV., who was perhaps as worthless a creature as ever sat upon a throne, said of her son, "He has a mule's head and a tiger's

heart." Perhaps the mule and the tiger were never so slandered before.

Ferdinand immediately fell under the influence of a coterie of priests and nobles. Guided by their advice, it was his constant endeavor to restore every thing to the state of despotism existing before the revolution. He re-established the *Inquisition*, and crushed every indication of popular liberty. These measures greatly alarmed and exasperated the Liberal party. The king met the risings of discontent by a decree threatening every person who should be found either speaking or acting against Ferdinand VII. with death within three days by sentence of court-martial. Under this decree ninety persons were arrested in the city of Madrid alone in one night. Every prison soon became crowded, and it was found necessary to convert the vast monastery of San Francisco into a prison to find room for the multitude who were arrested.

On the 15th of September a decree was issued restoring the old feudal and seigniorial privileges which had been abolished. Every thing like free discussion was extinguished. This led to the establishment of secret societies, and especially the order of Freemasons. The *Inquisition* issued a proclamation denouncing these societies. And now came judicial murders, insurrections, guerrilla warfare, and frightful reprisals. A large number of Liberals were arrested. After repeated trials the judges declared that there was no evidence against the accused sufficient to justify their being condemned as traitors, or as persons exciting tumult or disturbances. The king, exasperated, ordered the proceedings to be brought to him, and by the exercise of his own despotic power pronounced upon thirty-two of them sentences of the most cruel kind. One was sentenced to ten years' service as a common soldier. Another, Señor Arguelles, one of the most eloquent members of the Cortes, was doomed to eight years' service as a common soldier, in chains.

The treasury was empty; the country impoverished by many years of civil war; robber bands were wandering every where; all industry was stagnant. The wretched realm was in a state of barbarism. The clergy, though they had boundless influence over their flocks, had no armed force with which to resist the universal brigandage which swept the country. Terror rendered the king merciless. The discovery of a conspiracy in Madrid caused the arrest, in every city and almost every town in the kingdom, of all persons found meeting after ten o'clock at night. Many of these, most of them members of the late Cortes, were imprisoned at Ceuta, loaded with irons. At dead of night they were put on board of a zebecque to be conveyed to distant exile, no one knew where. To rivet the chains of religious intolerance the order of Jesuits was re-established, and they were intrusted with the entire education of the young, both male and female.

Ferdinand, in previous years, when heir-ap-

parent to the throne of Spain, had married, for his first wife, his cousin Maria, a princess of Naples. She seems to have been a very lovely woman, gentle and affectionate. But her unfaithful, brutal husband led her a life of misery. After five years of suffering, during which, it is said, she often experienced the most coarse and vulgar abuse, she died, as was currently reported, of poison administered by her husband's hands. Ferdinand then applied to Napoleon for a wife from some member of the Bonaparte family. He was then striving to usurp the crown, and hoped thus to obtain the support of Napoleon. But as Charles IV., the nominal father of Ferdinand, wrote to Napoleon that his son had attempted the life of both his father and his mother, Napoleon decided that he could hardly recommend any of his nieces to marry the young man. Ferdinand, after having been eight years a widower, married his niece, Maria, daughter of the King of Portugal. At the same time his next younger brother, Don Carlos, married the elder sister of Isabel, who was heir-presumptive to the crown of Portugal. Ferdinand hated his brother Carlos, and was very anxious to secure an heir which would prevent his brother's accession to the throne.

In one year after her marriage Maria died childless, and Ferdinand hastily, a few months after her death, took another bride, marrying by proxy, Maria Josephine Amelia, niece of the Elector of Saxony. In the mean time there were insurrections and executions innumerable. For ten years Maria Josephine endured her husband, and then she sank childless into the grave. Ferdinand was now forty-five years of age, a worn-out debauchee. He was annoyed extremely by the thought that should he die without leaving an heir the sceptre would pass into the hands of his hated brother Carlos. He therefore immediately sought another bride, Christina, a daughter of the King of Naples. She was a frivolous girl, apparently without conscience, but twenty years of age. Carlos and his party violently opposed this union.

It is said that it was suggested to Christina by the Ministers of Ferdinand that a law higher than the claims of ordinary morality required that she should produce an heir to the throne. It is revolting to allude to these scenes of corruption. There was a private in the king's guard at Madrid by the name of Munoz. He was a very handsome young soldier, the son of a tobacconist. The queen adopted Munoz as her favorite, lavished upon him wealth and titles of honor. The king's friends exulted greatly, and Carlos and his party were correspondingly dismayed, when it was announced that Christina was about to become a mother. Should she give birth to a son, and should Ferdinand die, Christina would be invested with the regency until her son attained his majority. But should a daughter be born the crown would legally descend to Carlos; for there was a law, instituted nearly one hundred and fifty years before, which

strictly excluded females from the crown. There was thus still a chance for Carlos.

While all Spain was anxiously awaiting the issue the Carlists were exasperated and dismayed by the promulgation of a royal decree transmitting the throne to females as well as males. It is said that Christina and her old father confessor devised this scheme, to which they easily won over the imbecile and dying old king. Carlos and his friends were roused to the utmost intensity of rage. They declared that they would deluge Spain in the blood of civil war before they would submit to such an usurpation of power. At length, on the 10th of October, 1830, a daughter was born, Isabella, the present ex-Queen of Spain.

Some time before this Ferdinand had been compelled, by an insurrection in Madrid, to give an assent, though hypocritical, to the Constitution. Carlos was in closest association with the monks, and was regarded as the representative of ultra-religious fanaticism. It does not appear that there was at that time any republican party. All were in favor of a monarchy, though a few wished for a constitutional monarchy, while the many seemed to desire the reign of an absolute king. Under these circumstances the Liberal party, who were to choose between Ferdinand and Carlos, rallied around the former, who had professed assent to the Constitution. This Liberal party, notwithstanding the serious doubts as to the legitimacy of the infant Isabella, promptly recognized her claims to the crown. The Liberals, though few in number, consisted of energetic men, who enjoyed the advantage of being concentrated in the great cities. The Carlists were composed of the mass of the rural population.

Both parties began to gather their strength for civil war the moment Ferdinand should die. He was very infirm, trembling on the borders of the grave. He had appointed Christina regent, and through all the provinces of Spain the forces were marshaling for the great conflict. But suddenly it was announced that Christina was about again to become a mother. Should a son be born it would divest the Carlists of all claim whatever to the throne, unless they should dispute the parentage of the child. A few months of intense excitement passed away, with hope upon one side and fear upon the other, when the queen gave birth to another daughter, Louisa.

When Isabella was three years of age Ferdinand assembled the Cortes to take the oath of allegiance to her as their future sovereign. The Carlist members of the Cortes refused to heed the summons. It was the 30th of June, 1833. The festival was one of the most brilliant which Madrid had ever witnessed. The ancient forms and customs of barbaric splendor were scrupulously revived, and a bull-fight was arranged in the great Plaza of the city, of unprecedented magnificence. At night a blaze of light from every dwelling and every spire illumined the city with extraordinary brilliance.

The babe Isabella was the prominent object in this scene of enchantment. As she gazed in childish wonder upon the display, and was almost stunned with the oaths of allegiance which rent the air when she was presented as the Queen of Spain, little could she imagine the woes which in consequence were to lacerate her heart, and the rivulets of blood of which she was to be the occasion.

Not long after this the dying hour of Ferdinand came. It was one of the saddest and most humiliating scenes of earth. It has been described by an eye-witness. The pitiable old man, arriving at the close of a joyless life of infamy and of oppression, trembled in view of death, which he well knew was to plunge his country into all the horrors of civil war, and was to introduce him to the presence of that Judge from whose verdict there could be no appeal. Angry disputants were in the death-chamber, and their clamor blended with the groans of the dying.

The crown was falling from the brow of Ferdinand, and enraged relatives were watching to grasp it. From words they proceeded to blows, knives gleamed in the chamber of death; they seized each other by the hair, and in the fierce struggle reeled to and fro against the couch and almost upon the body of the dying king. The poor old man, his eye already dimmed by the film of death, was bewildered by the clamor, and groaned in irrepressible agony. The noise of the brutal fight filled the palace, and others gathered to mingle in the fray. At length the combatants were separated, and most of them withdrew from the apartment. The king seemingly had fallen asleep. Some one approaches the bed. Ferdinand was dead!

His life of sin and shame was ended. He had gone to the Judgment. But he had sown the seeds of crime and woe, which would desolate the nation many long years after his body should have mouldered to the dust. The death of Ferdinand was immediately followed by civil war, which burst forth with the utmost violence throughout the whole kingdom. By the decree of Ferdinand Isabella was proclaimed queen, under the regency of Christina. We have not here space to describe the scenes of violence and misery which ensued. Year after year billows of flame and woe surged over the land. Cities were sacked, villages burned, harvests trampled beneath the conflict of armies, and the cry of the unprotected maiden, of the widow and the orphan, ascended unceasingly to the throne of God.

Sometimes the troops of Carlos were victorious, and wreaked barbaric vengeance upon all the advocates of Christina. Again the troops of the regent Christina triumphed, and retaliated with direful reprisals upon their opponents. Thus for months and years the cruel war raged, and the peninsula was shrouded in woe. Spain seemed lapsing into barbarism. Education was neglected, industry perished, and blood-hound ferocity seemed to take possession of all hearts.

Foreign nations did not interfere, for they were divided in their sympathies. England and France gave their moral support to the regent Christina, as being the representative of the more liberal party of the two, while Austria and the Pope were in sympathy with the ecclesiastical intolerance which Don Carlos represented. Christina, anxious to secure the military support of France, made formal proposals to Louis Philippe for the double marriage of her two daughters, Isabella and Louisa, the first to the Duke d'Aumale, the third son of the King of the French, and the other to the Duke of Montpensier, his fourth son. Neither of the young princesses were then of marriageable age. But this proposition brought into prominence the question of the "Spanish Marriages," which soon agitated all the courts of Europe, and which for a time threatened to bring on a general war.

Louis Philippe, well aware that the other courts, and particularly the Cabinet of London, would not consent to so intimate an alliance between France and Spain as Christina had proposed, which would virtually make the two kingdoms one, courteously declined the hand of Isabella for the Duke d'Aumale, but accepted the hand of Louisa for the Duke of Montpensier. The English Cabinet was at this time understood to be intriguing for the marriage of Isabella with Prince Coburg, a cousin of Prince Albert. It ought, however, to be stated that this was denied by the British Government. Sir Robert Peel stated in Parliament on the 19th of January, 1847: "I shall content myself with making one observation: that the last Cabinet, as long as they were in power, never made any attempt to obtain for a prince of the house of Saxe-Coburg the hand of the Queen of Spain." This denial was regarded by France as a diplomatic falsehood. During the vicissitudes of the war Christina was at one time driven out of Spain and took refuge in Paris. Louis Philippe then embraced the opportunity to recommend to the Queen Regent the marriage of Isabella with one of her cousins, a son of Ferdinand's younger brother Francisco. "The object of this proposal," says Sir Archibald Alison, "was to exclude the pretensions of Prince Coburg, and at the same time to avoid exciting the jealousy of the British Government by openly courting the alliance for a French prince."

Francisco had two sons, both of them very worthless young men. Enrique, the elder, was coarse, brutal, an avowed atheist, but endowed with much energy of character. Francisco is represented as imbecile, besotted, and very repulsive in person. It is not probable that Louis Philippe was acquainted with the character of either of the young men. He was regarding only the political aspects of the question.

Such was the state of affairs when, in the autumn of 1842, Queen Victoria paid a friendly visit to the King of the French at the Château d'Eu in Normandy, which visit Louis Philippe,

a few months after, returned, being received by the queen with royal magnificence in the halls of Windsor. In these interviews between the two courts the question of the Spanish Marriages was earnestly canvassed. It was evident that the French monarch was anxious to secure as close an alliance as possible with Spain. It was also clear that the English Cabinet would not assent to any arrangement which would place the resources of the Spanish monarchy at the disposal of the King of France.

A compromise was finally effected through the agency of Lord Aberdeen and M. Guizot. It was agreed that Louis Philippe should renounce all pretensions on the part of any of his sons to the hand of Isabella; and that the Duke of Montpensier should not marry Louisa until after the queen, Isabella, was married and had had children. This was to prevent the Spanish crown from passing to the heirs of Louis Philippe. England agreed not to advance or to support the claims of the Prince of Saxe-Coburg. And both parties pledged themselves to urge that Isabella should choose her husband from among the descendants of Philip V., which, under the then existing circumstances, meant one of the two sons of Francisco.

Such an arrangement seems extraordinarily loose for national diplomacy. But the testimony of both parties is decisive upon this point. M. Guizot, the Minister of Louis Philippe, writes:

"As to the marriage of the Queen of Spain in particular the king had acted, from the opening of that question, with frankness and disinterestedness. He declared that he would neither seek nor accept that union for any of the princes, his sons; and that as to Princess Louisa he would not seek her for his son, the Duke of Montpensier, until the queen should be married and should have children. (*Que lorsque la reine serait mariée et aurait des enfants.*)"

In accordance with these stipulations Christina endeavored to induce her daughter Isabella to accept one of her cousins, Enrique or Francisco. It appears, however, that Isabella, who had grown up to be any thing but a gentle and pliant maiden, had a will of her own. She disliked both of her cousins, and strenuously refused to take either of them for her husband. Christina was much annoyed by the stubbornness of Isabella. She hoped, by promoting this marriage, to secure for herself and her child the moral if not the material support of both France and England. Civil war was still desolating Spain. The parties were too equally divided to hope for any speedy termination of the conflict. The Cortes urged Christina to press forward the marriage of Isabella. Louisa was betrothed to the Duke of Montpensier. But, as we have stated, her marriage could not take place until very considerable time after the marriage of Isabella. The Cortes placed the child-queen upon the throne in November, 1843. She was then thirteen years of age. Narvaez was military dictator, and in conjunction with Christina administered whatever there was of government in a realm ravaged by civil war.

Christina decided to attempt to secure the support of England by offering Isabella, and of course with her the crown, to the Prince of Saxe-Coburg. England was pledged to Louis Philippe not to favor this union. The French annalists say—and there is but little doubt that they say truly—that Christina made this proposal at the suggestion of Sir Henry Bulwer, the British ambassador then at Madrid. A very angry controversy arose between the Courts of France and England. The Cabinet of St. James denied that it had exerted any agency in the matter.

Louis Philippe, apprehensive that England might succeed in securing Isabella for the Prince of Saxe-Coburg, urged Christina to press forward immediately the marriage of the young queen with the youngest son of her uncle, Francisco. The young man was then called the Duke of Cadiz. Louis Philippe also resolved, without waiting, according to his agreement, for the marriage, etc., of Isabella, to have the nuptials of the Duke of Montpensier with Louisa celebrated at the same time with those of the young queen. This plan was carried into effect. The feeling which was aroused in England by this measure may be inferred from the following remarks of Sir Archibald Alison:

"Thus was the *entente cordiale* between the governments of France and England, so essential to the peace and independence of Europe, broken up—and broken up in such a way, and on such a question, that reconciliation between the parties was rendered impossible. Not only were national interests of the most important kind brought into collision, and national rivalries of the keenest sort awakened, but with these were mingled the indignation at broken faith, the soreness at overreached diplomacy. One chorus of indignation burst from the whole English press at this alleged breach of faith on the part of Louis Philippe, and the violation of the royal word, pledged to Queen Victoria, amidst the festivities of the Château d'Eu and Windsor Castle."

We have alluded to the repugnance of Isabella to accept either of her cousins for a husband. Francisco was peculiarly obnoxious to her. His feeble mind, squeaking voice, and repulsive person excited her contempt. But it was decided that Francisco was the one she must have; probably because Christina, with her Ministers, could more easily mould him to their will.

It is said that one night the unnatural mother, aided by one of her crafty Ministers, took the child of sixteen into an inner chamber of the palace to constrain her consent. The task was a hard one. Isabella was masculine and rugged in her person, and very inflexible in her determinations. Tears, bribes, flattery, menaces, were all for a time tried in vain. Hour after hour passed away as the resolute maiden resisted the expostulations and solicitations of her mother and the Minister until the day dawned. Then, overpowered, exhausted, despairing, she yielded, sullenly submitting to the outrage. Her mother, fearing lest she might change her mind, made arrangements

to have the marriage consummated as soon as possible. The death of Isabella without issue would transfer the crown to Louisa. And it is even reported loudly that Francisco was known to be *physically imbecile*, and that this consideration led the friends of the French alliance to urge the marriage.

The friends of Don Carlos were bitterly opposed to the marriage of Louisa with the Duke of Montpensier. The national pride of the Spaniards revolted at the thought of having a French prince come so near to the throne. There was great danger that the Duke of Montpensier would be waylaid and assassinated on his way to Madrid. It was, therefore, not deemed safe for him to cross the frontier unless accompanied by a strong armed retinue. Two thousand steel-clad dragoons composed his escort. Like the rush of the whirlwind they swept over the hills and vales. Both the princesses were married at the same time in October, 1846. After a hurried wedding, and a still more hurried marriage-feast, the maiden Louisa, fourteen years of age, was borne in triumph, as the Duchess of Montpensier, to Paris, where she was received with the warmest congratulations by the family of Louis Philippe.

A writer in *Blackwood's Magazine* alludes to these two marriages in terms which very clearly reveal the excitement they at that time created:

"With Louisa less trouble was requisite. It needed no great persuasive art to induce a child of fourteen to accept a husband as willingly as she would have done a doll. Availing himself of the moment when the legislative chambers of England, France, and Spain had suspended their sittings—although, as regards those of the latter country, this mattered little, composed as they are of venal hirelings—the French king achieved his grand stroke of policy, the project on which there can be little doubt his eyes had for years been fixed. His load of promises and pledges, whether contracted at Eu or elsewhere, encumbered him little. They were a fragile commodity, a brittle merchandise, more for show than use, easily hurled down and broken.

"Striding over their shivered fragments, the Napoleon of Peace bore his last unmarried son to the goal long marked out by the paternal ambition. The consequences of the successful race troubled him little. What cared he for offending a powerful ally and personal friend? The arch-schemer made light of the fury of Spain, of the discontent of England, of the opinion of Europe. He paused not to reflect how far his Machiavelian policy would degrade him in the eyes of many with whom he had previously passed for wise and good, as well as shrewd and far-sighted. Paramount to these considerations was the gratification of dynastic ambition. For that he broke his plighted word, and sacrificed the good understanding between the Governments of the two great countries."

The same writer, speaking of Francisco, the husband of Isabella, says:

"We have already intimated that as a Spanish Bourbon he may pass muster. 'Tis saying very little. A more pitiful race than these same Bourbons of Spain surely the sun never shone upon. In vain does one seek among them a name worthy of respect. What a list to cull from! The feeble and imbecile Charles IV.; Ferdinand the cruel, treacherous, tyrannical, and profligate; Carlos the bigot and the hypocrite; Francisco the incapable. Certainly Don Francisco is no favorable specimen either morally or physically of the young Bourbon blood. For the sake of the country whose queen is his wife, we would gladly think well

of him; gladly recognize in him qualities worthy of the descendant of a line of kings. It is impossible to do so. The evidence is too strong the other way. He accepted the hand reluctantly placed in his, became a king by title, but remained, what he ever must be in reality, a zero."

Of course such a wedding, with such characters, could lead to nothing but crime and misery. Isabella, the reputed child of ignominy, reared in the midst of the corruptions of the most corrupt court in Europe, has developed the character which would naturally be created by such influences. In figure she was coarse and fat, with a gait which has been described as an "ungainly waddle." At the court ball, just before her marriage, it is said that "she astonished the spectators with something like elephantine gambolings." She was endowed with masculine strength of mind, and a prodigious memory. Louisa was far the more beautiful of the two daughters. Introduced at so early an age into the family and court of Louis Philippe, where the purest morals prevailed, she has developed into a very worthy and attractive woman.

Not a year elapsed after this ill-assorted match between Isabella and Francisco ere all Europe was filled with rumors of their quarrels. A divorce was openly talked of on the ground of Francisco's alleged physical incompetency, which, according to the civil but not the canon law, rendered the marriage null from the beginning. It is not strange that Isabella, reared under such influences, should have developed a character repulsive in the extreme. Despising her husband, having been forced to marry him, she seems to have paid no regard to her compulsory nuptial vows, and imitating the example of her mother and her grandmother, has rendered the court of Spain, according to general repute, the most corrupt in Europe.

Isabella has several children. In 1850 she gave birth to a son, who almost immediately died. About a year after she gave birth to a daughter, Maria Isabella, who subsequently married Count Girgenti, a Neapolitan noble. She has also now a son, Alfonso, eleven years of age. The insurrection which recently dethroned the queen and cast the crown of Spain into the dust, has caused numerous claimants to spring up eager to grasp it. The probability is that Spain is not sufficiently enlightened even to wish for a republic. We are in danger of being deceived as to the voice of the people, from the fact that the republican or democratic party, residing in the cities, has greatly the control of the press. It is said, and probably truthfully, that the peasantry, who are generally under the dominion of the priests, are, almost to a man, opposed to a republic. Should the liberal party, in the cities, without consulting the voice of the nation, establish a republic, civil war would probably be the result. On the other hand, should the question be fairly submitted to universal suffrage, the vote would probably be in favor of a monarchy. Then

comes the difficult question, upon whose brow shall the crown be placed? Will some one of the generals of the democratic party obtain it? Will the sceptre be placed in the hands of one of the children of Isabella? Will a son of Don Carlos, who is an eager claimant, obtain the prize? Or will the Duke of Montpensier take his seat upon the throne? The last is spoken of as a man of ability, of worth, of liberal tendencies, and perhaps is as likely as any other candidate to win the crown.

FATE AND DAISIES.

"IT'S the very poorest medder on the hull place," my uncle Levi had said, wiping his hard hands on the brown towel, and looking from the kitchen window across the rye-fields to a meadow white with daisies. "It don't turn nothin' to nobody, fur it's full of that plaguy dutch cuss from one end to the other. I'll have it mowed before another of them cussed flowers has time to blow. Jake," he added, turning to a young man wiping another pair of hard hands on another brown towel, "you jest take that medder in hand to-morrow, and see ef you can't make ~~them~~ cussed flowers a little scarcer."

In this meadow, knee-deep among the daisies, Jane Spear and I stood when the sun was going down. Jane was plucking the petals from the corolla of one of the "cussed flowers," telling my fortune, as she had gravely intimated a minute before she would.

"Nonsense!" I had said to her proposition to tell me the profession of my future lord and master; but as the dark-eyed, gipsy-faced girl bent gravely over the little flower, and repeated in solemn tones the prescribed formula, I was conscious of watching her intently, as if indeed there were some connection between my fate and the flowers of the field.

"Lawyer, doctor, farmer; lawyer, doctor, farmer; lawyer, doctor, farmer"—Jane Spear paused over the half-plucked corolla and glanced into my face.

I tried to put the eagerness out of my eyes, and the earnestness away from my mouth, but the quick-sighted girl smiled and resumed the formula:

"Lawyer, doctor, farmer; lawyer, doctor, farmer; lawyer, doctor, farmer; lawyer!"

Jane Spear's voice dropped with the last petal. "It is a lawyer," she said.

"I'm so glad it wasn't a farmer," I exclaimed, with a sigh of relief.

Jane Spear's eyes sought mine searchingly. What wonderful eyes they were! I had said to myself a score of times that if Jane Spear's brother Jake had eyes like Jane's I would have liked him better. You see, Jane's eyes told tales and asked and answered questions plainer than any words. I read the question in Jane Spear's eyes that night, "Then you won't marry brother Jake?"

My answer was wordy. I said there was no

use talking, which meant that there was no use for any one to talk who held opinions contrary to mine, and was a certain indication that I would talk a great deal. I said that farms were very nice in story-books and poets' imaginations. A farm, in fancy, was a tract of land modeled after the garden of Eden. Figuratively it flowed with milk and honey, and literally it grew grain spontaneously, and yielded strawberries promiscuously.

A farm, in fact, was a tract of land prone to thistles and ill weeds. The figurative flowing with milk necessitated a literal and exceedingly nasty cow-yard; and the honey was scarce, and apt to be sold at the nearest market at the rate of thirty cents per pound. As for spontaneous grains and promiscuous strawberries, the poet's brain was more fertile in their production than the sterile fields.

In fancy, farm-houses were romantic cottages embowered in vines, cool as a refrigerator in summer, and warm as a toast in winter.

In fact, farm-houses were apt to be ugly-looking establishments, in sad need of paint outside, and very low-ceiled and uncomfortable within. The vines were most likely growing on hop-poles in the garden, and the paper curtains at the window let floods of summer sunshine in, and the fire in the chimney-corner failed to keep the winter's cold out.

Farm-house kitchens, according to romancists, were enchanting places, large as all outdoors, with a floor white as the drifts, rows of shining tins on the wall, a cat purring on the hearth, and a table always set fit for a king.

Farm-house kitchens, out of romance, were liable to be wretchedly hot and cluttered up, and not at all desirable as steady places of abode. It was a lamentable fact that tins had a propensity for getting dull and at sixes and sevens; that floors large as all outdoors needed an immense amount of scrubbing; that cats had a bad way of dabbling in victuals unless carefully watched; and the table bore a burden of unwashed dishes and unscoured cutlery three times per day.

In fancy, a farm-house larder was filled with the fat of the land, with pans upon pans of delicious cream, with pounds upon pounds of golden butter, with cakes, and pies, and puddings, and no end of jellies and preserves.

In fact, the fat of the land had not a delightful odor; the pans upon pans of delicious cream suggested a back-breaking, arm-aching churning; the pounds upon pounds of golden butter bore witness of many days' toil; the cake was probably limited to gingerbread; the pies were flavored with fennel seed; in nine cases out of ten the puddings were all out, and the jellies and preserves were only used on company days.

In imagination, the farmer's wife was a buxom dame with a heart full of goodness and a face full of smiles, who always had her work done up, and was dressed to death in a ruffled white apron.

In reality, the farmer's wife was a rather

jaded-looking woman, who grew red in the face from standing over a heated stove, and large in the hand from much toil. Her mood was ruffled more than her apron, and her words were often sharp and severe.

The ideal farmer was a large-hearted, open-handed man, with broad acres in the highest state of cultivation, deep pockets full of jingling coin, and any number of government bonds stowed away in convenient hiding-places. He did his work by machinery, and was the embodiment of fun and good-nature.

The real farmer was always at work at five o'clock in the morning, and abed soon after the chickens. He was apt to have a mortgage on his acres, a note due in the bank, and ten chances to one if the jingling in his pockets was not produced by the collision of old nails. Said farmer was liable to stinginess, induced by devising ways and means to make both ends meet, and crossness likewise from overwork and lack of recreation. His hair was generally rough, and he wore no collar.

"You mean Jake," exclaimed Jane Spear. Her eyes were looking across the meadow to the rye-field, where walked the tall, sun-burnt man to whom my uncle had spoken that noon.

"You are mistaken. I have not given your brother a thought," I replied, quietly.

Jane Spear colored violently. "I wish I could make Jake see with my eyes," she muttered, in a vexed way. She stooped down and plucked another daisy, with the remark, "I haven't told you all yet."

"Rich man, poor man, rogue," she repeated, solemnly. One by one the spotless fragments dropped to the earth, and I, watching with the old eager eyes and earnest mouth the single bit of white set in the yellow bed, shivered, for Jane Spear had named it—"Rogue."

She looked up with a smile that was full of sarcasm. "A farmer might have been honest," she said. "Jake was certain to be."

My eyes followed hers beyond the daisies to the field where the farmer lad stood, and then away to the little school-house under the hill and the old brown farm-house. I shook my head. I had known better days. I hated the paper curtains—signs of small capital; I trod the rag carpet with disgust; I read the limited supply of books in rebellious moods; I snubbed the cheap prints on the wall; I grew tired and out of sorts in the little school-house where I taught, and heated and impatient in the kitchen where I drudged, and wished wickedly sometimes that my father had lived or Aunt Larkin had died.

I turned to Jane Spear now with the words on my lips: "I wish you could tell me if Aunt Larkin will ever come."

Jane shook her head. "I have nothing to do with your aunt Larkin," she said. "I will tell you instead the material for your wedding-gown."

Again she plucked the daisy petals, repeating "Silk, satin, lawn." She paused with "sat-

in" on her lips as the last petal fell. "It will become the occasion," she commented—"a lawyer, a rogue, and your aunt Larkin."

For myself, I looked down on my calico dress with doubt in my eyes. It was a long way off from that cheap calico to satin. I should never wear it but with Aunt Larkin's help.

Across the fields there came a sharp, shrill cry—"Ruth! Ruth! Ruth Macy!"

It was my uncle Levi's voice. "Come," I said, "uncle wants me to spell a word or write his accounts, and there is the yeast to mix and clothes to fold."

I turned toward the rye-field, but Jane Spear laid her hand on my arm: "Listen!" she said, gravely.

It was her brother Jake singing:

"Gin a body meet a body
Coming through the rye,
Gin a body kiss a body,
Need a body cry?"

I turned my back on the rye-field and went home another way. It was the best way to avoid "a body," and there need be neither kissing nor crying, I said to myself.

"I shall try to make Jake see with my eyes," Jane Spear said as we reached the door-yard gate, and she held out her hand to bid me good-night.

"I am sorry," I began; "but there's no use talking."

"Yes, you are right," Jane interrupted, quickly. "There is no use talking to you. I had better talk to Jake. Good-night!"

I turned from the retreating figure and went toward the house.

"Jest like her father for all the world!" were the words that arrested my footsteps on the threshold. I knew it was I of whom my aunt Ann spoke. Whenever she talked of a woman "like her father for all the world," it was I. It was an oft-told tale. There was no harm in hearing it again. My aunt continued: "As full of uppish notions and hifalutin ways as if she was a born lady! And that way is like her mother's too. Dear me! She comes honestly enough by her pride. She ain't got so much to be proud of in her looks neither, for you can't make her hansom any way you can fix it. Jake Spear thinks she's uncommon; but laws! Jake worships the ground she walks on. It's like the girl to give him the cold shoulder, though the Spears is as good as she is any day. I used to think mebbe her aunt Larkin would do somethin by her, bein her own brother's child, and they do say she's got a power of money; but then rich relations ain't much to count on. Howsomer, there's no tellin. That letter is from furrin parts, and there's no knowin but her aunt Larkin is comin home and will do the hansom thing by Ruth. Laws! how that girl will make the money fly if her ship ever comes in! I do really believe somethin is goin to happen. I've felt it in my bones all day, and you know I seen a letter in the candle last night as plain as my two eyes could see it."

Ruth laughed at me; but I wonder what she'll say when she sees that dockymment on the mantle-tree-piece with the furrin mark? I guess she'll think there is somethin in my bones besides fol-de-rol, and she won't say it's all moonshine for me to see letters comin right up out of the candle."

I burst into the room, forgetting to be prudent or careful. "Is there any—" I stopped suddenly, for I would not have my aunt know how much I had heard.

"Gracious, child!" exclaimed my aunt, turning around and surveying me. "What's got into you? You look as if you was jest ready to fly right off the reel. You orten to git yourself all worked up into sich a state. There's a letter for you on the mantle-tree-piece, and I guess it's come from acrost the water. Mebbe it's from your aunt Larkin, and p'raps it's got good news for you."

I had already torn away the envelope, and was making myself mistress of its contents. It was very brief, and ran thus:

"MY DEAR NIECE,—I am making preparations to sail for America, and on my arrival I would like you to meet me in New York. We may be able to do each other mutual service. I hear you are a good school-teacher. It is well. Providence helps those who help themselves. I hear also that you are a real Macy. It is the best thing you can be, though, alas! being a Macy didn't seem to do your poor dear unfortunate father much good.

"I will write you before the steamer sails, and shall expect you in New York on my arrival.

"My lawyer will settle all claims your mother's relatives may have against you.

"With kind regards, your aunt,

"PIEBE MACY LARKIN."

In reply I wrote:

"MY DEAR AUNT,—I hold your opinion that we may do each other mutual service, and I am making preparations accordingly to meet you in New York. The fact is, I am somewhat weary of school-teaching, and if I can help myself in some other way I shall be glad to claim the help of Providence.

"Perhaps you are right in saying the best thing I can be is a Macy. I subscribe to the sentiment with the privilege of changing my mind under other circumstances. I have a precedent in your own change from Macy to Larkin.

"My mother's relatives have no claims on you or me, save honor from you and love from me. The services of your lawyer will not be needed in discharging these claims.

"With kind regards, your niece,

"RUTH MACY."

After that the farm-house, the little school-house under the hill, Jake Spear and Jane, and all the homely surroundings of my daily life gave place to new dreams and vague anticipations. The old things dropped quite out of my life when I left them all behind me in obedience to the summons of my aunt Larkin to meet her in New York.

She was a tall, stern-faced woman who rose to meet me when I entered the room where they told me I would find my aunt.

"Is it Ruth Macy?" she asked, doubtfully.

"Yes, Aunt Larkin," I answered.

"I was expecting you," she replied, giving me her hand. "You have hardly the face I expected from your note. It was sarcastic, do

you know it? You do not look like one given to sarcasm."

"I took my cue from you," I answered, quietly.

My aunt smiled as she turned away to dispose of some papers. "Frankness was always a Macy virtue," she remarked, taking a seat at her writing-desk and beginning to assort papers.

I watched her for a time, marking the proud air and haughty face that must have been handsome when it was young. When I was weary of that I looked out of the window and dreamed of daisy-fields and the old home I had left. Then I fell to wondering what my aunt thought of me, and what were her intentions in regard to me.

I was startled by her voice addressing me, and looking up I found her eyes on me in evident measurement and calculation. I judged she was disappointed in me, for she said, briefly, "Your note quite deceived me. I fancied you tall and stately, but you are neither. Dress will improve you very much. The dress-maker will take you in hand to-morrow."

"I shall be a bill of expense," I answered. "What am I to do?"

My aunt smiled. "It is like the note," she said; "but that is the Macy of it. Well," she continued, "you shall be my amanuensis. I like your writing. It has elegance and character; it is the penmanship of a lady and a Macy. I shall keep you very busy sometimes. You will earn all that you receive. I am engaged in a troublesome lawsuit with my half-brother, your uncle Dick Wiggins," she added, in a confidential tone. "You never saw him, of course, for he had nothing to do with the Macy side of the house. The lawsuit is about our mother's property, and if your father had lived he would have contested it as I am doing. You will receive your father's portion if we win. It is but right you should help work for it. There is no doubt but we will succeed. Your uncle Dick is a stingy old bachelor, who deserves to lose the suit. You know my step-son, Rob Larkin, is a lawyer, and he says there isn't a shadow of a doubt but we will win the case. You will be wealthy if we do—you and Rob."

"Is your step-son married?" I inquired.

"No," answered my aunt. "It might be worth your while to catch him."

"I prefer to be caught," I answered, proudly.

My aunt looked keenly at me. "A real Macy," she commented, musingly. "Now go, child, and dress for dinner. I will wait for you and Rob."

I went up stairs with those words ringing in my ears—"You and Rob." He was a lawyer. Was he a rogue?

I said so when I saw his face, crafty, artful, and yet not without the fascination that makes willing subjects of the people over whom such men use their power. Before our dinner was concluded I decided that my aunt was one of these subjects. She might think herself the mistress, but Rob Larkin ruled her. "He

shall never rule me," I said, emphatically; and then I fell to dreaming of the daisy prophecy, the lawyer, rogue, and satin dress.

My aunt was correct in her estimate of my susceptibilities for improvement by dress. Standing before my mirror two months later, I smoothed my lavender silk, lifted my lace bertha to see it fall rich, heavy, and graceful, adjusted the sprays of pink coral in my hair, and went down for my aunt's judgment.

She nodded her approval. "I said so," was her single comment. "Come! Rob and the carriage are waiting. You will have a sight of the best society to-night in Judge Hart's parlors. It will be an opportunity for you to judge how you like it, and how it likes you."

Taking a sight of the best society that night in Judge Hart's parlors, I listened to the conversation around me and meditated. The sum of my meditations was that I did not like the best society. I judged also that it did not like me, or it would not have left me free to pursue my own thoughts.

A gentleman at my side talked of witnesses, testimony, and verdicts. "He is a lawyer," I said to myself. "I wonder if he is a rogue;" and then I was angry with myself for harboring the daisy prophecy, as if there was of necessity connection between the profession and roguery because a silly girl had united them with my fate on daisy petals.

The gentleman turned to me. I had been introduced to him as Mr. Sands. "What do you think of it?" he asked.

The query was vague enough for a court's questioning. Was he entrapping me into an expression of opinion concerning himself, or fate, or daisies, or the best society? I was non-committal.

"It? What?" I asked.

"That *trois temps*," he answered, nodding to the musicians.

"I have not heard it," I replied.

"I thought as much," he answered, with a smile. "You have capabilities for abstraction and concentration." He turned to the gentleman at his side and resumed his conversation.

I bit my lips with vexation. I had said to myself that if the best society would talk to me I had it in my power to be agreeable, but this man had surprised me into a confession of my abstraction, and had left me when he had passed judgment on my mood. I saw Aunt Larkin across the room, and made a movement to join her.

Mr. Sands arrested the movement. "What is your intention?" he asked.

"Migration," I answered.

"Madness!" he exclaimed. "You are ambitious. You are not content to be a fixed star."

"An earthly figure would suit me better," I said, quietly, perhaps bitterly.

"Suggest one," was the authoritative response.

"Wall-flower," I answered.

The man measured me from head to foot, and turned away with a smile. "You will bear transplanting," was his comment. "That redowa will do it. Unconsciously your fingers are keeping time to the music. Will you dance?"

It had been my favorite dance in better days, but I hesitated until I caught the look on Aunt Larkin's face. The look was mingled wonder and intense satisfaction. To answer the wonder and intensify the satisfaction was worth the trial.

"I will try," I answered.

With some partners I might have failed, but not with one like Mr. Sands—light of foot, firm in arm, and controlling in his movements. Like half-forgotten strains of music that a touch recalls, or a half-forgotten poem that a word suggests, the unfamiliar step came back with the old ease and lightness and pleasure. Not until the music ceased did my partner conduct me to a seat in the bay-window.

Involuntarily my eyes turned to Aunt Larkin. She was surveying us through her eye-glass, with the wonder answered and the satisfaction intensified.

My companion's gaze followed mine. "Larkin looks as if the lawsuit had been settled in her favor," he said, musingly.

He knows of my aunt's suit, then, I thought. "Is Mrs. Larkin likely to win?" I asked.

Mr. Sands's face expressed some surprise at my knowledge of the suit. "We can not tell," he answered. "A little influence either way may change the tide in either direction. Do you know the woman?"

"Yes—that is—she is—"

"She is a rare diplomatist," interrupted Mr. Sands. "Her half-brother, Richard Wiggins, the contestant in this case, is no match for her in that direction."

"I thought the question of skill lay between lawyers," I answered. "What is the strength of the lawyer pitted against Robert Larkin?"

The man's answer was a laugh, peculiar and involuntary.

"You are he!" I exclaimed, in surprise.

He bowed, and with a smile inquired, "What do you know of the Larkin suit?"

"That woman yonder in diamonds and point lace is my aunt Larkin," I answered.

"What strange fate throws us together?" he asked, musingly.

"The fate that controls the meetings and partings of the Montagues and Capulets," I answered, laughing.

"God forbid!" was the exclamation, so earnest in answer to my tone of badinage that I looked up with sudden wonder into the darkly flashing eyes and gravely thoughtful face.

The music changed at the moment.

"Another redowa!" exclaimed my companion. "The order of dances has been changed. Ah! it is Rob Larkin's work, and here he comes to claim your hand. *Au revoir!*"

That night I had more than a sight of the

best society. I mingled with it, haunted ever by two faces that watched me closely, and those faces were Aunt Larkin's and Lawyer Sands's.

My aunt Larkin met me with a smile next morning. "Last night was an experiment," she said, with a shrewd glance in her dark eyes.

"Yes," I answered.

"It was a success," she continued, complacently.

I bowed in acknowledgment of her praise.

"You are not handsome," she continued.

"No," I replied.

"But there is something in your face superior to beauty," she pursued. "Rob sees it. I should say Kirke Sands was not blind to it."

I did not reply. I was thinking of Kirke Sands.

"Your uncle Dick is his client," continued my aunt. "You can steal a march on him by making Kirke Sands your friend. If you have friends, use them."

I remembered Kirke Sands's opinion of my aunt, "She is a rare diplomatist." I began to suspect dimly that she was using me.

"You saw the blonde lady in white and pearls at Judge Hart's last night?" inquired my aunt.

"Yes," I replied. There was no woman's face so impressed on my mind as hers, for Kirke Sands was oftenest near it when away from me.

"That was Margaret Clay," explained my aunt. "She will inherit your uncle Dick's fortune. Rob has feared that Kirke Sands would prove a powerful antagonist in the suit because of his interest in Miss Clay. You know the song:

'Love gave him energy,
Love gave him strength;'

and then again,

'Love rules alike in camp and in court.'

If you could distract his attention you could checkmate the game. It is worth the trial."

I did not say a word. I was sure my aunt was using me.

"We lose much if we lose this lawsuit," pursued my aunt. "I lose a fine estate, and you lose a good income, and perhaps a husband. I have set my heart on an alliance between you and Rob."

My lip curled. Here, indeed, were possibilities for the fulfillment of the daisy prophecy. The lawyer, rogue, and satin dress were not so very far away in my aunt's calculations.

My aunt resumed, explaining our position. "If we fail in this suit there will be retrenchment for me and school-teaching for you."

I smiled. School-teaching was possible. That other—to be the wife of Rob Larkin—was impossible.

Months after I bent over my writing at Aunt Larkin's desk, but I could not write. I shut up the desk and picked up a book. A few minutes later I laid that aside and took up some

sewing. I was soon weary of that, and walked to the window.

Aunt Larkin, standing at the mantle, watched me, and said, as she began to pace the floor: "There isn't any use, Ruth. I have been through all that set of employments, and have come down to this walking of the floor. It's the only thing I can do when I am nervous. You have a vast amount of self-control. I have wondered at you sitting calmly at the desk when in the lower part of the city men are wielding the power that will make us, comparatively speaking, rich women or beggars." She took out her watch with nervous, trembling fingers. "I should think it was time to hear from Rob," she said, impatiently. "He promised to send a messenger when he knew the decision. I haven't much doubt of the result. We have every thing on our side. Even Kirke Sands, the opposing counsel, will not be likely to use his influence against you. His admiration is undisguised, and you have blocked the game for Margaret Clay completely. Ah! I hear the street-door. And it is—yes, it is Rob's step. He has come himself to bring the good news."

She rushed into the hall and met her stepson on the stairs. I bent my ear to listen. I could not catch the words, but I knew Rob Larkin's bitter, angry tones, and my aunt's incredulous exclamation signified defeat.

They entered the room; Rob Larkin, heated, flushed, and indignant; my aunt, incredulous and aghast. "It can not be!" she was saying. "We had every thing on our side."

"But it can be," answered her stepson, bitterly. "We had nothing on our side. To be sure, I thought we were secure, but Sands worked as if all the furies drove him, and he carried the judge right over to his side. Every body says that Margaret Clay was the motive power."

"I was certain he would work for Ruth," said my aunt, in vexed disappointment. "I have built great expectations on his interest in her."

"Humph!" exclaimed Rob Larkin. "To-day's work settles the question of his interest in Margaret Clay. Ah! He's a rogue, is Sands. They say his bargain with Wiggins was tremendous. I believe it was Margaret Clay's hand."

"Well, Ruth," said my aunt, turning to me, "it is as I said. There will be retrenchment for me, and you—"

"I shall return to Uncle Levi's and my school-teaching," I answered, with a bitter smile. The bitterness was not in the school-teaching; I was thinking of Kirke Sands and Margaret Clay.

That evening a servant brought me a card, saying that a gentleman waited for me in the parlor. It was Kirke Sands, and I declined to see him. If the question of his interest in Margaret Clay was settled I had no wish to see him. Next there came a note, asking me to make an appointment for him to call. What had men

like him to do with my new sphere? Jake Spear was better suited to it. My answer was brief, decisive, and negative. I thought it would accomplish that whereto it was sent.

I was walking down Broadway one rainy day, profoundly meditative, trying to forget the things behind and press forward to things before. The things behind were luxury, refinement, and Kirke Sands. They were hard to forget. The things before were the school-house under the hill, the farm-house kitchen, Uncle Levi, Aunt Ann, and Jake Spear. I did not press forward. I dreaded going there on the morrow.

An east wind blowing violently caught my veil and bore it down the pavement. A gentleman coming up stooped to catch it. I fixed my eyes on a shop window in study of its wares to avoid Kirke Sands, but he came to my side.

"Madam, you have lost your veil," he said.

I turned calmly, prepared for the encounter, but the man's face was not calm.

"Ruth! Miss Macy!" he exclaimed. "Fate sent me your veil."

"You are mistaken," I answered, calmly. "It was an east wind."

"Be it so," was his earnest response; "still it is fate. See, it is raining fast! It is no day for a woman to be out. Let me order this carriage and take you home, I have much to say to you."

A sudden impulse seized me to hear what this man had to say by way of justification for his "most unaccountable behavior," as Aunt Larkin called it.

He attempted no justification. When we were seated in the carriage his first words startled me: "I believe you are my fate, Miss Macy."

"I think you are mistaken again," I said, trying in vain to speak calmly. "Margaret Clay is your fate, according to public opinion and Aunt Larkin."

"Margaret Clay!" Kirke Sands laughed sarcastically. "A woman with a doll's face and a child's manners. I want a woman. I want you, Ruth Macy. I set public opinion and your aunt Larkin at defiance. Be my wife, Ruth Macy!"

I was gathered unresistingly in the strong man's arms; I had not the heart or wish to say nay.

"Send your aunt to me," he said, as he sprang out of the carriage at Aunt Larkin's door. "You must not go into the country to-morrow."

"Lawyer Sands is waiting to see you in the parlor," I said to Aunt Larkin, as she sat assorting papers.

"Lawyer Sands!" exclaimed my aunt, incredulously. Then her eyes scrutinized my face carefully. "You have been out?" she asked. "What does Lawyer Sands want? What does it mean?"

I vouchsafed her no reply, but walked to the window. There my aunt found me on her re-

turn. She was smiling in a satisfied way, but the smile did not cover her astonishment.

"It is a remarkable *dénouement*," she said, expressing her astonishment. "But you have done well. Catching Kirke Sands was worthy of a Macy;" and her satisfaction gleamed out there. "Of course you must not go into the country," she continued. "Your lover is anxious for a speedy consummation of the affair. The public will be quite taken aback. And I don't wonder! I never dreamed but he was working for Margaret Clay!" So her astonishment vented itself. "I shall give you a wedding!" she exclaimed, after a minute's pause. "You shall wear satin and point lace. It will be a delightful thing to enjoy the public surprise. I declare you have done a good thing! It's almost a pity that you will cease to be a Macy." So her satisfaction expressed itself.

A bride in white satin, leaning on my husband's arm, I watched the wrappers taken off a bridal gift. It was a brooch—"a pretty bauble," my husband said.

It was more to me. It was a daisy, with the yellow disk of frosted gold and thin, white, pearly petals. It suggested the daisy prophecy—a lawyer, rogue, and satin dress. I did not need to look at Jane Spear's card to ascertain the name of the giver. I put it in the case, and clasped it tight, and packed it, still later, at the bottom of my wedding gifts. The man who married a dowerless bride for love was not a rogue.

I had been married a year when my aunt Larkin called on me.

"I have been to hear your uncle Dick Wiggins's will read," she said, with an involuntary grimace.

"Ah!" I answered, indifferently. There were few subjects of so little possible interest to me as this man's will.

"You should have been there," continued my aunt, with a sorry attempt at smiling. "It would have done you good to find yourself so remembered."

"I remembered!" I exclaimed.

"Yes," answered my aunt. "You are equal heir with Margaret Clay. It was the price of Kirke Sands's counsel. He played his cards well to defeat us and marry you."

"Who drew up this will?" I asked, with trembling voice.

"Kirke Sands," answered my aunt.

I answered not a word; but I went to the bottom of my bridal gifts that day and fastened the daisy brooch at my throat.

"A pretty bauble," my husband said, as he stooped to kiss me.

"Yes," I answered, with a shiver. "I believe in fate and daisies."

"I will tell you something better to believe," he said.

It was the half of my uncle Dick's fortune. But that morning's sun had risen on a woman a thousandfold richer.

My husband was a lawyer—and a rogue.

MY ENEMY'S DAUGHTER.

CHAPTER V.

DEATH IN ARCADIA.

NONE of us liked the singing-saloon. Not that there was any thing bad about it except its name; that, in a small country town, was quite enough. In our town it did not much matter whether a man, woman, or institution was really bad or good. The sole question was whether he, she, or it had a bad name. So it had long been our object that Christina should abandon the music-hall, and try to live by teaching singing and the piano. At last we resolved that a day-school should be opened. Yes; Mr. and Miss Braun's school—French, German, and music. We advertised in the local paper—rather a stretch of boldness on our part in those quiet days—and I brought in a copy of the paper that same evening, over which we gazed and laughed a good deal. Young ladies and gentlemen were to be taught; and of course perfectly original plans were to be adopted in the teaching of every thing. A great brass plate was got and engraved with the legend, “Mr. and Miss Braun's School.” I crossed the street furtively to look at it, and report as to the effect; and the thing was so far accomplished.

Not many pupils came at first. The story of Christina's nightly performances had of course got abroad, and made mammas feel shy of such an instructress. Gradually, however, a few were got together, all from the humbler ranks of our middle plateau; these brought more; and the terms being moderate, and a good deal taught for the money, things began to look a little more prosperous.

Still, this was clearly not the kind of field which Christina's ambition would have sought. We had often indulged and talked over wild hopes that at some distant period we might sing together, *prima donna* and *primo tenore*, upon some great stage, with half a metropolis for our audience. “I saw Rubini,” Mr. Braun would sometimes repeat, “in Italy, when he was your age—*ja wohl*, I knew him too—and he had not a finer voice. No; that had he not.” I report this eulogy of my voice without a blush. The tribunal which is proverbially wiser than Voltaire has since decided, very conclusively, that my voice is not quite equal to Rubini's. But at the time the praise was spoken it had some effect upon me other than to make me smile.

In fact it had become gradually understood that the musical and other fortunes of Christina and myself were to be associated in life and for life, whenever fate and favor should allow us to begin the struggle together. We were to make a great name in Florence, in Paris, in London. I need not say that we did not pause to consider whether any difficulties were likely to arise in the way of a pair who began by getting

married as a preliminary to seeking their fortune. As to our solitary counselor, he would have seen no objection whatever to any scheme which seemed graceful, disinterested, and somewhat romantic; and even if the scheme had none of these recommendations, he would have become reconciled to it or any thing else in a quarter of an hour. So far, then, the common obstructions to the course of true love did not, in our case, rise to disturb the smoothness of the current. There were only three persons in the world to be consulted, or who cared a straw about the matter, and they were quite in harmony on the subject.

At least we were quite in harmony so far as the love and the main wish of two lives were concerned. But the feelings of Christina and myself did not always flow in the same channel. She was a true-born artist; I never was, except in the merely technical sense, an artist at all. She would have given up a fortune for a lyric success; if I were assured of an easy income, I should no more have thought of becoming a professional singer than of becoming an amateur fireman. Moreover, all her plans and projects now were for splendid success under my leadership. Like all women who have any imagination, she saw her lover as a hero destined to triumph on every field he chose to enter. She always arranged the plan of the future as if we could not fail. I looked forward with a secret dread of failure to every undertaking in which I was likely to bear a part. For all that is talked of man's idle self-conceit, I think an ignoble distrust of our own capabilities is one of the commonest of masculine weaknesses. In my case, indeed, my distrust was well justified in one sense; but it helped, more than any thing else, to spoil some part of my life. Christina really knew what she could do; and she was only waiting for the time to do it. She was quite happy, cooking her father's sausage and lighting his pipe; but all the time she knew herself an embryo *prima donna*, and regarded the musical world as only waiting for her. There were times when I felt something like a pang of pity for her inexperience, and her confident, sanguine nature. I ought rather to have pitied my own inferior courage, miserably inferior endowments, inferior organization altogether. Knowing what she became—knowing what, under brighter auspices, she might have become—it now seems to me the very blindness of affection which made her dream for a moment of placing herself and her career under the guidance and guardianship of one so miserably unworthy.

I often wondered how, with her ideas and her hopes, she could have endured singing in a vulgar provincial music-hall. I told her as much.

“I would sing any where,” she said, “rather than be in debt. Father could do nothing, and I must use every power I have, or he must

starve. I would have sung my songs in the streets rather than see him troubled to get bread. So little makes him happy, that it would be a shame if he were to want any thing; and then he is old, and he remains not long, perhaps;" and tears stood in her eyes. "I sang in a concert-saloon in Cologne, a room near the theatre; I wonder if it's there now? I could find it in a moment, if I were there; *we* will go there one day and look at the outside of it; but only the outside, for I hated the place itself. Yes, I sang there when I was a little one—yes, only ten years old."

"But you were not born in Cologne?"

"No, no; much farther away from this—across the Vistula." (She mentioned an old historic Prussian town.) "We only came to Cologne when we were coming to England; and we only came to England to go to America. But father has not the art of getting forward in any thing; and so we remained a whole year in Cologne on our way to England, and now we have been many years in England on our way to America; and I don't suppose we shall ever get there, unless *we* go there some day to visit your brother, Emanuel."

"But we shall visit your birth-place some day, shall we not, dearest?"

"I don't know, Emanuel; I don't like to think of it. I was not happy there—oh, not happy at all, but very miserable; and I do not want ever to see the place any more. It is like a discord, or a broken string, or a harsh note, or something of that kind, coming in to some beautiful delicious piece of music, when I turn from now to then. It was all so dull, and without color, and sad and harsh. My father and brother never could agree." (I should mention that I was aware of one of Mr. Braun's sons being still alive.) "Louis was very harsh to father, and not forbearing. I don't remember what it was all about; but I can guess now that Louis thought—well, I suppose he thought my father had not been very prudent or persevering; but I know he was harsh, and he scolded, and his wife scolded. She was very cold and hard and religious, and she always scolded me. One day, I remember, she told me I had too great an appetite, and ate too much for a little beggar-girl; and I cried half the night through, and then got up and tried to steal away, to drown myself from one of the old bridges. But an old night-watchman found me—I remember him so well; he had a horn and a spear of some kind—and he brought me back; and she beat me, and I so hated her! At last father said he would go away, and I was delighted. I did not care where we went—any where, so that we went away. Louis, indeed, was not bad, for he gave us money to go; and she was not bad either. I think she must have been a good woman, but hard; and then she had children of her own, and we were mere dependents. So I came to sing in Cologne, Emanuel, and then here; and so ends my long, long story."

During the whole of the story, which she told in a dreamy kind of tone, her eyes and lips had marked its incidents with the symphony of deep expression. She lived the old life quite over again, as she thus ran it through for me. I was glad when the story was done, so painful was the emotion it had evidently caused her.

"How happy for me, dearest Christina, that you did not go to America! I only wish I had known you sooner, and were rich for your sake, and you should never have sung in a wretched saloon."

"I sang very badly in the place here lately; but I think it was because the people there knew nothing about singing, and there was no use in trying to sing well."

"You sang only too well for me; you bewildered me. I never heard such singing before—indeed, I never heard *any* singing before, in the true sense."

"Ah, I always sang my best when you were there. I saw you the very first night, and sang for you. I loved you even then, Emanuel, though I thought you came with no good-will to me. Was I not angry and rude? *Ach!* I think I loved you always, before even that night—yes, from the very first."

"And will always, to the very last?" I whispered.

"Always—oh, always—if you remain still what you are, what I believe you to be. And if not, then—"

"Then, dearest?"

"Then all my light will go out, Emanuel, and I shall be miserable forever. Oh, if I ever think you do not love me beyond every thing in this world, then I shall hate you—no, I don't believe I ever could hate you; but I shall be wretched, and perhaps make both of us unhappy for our lives. But I think that you will never change; I knew from the very first that you would some time come to love me; and now I know that you will love me always. Ah, how bright life is now!"

Her eyes sparkled in tears. We were alone at this time in the little old room. She seated herself at the piano and sang one of her German hymns with even more than her wonted passion of pathos. I sat listening in the deepening twilight of the calm summer evening, happy—transcendently rapturous and happy.

Those were bright days. I have lingered long over them here, although they sounded but as the overture of my life, and really formed no part of the drama itself. I have lingered over them because they were so happy, and because they were so brief.

How long might we have gone on thus peacefully and happily, content with merely playing the prelude of real existence? When should we have married, and begun the business of our life-drama in good earnest? These are speculations which I used to be fond of going over and over in my mind, but which I can hardly expect any body else to follow with interest. I dismiss them here from my pages;

but the words I have written may remain, for they will serve to indicate thus early that the drama was never played out as we had pre-arranged it.

The first discordant note which Fate struck in was the death of Christina's father. The mild old man passed suddenly but very quietly out of life. One evening he complained of having a headache and cold feet. When I came that night a doctor was with him. I remained all night. Whatever malady had seized my poor old friend kept a firm hold. Toward morning he talked a good deal, now in English, now in French, now in German, intelligibly but not coherently, of his early home, his wanderings, his lost wife (whom now he saw in Christina), his family one by one, his flowers. He murmured stray scraps of German poems: "Ueber allen Gipfeln ist Ruh"—those exquisite, mournful, consoling lines which came from Goethe's soul and hung late upon his dying lips; and he whispered now that he was going to learn all the secrets of the Creation; and he repeated faintly two lines from Uhland:

"Da sind die Tage lang genug,
Da sind die Nächte mild."

Toward the end he brightened up into clearer consciousness, and called Christina by her name. I remember with a peculiar pang how he touched Christina's hand and then mine, smiled upon us in the old gentle way, full of trust and serenity, and so died. He looked only a little paler and milder in death than in life.

After this came a long sad interval, sweetened, I must own, to me by the consciousness that my presence and my love must be still more needful to Christina than before.

CHAPTER VI.

CHRISTINA AND I.

THE same little room, unchanged save for the absence of one of its old inmates, whose flute, pipe, and books stood untouched in their familiar former places. Christina and I were alone. We had been talking long and earnestly. She arose and went to the window, and looked silently and thoughtfully into the soft summer night-air. The breath of an exquisite day still haunted somehow the very pavement of the street below, and seemed to soften the hum and the tread of the people who passed under our window. The stars were faint in the violet sky, from which the light of day had not yet wholly faded.

Christina remained for a while motionless and silent, one hand keeping back her hair, the other arm resting on the side of the open window. This was one of those evenings at the close of summer when the dusk seems to descend suddenly like a veil; and as I looked admiringly and lovingly on her face, turned in profile to me and gazing westward, the roseate light which shone on it suddenly went out, and

her cheek seemed pale and melancholy. As the room appeared to darken she looked away from where the light in the west had been, and turned toward me smiling, with a sweet, sad expression, which I see even now.

"Emanuel," she said, "you have made me happy—happy, although we have lost my poor father. I never before knew what it was to feel even an hour's happiness. My life was always cold and hard, and I did not hope for much better on earth. Now I believe in happiness, for I believe in love. Do you know that I tried all I could to love poor Edward Lambert; he was so fond of me, and so good; but I could not. I did my best: I wished and prayed to love him, and I could not. I do not know what would have happened to me but for you. I know I never could have staid with my brother in that place, which would be strange to me now. I think I should have had to find out the old bridge where I was going to drown myself before, and complete the work this time. What would have become of me if I had gone there?"

"What would have become of *me*?" I asked, with something of reproach at least in my voice.

"I don't know. I thought perhaps you would have been as happy without me—but stop, don't scold me—indeed I don't think so now. If I succeeded in the world—"

"And didn't fling yourself from the bridge."

"And didn't fling myself from the bridge—don't laugh at me, that was quite a possibility too—if I didn't drown myself, but lived and succeeded, and made a great noise in the world, and got money, then you should have heard of me, for I would have come to you. If not, then you should never have heard or known any thing more of me. I think that is what I meant to do, if I clearly meant to do any thing. But you have changed all that, Emanuel, and it only remains—"

"It only remains to arrange our plans and to be happy."

"We will think of our plans to-morrow, when we are a little more calm and composed. All this has come on us rather suddenly, and I scarcely slept last night, Emanuel, with thinking of you, and how soon I must leave you. Then, even when I fell asleep at last toward morning, I had such a horrid dream; I dreamt that you yourself, with your own lips, told me calmly I had better go—that we had better separate; and I awoke in misery. But that, thank Heaven! has not come true, and I feel that we are acting the wisest part. Life is not long enough for separation, is it, dearest? and I know my Emanuel will not suffer loss in the end by his sacrifice. I see the future all bright before us—as bright as the sky was just now—that is, before the evening's red had faded and the darkness come up."

Sacrifice! My sacrifice apparently was that I consented to be loved as a man does not expect to be loved a second time in this world.

Let me explain the source and meaning of the conversation I have just described.

The death of Christina's father ought, in accordance with ordinary usage and respect for public opinion, to have somewhat changed the manner of our intercourse; but it did not—I still spent every evening with Christina as before. I sat beside her while she made her mourning-dress; I was beside her in the deepest of her affliction, and in its gradual subsidence. When the funeral had been long over, and the clergyman and one or two other friends who came out of mere kindness had ceased to visit her, I came regularly every evening, and sat for hours with her just as before. I can say literally that all the time I did not give to business or to sleep I gave to her. I always left her with reluctance, though the separation was but for a few hours. I always hastened eagerly to her, although only a few hours had passed since our last meeting. We walked together of evenings on the hills and by the sea, and watched the line of light that streamed from the west until it seemed to fade into the waves and the night and the stars came up. I learned from her to know each constellation that lights our northern horizon. Her father had taught her, like himself, to live among the stars and love them. I loved to hear her talk as much as to hear her sing—ay, “far above singing.” My whole nature was quickened and purified by hers; it was the old, old story of Cymon and Iphigenia over again.

Of course it must have been dreadfully improper, not to say dangerous, thus to spend long evenings after evenings together and alone. But we never thought it so, and indeed never thought about the matter at all. I know that nothing could have been purer than our love, more innocent than our intercourse. I do not recommend that sort of thing as a rule—I see all the danger of it; I see that the two very best people in the world—and we, good lack, were not even the second-best—might have found reason to repent such heedless self-confidence. But it is certain that we trod the furnace unscathed—nay, that we did not even know we were girt with fire from which ordinary eyes would say there was no escaping. I do not well know what preserved us; perhaps our very unconsciousness of danger, perhaps poetry, perhaps music, perhaps sentimentality, perhaps that generous subtle fire of youthful love which has so little of the animal oil in its composition. I can only say that, when we were driven out of our terrestrial paradise, we had at least no cause to blush, or hang our heads, or cover ourselves, because of shame.

Of course, however, this was not the view of the matter taken by our neighbors. It was not likely that in such a miserable little town, enslaved by the judgment of Mrs. Grundy, conduct like ours could escape gossip and criticism. The people living in the same house with Christina knew of our meetings; pupils of Christina's called occasionally in the evening and

found us together; many good-natured persons began to talk about us, of whom, I can say in all sincerity, we had never conversed. This kind of talk must at last reach Christina's ears; and it did.

One evening when I came as usual I was told that she was not at home; and I was much surprised, knowing how few acquaintances she had, and how little she cared to visit any of them. The next evening the same thing occurred. The next day I wrote her a letter asking, somewhat warmly, for an explanation. I received a reply full of love and tenderness, begging of me not to come that evening, but promising to write again. I did not grow jealous, or suspicious, or angry. I knew that Christina's heart lay open to me; but I became alarmed, expectant of some evil news; restless, sad. I think I had from the beginning a foreboding that something disagreeable would reach us from her brother. Immediately on poor Mr. Braun's death Christina had written to her brother, acquainting him with the event, describing exactly and frankly her own position and prospects, and asking simply for any advice he could give. For weeks no answer came; but we were not much surprised. In those days railways did not traverse East Prussia and connect Ostend with St. Petersburg.

At last I received a little note from Christina, written in apparent haste, and asking me to see her that evening. I went at the earliest possible moment. It was the evening with which this chapter opens.

I hurried up stairs, and found her door open. I went in, and saw her alone, kneeling on the floor, and engaged in packing up some clothes, books, and music. She looked up, and there was so sad an expression in her face that I positively started.

“Christina, my dearest,” I said, kneeling on the ground beside her, “what on earth has happened? Why do you look so sad—and why would you not see me before?”

“I am going away, Emanuel,” she replied, in a very faltering voice.

“Going away! Going where? Away from me? No, that I know you are not.”

“Ah, yes; it is quite true. I am going to Reichsberg—I must go!”

“Never! you shall not!”

“I must, indeed. See, Emanuel, here is my brother's letter. Read what he writes.”

I took the letter and tried to read it. It was in German, written in a dreadful character, which danced before my eyes maddeningly. After some impatient bungling efforts I thrust it into her hand.

“Read it, Christina,” I said; “and let me know the meaning of all this, for Heaven's sake!”

She read me the letter. It was long, well-meaning, cold but not unkindly, intensely moral, pious, and philistine. It expressed well-regulated regret for the death of Mr. Braun, but it made it a duty to allude rather pointedly

"I AM GOING AWAY, EMANUEL."

to his faults and his weaknesses. It showed how these faults and weaknesses had now left the daughter, whom he, the father, so professed to love, homeless and unprovided with any means, at scarcely nineteen years of age, in a far-off foreign country. It expressed a hope

that Mr. Braun had found in dying that spiritual comfort and faith which he ostentatiously rejected during his lifetime.

All this I listened to somewhat impatiently as Christina put into half-intelligible English its long sentences. But the point of the story

lay in the concluding passages, and these soon secured my whole attention. Louis Braun disapproved and deplored the kind of life his sister had led as a singer, utterly demurred to her idea of ultimately going on the stage, and enjoined, nay insisted, on her immediately leaving England and placing herself under his protection. He inclosed some abominable Prussian notes for the purpose of assisting her to undertake the journey, which he recommended her to make by way of steamer or sailing vessel from London or Hull to Dantzic.

"It's kind of Louis," Christina stammered out, when she had read to the end. "You see, Emanuel, he has a good heart, and means for the best. I can do nothing else. I must go; and I will help him in his business, and attend to his shop. But I will go on the stage and sing yet one day, for all that."

"You shall not go to him!" I exclaimed. "You shall be the servant of no brother, and attend to no shop. What right has your brother to control you? What has he ever done for you, that he should attempt to order you about in that way? What account of your movements have you to render to him? Leave it to me; I'll write to him."

"Louis knows not one word of English; and, dear Emanuel, I don't think your German would be quite certain to explain itself clearly to him."

"Now, I know you don't think of going," I said, warmly clasping her; "you never could smile in that way if you thought of leaving me. Write yourself, then, and tell your brother that he may go—I mean that when you really needed his protection he did not offer it, and that now you don't want it, and will have none of it. No, don't write that—of course you would not—but write and tell him you will not and can not go."

"But what can we do, Emanuel?" she asked, looking up at me with her large eyes, now all sadness and seriousness. "My brother's letter is not all; but my pupils—I did not like to tell you before—are all dropping away. Yes, it is quite true; soon, I fear, I shall have none. The people here talk so much; and now they talk of us, who never did them any harm. Yesterday a lady who had always been my good friend took away her three girls. After the holidays some always do not come back; and this time I shall have very, very few. I met Miss Griffin a week ago, and she spoke very strangely and coldly to me. I do not care about my brother much—I hardly know him at all; but I see that I had better go to him, and even for your sake I must go; and perhaps—oh, perhaps, my own dear Emanuel—we may meet once again."

"Once again! We will never part—never! Why can not we at once put a stop to the talk of all these people? Why can not we be married now—to-morrow? We do not want much to make us happy. Listen, Christina—hear what a salary I have; in a place like this we might live on it forever;" and I whispered its amount

—about as much as a fast young Londoner might spend in gloves and cigars.

Christina made no answer. Was she overwhelmed by the largeness of my means, or rendered aghast by their smallness?

"We shall be the happiest people in the world," I urged. "You can give music-lessons, if you like; or we will give concerts together. Why, the singers at that concert in the Assembly Rooms last night were good-for-nothing humbugs, I have been told; and yet people paid to hear them just because they came from London. I am sure no one of them had a voice any thing like yours. We only want to get known. We can't give musical entertainments together now, that's quite clear; but Mr. and Mrs. Emanuel Temple Banks would sound famously, *nicht wahr?*" said I, endeavoring to become jocular. "Or suppose I come out as a blind singer, like Vult, in the story—Richter's story—your poor father read to us so patiently when we were not listening to half of it? Suppose I be a blind singer, and you my wife or sister, sustaining and guiding me? I think it would draw splendidly."

"Nonsense, Emanuel; you must not talk such nonsense," said Christina, smiling nevertheless, though perhaps a watery smile. "We can not be married yet; it would be too rash; and what would people say?"

"What should we care? Let them say what they please. It doesn't appear that the people who concern themselves about us say such very flattering things already that we need court their good opinion. Let them speak well or ill of us—there is a world elsewhere," I exclaimed, in splendid Coriolanus fashion.

"There is, there is indeed, Emanuel!" she said, springing up and with brightening eyes; "there is a world elsewhere, thank Heaven! which is not like this narrow and miserable little place. Oh, who would live here and stagnate, when there are places where life has a chance of success!"

I saw that she was yielding, and I pressed my advantage. I clasped her in my arms, and vowed I would not release her until she had pledged herself never to leave me.

"How could I refuse any longer?" she said at last. "You have prevailed, my own; ah, I am afraid I was only too willing that you should prevail. If you are not unwilling to sacrifice yourself for a poor singing girl, what can she do but accept the sacrifice when she loves you so dearly as I do?"

It was then that she gently withdrew from me for a moment, and went to the window, as we saw her at the opening of this chapter. "Dost thou look at the stars, oh my star?"

We spoke but little of our plans and prospects that night; we were too happy for talk. Strange thing in mortal life, we knew we were happy! It is not retrospect alone which throws for me a golden glory round that unforgotten evening; I knew at the hour that a golden atmosphere floated round us both.

Christina had utterly flung away the early doubt and despondency of the evening, and returned to the old joyous self-confidence. She looked at the future with the brightest eyes.

"No chance of our failing, Emanuel," she said, ecstatically.

"And even if we do fail, my dearest," I replied, "what then? We shall be none the less happy. I do not care one rush for any success in life while we can live for each other and be happy. We only value life itself that we may love each other and be happy."

She smiled a triumphant smile. "Have no fear," she said; "we shall have love and happiness and success too. I know we shall; I see the future as clear as to-day. Now, dearest, you must go. I shall see you to-morrow night, shall I not?"

Needless to give my answer—rather, I should say, to describe it. As I was leaving, my eye fell upon the trunk which she had been packing when I came in.

"You may undo your work of packing now, *liebchen*," I said, smilingly.

"Nay, is it worth while?" she asked, smiling with a significance I did not understand. "Remember the world elsewhere."

Need I say how we parted? Need I tell how often I walked backward and forward under her window that night? Need I say that I felt the happiest and the proudest of human creatures? Need I say how I lay awake, and tossed half the night through, recalling every word, every glance, every kiss; how I shaped out plan after plan for our future path of life; how I felt all the passion and the ecstasy, without any of the doubts and feverish fears and torturing pangs, of love?

CHAPTER VII.

THE PATHS DIVIDE.

I HAVE already said that the one thing which gave me any uneasiness as to the future was Christina's passionate desire to go on the stage. This had not, indeed, been a discordant note in our harmony; but it was one I always endeavored not to touch. I kept the question as much as I could out of sight; I compromised with it, made myself believe it would arrange itself somehow. In fact, I was afraid of it, but still kept hoping it would come to nothing; for the more and more I loved Christina, the more and more I wished to keep her wholly to myself, the more jealous I grew of any art, any profession, which could divide her thoughts with me and my love. I could have lived in a desert island with her forever—yes, I still think I could—and never wearied of her, or longed for other companionship. Doubtless to most persons such a profession will seem merely the conscious or unconscious exaggeration of sentiment; doubtless in their case it would be so. I am speaking of myself—of my own heart, and of what I know. I could have lived with her

—we two alone—a long life through, and known no weariness or change if she knew none. The first strong emotion of all my life was love for her; and the more I grew to love her, the more jealous I became of the art which she so loved.

I should have been glad to compromise for a life of music-teaching and singing at concerts and oratorios, and such milder and safer paths of the lyric art. Indeed, I had myself had several engagements at local performances of the kind, and was, as I have mentioned already, becoming a sort of small, very small, celebrity. I was saving a little money to begin married life withal, and was very economical and careful, my whole heart being set on one object; nevertheless, the general impression of respectable and good people in our circle still was that I was simply going to the devil.

Now the attorney in whose office I daily worked was a very respectable man. He was a pious man, and sang very loud in church. He was also a very pompous man. He had a very respectable, pious, and pompous wife. He consorted with the rector; he sometimes dined with the local lord; and at the annual flower-show his wife was always taken notice of and politely spoken to by an evangelical countess, and by the wives of the county members.

The very morning after I had made my pact with Christina, I was summoned to my employer's room almost immediately on his reaching the office. When I came into the presence of Mr. Bollington—that was his name—I saw, by the very way in which he settled his neck into his collar, that something was up. I may say that I never liked Mr. Bollington; his manner somehow seemed always to convey to me the idea that he regarded a salaried clerk as simply a poor devil.

"Oh, ah, Mr. Banks," he began. "Yes; I want to speak to you. Close the door. Thank you; that'll do. Mr. Banks, I hear you are getting very much into the way of singing at nights at concerts and oratorios, and all that kind of thing. Now, that is not quite a legal sort of thing, nor quite respectable in our line of business; and I am rather afraid it will tell against us, you know. I am very particular, Mr. Banks, as you know. Law is rather a particular sort of business. People say law is jealous, and won't have any rival, don't they? I think some poet or novelist, or somebody, says something of the kind. I don't think it will do, Mr. Banks; I don't indeed. Law is drier and duller than music; but I think you'll find it better in the long-run."

I was a good deal embarrassed by this address. I had no respect for Mr. Bollington; I knew him to be merely a stupid, respectable old ass; but respectability has somehow an awful sort of halo of divine right yet lingering about it, and it impresses the Bohemian more than he cares to acknowledge. I, an embryo Bohemian, had always to make a little mental struggle to assert myself against this respectable member of society. Now, however, there were other

reasons to embarrass me; he seemed actually inspired with a purpose to destroy all my projects.

I stammered out something about being fond of music, and not seeing any harm in such devotion.

"Pardon me; I have not said there was any harm. A taste for music is very respectable; and I am the last man in the world likely to find fault with an inclination which some of the most respectable persons I know, even in my profession, cultivate—in a manner which, in fact, adds to their respectability, I may say. But that is in an amateur way, Mr. Banks; in an amateur way. It is quite different when one comes to be a professional performer; and I hear, Mr. Banks, that you have been going quite into the professional line of late. Now, you have not consulted me on the subject, or ascertained whether I considered such an occupation quite consistent with your position here; and I have therefore found it necessary to send for you, and, in fact, to open the subject myself."

"I really didn't suppose," I said, "that you could have any objection to my improving my income by any means—any honorable means, of course—which did not interfere with my character or my business here. I have not been inattentive to the office."

"Pardon me; I have made no charge of the kind."

"I do not see why one may not have different occupations at different hours of the day."

"In a general way there may be no objection. Many occupations admit of such combination; but we are now speaking of a particular case. This firm, Mr. Banks, has a character for strict attention to business, and business of a peculiar and exclusively respectable kind. I don't say that in a certain kind of low criminal business, for example, there is necessarily any reason why a solicitor should object to his clerk singing at concerts after office-hours. I think it quite possible that such singing and a certain kind of criminal business might combine very well. But ours is not a business of that class, Mr. Banks. Our clients are of quite a different order of life, and they have strong and very proper views on the all-importance of respectability."

"But really, Mr. Bollington"—I had now quite reasserted myself; stupidity had washed all the imposing guilt off respectability, and I could have laughed at or sworn at it—"really, Mr. Bollington, I don't quite see that I am bound to give up every thing to such views."

"Not bound at all, Mr. Banks; certainly not bound. You are not an articulated clerk, and are quite free to act as you please. Let the conversation close for the present. Be so good as to think the matter over. I am sure you understand my determination. You can therefore decide for yourself, and let me know, and we can recur to the subject, if necessary, say the day after to-morrow. And now, Mr. Banks,

about the papers in the case of Davys and Pontypool, if you please."

This was of course an *ultimatum*. A greater *contretemps* could hardly have occurred. All my plans for the present were based on that very combination of music and law which Mr. Bollington declared to be only possible, if at all, in the case of a very low sort of criminal business. This was a sharp and sudden blow to me; and I had the whole day to bear it before I could pour out my bad news and my feelings to Christina.

Grimly enough I went to her lodgings that evening. I thought the very sky looked gray above me; and Christina's gladsome, confident eyes were a sort of new pang and reproach to me.

"Oh, Emanuel, I am so delighted to hear it!" was the reply with which she broke out when, with a sad face, I had got through my dismal news. "I am delighted from my heart to hear it! Why should you stay in so miserable a place, and be paid a few wretched shillings a week, you who are better than them all; you with your voice—and your talents—for you know I never would care for mere voice? No; you are rid of it all now, and are free. Now you will have to throw your soul into the art you are fitted for, my dear Emanuel. Ill news, dear! This is the best and brightest of news to Christina. I always feared that you would be content to work and wait here, and I have had enough of working and waiting. You are so easily contented—oh, far too easily contented! but only because you are modest of your talents, and do not know what you deserve and what you can be, as I do. No, no; my Emanuel will be no more a slave, but an artist. Tell him so, and be free."

There was something pitiful to me in hearing the enthusiastic girl run on in this wild way.

"Alas, Christina," I said, "it is not so easy to make a great way in the world as you think—you girls, with your vivid imagination and your confidence. You see me with eyes which will guide nobody else. Think how difficult it is to get on in this place."

"In this place! Yes; but who would think of this place? Leave it, my Emanuel! London and Paris—these are the places for us. Why delay here at all? why not go to London at once, and together? why, dearest Emanuel, why?"

Her impatience rose to something like wildness.

"Because, my love," I said, looking as wise and as cheerful as I could contrive to do—"because in London people who have neither money nor friends may have to starve."

"But we have some money. I have saved some; a little—and not so very little. See!"

And she showed me in triumph a few poor sovereigns heaped up in a drawer, where any body who chanced to enter her room might have found, and, if so inclined, stolen them. I could hardly keep back my tears—I was only

a boy, after all; and there was something unspeakably pitiful and touching in the pride and confidence built upon the few poor golden coins.

"My dearest, your money and mine would not keep us long in London. People must endeavor to make a beginning where they have friends."

"Then you are content to give up your career; give up your chance of becoming a great artist—as I know you would be?"

"No, not give up, my own Christina, but just wait only a little for a better chance. Listen, you wild girl; we must give up something—"

"But listen, Emanuel. I have set my very soul on being a great singer, and on your being one too. You may think me a mad creature; but I know that in this I am wiser than you. Don't stop on the way, and don't be afraid. I am not afraid; why should you—a man?"

"You are not afraid," I said, taking both her hands, and trying to pet her into calmness, "because you are a generous, imaginative, darling girl, who, once you love a man, think the world must see him as you do, and that he must turn out something great. I know more of the world, and of myself, than you do. I only ask that we should be patient for the sake of each other. I can not do any thing which might make you unhappy. You may be ready to sacrifice yourself; but don't ask me to sacrifice you."

"Listen, Emanuel," she said, disengaging her hands from mine, and then laying one arm on my shoulder and looking earnestly, imploringly at me (I see her deep dark eyes and eager trembling lips even now this moment); "do not talk of waiting and of patience, and of living a life of dull, stupid plodding in this hateful place. Only last evening you appealed to me—and persuaded me; let me now persuade you. Do you think me bold to speak in this way? Yes, I am bold now, because I love you so, because you are all in the world to me, and I tremble to think of our separation."

"Separation? Who speaks of separation? What could separate us?"

"You do not know; I do not know; any thing, any delay—a night's reflection may change our fortunes, may change our hearts! I tremble to hear you talk as if you only wished to cling to this place forever."

"And I tremble to hear you speak as if ambition, and not love, were your impulse, Christina! Yes, I could be happy with you here, even here, forever!"

"But let us not talk of that. I could not see you condemned to an ignoble, stupid life here; I love you far too deeply. Your ambition is mine; your success would be mine. Oh, Emanuel, love me and my ambition too, or you can not love me, you can not understand me at all!"

"If the choice were between your love and your ambition," I said, sullenly, "I know which would win."

"You can't divide them; they are one and the same. They are as my heart and my soul. Oh, Emanuel, you know I love you. I have no one on earth whom I care for but you."

"And yet if it were a choice between giving up your chance of a career, your dream of a career"—I was now bitterly jealous of her ambition, and spoke in almost savage tones—"you would throw me away without a thought. Do you call that love?"

"No," she replied, vehemently, and turning from me, "I do not. But I loved an ambitious man, a brave man, an artist, and not a slave."

Had she struck me in the face I could not have felt the blow more heavily. A surprised, passionate, injured cry was breaking from my lips. I repressed it with all the force of energy I could call up; but I turned away, and, sitting on the nearest chair, covered my face with my hands.

I do not know how many minutes or seconds I had sat thus. It seemed to me a long interval of bewildered pain and bitterness. I felt at last a hand laid on mine, and a sweet, piteous voice murmured "Emanuel!" I allowed the hand that covered my face to be drawn away; and then I saw that Christina was kneeling at my feet, and looking up at me with eyes full of tears.

"Oh, forgive me!" she exclaimed; "my dear, dear Emanuel, forgive me; I did not know what I was saying."

"You have cruelly misinterpreted me, Christina."

"I have indeed; and that is the second time in our lives I have done so. But I will do so no more. How could I use such cruel, shameful, false words to you! But I was disappointed; oh, so bitterly disappointed! and I was mad."

"Dearest Christina, you know—if you do not, at least Heaven knows—that I only think of your happiness, that I only shrink from exposing you to utter poverty."

"But what else have I suffered from my birth? I am well used to poverty. Ah, if you did but know all! I prefer any poverty, even alone, to going to my brother. Why should I fear it with you? But I will not talk in that way any more; I was foolish and wild; and you were right not to heed my folly. You are calm and have sense, and you know the world."

"You are a true woman, a true heroine," I said, my bitterness wholly melted away by her sweetness and submission, "and you would rather have the courage which springs without counting the consequences than that which calculates and waits. So would I, perhaps, if the consequences only affected myself alone; but a man who has the happiness of the woman he loves placed in his hands must not plunge headlong with her and himself too. No, my dearest, the courage which endures is often the best. We can wait for our career."

"We must wait indeed, Emanuel; and perhaps a long time. You must have thought me

a wild, romantic fool. I am sorry now, for I see that you are right."

"Then I have convinced you?" I asked, joyously, proud of my pitiful and jealous prudence, as if it were any thing but faint-heartedness, suspicion, and folly.

"You *have* convinced me," she said, in a low, sad voice. "Let us not speak of it now any more, Emanuel; at least for to-night. I will sing you something."

She sat down to her piano and sang, and I listened until the dusk deepened into night. We parted with affection; but there was a sadness in her manner which I might have thought ominous. As I stood a moment below her window I heard her still faintly singing, and knew that she was not sitting but moving through the room. I walked slowly away, often looking back; suddenly I heard her window raised, and, turning round, I could see, in the deep purple of a late summer night, the outline of her head and neck dark against the sky. I thought she beckoned to me, and I hurried back.

"Only to say good-by," she said in a whisper; and she seemed strangely fluttered and excited. "I only wanted to say good-by once more, dearest; just good-by."

As she leaned from the window a rose she was wearing in her breast fell at my feet. I took it up and put it to my lips. Some coming footsteps were heard, and she whispered in a very faint, very sad tone the word "*Ade*." Then she quickly closed the window and drew the curtain, and I could see her no more.

Her voice lingered in my ears as I went slowly home, and was in my dreams all night. I longed for the next night, that I might listen to it again.

So the next day dragged heavily through, and I was impatient of it, of myself, of every thing, feverishly anxious to meet *her* again; haunted fretfully by a fear that I had made myself look mean in her eyes; by a doubt whether, after all, my wisdom had not been folly; by a vague foreboding of disunion between us. I made many mistakes and blunders that day; and Mr. Bollington more than once put up his double eye-glass and looked at me with cold significant scrutiny.

At last the hour came for leaving the office. I was at the door, rejoiced to be free in the evening sunlight, when a small boy, whom I knew well, came up and handed me a letter. The urchin was the youngest son of the poor watch-maker who had the shop over which Christina lived, and he was often bribed with buns, apples, and half-pence to act as letter-carrier between us. So I knew at once what he came for, and I snatched at his letter.

"Oh, but stop," said the young varlet; "is the office closed for the day?"

"Yes, Tom; what of that?"

"And you are home for the day?"

"Yes, yes. Why do you ask questions, you little imp?"

"Because she told me I wasn't to give it to you until you were coming away. I've had it in my pocket ever so long."

So he gave me the letter, and darted down the street, alternately whooping and whistling.

I opened it, and read:

"MY WELL-BELOVED, Farewell! I have thought and thought, and I see we must not marry yet. Oh, forgive me, Emanuel, and be not so very sorry or lonely. I think we must not meet for a long time. I am gone away, and you must not think of following me or seeking me; for the Heaven has told me that now I could only be an encumbrance to you, and that if we were married now, you would be sorry one day. I go away that I may some time be able to help you. If ever I can, then we shall meet again, for I will find you and come to you. If not, then far better we meet no more. Either way it will be better, and you will thank me some time, and say Christina had right. I love you still; all the same as ever. Still love me: farewell, and think of me often, as I shall never, never forget you.

"CHRISTINA."

This was all. The letter was written in the quaint half-German character and the constrained foreign style which I knew so well. I turned down a dark lane out of the sunny street; the ground seemed to heave under my feet, and black spots danced before my eyes in the sunlight. I was not far from the sea—my old, old confidant; and I hurried to it as if my lost love were to be found by its margin. Staggering, slipping, with dazed eyes and choking throat and bursting heart, I reached the strand, and flung myself down, and read the letter again and again and again. And then I laid my head upon the ring of a rusty anchor, and I broke into a boyish passion and tempest of tears. She had made her choice—and left me! Of the beautiful happy life that had grown up around us, and that seemed destined to live with our lives, there was nothing left me but my memory, my grief, my agony—a few letters, and the flower that last night had fallen from her breast.

From that time I never saw her face for ten long years.

Did I make any effort to recover her? Did I not? All I could learn at her lodgings was simply that she had gone by the London coach, and that she had said she was going to her brother's. I hurried up to London by the very next coach—with what result I need hardly say. Utterly a stranger in the metropolis, my search there was quite thrown away. I could only learn at the coach-office that such a girl had actually traveled to town the day before, and that was all any body knew of her. I wasted days in hunting about the docks for Dantzic or Königsberg ships or steamers. I found nothing of her. Then I bethought me that she might have gone to Hull, and I too went to Hull; of course utterly too late to have stopped

her even had she gone there. I had made up my mind to follow her, when it occurred to me that perhaps, after all, she had relented and written to me some word of comfort and guidance, and I hurried back to my native town. No letter awaited me, and I resolved at least to try the last chance and follow her to her brother's. I remembered the name of the street in which her brother lived, and it could not be difficult to find the house. Besides, I was now seized with a detestation of our town and all that belonged to it; and it seemed to me that I must leave it or go mad. The thought of living there without her, of toiling there uncheered and unloved, of spending drear evenings alone where I had been so happy, of looking up at the window where she could no longer be seen; all this was simply intolerable to me. I had never entered my old employer's door from the evening when I received Christina's letter. What Mr. Bollington thought of me, or whether he thought about me at all, I cared nothing. I sent no explanation or word of any kind. I had some little money saved; I sold some few poor things, and got a little more money; and I took a passage in a Baltic vessel which was to put in at Dantzic. One fair sweet autumn evening I looked back on the strand where I had read Christina's letter, and watched the white houses of the old town of my childhood, and the hill whereon was my mother's grave, until all sank out of sight, and with them closed the first bright chapter of my life.

The weather changed, and we had a rough, slow, miserable passage. Our wretched heavy old tub was beaten about the North Sea and the Baltic so long that it seemed to me as if life had been actually changed into a perpetual tossing on broken wintry waters. At last we reached Dantzic, and I made my way to Christina's native town—a town of canals and islands, and numberless bridges, and steep, narrow, darkling streets, with whole populations living in each house.

I found Christina's people at last. They received me at first coldly, and even harshly, regarding me as her evil genius; but having at length come to understand that she had renounced me, they lapsed into pity and were kind. But they knew nothing about her—absolutely nothing. She had not come there; she had not written any reply to their last letter. My coming first told them that she had left her old home. My journey had been utterly fruitless and futile.

I took a passage again for England. Sick at heart, and weak in frame, with only two or three sovereigns left, I landed one wet, foggy evening near the Tower of London. As I stepped ashore I said to myself, "Here, then, in London will I stay. I accept battle here. I will succeed here or fail. I will live here, if I can; if not, I do not much care how or how soon I am to die here. Here I shall meet Christina again, or nowhere."

CHAPTER VIII.

FROM ARCADIA TO BOHEMIA.

So I kept my word, and drudged for years in the solitude and darkness of London poverty and struggle. I gave myself up to the teaching of music and to concert-singing, when I could get a decent engagement, or indeed any engagement at all. Understand that mine was for a long time a hard struggle. I lived in a garret—I was familiar with hunger. The details of the first few years may be spared. Stories of struggles in London by rising young men have all a sort of family resemblance; indeed, they are as much alike as Lely's court beauties; and if they sometimes differ in catastrophe—one adventurous career ending in Westminster Abbey, and another in the Lambeth Workhouse—so one court beauty may have died in the purple, and another in the lazar-house. I do not care to weary the reader with a minute account of my struggles for a living; I only ask him to understand that they were real and hard; that for a time they regularly included actual want; that they often meant destitution; that hunger was a common condition; that once or twice I thought it likely enough my fate must be to die of starvation. Let us pass over all this, and come to a time when I began to have a certain income, however small; when I had a few substantial engagements as a teacher of singing and music; and was beginning to think of struggling my way to Italy in the hope of returning thence a qualified candidate for a place on the lyric stage. For on this I had set my heart. Pride, disappointment, baffled love, all conspired to make this seem the necessary task of my life. To prove myself—even were it only to myself—not a failure, not a coward, was a resolution within me strong and tenacious as revenge. It was, indeed, my revenge.

I will not say that the memory of Christina had not somewhat softened, faded into a gentler recollection, during all this time. But its impression was always with me, giving sadness or courage, hope or despondency, as my chances and my mood would have it; always, most certainly, exalting and purifying the mournful monotony of my drudging life by the memory of something beautiful, tender, and distant. For years of my life I was in the habit daily of going up and down the river in the boats, and I became an intense admirer of St. Paul's. I admire that building—forgive me if the confession show stupidity and want of taste—more than Pantheon or Colosseum, than Westminster Abbey or Notre Dame, or Cologne or Antwerp Cathedral, or St. Peter's or St. Sophia's. To look up at it from Blackfriar's Bridge on a winter evening, when a cold heaven and a few whitening clouds are behind, and the dome seems a mere flat shape against the sky, a mere form and outline, delighted me. To see it sparkling in the rosy color of a summer morning, with light and shade succeeding each other on its spires and its rounded sides, or rising out of the masses of sunset

cloud-heaps like a glimpse of some glorious heaven-city, was a sight still more exquisite. Even when the November fog is around it, and its outlines can only be seen at broken and vague intervals, it is a delight to think that behind that curtain of vapor lie rich spires and domes which one breath of wind might reveal in all their beauty. In whatever season or hour, it seems to me to romanticize and to sanctify the hideous commonplace stretch of roofs and chimneys, and wharves and the leaden Lethean river, on which it looks. So was the memory of Christina, and the presence of my love and even of my disappointment, in my hard and commonplace life.

Sometimes I have deliberately come to one of the bridges in the early morning, and stood in one of the recesses and watched the different phases of beauty the glorious dome would assume in the glowing light and the changing clouds, until perhaps at last the whole air filled with brightness, and every cloud vanished, and the dome and cross were alone in the blue heaven. But these were rare enjoyments. Generally I caught glimpses of my favorite building as I made my way among the bustling crowds on the bridges or on Ludgate Hill, or as I passed beneath in one of the penny steamers. So, too, of my memory of Christina. Sometimes I had an hour or a whole evening to give to my boyish love, and I brought her back before my mind and my eyes until she stood as clear and as life-like before me as when we lived in Arcadia together. But these, too, were rare delights. In ordinary life I only caught mental glimpses of her as I fought my way through vulgar difficulties, and obtained some mean and commonplace advantages. But the influence was there always. I am a believer in beauty and nature and love, and all the rest of it. With a memory like mine, a faint hope, a strong purpose like mine, life could never become wholly vulgar or contemptible. "So long," says the great prose-poet whom Christina's father used to read to us in the old nights, "as the sun keeps but the slenderest rim of its disk unclipped the world is not given up to darkness."

All this time, be it understood, my ordinary way of life was very prosaic, poor, and mean. I was now—say seven years or so after my coming to London—only just lifting my head above mere poverty. I was utterly obscure. I was living in a low and swampy district on the Surrey bank of the Thames, in the Putney direction. I lodged there with a poor, respectable, and lady-like old person, whose appearance attracted me when I happened to come that way hunting for cheap and airy apartments. The neighboring population consisted chiefly of brickmakers and market-gardeners. A park having been promised, a few rows of cheap stuccoed houses were built, and christened Albert terraces, Garibaldi villas, Alma places, and such other appropriate and attractive names as the whirligig of time chanced to bring within the easy intellectual range of speculating builders.

The roads were damp and undrained, and the whole place looked specially cheerless. The inhabitants of the terraces, villas, and places in no case belonged to the indigenous population, but were of a half-genteel, half-pauper, and wholly nomad class, like ourselves. Many people tried letting lodgings or opening schools there, and failed. One or two persons having privately the care of insane patients, and probably rather anxious to keep them insane, brought them to bide in this dismal swamp. A few government civil officers—Customs, Inland Revenue, etc.—who had not risen in their departments, came and settled there. A forlorn water-color painter, a hopeless photographer, were among our neighbors; in fact, any kind of people who, dreadfully poor, yet would not wholly abandon the appearance of gentility, drifted thither naturally. So long as the villas and cottages were kept in decent repair they looked pleasant enough, and indeed rather fine and imposing. A semi-detached villa, with a vast row of steps and urns at either side, somewhat awed the visitor at first; but the urns were full of dry mud and dead leaves and spiders; the drawing-room was uncarpeted and hardly furnished; a dirty slatternly servant, or a little girl with a torn frock and curl-papers, opened the door; grass and weeds grew upon the sides of the parapets; the only traffic consisted of great coal-wagons going to and from the neighboring railway-stations. The lanes were blocked up with perpetual mud; the frog looked in at the kitchen-window; the maggot and the worm made themselves free of the back-parlor. Here and there small rows of shops had been begun and suddenly stopped, and no one ever seemed to have any idea of completing them. My landlady's daughter called the whole settlement "a refuge for the destitute." It was decaying, but not venerable; it was new, but not fresh; it had all the disadvantages of newness, and all the defects of age. I heard a lady near whom I happened to sit one evening in a river steamer describe it to a companion, when its swampy flats came in sight, as "a deathly place." The phrase was picturesque, effective, and very appropriate. It did look a deathly place; but it had the advantages—to me supreme—of being very cheap, and of having easy access to the river, and therefore to town. In this refuge for the destitute, then, began my march to wealth; in this deathly place opened my struggle for life.

My landlady and her daughter were poor—dreadfully poor. I had seen enough of poverty in my own town, and indeed in my own surroundings, but somehow it was not poverty like that of Mrs. Lyndon and her daughter Lilla. Provincial poverty is hardly ever indeed quite the same as London poverty—there is all the difference that exists between a thatched hovel and a Drury Lane garret. But that was not the difference here; Mrs. Lyndon was always clean, neat, and well dressed; and she always seemed to be able to get mutton-chops for her

daughter's dinner. The daughter always dressed like a girl accustomed to wear good clothes, and therefore not afraid to be occasionally shabby. She never looked worse than like a lady in dishabille. There was none of the artful neatness, the mournful nervous precision, of conscious poverty about her. What on earth did they live on, that mother and daughter? I had been with them now for a long time; I was constantly being consulted by mother and daughter about their pecuniary affairs. I sometimes counted over the amount which I knew the lodgers to pay, and it still left a pound or two of the house-rent unaccounted for, and the rates and taxes altogether unapproached. Every other day some tax-collector called and left a paper. These documents used to lie in little dusty, sooty piles on the chimney-piece; I do not know that Mrs. Lyndon ever thought about attempting to pay off any of them. I scarcely ever came in at the door without seeing some collector arguing and threatening in vain. I think the dwellers in these neighborhoods used to allow debts of this and other kinds to run up until they reached an insurmountable pile, and then they removed at night to another locality. They were up to all manner of dodges. Sometimes the house was taken in the daughter's name; and this fact enabled the mother, who was always at home, to waive the responsibility away from herself and stave off the collectors a little longer. They seemed ashamed of nothing. Lilla would entertain me sometimes through a whole afternoon's walk with narratives of the straits to which they had been driven, and the success with which they had come through them. You could not contemplate poverty of this sort without an impression that in its meanness and its cynicism it bordered on vice; and yet its endurance, its frankness, its cheerful determination were dashed with the flavor of a kind of virtue. You must pity people so hard up, and you must also feel a certain contempt for them; and yet in my case I could not help liking them, trusting in them, and feeling something resembling affection for them. They were in every sense so kind-hearted, in one sense at least so true; and then we were all so hard up together, that mere necessity and propinquity made us companionable, as people may be who are forced to pass the night beneath the same tree in Hyde Park, or under the same dry arch of the Adelphi.

A girl like Lilla Lyndon was, to my provincial mind, a perfectly wonderful phenomenon. She was extremely pretty, with dark skin and crisp, wavy, dark hair, and bright, laughing, twinkling eyes, and a smile the most confident, sweet, and winning one could well be gladdened by. She had plenty of talk, and she talked in a voice just a little sharp, but with a charming accent; and, in whatever poverty and privation, she had something like the manners of a lady. But these were not the peculiarities which most struck me. I was principally surprised by her inexhaustible knowledge of practical life. How

old was she? Hardly twenty, I should think, at the time I am now telling of, and yet she seemed to know London, its ways, its people, its life, its tricks and dodges, high and low, to the very heart. No royal road was that which had led to such learning! Many a hard struggle must have been battled through before such sad practical experience of the world's warfare could be got into that pretty little curly head.

Lilla always dressed with an appearance of fashion. If a new style of bonnet came in, I sometimes found her at night working away at her own old bonnet, and next day it was converted into a very deceptive imitation of the reigning mode. She reconstructed her dresses as often as the British Board of Admiralty reconstruct their war-ships. When crinoline came in she was in the front of the fashion, with petticoats wide enough for a duchess. She was always doing some mending work to stockings and slippers. She was absolutely without hypocrisy or deceit of any kind; even the pardonable feminine deception which keeps ready to hand a piece of crochet-work or bead-ornamentation to be produced the moment a tap at the door announces a visitor, while the real piece of work, the pair of stays or flannel petticoat in process of repair, is hastily thrust under the sofa-cushion. Whatever Lilla Lyndon was doing when you came in, that she kept on doing as unconcernedly as before. You found her darning a stocking, perhaps, and she continued the work—sometimes, it may be, calling your special attention to the frayed and tattered condition of the article. You found her in curl-papers, and she volunteered the admission that she was too lazy to take them out when getting up that morning, or that she wanted her hair to be in particularly good curl that evening—perhaps because her uncle was going to take her somewhere. She was ashamed of nothing that she did. Let me do prompt justice to a clever and pretty girl, and say, to prevent my readers from misjudging her, that she never did any thing to be ashamed of, except talk over creditors, and go in debt when she had no prospect of paying. She was honest in every way except as regarded creditors; and you could as easily have convinced a cat that it is dishonorable to steal cream as induced Lilla Lyndon at this period of her life to believe that the laws of morality have any thing to do with the relations between debtor and creditor.

Lilla's uncle was for some time a mysterious and mythical personage to me. The very first day I became acquainted with mother and daughter I heard of the uncle, who was a member of Parliament, and had an estate in Leicestershire, and who would not do much for them now, but they hoped would do something some day for Lilla. They did not boast of him by any means in the manner of ordinary poor people dragging in a story of a rich relation, but simply referred to him as their one sole possible resource and holdfast in utter emergencies. Gradually I came to hear of the various arts and

expedients by which Lilla contrived from time to time to coax or wring a few pounds out of him. Mrs. Lyndon never ventured to go near him. There was a sort of treaty, I fancy, that she was never to intrude on him. I could gather from them that he could never forgive her for having been virtuous, and having thus rendered it necessary for his brother, when he fell in love with her, a poor girl, to marry her. He was now more angry with her than ever because she was poor and lonely, old and shabby. No doubt many of her shifts and schemes and pressing appeals for money often made the relationship seem a very discreditable thing. The mother and daughter had not known him very long. Lilla's childhood had been passed in Heaven knows what poverty and meanness, her mother never daring to apply to the wealthy and offended relative. Lilla herself told me, with some pride and much laughter, how she, being driven to utter desperation one day, determined upon hunting down her uncle, and how she found him out in his great house in Mayfair, and faced the powdered servants, and insisted upon seeing him; how she waited outside the hall-door for two mortal hours, very cold, very hungry, but resolute, and prepared for the encounter by being dressed in whatever finery she had got; how at last she saw him, and was rather gruffly received; how she began to cry, thinking that the proper way to soften a cruel uncle, but was soon undeceived by the cruel uncle telling her sternly that he hated crying women, whereupon she desisted from weeping, the more readily because she had not the least inclination to cry; and how at last she compelled him to admit the relationship, and came away with a permission to call again and a ten-pound note. This present she changed at the nearest shop, and treated herself forthwith to a pair of gloves, a new bonnet, a fowl to be brought home for dinner, and a hansom cab to her own door.

Since then she had never lost sight of him. He must either have begun to accept her existence and her visits as a kind of dispensation not to be any longer resisted, or she must have really succeeded, with her pretty face, genteel figure, and coaxing ways, in making him fond of her. He was a widower, and had daughters of his own; but they would never see Lilla, who, for her own part, was only too happy to escape seeing them; and all her visits, therefore, were paid in the absence of these inflexible ladies. Mr. Lyndon seemed to me, by Lilla's own admission, to have done a good deal for her. He had obtained for her situations as governess in various families in London, in Cheltenham, in Edinburgh, in Bath, in Scarborough; but she always quitted her place somewhat abruptly, and came back to her mother reveling and rejoicing in her freedom, which she celebrated by laying out part of the balance of her salary in a fowl, or oysters, or a lobster, or something nice for supper. Terrible trouble had she each time to make her explanations and excuses to her uncle, and cozen him

into forgiving her. From various hints and stray words, I conjectured that she did not get on well with the ladies of any family; and I fancy she had the evil fate, either by intention or innocent inadvertence, to attract a good deal too much of the notice of the husbands, brothers, sons, friends, and male visitors generally, of the houses into which she was successively introduced.

I often marveled that, in a place like London, so quick and clever a girl as Lilla could find no way of converting her energy and ingenuity into money. But practical capacity of this kind she seemed not to have, or not to care about exerting. I began to find, too, that the counsels of her mother did not much tend to make her industrious to any purpose.

"My Lilly is a good girl," poor Mrs. Lyndon would say to me; "a good girl, Mr. Banks, although I say it. She ought to be a lady; and perhaps she will be one day. If I were dead and out of the way, I think, perhaps, they would make her a lady. She isn't fit to lead this kind of life; she's too delicate and too refined; any body can see that. She can't eat the kind of dinners I have to set before her sometimes, poor child."

Lilla was immensely fond of the pastry-cook's shop, and had a taste for lobster-salad as finely developed as ever I saw. There was something unspeakably touching in the manner and tone of the old woman when she spoke of this bouncing London lass, and the sincerity with which she evidently regarded her as too delicate and fragile for the coarse world around.

"She isn't strong like me," the emaciated old creature would say, the tears blinking in her sad and faded eyes. "I was a farmer's daughter, Mr. Banks, passing half my days in the fields and the open air, not like a poor, peaky Londoner. I was a fine, stout, rosy girl at Lilly's age; and long before that I could cook and bake and brew, and put my hand to every thing about the farm. Once we had a great harvest-home dinner, and I cooked a beautiful fawn for the day; and oh, bless you, the praise I got for it! My father called me up to the table, and the farmers all drank my health, and told me I'd make such a splendid farmer's wife. I was that proud, I can tell you; and I didn't expect then to be living in London a poor old woman. But my poor Lilly was brought up in town, and I never had much to give her, dear child; and she can't be expected to look strong and well as country girls do."

Mrs. Lyndon was not a widow. That piece of information had been volunteered to me by Lilla. Lilla told me her father had deserted them, and gone abroad somewhere, and had not since been heard of.

Sometimes when I came home late at night I used to find my way down to the kitchen, where the embers of the fire were generally burning, and where I could smoke a pipe with a clear conscience, having no curtains to fumigate and no one to render uncomfortable. One

night, as I was going down, I was surprised to see a light below. Thinking the gas had been left burning by mistake, I went down; and when just on the last stair I saw that Mrs. Lyndon was still up. She was seated with her back to me, and leaned over the table. Was she asleep? I stooped forward to see. No; she was awake, and bent over something which she was moving between her hands. Old stories of misers in the depth of lonely night counting their secret stores of gold came whimsically enough to my mind. She had no gold, however; only a decayed old pack of blackened cards spread before her. I softly withdrew; I had seen enough; I had fathomed all the poor, sad little mystery with one involuntary glance. I too was of Arcadia; I too had come up from the country, where superstitions are still a faith, and omens and divinations defy Hamlet's philosophy. I knew at once that Mrs. Lyndon was trying some feeble, sad, sibylline work. Poor old creature, with her early and childish country superstitions still clinging round her, she was sorting the cards to discover in them some tidings of the husband who had deserted her—some hint as to the fortunes of the daughter whom she was breaking her heart to bring up as a lady.

Late that night I heard a hansom cab drive up to the door. I was reading something in my own room, and I looked out of the window. Some one got out of the cab and handed Lilla to the door-step. She was in opera costume—wherever on earth she had got it—and she looked indeed very attractive, and apparently very joyous, as she tripped up the steps. It was an elderly gentleman who accompanied her. I could see his iron-gray hair and rather red face. Lilla opened the door with her latch-key, while he got into the cab and drove off. I could hear him giving directions to the cabman in a peculiarly strident voice. Lilla crept very softly down stairs, where I suppose her mother was still sitting up for her.

Next morning I chanced to meet my young friend.

"Oh, Mr. Banks," she broke out, "I have such a headache!"

"You were dissipating last night," I answered. "That is what comes of late hours."

"How do you know? Did you see me come in?"

"Yes, that I did."

"I am so glad! Did I look well?"

"Charming."

"Did I really? Yes; my uncle took me to the Opera, and gave me the dress and cloak to go in—was not that kind of him?—and it was so delightful!"

"The music? What opera was it?"

"Oh! *Fidelio*. But I didn't care about the music; at least, I mean I didn't care so much about it. I was so happy, and delighted with every thing, and especially myself. I was a lady for a whole night! And we were in the stalls—I love the stalls! I never was there be-

fore—and we had supper afterward! And we drove home in a hansom. Now I have a headache; but I don't mind, for it's such a long time since I had a new dress; and I was so happy."

I could not help thinking of the poor old mother in the damp kitchen, spelling over her pack of cards.

Indeed, I could never look at that poor old woman without wondering for what unknown purpose she was ever sent upon earth, in what inscrutable way Heaven would compensate her in some world hereafter for her joyless drudgery here. Not merely was she not happy herself, but, with the kindest heart, the most unselfish nature in the world, she did not seem to have the power of making any one else happy. What hopeless misfortune had crushed her into beggarly inertness so young I did not know: but so long, at least, as Lilla's memory seemed to go back, the lives of the pair had been one unintermittent, humiliating, demoralizing battle with poverty. Poverty and drudgery appeared to have crushed quite out of Mrs. Lyndon all the feeling of religion which every where but in London seems to cling to the old and the unfortunate. The butcher and baker left her no time to think of heaven. Her one thought was for her daughter: to get the pretty girl enough to eat, to cook tender chops for her, to have little dainties for her breakfast and her supper, to keep her in clothes, to guard her against consumption, to dream of her one day becoming a lady.

As for the daughter, she was simply a kind-hearted, bright, clever little heathen, not surely incapable of conversion and training if any high-minded creature could but take her in hand. Just now no Fayaway, no naked girl of South Sea islands, could be a more thorough pagan than my graceful and pretty friend Lilla Lyndon.

PREACHERS AND PREACHING.

IT seems a curious anomaly that Scotland, where people are said not to know how to converse, but only to argue and *discoarse*, should have produced of late a series of charming books of table-talk. This unexpected vein was opened by the publication of the Autobiography of the Rev. Dr. Carlisle, who had lived familiarly with Hume and Robertson, and listened to the voice of old Johnson, or heard its resonance through his faithful echo, Boswell. Then came, after Carlisle's pleasant record of the great of his early generation, the equally faithful and agreeable "Memorials of his Time," by Lord Cockburn, the friend and biographer of Jeffrey, the companion of Scott, and a fellow-contributor with Sydney Smith, Brougham, Allan, and Horner to the *Edinburgh Review*. Dean Ramsay followed closely with his "Scottish Life and Character," and completed the familiar history of the literary men of the three generations which compose the Augustan era

of Scotland. There was a lightsome grace about all these books which took the world by surprise, for nothing of the kind was expected from that northern country, the mind of which was supposed, like its climate, to be immersed in a perpetual mist. They are, indeed, as cheerful reading as the French *ana* or memoirs, the best characteristics of which they possess, having all the intimate revelations of those familiar histories, tempered, however, by the decorousness of a severer morality.

Dean Ramsay has lately given greater completeness to his first work by the addition of what he terms "Pulpit Table-Talk." This, as its title indicates, is exclusively taken up with a record of the sayings and doings of the clergy. The author, though of the Scottish Episcopal Church, is a man of liberal sympathies, and is evidently disposed to hail every good Christian as his religious brother, whether he wears a surplice or not. In fact, as a native Scotchman, and living in Scotland, he has naturally more to say of the Presbyterians, who are in the ascendancy, than of his own sect.

Dean Ramsay must be a pleasant preacher to *sit under*, if he preaches in the enlivening strain in which he writes. He has evidently but little sympathy with dullness of any kind, and does not hesitate to denounce it, especially in the pulpit, and leaves us to infer that it is by no means a rare constituent of the four millions of sermons delivered every year in Great Britain. "Sir, in a sermon, the sin against the Holy Ghost is dullness," said Sydney Smith—a remark so irreverent that we should have hardly ventured to repeat it, had we not found it already quoted by our reverend author, who seems to have a very creditable horror of the offense it denounces, and accepts this advice of a friend: "Rather than see you dull and commonplace, I would see you bordering upon the eccentric or startling."

Dean Ramsay makes a distinction between a dry and a dull sermon, but upon common hearers the effect is the same. They both promote what our good clergyman terms the evil habit of sleeping in church. A dry discourse, however, may be learned, and of interest to some hearers, while a dull one is stupid, and can never please. Dr. Macknight, of whom the following story is told, is given as an example of the dry kind of preacher: This "logical and erudite" clergyman had been overtaken by a sharp shower in coming to church. In the vestry, and before the service began, the attendants were doing all in their power to make him comfortable by rubbing him with towels and other appliances. The good man was much discomposed, and was ever and anon impatiently exclaiming, "Oh, I wish that I was dry!" and repeating often, "Do ye think I am dry enuch now?" Dr. Henry, his colleague, who was present, was a jocose man, of much quiet humor. He could not resist the opportunity of a little hit at his friend's style of preaching; so he patted him on the shoulder,

with the encouraging remark: "Bide a wee, Doctor; bide a wee, and ye's be dry enuch when ye get into the pulpit."

People will sleep occasionally under the most wide-awake preachers, and these have accordingly been forced to resort to most extraordinary means of arousing their slumbering flock. John Wesley, noticing that some of his congregation were nodding, stopped suddenly in his sermon and shouted, "Fire! fire!" The people were greatly alarmed, and some one cried out, "Where, Sir—where?" "In hell, for those who sleep under the preaching of the Word," was the solemn answer of the preacher.

Dean Swift wrote a sermon especially addressed to the somnolent members of his church. The text was Acts xx. 9, where an account is given of Eutychus falling asleep during the preaching of Paul, and being taken up dead. "I have chosen these words with design," said the witty dean, "if possible, to disturb some part in this audience of half an hour's sleep; for the convenience and exercise thereof this place at this season of the day is very much celebrated." Afterward, in allusion to Eutychus sleeping in the window, he says: "The preachers now in the world, however they may exceed St. Paul in the art of setting men to sleep, do extremely fall short of him in the power of working miracles; therefore, hearers are become more cautious, so as to choose more safe and convenient stations and postures for their repose, without hazard of their persons, and upon the whole matter choose rather to trust their destruction to a miracle than their safety."

Sterne certainly, whatever might be his other defects, was not chargeable with dullness, and yet he availed himself frequently of tricks of rhetoric to keep his audience awake. He justified them on this ground when called to account by the Archbishop of York for his eccentricities in the pulpit. On one occasion, after giving out this text, "It is better to go to the house of mourning than to the house of feasting," he flatly declared, "*That I deny.*" A less refined but clever preacher made use of a similar device to secure the attention of an indifferent congregation. After giving the text, "I can do all things," he paused, and looking keenly at the Bible, said, in his native Somersetshire dialect: "What's that thee says, Paul?—'I can do aal things?' I'll bet thee half a crown o' that." So he took half a crown out of his pocket and put it on the book. "However," he added, "let's see what the Apostle has to say for himself." So he read the next words: "through Christ that strengtheneth me." "Oh," says he, "if that's the terms of the bet, I'm off." And he put the half crown into his pocket again, and preached his sermon on the power of Christian grace. Another preacher, impatient of a possible somnolence, cried out, in his loudest voice, in the midst of his sermon, "Victory! victory! victory!" A Reverend James Bonnar, an eminent Scotch preacher, effected

ally awakened the sleepers of his congregation by an ingenious device. It was a very warm day, the church was closely packed, and he observed many of his people nodding. He therefore introduced the word "hyperbolical" into his sermon, and as he did so, paused and said: "Now, my brethren, some of you may not understand this word 'hyperbolical.' I'll explain it. Suppose that I were to say that this congregation were *all* asleep in this church at the present time, I would be speaking hyperbolically; because" (looking round) "I don't believe much more than one-half of you are sleeping." The effect was instantaneous.

There are some church-goers, however, who indignantly resist all attempts on the part of the preacher to keep them awake. An old clergyman of the dull and quiet sort, having got an assistant who was loud-mouthed and stirring, found that a regular member of the church had suddenly become slack in his attendance, and consequently went to his house to rebuke the backslider. He was not in; but his wife, on being asked why her gudeman was so seldom at church now, replied: "Oh, indeed, minister, that young man ye've got roars sae loud that John canna sleep sae comfortable as he did when preachin' yersel sae peaceably."

The text is the keystone of that formal structure, the modern sermon. It was not, however, so in former times, for we are told that the old divines frequently preached without any text at all; and we knew a celebrated clergyman who generally wrote his sermons before he selected a phrase from Scripture to prefix to them. The connection of the text and sermon is often forced. Rowland Hill, the eccentric English preacher, wishing to denounce the practice then prevalent among the women of wearing showy head-dresses called "top-knots," preached from this text: Matthew xxiv. 17—"Let him that is on the house-top *not* come down," and pointed to the latter part of the phrase, "Top-knot come down," as a Scriptural denunciation of the coiffure in vogue. Rowland Hill was an inveterate clerical punster. Preaching on one occasion at Wapping, a low district near London, he assured his hearers, who had been among the most dissolute of that unsavory quarter, that such *Wapping* (whopping) sinners even as they were might hope to be forgiven.

One preacher took for his text the word "and," and another "but." The latter, as Dean Ramsay tells the story, was a candidate for a lectureship, and had to deliver a discourse before the trustees of the endowment, in the way of competition; so he was determined to show how clever he could be, and took for his text the single word "but." He deduced from thence the great truth and the important doctrine that no position is without some corresponding cross or opposite trial. Naaman was a mighty man of valor and honorable, *but* he was a leper. The five cities of the plain were fruitful as the garden of Eden, *but* the men of Sodom were awful sinners. I called you, *but*

ye answered not, etc. When he came down into the vestry after his sermon the senior trustee of the lectureship met him and said, "Sir, you gave us a most ingenious discourse, and we are much obliged to you; *but* we don't think you are the preacher that will do for us." This was a practical application of his sermon that the pulpit orator had not calculated upon. One of Dr. Hawks's most effective "charity" sermons was preached from the text, "To beg I am ashamed," but a meaning was given to it quite different from the original intention. He turned it effectively to his purpose by the gloss that he was ashamed for his hearers that the neglect of so good a cause as that for which he was pleading rendered it necessary to beg for it.

Texts have sometimes been chosen with great aptness to point a rebuke. The celebrated Paley, the author of the "Moral Philosophy" and the "Evidences of Christianity," had occasion to preach at Cambridge on the Sunday following the visit of Pitt, who had just been made First Lord of the Treasury and Chancellor of the Exchequer at the early age of twenty-three years. Paley had noticed the obsequious attention of the leading members of the University to the young statesman, with the evident view of obtaining a share of the good things at his disposal. Paley determined to rebuke this servile worship and eager selfishness, and accordingly gave out this text: "There is a *lad* here which hath five barley loaves and two small fishes," and added, as he looked round on the throng of dignitaries and place-hunters, "But what are they among so *many*?"

A text inadvertently taken has, occasionally been the source of much mischief. Dr. Sheridan, the father of the celebrated dramatist and orator, Richard Brinsley Sheridan, being asked to preach for his friend, a country clergyman, delivered an old sermon with the text: "Sufficient unto the day is the evil thereof." Unfortunately for the doctor, it happened to be the anniversary (which he had forgotten) of the accession of the House of Hanover. This was considered an insult by the court, and the preacher, who had been formerly a favorite, lost all favor, and with it, it is said, a promised bishopric. On the death of Princess Charlotte, when a wail of sorrow came from every pulpit in Great Britain, a celebrated divine startled his listeners with the text: "Take this cursed woman and bury her, for she is a king's daughter." This was not designed as an insult; far from it; for the preacher in his sermon took the view that if a character such as Jezebel was should be buried with pomp simply because of royal birth, how much greater should be the respect shown to the memory of so virtuous a woman as the Princess Charlotte.

The *death's head and bloody bones* style of eloquence, as it has been irreverently termed, is less frequently heard from the pulpit than it used to be. Preachers generally prefer nowadays the gentle and persuasive to the alarming or threat-

ening mode of sermonizing. Whitefield was a great master of the latter, and no one in modern times could frighten a sinner more effectually with the "terrors of the Lord." He, however, was a lamb in comparison with some of the preaching lions of the Middle Ages. The venerable Bede used to draw pictures of torment that the cruel imagination of Dante has not equaled. Mark with what picturesqueness of horror Bede describes the place of punishment: "He beheld trees all on fire, and sinners tormented on those trees; and some were hung by the feet, some by their hands, some by the hair, some by the neck, some by the tongue, and some by the arm. And again he saw a furnace of fire burning with seven flames, and many were punished in it; and there were seven plagues round about this furnace; the first was snow, the second ice, the third fire, the fourth blood, the fifth serpents, the sixth lightning, the seventh stench; and in that furnace itself were the souls of the sinners who repented not in this life. There they are tormented, and every one receiveth according to his works; some weep, some howl, some groan, some burn and desire to have rest, but find it not, because souls can never die." Again: "And Paul demanded of the angel how many kinds of punishment there were in hell. And the angel said, 'There are a hundred and forty-four thousand; and if there were a hundred eloquent men, each having four iron tongues, that spoke from the beginning of the world, they could not reckon up the torments of hell.'"

To the various modes of preparing and delivering a sermon, the writing and reading, reciting after learning by heart, the skeleton and the extempore, Dean Ramsay adds the peculiar method pursued by the celebrated Robert Hall. He was a great invalid, and kept much to his sofa. He thus got into the habit of mental composition, and being very careful in regard to style, and of good memory, his most celebrated sermons were thus composed, and delivered *verbatim* to his congregation, and subsequently repeated to a reporter for publication. "When Wilberforce," says the dean, "was told of this habit of Hall, he called it the *viviparous* mode of producing a sermon; that is, by a direct or living birth, as opposed to the *oviparous* process, of which the written manuscripts in other sermon-producers represented the egg. I recollect my distinguished friend, the late Marquis of Dalhousie, having this power. When a candidate for East Lothian, as Lord Ramsay, he composed in his head, at Coldstream, an elaborate speech, which he first delivered at Haddington, and then corrected the report, which had been taken down, so as to make it a *verbatim* copy. On my mentioning the circumstance to the first speaker of the day, William Gladstone, I recollect his saying that he envied the power."

In a talk about the great preachers of modern times the universal apprehension seizes at once upon the well-known names of Whitefield,

John Wesley, and Robert Hall, of England, Chalmers and Irving of Scotland, Lacordaire of France, and Channing of the United States.

The effects of Whitefield's eloquence seem to have been marvelous. He frequently preached in the open air to a gathering of three thousand persons, every one of whom, such was his sonorousness of voice and the rapt attention of his listeners, could hear every word he uttered. On one occasion while preaching a wall upon which hundreds of people were sitting fell, but so intent was his audience that not the slightest confusion or interruption ensued. Whitefield's style was emphatically a preaching one, and its power is not sustained in his printed discourses. This eloquent preacher did not disdain to resort to an occasional *tour de force* to awaken interest or produce an effect. While inculcating upon his hearers the fact that salvation was not to be won except with labor and self-denial, he said: "You seem to think it a very simple matter; you think it quite easy. Oh, just as easy as for me to catch that insect flying past me" (grasping at a fly or supposed fly). Then, after a pause, he opened his hand and exclaimed, in a solemn voice, "But I have missed it." He is said to have often repeated this piece of clerical legerdemain.

Wesley's sermons, unlike those of Whitefield, read well. There is one against the extreme doctrine of election and reprobation which Southey has declared to be one of the "finest examples of impassioned eloquence in the language," and it certainly must be acknowledged by all, whatever be the difference of opinion in regard to its force of argument, to be a brilliant example of powerful rhetoric.
